MINUTES OF EVIDENCE - - - - -	1
APPENDIX - - - - - - - -	i

CONTENTS OF APPENDIX.

APPENDIX I.—COUNCIL OF MILITARY EDUCATION.

Page

A.—Historical notice, by the Secretary - - i

B.—Correspondence, &c., connected with the original formation, and with the gradual extension of the powers of the Council of Military Education - ii

APPENDIX II.—ROYAL MILITARY COLLEGE, SANDHURST.

A.—Questions and replies relating to the College - vii
Questions issued by the Commission - - vii
Answers received from—
Colonel W. H. Adams - - - vii
Captain L. Griffiths, Royal Artillery - ix

B.—Memorandum by Colonel Addison on the present educational system of the College - - x

C.—Memorandum by Colonel Addison on the College as a place of later military education - - xiii

D.—Paper handed in by Captain E. Walker, R.E., supplementary to his evidence - - - xiv

E.—Historical notice of the College, by the Secretary xiv

F.—Chief changes in the educational system of the College since 1855 - - - - - xix

G.—Plans for the amalgamation of Woolwich and Sandhurst:
(i.)—Historical notice, by the Secretary - - xx
(ii.)—Plan suggested by the Right Hon. Sidney Herbert in 1856 - - - - xx
(iii.)—Account of a scheme prepared by the Council of Military Education in 1857 - xxi

H.—Proposals for making the Royal Military College the sole means of admission to the cavalry and infantry:
(i.)—Preliminary notice, by the Secretary - xxii
(ii.)—Correspondence connected with the schemes for requiring all candidates for commissions in the line to pass through the Royal Military College - - - - xxiv
(iii.)—Correspondence between the Secretary of State for War and the Universities of Oxford, Cambridge, and Dublin, relating to the plan for requiring all candidates for commissions in the line to pass through the Royal Military College - - xxxii

I.—Queen's and Indian cadetships:
(i.)—Memorandum on the regulations under which Queen's and Indian cadetships are granted, by the Secretary - - - xxxv
(ii.)—Correspondence connected with the establishment of Queen's cadetships - - xxxvi
(iii.)—Correspondence connected with the establishment of Indian cadetships - - xxxvii

K.—Correspondence on the question of reducing the instructional staff of the College - - - xli

L.—Present regulations of the Royal Military College xliv

APPENDIX III. — ROYAL MILITARY ACADEMY, WOOLWICH.

A.—Questions and replies relating to the Academy - xlvii
Questions issued by the Commission (first series) xlvii
Answers received from—
Professor Sylvester - - - xlvii
Lieut.-Colonel J. J. Wilson - - xlviii
Lieut.-Colonel C. H. Owen - - l
Lieut.-Colonel G. A. Milman - - li
Major W. J. Stuart - - - li
Captain C. B. Brackenbury - - lii
Captain H. Brackenbury - - - liii
Questions issued by the Commission (second series) - - - - - liii
Answers received from Captain Strange - liii

Appendix III.—*continued.*

Page

B.—Memorandum by Colonel Field on various points referred to in his evidence - - - liv

C.—Papers handed in by Colonel Field:
(1.) Total strength of the establishment - lviii
(2.) Nominal list of professors, &c. - - lviii
(3.) Hours of study, &c. - - - lix
(4.) Distribution of studies - - - lx
(5.) Table of final marks - - - lx
(6.) List of subjects of examination in the 1st class - - - - - lxi
(7.) Subjects finally disposed of in the junior classes - - - - - lxi
(8.) Scale of punishments - - - lxi
(9.) Description of punishment - - - lxi

D.—Papers handed in by Captain Bruce:
(1.) Commissions, &c., on the Academy, from 1835–61 - - - - - lxi
(2.) Table showing medley of cadets at the Academy, from 1857–63 - - - lxii
(3.) Dates of chief alterations in mode of admission, from 1855–69 - - - lxii
(4.) Dates of chief alterations in character of entrance examinations, from 1855–69 - lxiii
(5.) Length and nature of course of instruction - lxiv
(6.) Alterations in the establishment number of gentlemen cadets, from 1855–59 - - lxiv

E.—Memorandum on the introduction of the competitive system for admission to the Royal Military Academy, by the Secretary - - - lxiv

F.—Regulations for the first competitive examination for appointments in the Artillery and Engineers - lxv

G.—Regulations for the first competitive examination for admission to the ordinary course at the Royal Military Academy - - - - - lxvi

H.—Present regulations for admission to the Royal Military Academy - - - - - lxvii

APPENDIX IV.—EXAMINATIONS FOR DIRECT COMMISSIONS.

A.—Historical notice, by the Secretary - - lxviii

B.—Original regulations for the examinations for direct commissions - - - - - lxix

C.—First regulations for the examinations for direct commissions issued after the appointment of the Council of Military Education - - - lxx

D.—Present regulations for examinations for direct commissions - - - - - - lxxi

APPENDIX V. — PUBLIC SCHOOL EDUCATION AS A PREPAPATION FOR THE MILITARY EXAMINATIONS.

A.—General notice, by the Secretary - - - lxxi

B.—Account of the army class at Eton - - lxxiii

APPENDIX VI.—EXAMINATIONS FOR PROMOTION.

A.—Historical notice, by the Secretary - - lxxiv

B.—Circular memorandum instituting for the first time a system of examinations preparatory to promotion - - - - - - lxxiv

C.—General order issued in November 1858 establishing the system of examinations for promotion on their present footing - - - - lxxvi

D.—Present regulations for examinations for promotion - - - - - - lxxvi

APPENDIX VII. — INSTRUCTION OF OFFICERS AFTER ENTERING THE SERVICE.

Page

A.—Questions and replies on the subject - - lxxviii
Questions issued by the Commission - - lxxviii
Answers received from—
General Sir W. R. Mansfield, K.C.B., G.C.S.I. - - - - - lxxviii
Lieut.-General W. F. Forster, K.H. - lxxx
Lieut.-General Lord W. Paulet, K.C.B. - lxxx
Lieut.-General Sir J. Hope Grant, G.C.B. - lxxx
Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B. - - - - lxxx
Major-General Sir A. H. Horsford, K.C.B. - lxxxi
Major-General D. Russell, C.B. - - lxxxi
Major-General W. C. E. Napier - - lxxxii
Major-General the Earl De La Warr, C.B. - lxxxii
Colonel C. Cameron Shute, C.B., 4th Dragoon Guards - - - lxxxiii
Colonel F. R. Elrington, Rifle Brigade - lxxxiii
Colonel the Hon. H. H. Clifford, C.B., V.C. lxxxiii
Colonel J. W. Armstrong, C.B. - - lxxxiii
Viscount Walden - - - - lxxxiv
Lieut.-Colonel H. C. Fletcher, Scots Fusilier Guards - - - - lxxxiv
Major O'B. B. Woolsey, Royal Artillery - lxxxv

B.—Miscellaneous questions relating to the instruction of officers, and other subjects:
(i.)—Questions addressed to Colonel Baker, 10th Hussars, and answers received from that officer - - - - - lxxxv
(ii.)—Questions addressed to Colonel Robertson, 8th Regiment, and answers received from that officer - - - - - lxxxvi

C.—Historical notice of plans for the instruction of officers, by the Secretary - - - - xci

D.—System of garrison instruction for officers, proposed by the Right Hon. Sidney Herbert:
(i.)—Correspondence between the Right Hon. Sidney Herbert, Viscount Hardinge, and the Treasury, in 1854 - - xciii
(ii.)—Extract from a speech of the Right Hon. Sidney Herbert in the House of Commons, June 5, 1856, on military education - xcv

E.—Plans proposed by the Council of Military Education for the instruction of officers in the service:
(i.)—Plan proposed in 1857 - - - xcv
(ii.)—Plan proposed in 1869 - - - xcviii

F.—Regulations bearing on the instruction of officers:
(i.)—Instruction of officers in the preparation of military reports - - - - xcix
(ii.)—Instruction of infantry officers in artillery drill - - - - - xcix
(iii.)—Instruction of officers in army telegraphy and signalling - - - - xcix

G.—Account of the Survey Class, Aldershot, by Major O'B. B. Woolsey, Royal Artillery, in charge of the Survey Class - - - - - c

APPENDIX VIII. — ROYAL ENGINEER ESTABLISHMENT, CHATHAM.

A.—General account of the establishment - - ci
Questions issued by the Commission - - ci
Answers received from Colonel Gallwey - - ci

B.—Course of instruction at the establishment - ciii

APPENDIX IX. — ADVANCED CLASS OF ARTILLERY OFFICERS AND DEPARTMENT OF ARTILLERY STUDIES.

A.—Questions and replies relating to the Advanced Class of artillery officers - - - - cvi
Questions issued by the Commission - - cvi
Answers received from—
Lieut.-Colonel Young - - - cvii
Captain C. B. Brackenbury - - cvii

B.—Memorandum on the Department of Artillery Studies, by Lieut.-Colonel Young - - - cviii

C.—Note on the institution of the Advanced Class of artillery officers, by the Secretary - - - cviii

D.—Correspondence connected with the origin of the Advanced Class of artillery officers - - cix

E.—Original regulations for the Advanced Class - cxii

F.—Present regulations for admission to the Advanced Class - - - - - - cxiii

APPENDIX X.—SCHOOL OF GUNNERY, SHOEBURYNESS.

Page

A.—General account of the School - - - cxiii
Questions issued by the Commission - - cxiii
Answers received from Colonel Elwyn - - cxiii

B.—Historical notice, by the Secretary - - cxvi

APPENDIX XI.—STAFF COLLEGE AND STAFF APPOINTMENTS.

A.—Questions and replies relating to the Staff College cxvi
(1.) Questions issued by the Commission. (First series.) - - - - - cxvi
Answers received from—
Lieut.-General W. F. Forster, K.H. - cxvi
Colonel the Hon. H. H. Clifford, C.B., V.C. - - - - - cxvii
Colonel J. W. Armstrong, C.B. - - cxvii
(2.) Questions issued by the Commission. (Second series.) - - - - cxviii
Answers received from—
Colonel T. E. Lacy - - - - cxviii
Colonel E. B. Hamley, C.B. - - cxix
Colonel the Hon. W. H. A. Feilding, Coldstream Guards - - - - cxx
Rev. J. F. Twisden, M.A. - - - cxxi
Major C. Adams - - - - cxxii
Major G. P. Colley, 2nd Regiment - - cxxii
Major G. D. Barker, 64th Regiment - cxxiv
Major A. S. Jones, V.C., 13th Regiment - cxxiv
Captain H. Schaw, Royal Engineers - - cxxv
Captain E. M. Jones, 20th Regiment - cxxvi
Captain G. M. Cardew, 67th Regiment - cxxviii
Captain A. L. Walker, 99th Regiment - cxxviii

B.—Memorandum on the subject of the Staff College, by Captain J. N. Crealock, 95th Regiment - cxxx

C.—Historical notice of the Staff College, by the Secretary - - - - - - cxxxiv

D.—Plan for the instruction of staff officers, proposed by the Right Hon. Sidney Herbert, in 1856 - cxxxviii

E.—Scheme proposed by the Council of Military Education in 1857, for the establishment of the Staff College - - - - - - cxxxix

F.—Original regulations for the Staff College - cxli

G.—Present regulations for the Staff College - cxlii

H.—General order instituting examinations for staff appointments - - - - - cxliv

I.—Present regulations for examinations for direct staff appointments - - - - - cxliv

APPENDIX XII.—SCHOOL OF MUSKETRY, HYTHE.

Note by the Secretary - - - - cxlv

APPENDIX XIII.—RETURNS.

A.—General returns - - - - - cxlvi
(i.)—Expenditure on military education, from 1858 to 1868 - - - - cxlvi
(ii.) Appointments to first commissions in the various branches of the service, from 1858 to 1868 - - - - - cxlvi
(iii.)—General results of the military examinations, from 1858 to 1868 - - - cxlvii

B.—Returns relating to the Royal Military College, Sandhurst - - - - - - cxlvii
Results of examinations for admission, from 1865 to 1868 - - - - cxlvii
Age of candidates examined for admission, for the last two years - - - - cxlvii
Age of gentlemen cadets admitted during the last two years - - - - cxlvii
Last place of education of successful candidates examined for admission during 1866–7 cxlviii
Number of cadets who have received free commissions in purchase corps and non-purchase corps during each of the last six years - cxlviii
Queen's and Indian cadets who have obtained commissions among the list of competitors for commissions without purchase - - cxlix
Number and per-centage of commissions without purchase obtained by sons of officers of the army and navy during the last 10 years cxlix
Number of cadets from Sandhurst who have been in each year competitors for admission to the Staff College - - - cxlix

Appendix XIII.—*continued.*

B.—Returns relating to Sandhurst—*continued.* Page

Average number of gentlemen cadets for the last four and a half years, under each rate of payment - - - - - cxlix
Return of offences and punishments from 1835 to 1868 - - - - cl
Returns handed in by Colonel Addison:
(i.)—Result of the final examination held in December 1868 - - - cli
(ii.)—Previous places of education and college course of gentlemen cadets admitted in February 1867 - - clii
(iii.)—Previous places of education and college course of gentlemen cadets admitted in August 1867 - - cliv

C.—Returns relating to the Royal Military Academy, Woolwich - - - - - - clv
Results of examinations for admission, from 1865 to 1868 - - - - clv
Places of education of successful candidates for admission, for 1866–67 - - - clv
Per-centage of successful candidates for admission, from 1858 to 1867, who came direct from public schools - - - - clvi
Total number of commissions given during last 10 years, and number and per-centage of these obtained by sons of officers of the army and navy - - - - - clvi
Number of sons of officers of the Royal Artillery and Royal Engineers admitted since the introduction of competitive examination - - - - - clvi
Age of cadets on leaving the Academy for appointment to first commissions in the Royal Artillery - - - - clvi
Age of cadets on leaving the Academy for appointment in the Royal Engineers - clvii
Average number of cadets for the last four and a half years, under each rate of payment - clvii
Construction and occupation of buildings, &c. clvii
Return of offences and punishments, from 1835 to 1868 - - - - clviii

D.—Returns relating to the examinations for Direct Commissions - - - - - clix
Results of the examinations, from 1865 to 1868 clix

Appendix XIII.—*continued.*

D.—Returns relating to the examinations for Direct Commissions—*continued.* Page

Per-centage of failures in obligatory subjects, &c., 1858–67 - - - - clix
Candidates who have failed three times during the last four years - - - - clix
Per-centage of candidates who came up direct from public schools, for the last eight examinations - - - - - clix
Number of failures among ditto - - clix
Places of education of successful candidates during 1866–67 - - - - clix

E.—Returns relating to the age of officers on first appointment to the service - - - - clx
(i.)—Ages of gentlemen gazetted to first commissions in the cavalry, guards, infantry, of the line, and colonial corps respectively from 1858–68 - - - - clx
(ii.)—Age of officers gazetted to first commissions in the Royal Artillery and Royal Engineers clxi

F.—Return relating to examinations for promotion - clxii
Number of officers examined for promotion, from 1858–67 - - - - clxii

G.—Returns relating to the Staff College and staff appointments - - - - - clxii
Number of candidates examined abroad for admission to the Staff College - - clxii
Number of officers at present in the service who passed through the late Senior Department at Sandhurst - - - - clxii
Number of officers who have passed through the Staff College, and number who have received staff appointments - - clxii
Number of officers examined since 1st January 1858, for appointment to the staff, without passing through the Staff College - - clxiii
Number of officers appointed to the staff since 1st January 1859, specifying those who have and those who have not passed through the Staff College - - - - clxiii

H.—Return relating to the artillery Advanced Class - clxiii
Number of officers who have competed for admission to the class - - - clxiii

MINUTES OF EVIDENCE

TAKEN BEFORE

THE ROYAL COMMISSION ON MILITARY EDUCATION.

Wednesday, 1st July 1868.

PRESENT:

THE RIGHT HONOURABLE EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LIEUT.-GEN. LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. W. C. LAKE.
BRIGADIER-GENERAL LEFROY.
COLONEL HAYTHORNE.
LIEUT.-COL. CHESNEY.

MAJOR-GENERAL WILLIAM C. E. NAPIER examined.

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Council of Military Education.

1. (*Chairman.*) You are Vice-President of the Council of Military Education?—Yes.

2. And you were formerly a gentleman cadet at the Royal Military College at Sandhurst?—Yes.

3. You were also major and superintendent of studies at the Royal Military College subsequently?—Yes.

4. How long did you fill that office?—For three and three quarter years, from Februray 1858 to September 1861.

5. You were then commandant of the Staff College?—Yes, for three and a quarter years, from September 1861 to December 1864.

6. And when you left that appointment, you were appointed to your present post, were you not?—No, I went to Dublin in command of a brigade.

7. How long have you filled the appointment of Vice-President of the Council of Military Education?—Since the 1st of April 1866.

8. Will you be good enough to state to the Commission how the Council of Military Education is composed?—The Council of Military Education consists of a president, who is the Commander-in-Chief for the time being, a vice-president, who is a major-general in the army, and four members, one of whom is an officer of the Royal Artillery, one an officer of the Royal Engineers, one an officer of the line, and the other a clergyman.

9. You say that one of the members is a clergyman; it is not necessary, I believe, by the constitution of the Council that he should be a clergyman, but merely a civilian?—I do not think that there is any fixed constitution. No doubt he might be merely a civilian.

10. Will you state to the Commission generally the duties of the Council of Education?—The duties of the Council, exclusive of those appertaining to army schools, libraries, and recreation rooms, which I believe do not come within the scope of the present Commission, are, first, to recommend to the Commander-in-Chief and the Secretary of State for War, gentlemen for the appointment of examiners in the army examinations. Secondly, the recommendation of professors and instructors for the Advanced Class of artillery officers, the Staff College, the Royal Military Academy, and the Royal Military College. Thirdly, to examine, by means of their staff of examiners, officers for direct appointment to the staff, chiefly the personal staff, such as aides-de-camp and assistant military secretaries. Fourthly, to examine officers of artillery for admission to the Advanced Class, and for certificates on quitting it. Fifthly, to examine officers for admission to the Staff College, probationarily after a year's residence, and for qualification for the general staff on quitting the college. Sixthly, to examine candidates for admission to the Royal Military Academy at Woolwich, and for qualification for commissions in the Royal Artillery and in the Royal Engineers on quitting that establishment. Seventhly, to examine candidates for admission to the Royal Military College at Sandhurst, and for qualification for commissions in the army on their quitting the college. Eighthly, to examine candidates for direct commissions in the cavalry, guards, and line. Ninthly, to visit the several military colleges whenever they consider it desirable. Tenthly, to report to the Commander-in-Chief on all questions connected with the education of candidates for the army, or with the educational departments of the several military establishments.

11. You have stated that is the duty of the Council to examine candidates for commissions and gentlemen for admission to the various military colleges. You mean, I suppose, that they undertake the general regulation of those examinations, the examinations being conducted by examiners elected by the Council?—Exactly so; the Council examine by means of their staff of examiners.

12. Have you any observations or recommendations which you would wish to make to this Commission with respect to the constitution or the duties of the Council?—The only observation which I have to make is with reference to the application to the Council of the rule by which their tenure of office is limited to five years. This regulation is likely to act injuriously to the public interests, not only by depriving the Council of the services of its members at the very moment when those services are of the most value, but also by causing the system of military education to fluctuate. Every man has his own ideas upon education, and if the members of the Council are constantly changed the system is likely to be constantly changed. At one time the standard of education will be raised, and at another time it will be lowered; there will be no fixed system or principle. The usual argument for the limitation of staff appointments to five years does not apply in the case of the Council. There is no object in training a number of officers for the post. No doubt it is well that fresh ideas should be occasionally introduced, but this will be effected in the common course of events; for instance, the Council has only been in existence for 11 years, and yet I am the fifth vice-president. Of the original Council established at the beginning of 1857 not a member remains.

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Council of Military Education.

I think that every purpose would be gained by limiting the appointment to 10 years.

13. The civil member of the Council is not, I believe, subject to the five years' rule?—No.

14. You admit in the answer which you have just given that it is desirable that from time to time there should be an infusion of fresh blood into a body such as the Council of Military Education?—Certainly.

15. And therefore your proposal, as I understand it, is not altogether to get rid of the limit of time for holding these appointments, but that the period should be lengthened?—Yes.

16. Then would you be of opinion that it is desirable that there should be a limit of time during which these appointments should be held?—Certainly; but I think that five years is changing too often for stability.

17. Can you tell the Commission in how many cases the five years' rule has actually been applied since the Council was first formed?—It has never been strictly applied hitherto. One member was obliged to go after, I think, eight years; and now, under that rule, the Council is going to lose the services of one of its most valuable members at the end of this year.

18. You are, of course, aware that in the case of members of the Council, as well as in the case of officers holding staff appointments, there is a power of re-appointment in the Commander-in-Chief, subject to the approval of the Secretary of State for War, and that consequently, in the case of any officer whose presence there was peculiarly valuable, those authorities would be able to re-appoint him for another period of five years, making the 10 years which you suggest?—Yes, but they will not do it. Sir Frederick Abbott's five years were completed in July 1867, and they have allowed him to remain to the end of this year, but no longer.

19. From the various changes which have taken place at different dates in the composition of the Council, there is, I suppose no danger that the application of the strict rule of either five or 10 years would produce a general change of the Council all at one time?—No, they cannot be changed all at once because they have been appointed at different dates.

20. There is, therefore, practically a sort of rotation in the arrangement, so that you are not in danger of losing more than one member of the Council at a time?—We shall lose two in the case of Colonel Hamley and myself, who go out together.

21. But of course that could be avoided by permitting either one or other of you to retain your appointment for a year longer as has been done in some cases?—Certainly.

22. (*Lord de Ros.*) The selection of the professors rests with the Council of Education?—Yes.

23. (*Lord E. Cecil.*) In what relation does the Council of Military Education stand towards the Secretary of State for War and the Commander-in-Chief; does it report directly to the Commander-in-Chief or to the Secretary of State for War?—We report directly upon all matters of education to the Commander-in-Chief; upon matters of finance we report to the Secretary of State for War.

24. Do any regulations which come from the War Office to the Council of Education go through the Commander-in-Chief, or do they come direct from the Secretary of State for War?—They go through the channel of the Commander-in-Chief. Indeed I may say that we have very little direct communication with the Secretary of State for War.

25. Do you ever report directly to the Secretary of State for War?—Occasionally we do; the War Office send us one of their minute papers for our opinion upon certain points, but that is generally with reference to the army schools.

26. That practice is not universal?—No.

27. (*Lord de Ros.*) You said that you occasionally paid visits to the college at Sandhurst; are those visits in the nature of inspection, and does that inspection go at all into discipline, does it at all correspond with the visit of the inspecting general officer of a regiment?—No; we have nothing to do with the discipline of the colleges. We merely inspect the studies.

28. (*Lord Northbrook.*) With respect to the working of the Council, is it fair to ask whether there are occasionally differences of opinion in the Council?—Certainly we differ occasionally.

29. And if there is a difference of opinion how do you decide?—We meet and discuss the matter until we come to an agreement.

30. Have you always found that that is the result of an argument?—Yes; it generally results in our agreeing either by mutual concessions or by one giving way. We seldom, if ever, send in conflicting memoranda.

31. With respect to appointments, do you consider yourself as Vice-President responsible for the appointments?—No.

32. But the Council collectively are responsible for them?—We only recommend, we cannot appoint.

33. Has any case arisen in which a member has thought it his duty to resign in consequence of differing from the rest of the Council?—Not that I am aware of.

34. Can you point out to us what you consider to be the advantages of the Council of Education separate from the Horse Guards or the War Office to perform those functions which you have described, rather than having a department directly in communication with the Commander-in-Chief of the army or the Secretary of State for War to carry out the same duties?—Our duties are so intimately connected with the Commander-in-Chief that it would be impossible for us to be in any way independent of him as a separate department.

35. Do you consider yourselves a separate department of the Horse Guards?—No; we do not belong to anybody particularly, but, in a few words, I consider the Council to be the advisers of the Commander-in-Chief and of the Secretary of State for War upon all matters of military education.

36. Do you think that it would be an improvement that the Council should be constituted as a department of either the Horse Guards or the War Office rather than be in a *quasi* independent state?—No; I do not see any advantage in it. We are certainly the advisers of the Commander-in-Chief, and therefore I suppose that we are a part of the Horse Guards to that extent.

37. With regard to your recommendations, are they always complied with?—No.

38. They are sometimes overruled?—Yes.

39. I allude to the appointment of professors.—Those appointments are never overruled.

40. (*Rev. W. C. Lake.*) With regard to the examiners, do you advise as to their appointment?—Yes.

41. Is your advice always taken?—Yes.

42. (*Lord E. Cecil.*) Do the examiners hold their appointments at will, or do they hold them for five years?—They hold them as long as they wish to remain, and as long as we wish to keep them.

43. (*Sir C. Russell.*) Is the paper for examination often altered, or is it altered at all, by the Council?—Yes, it is our duty to examine all these papers before they are printed, and if we object to any of them we send them to our examiner and request that he will alter them.

44. And then having been altered by the examiner they are submitted to the Council for their approval?—Yes.

45. Therefore the suggestion of an infusion of fresh blood into the Council would be for the purpose of getting fresh persons for the class of examination which shall take place?—Rather for the general system of education.

46. Has the class of examination been much altered since the establishment of the Council of Education?—Yes, we have found it necessary to reduce the standard of the examinations.

47. And do you find as you proceed that the tendency is to reduce the standard of examination,

that the necessity for reducing the standard of examination is going on?—Not now; we have arrived now I think at the lowest possible pitch.

48. (*Brig.-Gen. Lefroy.*) There is another way of influencing the examination besides varying the questions, namely, by affecting the scale of marks and marking a subject high or low, so as to make it easier to get 400 marks on one subject than to get 400 marks on another subject; is that power ever exercised at all?—We have had occasion to request our examiners to be indulgent and to mark higher than they were naturally inclined to do, otherwise we could not have got officers for the army.

49. (*Lord E. Cecil.*) What is the salary of the Vice-President and of the members of the Council of Military Education?—The salary of the Vice-President is 1,000*l.* a year, and that of the members is 600*l.* a year.

50. What is the salary of the examiners who are appointed permanently?—They get so much for each examination.

51. They are paid by fee?—Yes.

52. Then there is no regulated amount which they receive a year, but it is variable?—It varies according to the examinations which they conduct.

53. (*Rev. W. C. Lake.*) Do the functions of the civil member of the Council require constant attendance?—No.

54. How often should you say that he does attend in the course of the year?—Except for the examinations, in which he takes his turn with the rest of us, he very seldom comes to the Council.

55. Does he come four times a year for instance?—I hardly know, I have not kept any account of it, he comes very seldom. Whenever we want him he comes up. If there is any matter in which we want his opinion we forward the case to him and ask his opinion upon it, but he is not expected to come regularly.

56. (*Lord E. Cecil.*) There is no number of attendances requisite of each member of the Council of Military Education; it is not necessary that a member should have attended a certain number of times in the year?—The Vice-President and the members attend every day in the office as a general rule.

57. Do all the members attend every day?—Yes, all except the civilian.

58. (*Lord de Ros.*) That is to say the three military members?—Yes, and the Vice-President.

59. (*Lord E. Cecil.*) What is your work every day?—Our chief work is with the army schools, there is constant correspondence about them, they are all under us; our work varies; at the time of the examinations we are occupied a good deal.

60. What is the length of your general attendance at your office?—My own attendance is about from four to five hours a day. The office hours are from 11 to 5, except on Saturday, when we close at 2 o'clock.

61. I suppose that there is a vacation time?—Yes. I go away for two months in the year.

62. Then the attendance is constant for 10 months in the year?—Yes.

63. For six days in the week for four hours a day?—I personally do not generally go up on Saturday.

64. Is there an obligation of attendance upon all the other members?—The attendance is understood to be daily, and as a rule it is so.

65. Do you all sit in the same room?—No, each has a room to himself.

66. I suppose that at a given time of the day or on a certain day you meet for general business?—We meet whenever we have anything to discuss.

67. Is there a secretary appointed?—Yes.

68. What are the names of the members of the Council of Education and of the secretary?—The Vice-President is Major-General William Napier, the members are Major-General Sir Frederick Abbott of the Bengal Engineers, the Rev. Canon Moseley, Colonel Pocklington, and Colonel Hamley of the Royal Artillery, and the secretary is Captain Greentree.

69. I suppose that the Commander-in-Chief is very seldom able to attend?—He never comes to the Council's office. His Royal Highness's conferences with the Council take place at the Horse Guards.

70. So that practically your body is reduced to five members?—Yes, a Vice-President and four members.

71. (*Rev. W. C. Lake.*) You said that there was no fixed constitution of the Council of Military Education, do you mean that there are no regulations?—I am not aware of any. Special instructions have been given to the Council from time to time.

72. In point of fact, if you were advising with regard to the military schools or the college at Sandhurst, or anything referring to your department, to whom would you always address that advice?—To the Commander-in-Chief.

73. And never to the Minister for War?—Yes, many of our memoranda which we send to the military secretary are for the information of His Royal Highness the Field Marshal Commanding-in-Chief and the Secretary of State for War; we, in fact, communicate with both in one letter, and the Commander-in-Chief sends it on to the Secretary for War.

74. (*Lord E. Cecil.*) Is there a good deal of correspondence attending the duties of the Council of Military Education?—With regard to the army schools and the libraries and recreation rooms, there is a great deal of correspondence. With regard to the colleges and general education, there is not, except between our secretary and the examiners.

75. I suppose that all that correspondence is submitted to yourself and to the other members of the board?—Yes, all important correspondence.

76. And if you have occasion to call a meeting of the board to decide upon any important point, notice of that meeting is given to every member of the board officially or privately?—The members are personally informed when a meeting is required.

77. Then you have no such thing as an *agenda* paper?—No.

78. I presume that your discussions are short?—Not always.

79. (*Lord Northbrook.*) Are we to understand that every expression of opinion which is given by the secretary is submitted to the Council of Military Education collectively?—Not upon ordinary details; each member manages them in his own branch; but all important matters are determined by, I will not say the whole of the Council, because sometimes some of the Council are away, and at other times they are engaged in examinations and other duties, but every important matter is signed by them; it is not sent by the secretary, we write in the shape of a memorandum, and the members sign that memorandum.

80. (*Lord E. Cecil.*) You said something about finance, do you regulate the finance, or is it regulated by the general board? In speaking of the communications with the Secretary of State for War you said that they simply related to finance?—Chiefly.

81. Is that the province of one particular member of the Council?—No, but questions are referred to us as to the salaries of the professors, and as to the salaries of the examiners, and so on.

82. That portion of your business is not large?—No.

83. (*Rev. W. C. Lake.*) You have said that it is one of your functions to examine officers for admission to the staff; must every officer of the staff previously go through an examination by the Council of Military Education?—No, there are certain exceptions which will appear when we come to that subject.

84. (*Brig.-Gen. Lefroy.*) Is there any minimum number of members which constitutes a quorum? During August and September generally speaking small bodies dwindle away to one or two individuals; do they then exercise the entire functions of the Council?—Yes; we have never less than two members present, and that is sufficient.

85. (*Lord E. Cecil.*) I see that in the estimates for army services eight clerks are mentioned?—Yes.

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Council of Military Education.

86. Those are of course additional to the secretary?—Yes.

87. Has each member of the Council a clerk to himself?—No; they all sit upstairs; and the clerks as a general rule take different departments. We have an immense number of returns to make out, and that is a very considerable work.

88. (*Lt.-Col. Chesney.*) With regard to the civil member, does he not see all important papers?—Yes.

89. Are you not bound one of you individually to attend all public examinations for admission to the colleges and so on; do you not take the actual supervision of them?—Yes; we attend at Chelsea. There is always one and very often there are two members at each sitting, according to the numbers to be examined.

90. How many of those examinations are there in a year in London?—We have generally four in a year for direct commissions. Then we have two examinations in a year for Sandhurst, and two for Woolwich; one for the Staff College, and one every second year for the advanced artillery class.

91. How long does the Woolwich examination take?—A fortnight, and the others take a week.

92. (*Chairman.*) I understand you to state that the largest portion of the duty of the Council relates to that branch which is not touched upon in our inquiry, namely, that referring to regimental schools, recreation rooms, and other matters connected not with the officers of the army, but with the men?—Yes. That is constant every day. Colonel Pocklington has that branch of the work, and there is no cessation to it.

93. According to the present distribution of your business how is it divided among the different members?—Colonel Pocklington takes the army schools and schoolmasters, and he is assisted in that by Sir Frederick Abbott, and Sir Frederick Abbott takes Woolwich, Colonel Hamley takes Sandhurst and the libraries and recreation rooms, and Canon Moseley and Colonel Pocklington between them also take the Chelsea Asylum and the normal and model schools there.

94. (*Lord de Ros.*) Is that what is called the Duke of York's School?—Yes. I take no branch. Of course everything is brought to me, but I do not take any particular department.

95. (*Brig.-Gen. Lefroy.*) I think that you have omitted the Hibernian School, does that follow the Chelsea School?—We have very little to do with the Hibernian School, which is in Ireland. We never go over there, we get returns from them which we embody in our annual report.

96. (*Chairman.*) With respect to the attendance and the duties of the civilian member, do you consider yourself entitled to call for his attendance at any time when you may require it, and is he bound to attend?—Yes, certainly.

97. In that event does he pay his own travelling expenses, or are they paid by the public?—He pays his own travelling expenses.

98. That is part of the arrangement made with him?—Yes.

99. Do you refer any papers to him which you may think fit?—Yes.

100. And you consider yourself entitled to call his attention to those papers?—Certainly.

101. But in point of actual attendance his duties are of a much less laborious character than those of the military members of the Council?—Yes.

102. (*Lord de Ros.*) Does Canon Moseley take any part in Colonel Pocklington's business, that is to say, as to the regimental schools and recreation rooms?—No, they are chiefly details which do not require it; they are matters of routine.

103. (*Chairman.*) His Royal Highness the Commander-in-Chief is President of the Council?—Yes.

104. Do you consider that you send your papers and reports to him in his capacity of President of the Council, or in his capacity of Commander-in-Chief?—In his capacity of Commander-in-Chief.

105. Does any of the business of the Council come before His Royal Highness in his capacity of President?—Occasionally; when we are meditating any change involving a principle, I go to his Royal Highness and talk to him about it first. I go to him as President of the Council.

106. The members of the Council are, I believe, appointed by the Commander-in-Chief with the concurrence of the Secretary of State for War?—Yes.

107. It would not be correct, I think, according to the existing regulations, to describe the Council of Military Education as a department of the Horse Guards; you are entirely separate both from the Horse Guards and from the War Department, are you not?—To a certain extent we are separate, but we are intimately connected with the Horse Guards. For instance, our correspondence with regard to the soldiers' schools goes to the Adjutant-General.

108. But all important recommendations of the Council, especially those affecting the education of officers and any proposal to change the regulations either as to age or as to the standard of examination or the principal details of examination, though submitted by the Council to the Horse Guards, would require to be forwarded to the War Office, and to receive the concurrence of the Secretary of State for War before they could be acted upon?—Certainly.

109. It is in that sense, I suppose, that you stated that you had very little communication with the Secretary of State for War?—Yes; because we report through the Military Secretary to the Commander-in-Chief.

110. But the Secretary of State for War has a full knowledge of all your important decisions, and a full control over any changes which you might propose to make?—Certainly.

111. Is it not a fact that if any important changes were to be proposed by the Council it is probable, and in accordance with the practice which has generally existed, that the Secretary of State for War would put himself into personal communication with the Vice-President himself, and with other members of the Council, and would discuss the matter fully with them?—Yes; the Secretary of State for War has on occasions met the Council at the Horse Guards in the presence of the Commander-in-Chief, and has discussed the points. For instance, the proposed alteration of the age for admission to Sandhurst and Woolwich was discussed by the Council in the presence of the Secretary of State for War and the Commander-in-Chief.

112. (*Lord Northbrook.*) By whom must a letter from the Horse Guards be signed for you to consider it to be a sufficient authority upon which to act?—By the Military Secretary.

113. (*Rev. W. C. Lake.*) You have spoken of your recommendations as to examiners being generally accepted by the Horse Guards?—They are always accepted.

114. Then, in fact, you are the appointers of the examiners?—As a matter of right we have no authority of our own, we only recommend; but as a matter of fact our recommendation is always accepted.

115. When an examinership falls vacant do you consider that that is an appointment which naturally comes to you to make?—Certainly.

116. In fact the Commander-in-Chief leaves such appointments in your hands?—Yes.

117. (*Chairman.*) Would it be correct to describe your duties towards the military colleges and institutions for military education as duties of inspection and superintendence, and not executive duties?—Yes.

118. And would it also be correct to describe your relations to the Commander-in-Chief and the Secretary of State for War as the relations of advisers?—Yes.

119. If any proposal were to be made to you from either of those departments with reference to any change which might be in contemplation, you would feel it to be your duty freely and unreservedly to give your advice upon it?—Yes.

120. You stated, I think, that minute papers from

the War Office were occasionally sent to you for your opinion?—Yes.

121. Therefore it is not a necessary practice that if the Secretary of State for War seeks your opinion he should obtain it through the Military Secretary?—No, he is not bound to go to the Military Secretary.

122. He has free communication with you upon points upon which he wishes to refer to you?—Certainly.

123. (*Lt.-Col. Chesney.*) Has there not been lately an instance in which you have recommended the appointment of a professor, where an appeal has been made to the Horse Guards against the recommendation without success?—Yes.

124. An attempt has been made to appeal direct to the Horse Guards against your recommendation, and still your recommendation has had its full effect?—Yes.

125. (*Chairman.*) From what quarter was the appeal which has just been alluded to made?—It was made by an instructor who thought that he had a claim to an appointment for which we had recommended another person.

126. (*Brig.-Gen. Lefroy.*) Is there any question on which the Council of Military Education might say, "This ought to have come to us through the "Horse Guards, and therefore we will not reply to "you?"—I do not think so; that has never occurred to me.

127. (*Lord E. Cecil.*) Am I to understand that no instructions of any sort have ever been issued, either upon that point or upon any other, since the first formation of the Council of Military Education?—There is nothing, that I am aware of, in the shape of a warrant or memorandum, exactly defining the duties of the Council of Military Education. They first began
dix, p. iv. under a minute of the Horse Guards dated 22nd April 1857, which directed them to inquire into certain points connected with the college at Sandhurst and the Staff College, and the whole system of examination for direct commissions in the army.

128. That is an instruction as to the duties of the members, is it not?—Yes, on that particular occasion, but our duties have increased. They are not limited now to the objects of that first memorandum, in fact it is not a permanent memorandum, and it cannot be considered as a permanent definition of our duties.

129. Do you mean to say that as fresh duties have been placed upon the shoulders of the Council no fresh instructions have been issued?—Our duties have grown up by degrees; they were not settled in a day. For instance, first of all we had nothing to say to Woolwich, and then at a later period Woolwich was put under us, and the army schools were also put under us.

130. At the time when Woolwich and the army schools were put under you, were no instructions issued to you as to your functions and as to the particular nature of the powers which you were to have over them?—We received a letter from the Military Secretary telling us that we were to undertake such and such duties with regard to them. I could easily ascertain in the office what instructions we have received from time to time. I have no doubt that when the army schools were transferred from the War
dix, p. v. Office to the Council of Military Education there must have been a letter to that effect.

131. (*Chairman.*) I believe that Captain Greentree has been all along secretary to the Council of Military Education?—Yes.

132. It may be somewhat difficult for you to answer these questions off-hand, as they relate to a period before the date of your first connexion with the Council of Military Education?—Just so.

133. I think, however, that we can obtain full information upon the subject and the documents from Captain Greentree, who has been all along secretary to the Council of Military Education?—Yes.

134. (*Lt.-Col. Chesney.*) You have spoken of your correspondence being uncertain. Have you not a good deal of correspondence with those persons who act as superintendents of the studies at the three colleges? Does not every alteration in the studies come under your cognizance?—Yes.

135. And your advice is taken upon it?—Yes.

136. Does not that involve a good deal of correspondence?—Not much.

137. (*Sir C. Russell.*) Do you consider that the position of His Royal Highness the Duke of Cambridge as President of the Council of Military Education is purely honorary?—Yes, I consider it as purely honorary, inasmuch as all questions must come before him as Commander-in-Chief.

138. I understood you just now to say that if a minute of either inquiry or suggestion came to you direct from the War Department you should not consider it necessary to submit it to the Commander-in-Chief. The bearing of my question is to this effect, namely, to know whether in his capacity as President of the Council of Military Education you would not think it incumbent upon you to submit such minute to him?—If it was upon an important point involving a principle I should consider it my duty to consult His Royal Highness as President, but not upon a trivial matter.

139. Therefore you do not draw much distinction between his position as President of the Council of Education and his position as Commander-in-Chief. Of course I perfectly understand that it is very difficult under the present circumstances to separate the one position from the other where they are combined in one individual; but supposing that it so happened that the Commander-in-Chief was another individual from the President of the Council of Military Education, I presume that there would be certain duties incumbent upon him as President?—If the President was not Commander-in-Chief of course he would attend at the Council and take his share in the work, in the consultations, and everything else.

140. (*Chairman.*) But His Royal Highness is President not as the Duke of Cambridge, but as the Field Marshal Commanding-in-Chief?—Precisely.

Examination for direct commissions.

141. Will you now give the Commission information with respect to the system under which direct commissions are conferred in the army, so far as regards the educational requirements. What are the regulations under which the examinations for direct commissions take place?—The regulations are those dated 1st January 1867, by which the examinations of candidates for direct commissions are directed to be held in London at such periods as the exigencies of the service may require, and to be conducted under the direction of the Council of Military Education by examiners appointed for the purpose. The number of candidates summoned to attend each examination is also limited to the requirements of the service. The age of candidates examined for direct appointments is from 17 to 20 years for the infantry, from 17 to 22 years for the cavalry, and from 17 to 26 years for the colonial corps. No candidate is allowed to be examined in more than five of the following subjects; namely, the classics, mathematics, English language, modern languages, history and geography, natural sciences, experimental sciences, and drawing. Of these subjects a certain portion of arithmetic, algebra and Euclid, and a qualification in English are necessary. The other three subjects are selected at the option of the candidate from the above-named ones. Upon the five subjects of examination a total of 1,500 marks must be gained for qualification. Students at the universities who have passed the examination necessary for taking a degree in arts are qualified for a commission by purchase without being required to pass the foregoing examination, provided they are within the limits of 17 and 23 years of age for the infantry, 17 and 25 years for the cavalry, and 17 and 28 years for colonial corps.

142. Will you state to the Commission how the examiners who conduct this examination are selected?—The Council have selected them from the information which they have obtained of their qualifications.

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Examinations for direct commissions.

We have a very high class of men as examiners; our object has always been to obtain men of undoubted ability and independence.

143. Do gentlemen apply to you for the office?—Yes, occasionally; we keep a list of applicants.

144. Do you also make selections without application?—All the civilian examiners were appointed long before I joined the Council, so I hardly know the details of how they were selected.

145. Is a vacancy made known in any way when it occurs among the examiners?—No, I do not think so; but I am not quite certain upon that point. We have had no examiners appointed since I have been at the Council, except a few military men whom we knew ourselves.

146. Do you appoint the examiners *durante beneplacito*, or do you appoint them for each examination, but as a rule from those who have previously exercised the functions?—We have a staff of examiners whom we employ in rotation upon these examinations.

147. You do not, therefore, always employ for direct commissions the same examiners?—No; we have two examiners in almost every subject.

148. Have you a list of the examiners at present employed by the Council?—I have.

149. Will you put it in?

The witness delivered in the same, which is as follows:

EXAMINERS.

Mathematics.—The Rev. Canon Heaviside, M.A., Canon of Norwich. The Rev. W. N. Griffin, M.A., late Fellow and Tutor, St. John's, Cambridge.

Classics.—The Rev. Osborne Gordon, B.D., late Censor of Christchurch, Oxford. Professor Rawlinson, M.A., Camden Professor of Ancient History, Oxford.

English.—G. W. Dasent, Esq., D.C.L. W. Stebbing, Esq., M.A., Fellow of Worcester College, Oxford.

French.—Monsieur Esquiros. Monsieur Savoye.

German.—Professor Max Müller, M.A., Taylor's Professor of European Languages, Oxford. The Rev. C. Schöll, Phil. Dr.

Hindustani.—Professor J. Dowson. The Rev. W. D. Maclagan, M.A.

Experimental Sciences.—Professor Liveing, M.A., Professor of Chemistry, Cambridge. Professor Abel, F.R.S., Chemist to the War Office.

Natural Sciences.—Professor Morris, F.G.S. H. W. Bristow, Esq., F.R.S., F.G.S.

Drawing.—Lieut-Col. H. Scott, R.E. The Rev. W. Kingsley, B.D., late Fellow and Tutor, Sydney Sussex College, Cambridge.

Italian.—C. De Tivoli, Esq.

Spanish.—Senor Vives.

Dutch.—Rev. Dr. Gehle.

Portuguese.—Le Chevalier da Costa Ricci.

Modern Greek.—The Rev. N. Morphinos.

Danish.—The Rev. J. Plenge.

Military History.—Major G. P. Colley, 2nd Foot.

Fortification and Practical Geometry.—Lieut.-Col. Hutchinson, R.E. Major Milman, R.A.

Military Administration.—Major M. Petrie, 2-14th Foot.

Persian.—Colonel Ouseley.

Military Legislation.—Colonel J. H. Laye, D.J.A.

Artillery.—Major C. F. Young, R.A.

150. Is that a list of the examiners employed, not merely for examinations for direct commissions, but also for other examinations which are conducted under the Council?—It is for all the examinations conducted under the Council.

151. Will you state to the Commission what is the object which you have in view in this examination; I mean whether it is to ascertain that the candidates have received the general education of a gentleman or whether it has any bearing upon strictly professional subjects?—The object is to ascertain that a candidate for a commission has received the usual education of a gentleman; it has no bearing upon professional subjects.

152. Do you believe that the present course of examination is such as a young man of ordinary ability ought to be able to pass after having been educated at one of our public schools?—I do, and for this reason, that the standard of examination was arranged by the Council after consulting the head masters of all the public schools, and it is now even lower than what these gentlemen considered might be fairly required from a youth of 16 educated at one of their schools without the intervention of a private tutor.

153. At what time did that consultation with the heads of public schools take place?—The 22nd of May 1857 is the date of the circular letter signed by General Cameron.

154. Has any communication ever been held with the head masters of public schools since that time with reference to this examination?—No, not that I am aware of.

155. As a matter of fact do you believe that the majority of candidates who come up for examination for direct commissions do come from public schools without passing for a time through the hands of what is called a private tutor, or is a resort to the practice of private tuition usual before they come up for this particular examination?—They almost all go to private tutors previously to coming up for examination; there are hardly 5 per cent. who come up direct from the great public schools. Ret

156. Can you explain why that is?—I fancy that it is because we admit so many subjects of general knowledge which are not taught at public schools, and therefore a boy who is not very well up in them goes to a "crammer" for a few months in order to get up those particular subjects, such as history, geography, chemistry, and geology, subjects which can be crammed up, and he would rather trust to them than to the little knowledge of Latin and Greek which he has acquired at a public school.

157. But those subjects, I believe, are not obligatory?—No; a small portion of mathematics and a very little knowledge of English is all that is obligatory, but then the candidates have to make up so many marks in other subjects.

158. Could they pass an examination without going up at all in those subjects with respect to which you say that they resort to private tutors?—If they know classics they can get 3,600 marks in classics alone.

159. Then they could pass?—Yes; they ought to be able to pass by knowing classics and mathematics and English alone.

160. What is the minimum number of marks required for passing?—1,500 marks.

161. When you say a small portion of mathematics, what amount of mathematics do you mean?—In mathematics 1,200 marks are given for arithmetic, including vulgar and decimal fractions, proportion, extraction of the square root, and simple interest; algebra, including fractions, simple equations, and questions producing them; and the first three books of Euclid. Out of those 1,200 marks 400 are required for qualification, and of those 200 must be obtained in arithmetic.

162. That is to say that provided a candidate obtains 400 marks for any of those subjects in mathematics to which you have just alluded, of which 200 must be obtained in the arithmetical subjects, he may make up the remaining 1,100 marks required for the minimum by a knowledge of Latin and Greek and English?—200 marks are obligatory in English.

163. Together with 200 marks in English, the rest may be made up by the marks obtained in the classics?—Yes. Then I may as well point out that if a candidate makes these 400 marks in arithmetic alone it qualifies him; he may know nothing of algebra or of Euclid, but if he can make 400 marks in arithmetic alone out of the 1,200 it is sufficient.

164. So that in truth a knowledge of arithmetic, of English, and of Latin would be quite sufficient to enable a youth to pass?—Certainly.

165. Have you any alterations or improvements to suggest with regard to the examinations for direct commissions?—None.

166. You think that they are altogether satisfactory?—Yes.

167. Can you tell the Commission what proportion of failures take place at these examinations?—31 per cent. fail for direct commissions. Retu p. cx

168. How often is a young man allowed to go up in the case of failure?—Three times.

169. Are the 31 per cent. entire failures, or are they the failures at the first examination, after which, therefore, a further opportunity is given?—They are the failures at each examination.

170. What is the per-centage of those who fail entirely, that is to say, of those who having been given every possible opportunity fail altogether?—I do not know; very few fail altogether.

171. Over what period is your 31 per cent. of failures calculated?—Over 10 years. p. clix.

172. Is the rule that after three failures a candidate is not permitted to go up again invariably adhered to?—Invariably.

173. Of course if before he has gone up three times he has grown older than the prescribed limits of age, that would also be a bar to his going up?—Certainly.

174. Have you any opinion to express with respect to the present limits of age?—I would reduce the limits of age for direct commissions and make them as follows: for the infantry from 17 to 19, for the cavalry from 17 to 20, and for the colonial corps from 17 to 25.

175. What is your reason for wishing to reduce the age?—Because I think that in these days officers enter the army at too advanced an age.

176. You would reduce the higher limit, leaving the lower limit as it is now?—Yes.

177. Do you think that it is an advantage to retain a specially high upper limit in the case of colonial corps?—It is an advantage to the individuals. I do not think that it is any advantage to the service.

178. But of course the number of cases to which it applies is very limited?—Yes, it does not much matter. It is sometimes a convenience to a man to get into the army at an advanced age. The age of the candidates from the universities I would propose to leave as at present.

179. Would you do so because you consider that it is an advantage to get into the army a certain number of men who have been at the universities?—Yes.

180. (*Lord E. Cecil.*) You stated that hardly five per cent. of candidates who came up for examination came direct from public schools?—Yes.

181. And you also stated that it was in general subjects of education that they failed?—Probably.

182. Can you give any reason for that?—They are not sufficiently prepared.

183. Then you think that the education which is given at our public schools is faulty so far as preparation for military education is concerned?—I consider that if a candidate cannot come up direct from one of the public schools for examination upon a course which was laid down with the full sanction, and even less than what was laid down with the sanction, of the head masters of those public schools, there must be some defect in the instruction.

184. What proportion of that five per cent. fail?—I do not know.

185. If any such return could be furnished it would at all events give one a very fair impression of whether the preparation was good or not. There might be other reasons for their not coming up?—I should think that probably none of those five per cent. fail, but I do not know. s, p. clix.

186. Do you not think that the reason why the candidates do not come straight up from public schools very much depends upon the custom and fashion of the day, that amongst some parents and guardians it may be thought a preliminary to entering the army that the youths should be sent to other establishments than public schools?—I think that it arises entirely from the feeling that they are not certain of passing the examination, and they like to go to these private tutors, who tell them that they are sure to pass them because they are accustomed to the style of examination and are able to prepare them for it.

187. If I understand you rightly, the subjects are so very simple, namely, Latin, English, and arithmetic, that one would suppose that no preliminary preparation at what are generally called "cramming" schools would be at all necessary?—That is what I say. If a boy has a tolerable knowledge of classics and arithmetic and English, he ought to be able to pass that examination direct from school.

188. Do you know anything of military classes being established at public schools? Has that come under your notice in any way?—There are what are called modern classes at some of the public schools, at Cheltenham and at Marlborough, for instance. Examinations for direct commissions.

189. Have you observed that the candidates coming from Cheltenham or Marlborough have invariably or generally passed?—They almost always pass.

190. Then it would be your opinion that modern classes such as are established at Cheltenham and at Marlborough would be beneficial in the other public schools?—They would be so far beneficial that they would probably ensure a candidate passing our examination.

191. That is of course in a military sense?—Yes, but I am not an advocate for giving what is called a modern education to the detriment of a classical education.

192. I am simply speaking with regard to the examination which the candidates have to pass. You think that such classes would be a benefit in the preparation of candidates for the examination?—They would be a benefit to the individuals who came up for examination with regard to that mere examination; they would no doubt enable candidates to pass.

193. Of the 31 per cent. who have failed in the examination, you think that the majority, if not all of them, have probably come from what are commonly called "cramming" institutions?—Yes, almost all the candidates come through the "crammers;" there are 95 per cent. who do not come direct from public schools.

194. Can you state what proportion of the 95 per cent. come from cramming schools?—I do not know; we only know it as "private tuition." There is written opposite the candidate's name that he comes from "private tuition." We get it in this way: "Harrow and private tuition," "Eton and private "tuition;" that means that they have been brought up at Eton or at Harrow, and have been for two or three months with a private tutor afterwards.

195. There is such a thing as a boy being brought up entirely under his father's roof, and there is such a thing as a tutor having two or three young gentlemen to instruct?—We have no means of knowing that.

196. Do you find that any young men come from schools abroad, from France or Germany?—Yes, there are some.

197. You would not put those under the head of "cramming" establishments?—The figures which I have given you show that there are something under five per cent. who come direct from our great public schools; all the others do not come from private tutors, because some come from Wimbledon, or from other schools, and some come from abroad.

198. Then it is hardly correct to say that 95 per cent. are from private tuition?—No, I do not say that.

199. Is it obligatory upon the candidates to put down the places at which they were educated?—No. For instance, for Sandhurst we get no such returns; we do for Woolwich, and we do for the direct commissions, but not for Sandhurst. I do not know why. Returns, p. clix.

200. I am now only asking as to direct commissions; do you classify the candidates coming up for direct commissions, do you make them state where they were educated? I think that that is rather an important matter, because a great deal has been said as to these cramming institutions, and I should like to know the number of candidates who come from these cramming institutions, and the number who fail, and the number who come from abroad or from

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Examinations for direct commissions.

private schools?—I am afraid that we have no means of giving the Commission that information, because we have often merely the words "private tuition."

201. Will you define what you call a public school in the sense of your five per cent. ?—We take Eton, Harrow, Rugby, Westminster, Winchester, Shrewsbury, Marlborough, and Cheltenham.

202. In the case of the candidates coming up from Scotland (of which I suppose there are not very many) with a purely Scottish education, how do you classify the education? I suppose that in the common acceptation of the term the schools in Scotland would not be called public schools at all; do you call it private tuition in the case of everybody who has been brought up at a Scotch school or at a Scotch university?—From the Scotch universities they do not come to us; they get their commissions from the Scotch universities upon passing their degree.

203. But there are such schools?—There is the High School in Edinburgh, and others.

204. You would not, I suppose, look at those schools in the light of public schools, but would put them under the head of private schools?—This return has been made out solely with reference to the public schools above mentioned.

205. With regard to the candidates who come from the universities, of course they are not examined at all?—No, we know that the examination which they pass is much higher than any examination for a direct commission.

206. I believe that at one time a knowledge of fortification was required, was it not?—Yes.

207. Why was that abandoned?—Because the Council found that what was taught as fortification in private schools was mere rubbish, and they came to the determination that it was better to base the examination upon general education without any technical education whatever.

208. Then it is quite your opinion that general subjects of education are infinitely preferable for that purpose to anything which may be called purely military?—Certainly.

209. Can you state what number of candidates pass in the year, and what number of commissions are given by purchase?—The number of candidates whom we have examined, I think, averages 500 a year, out of which 31 per cent. have failed; you must deduct that per-centage.

210. (*Lord Northbrook.*) I believe that in the first examinations for direct commissions which were held the minimum standard of qualification was very much higher than it now is?—In the first examinations a minimum was required upon each subject, and if the candidates failed in any one of those subjects they lost their examination.

211. Then changes were introduced, lowering the standard?—Yes, we have always been lowering; that has been our tendency.

212. At the beginning of the examinations, even under the present system, was the minimum number of marks the same as now? In 1858 the total number of marks required was, I think, 1,800?—It has since been altered; we previously allowed the candidates to be examined in more subjects, and when we reduced the number of subjects to five we were obliged to lower the aggregate.

213. Reducing the minimum from 1,800 to 1,500 marks would lower the standard, would it not?—No, because we limited the number of subjects at the same time.

214. If you look at the Horse Guards Regulations of the 2nd of August 1858, I think you will see that the number of subjects then was precisely the same as the number of subjects now; I find no difference?—In those days we allowed the candidates to be examined in eight subjects.

215. If you look at those regulations I think you will find no difference excepting that the number of marks required to be obtained is now 1,500, and it was 1,800?—Under that regulation candidates were allowed to be examined in eight subjects, but we now only allow them to be examined in five subjects, and that is the reason why we have reduced the number of marks.

216. So that the minimum qualification is about the same?—Yes.

217. With regard to the failures, have you taken the failures since 1858, or do you include those cases in which the standard was higher?—No; they begin in 1858.

218. Has the number of failures diminished in later years, or is the average about the same all through?—I have not made out that calculation, but it could very easily be made from the return.

219. Have the candidates improved or not?—They have improved. All our examiners tell me that they now come up better prepared.

220. Referring to the first report of the Council of Military Education, at page 6 I find that at the examinations which were held in the last quarter of 1857, 95 candidates passed and 92 failed; that subsequently to that the standard was reduced, but that still in the examinations which were held in the first quarter of the year 1858, 173 candidates passed and 102 failed; that then the standard was again reduced, and that subsequently the failures have been in a less proportion, as shown by the statistics which you have produced to the Commission. Is that so?—Yes, that appears to be so.

221. With respect to those portions of the examination which are now obligatory, I see by the original report of the Council that the reason why a knowledge of mathematics is to a certain extent made obligatory is that "a thorough knowledge of arithmetic is an in-"dispensable qualification for a regimental officer;" do you consider that a sufficient reason for making it obligatory?—Certainly.

222. But is a regimental officer required to do more than is comprised within the ordinary four rules of arithmetic?—I think that an officer certainly ought to know arithmetic and something of Euclid.

223. The words are "a thorough knowledge of "arithmetic is an indispensable qualification for a "regimental officer;" do you consider that a regimental officer would require to extract square root?—No, I suppose not.

224. Or to do algebra?—No, I do not know that he would.

225. Or Euclid? Would a regimental officer ever be required to know any of the propositions of Euclid?—I beg to observe that the examination is not based upon any consideration whatever as to what is requisite for an officer; it is merely a test that he has received a certain general education.

226. Still the reason why this branch is made obligatory is, as I find, because the Council of Education think that "a thorough knowledge of arithmetic is an "indispensable qualification for a regimental officer;" and I wanted to ask your opinion how far it should be pushed and what knowledge of arithmetic is absolutely necessary to enable a man to perform the duties of a regimental officer?—I did not write that report; it was made long before I had anything to do with the Council, so that I am not in any way bound by it.

227. How much knowledge of arithmetic is necessary for a regimental officer?—He ought, of course, to have a sufficient acquirement of arithmetic to be able to keep the accounts of the men in his company, and their savings' banks account. As far as his mere requirements as an officer are concerned, I suppose that is sufficient.

228. Would you go further than the first four rules in arithmetic?—Yes; he would be a very ignorant officer if he could not do more.

229. (*Brig.-Gen. Lefroy.*) Would you not add to his requirements the checking of the mess accounts?—Yes.

230. (*Lord Northbrook.*) Does the checking of the mess accounts require any knowledge of arithmetic further than the first four rules?—No; I suppose

that all the mess accounts could be solved by the compound rules.

231. Have not many men been promoted from the ranks, and as adjutants been very good regimental officers?—Yes.

232. Do you suppose that their knowledge of arithmetic and of mathematics was high?—I suppose not.

233. I am not disputing that the amount of qualification in this minimum is at all large, but I am merely asking you whether it is necessary as an obligatory part of the examination?—I myself would not reduce it.

234. Taking, again, the question of English language, I do not find in these reports any of the examination papers relative to English language. Can you state what examination papers are set as to a knowledge of the English language?—The candidates are obliged to write from dictation, and they answer questions upon English grammar, and then write an essay.

235. Have you any of the questions which are put?—I dare say that there are some here.

236. Will you have the kindness to put in some of the last papers of examination for direct commissions?—I will do so.

237. Upon the question of a knowledge of English language, in making English language one of the subjects I presume that it is intended that a man who enters the army should at any rate be able to write a decent letter in English, and spell properly?—Yes.

238. Would not that be sufficiently met by limiting the obligatory part simply to writing English correctly from dictation, as is the case in examinations for the Royal Navy?—I do not think that it would. A man may be able to write from dictation, and not be able to write an original report properly.

239. Do you think that it is necessary that every officer who enters the English army should be able to write, for example, an essay?—Not an essay, but he ought to be able to write a report upon a military operation.

240. You would make it obligatory that he should be able to describe any circumstances which had happened to him in an intelligible letter spelt properly?—Yes; and that is very much the nature of our examination. The candidate has an essay to write; a very common question is this, "Write a letter to a "friend describing a boat race," or "describing how "you passed your vacation," or "describe some town "which you have visited." That is the sort of essay we give.

241. But at the same time there must be some papers with very much more difficult questions contained in them, must there not?—This not being a competitive examination we do not put difficult questions. If you have a competitive examination you must put difficult questions, but where it is only a qualifying one there is no such necessity.

242. With respect to another point, namely, a knowledge of French, do you consider that a knowledge of French is a very important thing to officers in the English army?—Yes, very important.

243. I believe that in the Crimean war most of the officers were ignorant of French?—I have no knowledge upon that point.

244. But you consider that that is a very essential point in the education of an officer in the English army?—I think that it is a great advantage to an officer to know some foreign language, either French or German.

245. Do you see any reason why a knowledge of French should not be made one of the obligatory points required on entering the army?—That would make it more difficult to get officers; you would get fewer men into the army.

246. Is not French now taught at all our public schools as a part of the school education?—I am not aware.

247. You are perhaps aware that French is a necessary qualification for any officer entering the navy, and can you state what reason can be given for making a difference between the two services?—The navy are constantly abroad, and I should presume that it is absolutely necessary for an officer in the navy to know French.

248. You know that officers of the navy enter at a younger age than officers of the army?—Yes.

Examinations for direct commissions.

249. Is it any greater hardship to ask a young man of from 17 to 20 to have a knowledge of French than to ask a youth of from 13 to 15 to have such a knowledge?—I am opposed to any increase of the difficulty of the examinations for direct commissions; as it is we have some difficulty in getting the candidates through, and if we increase the standard we shall have more difficulty.

250. I hold in my hand one of the examination papers for direct commissions in 1859?—I would rather take a more recent one.

251. The drift of the questions which I have been putting to you is whether the amount of the obligatory portion of mathematics might not be reduced, and whether the amount of the obligatory portion of English language might not be reduced, and at the same time some knowledge of French be introduced as one of the obligatory portions of the examination on entering the army?—That would require more consideration than I am at this moment able to give to the point. French used to be one of the obligatory subjects, and the Council of those days did away with it.

252. (*Lt.-Col. Chesney.*) As only five per cent. of the candidates are said to come direct from the public schools, supposing that there were no obligatory marks required in English and mathematics, would there not be a much greater proportion of candidates from the public schools?—Probably.

253. If French were made an obligatory subject, would it operate in an opposite direction?—I should say so.

254. Can you tell us what proportion of the 31 per cent. of candidates who have failed, have failed in the obligatory portions of English and arithmetic or mathematics?—I can furnish that return.

Returns, p. clx.

255. Do you consider your examinations as following the course which is taken by public schools and schools generally, or do you look upon it as desirable to lead up the candidates to any particular mark? Do you conform your examinations to what they think right, or are they obliged to come up to your particular standard?—We based our examination upon asking the head masters of the public schools what they fairly thought we might call upon the young men of 17 who had been educated at their schools to pass, and upon their answers the system was laid down, and it is less than what most of them said might be expected.

256. Is it not the case that a lad may now pass for a direct commission without knowing anything whatever of Euclid?—Yes.

257. Are you aware that to enter the highest form at Harrow at present there is an examination in Euclid?—I do not know anything about that.

258. (*Brig.-Gen. Lefroy.*) Following out the exhaustive process, it seems proveable that no one qualification whatever is necessary to make a good officer; is there any qualification except reading and writing, which is so indispensable that the total absence of it may not be compensated by high qualifications in something else?—I think that an officer must know arithmetic.

259. I except that. Is there any qualification which is so indispensable, such as fortification or anything else, that the entire absence of it may not be compensated by eminent abilities or knowledge in something else?—For the performance of the mere routine of regimental duties I suppose that a very little knowledge of anything would suffice for an officer, but I should be very sorry if the officers of the British army were so ignorant.

260. We will suppose that an officer has a particular talent for drawing, or a particular eye for ground; are not the requirements of military service such that no educational acquirement is so far in-

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Examinations for direct commissions.

dispensable that the absence of knowledge upon a particular subject may not be made up to the public service, as to the military value of a man, by his talents of a different description; and therefore in one sense not one of these obligatory subjects as you term them is necessary for the efficient performance of military duty?—I think that the obligatory subject of arithmetic and Euclid is indispensable as an exercise to the mind for everybody who can pretend to have been educated at all; I think that the State has a right to expect that the officers who join Her Majesty's army shall have received the ordinary education of an English gentleman, and I consider that the ordinary education of an English gentleman embraces the subjects which we have put down here.

261. Is it not the case that in every examination a portion of the young men obtain 6,000 and even a larger number of marks?—Yes.

262. And on the other hand a considerable number fail because they cannot get 1,500 marks?—Yes.

263. That is, although the masters of public schools 10 years ago considered 1,800 marks the number which ought to be obtainable by boys coming direct from those schools?—I do not think that they said anything about marks. It was the subjects. I do not think that we asked them about the number of marks.

264. The examination being as you have stated purely qualifying, and the scale of qualification being such that one boy gets four times as many marks as another, there is still something in my opinion to be explained, why young men from public schools are unable to come up to that low standard of qualification without the intervention of private tutors?—I cannot explain it. I must leave it to the public schools to explain that.

265. Would it be possible to give a return of the proportion of failures to candidates from certain public schools? For instance, if Eton puts forward 10 boys and passes ultimately eight of them, that is a much more creditable thing than a master who puts forward 40 boys and passes 10 of them?—Yes.

Returns, p. clix.

266. (*Sir D. A. Cameron.*) Do you think that the first four rules of arithmetic, simple and compound, are sufficient to enable an officer to perform all his regimental duties? Can he keep the accounts of his men, for instance, without a knowledge of fractions, or can he keep his savings' bank account without a knowledge of simple interest?—No, I include fractions as a part of the four rules; proportion of course must be required.

267. And interest?—Yes, for the savings' banks accounts.

268. Do you not think that a knowledge of the first three books of Euclid is very advantageous to an officer?—Yes.

269. In enabling him to understand, for instance, the movements of a battalion or of a brigade. I do not mean to say that it is absolutely necessary, but would it not enable him to understand them better?—Certainly.

270. Can he read any work upon field or permanent fortification without having some knowledge of mathematics?—I should say not with advantage to himself.

271. (*Lord de Ros.*) Have you never seen an experienced officer, an adjutant, who was perfectly ignorant of mathematics, manœuvre a regiment admirably well?—I suppose I have.

272. As regards the accounts of companies, in practice do not the pay serjeants arrange the fractional payments?—I do not think so in well regulated regiments; at any rate every officer should be able to keep his men's accounts.

273. Have you never met in the examinations with young men of some capacity in other respects, but who were quite incapable of acquiring mathematical proficiency?—Yes, some young men, I believe, are incapable of acquiring mathematics; I suppose therefore that such persons might not be able to acquire what we demand of them, but I cannot tell, I have no data on which to form a specific opinion upon that point.

274. May not the cause of parents deeming it advisable to send their sons to "crammers" be attributable to the particular style of examination, which the public schools do not meet, but which the crammers have specially studied?—Yes; no doubt they are induced to send their sons to these crammers in order that they may learn these subjects, because they have not learned the subjects which the public schools profess to teach them.

275. May not the failures of the boys in examination be often attributed to the absence of sufficient explanation of the questions?—I think not, the examiner is always present and ready to explain any doubtful point.

276. Has the candidate immediate access verbally and directly to any one to explain the question before him?—He has instant and immediate access to the examiner who sets the question.

277. You said that the public schoolmasters had been consulted as to the amount of instruction, would they not be rather inclined to overstate that amount in order to represent their schools as being better than others?—I think not, from the character of the head masters of those schools; they are all men of high character.

278. Could not any boy sent to a *pension* in France acquire an amount of practical and useful French in two months?—I should say not, unless he knew somethink of it before.

279. (*Rev. W. C. Lake.*) Your examination is intended to ascertain whether the candidates have had the ordinary education of a gentleman?—Yes.

280. And therefore you fix upon those points which are common points of teaching in public schools, that is the principle upon which you go?—Yes.

281. And speaking generally you take a very low standard, do you not?—Yes.

282. Will you explain a statement which you have made, namely, that you have been always lowering your standard? I think that you afterwards said that you believed that the examiners thought that the young men of late years had improved?—When I said that we have been always lowering the standard, I perhaps had better qualify that expression. We were obliged to lower the standard from the original standard which was established; we found that so many candidates failed that we lowered it in this way, namely, that we instructed our examiners to be easier and to mark more liberally, and not to be so strict; that is how we lowered it.

283. When did you do that?—I do not know, it was before I came to the Council. I could get the date.

284. (*Chairman.*) It was some years ago?—Yes.

285. (*Rev. W. C. Lake.*) Taking the very low standard of your necessary requirement, you find that 30 per cent. of the candidates have failed every year in even attaining that low standard?—Yes.

286. And about 95 per cent. of those who succeed go through cramming schools as they are commonly called?—Yes, or private schools.

287. Can you give any estimate of what is the proportion of what are called cramming schools?—No; because we have no return of that; the return which we have says "Private tuition," it does not always mention any particular place of education.

288. What proportion of candidates do you believe have gone to those cramming schools?—I believe most of them.

289. What is your impression with regard to the general tone which is prevalent at cramming schools?—I have no personal acquaintance with any of them, but my general impression is that there is an entire want of discipline in the majority of those places.

290. It is likely that many of these schools would be in London, and in the neighbourhood of London?

—London, Blackheath, and Woolwich, and all round.

291. Do you think that that fact and the general circumstances of these cramming schools lead to a low tone of discipline and of morals generally?—Yes, I am entirely of that opinion; that is my impression gathered from what I hear in conversation.

292. Has it ever occurred to the Council of Military Education whether they could not take a certificate of having done creditably in one of the highest forms in a public school as a substitute for an examination, with a view to rendering it unnecessary to go to a cramming school?—I have no objection to that myself. We have talked of it lately in the Council, but we are not agreed about it. Personally, I should have no more hesitation in taking a certificate from the head master of one of our great public schools than in taking a certificate from a university.

293. Perhaps you have felt it to be a difficulty that you would have to fix upon a certain number of schools?—Yes, that is one of the difficulties.

294. With regard to the universities, might it not be desirable to take a lower examination than you at present require as a step for entering the army? You now require a B.A.?—Yes.

295. Might you not be satisfied with a young man having passed his "moderations," as they are called, or even his "little go?"—Yes, provided that we had a limitation of age. I do not want to fill the army with ensigns of 25 years of age.

296. I observe that that is done in the case of admission to Sandhurst?—Yes.

297. Might it not be equally done in the case of obtaining direct commissions?—Certainly, provided that such candidates come under the same regulations as to age as the rest of the public.

298. You seem to think that at some of the schools the establishment of a modern class has had a beneficial effect upon the army examinations?—It has had the effect of passing candidates into the army.

299. Could you say that the candidates who came from those schools appear to you to be better educated (using the word in the general sense) than those who came from cramming schools; have you any impression in that respect?—I do not know as to that. We have never examined their papers with that view at all.

300. Do you know whether the boys who were at Cheltenham or at Marlborough, where there are these modern classes, afterwards went to private tuition?—I should say that it was not common for the direct commissions; I am under the impression that they come up direct to us from Cheltenham and Marlborough for the direct commissions examination.

301. Then you think that the encouragement of anything like a modern department in public schools would directly tend to diminish the candidates going to cramming schools before entering the army?—Yes. I have no doubt that it would do so.

302. (*Lord de Ros.*) Are you not aware that it is a very great objection among the cavalry commanding officers that officers should be sent to their regiments at a later age than in the infantry?—I am not able to answer that question.

303. (*Rev. W. C. Lake.*) Has it occurred to the Council to consider whether it is not undesirable to appoint the examiners for life?—We are very glad to keep them as long as we can if they suit us; it is not an easy thing to examine.

304. (*Col. Haythorne.*) Is not one of the principal reasons why parents send their children to cramming schools because they have more individual attention paid to them there than they have at the public schools?—Certainly, they are better taught; there is no doubt of that.

305. (*Brig.-Gen. Lefroy.*) Does not the permanence of the examiners give an immense advantage to the private schools as against the public schools? Each examiner has his own manner, and his own tone, and his own style of question, which becomes well known by those who teach in the private schools. Upon those grounds is it not extremely important to change the examiners from time to time?—There is no doubt that those men who make it their business to prepare candidates do become acquainted with the general style of examination of the different examiners. But whether that objection is of sufficient force to make it worth while to incur the disadvantages of frequent changes of the examiners or not, I am hardly prepared to say.

306. (*Chairman.*) You have stated that you are unable to tell us accurately what number of candidates come from these cramming schools?—Yes.

307. Because the information in your possession would only tell you those who came, say, from Harrow and private tuition, and those who came simply from private tuition?—Yes.

308. Would it not be probably fair to conclude that where it was stated that a youth had come from a public school and private tuition, that private tuition might be in a great majority of cases what has been described as a cramming school?—Certainly.

309. You have told us that the object of this examination is to ascertain whether the candidates have received the general education of a gentleman?—Yes.

310. Therefore I conclude that you deliberately do not inquire whether the subjects of that examination are of a character which would be specially useful to a man in his professional career?—No.

311. In this examination you do not look at all to what may be required in his professional career?—Not in the least, we do not consider it at all.

312. You go upon the general assumption that it is desirable that officers of the army should be educated gentlemen?—Yes.

313. If that is so I conclude that you must necessarily follow the course of education at public schools rather than attempt in any way to lead it?—Yes, I should say that we rather work up to each other.

314. But your object is to test whether these young men have received a good general education such as the public schools of the country (using the term in a general sense, and not in a narrow sense) afford?—Yes.

315. And consequently if there was a subject, such as for instance French, which was unfairly neglected in the public schools, it would be difficult for you to make it a part of the obligatory subjects until the public schools took it up in their education; is not that so?—Just so. At the same time there is scarcely a candidate who comes up to us for any examination whatever who does not take up French; almost all of them go up in French.

316. (*Lord de Ros.*) That rather shows that it is considered a part of the education of a gentleman?—Yes.

317. (*Chairman.*) You would, however, perhaps individually consider it very desirable that French should be so taken up at the public schools as to enable you to include it as an obligatory part of your examination?—Yes, I think that a knowledge of French is a great advantage to everybody in these days.

318. You were asked, with reference to the correspondence which took place between the Council of Military Education formerly and the public schools, whether it was not possible that the public schools might be inclined to overstate the standard of education with a view to raising the idea of what they themselves taught. Would not that, however, in the end have an injurious effect upon the public schools, because of course it is not to their advantage that their candidates should fail in their examinations?—Precisely so.

319. And consequently would they not have a considerable interest in not overstating what they teach?—I think so.

320. I understand it to be your opinion that there is nothing in your examination which public schools

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Examinations for direct commissions.

may not be able fairly to expect those who come from them to pass?—Quite so.

321. And that in your judgment if youths are not able to pass this examination it would be rather the fault of the public schools?—Yes, I can come to no other conclusion.

322. You stated that you had had under your consideration in the Council the idea of accepting from public schools a certificate that a boy had been in a certain class in one of those schools in lieu of his examination for a direct commission. Would it not be necessary in that case that the authorities should assure themselves, as respected each school, that there were examinations established in connexion with passing into such a class which would afford the same sort of security which the present general examination affords?—Yes, I think that that would be very necessary.

323. I mean that no certificate in that case should be accepted from a public school except after an examination?—Yes.

324. And that the mere fact that a boy was in a particular form in a public school should not be taken as conclusive, unless the Secretary of State was satisfied that there was an efficient examination in the school itself?—Yes, I think that that would be a necessary regulation.

325. Would you not, however, in that case lose one advantage which you now gain by the general examination, that is to say, an examination altogether independent of the place of education where a youth has been instructed?—Yes, we should lose that advantage.

326. Is there not in that respect a difference between such an examination in a public school and an examination in a university, the university examination I believe being conducted by general examiners?—Yes, there is that difference.

327. You stated that you would be prepared to accept the "little go" examination, or the examination for moderations at the universities in lieu of the examination for the degree of B.A.?—Yes.

328. But you said that in that case you thought that the prolongation of the limit of age ought to be done away with?—Yes.

329. In the case of Sandhurst, however, you grant a prolongation of age to the universities; why do you draw that distinction?—We are going to do away with that altogether at Sandhurst.

330. That is a proposal under your consideration?—It is a proposal which was settled by the Council and the Secretary of State for War and the Commander-in-Chief. It was ordered to be carried into execution, but it was stopped pending this inquiry. So far as we are concerned we are unanimous about it.

331. I suppose that it is possible that there might be reasons which would lead you to desire not to have older men admitted to Sandhurst which would not necessarily apply to the case of a man to be admitted into the army straight from one of the universities?—I do not want old ensigns in the army. I do not object to a few of them from the universities who are bachelors of arts, but I should have a great objection to officers of the army coming in any great numbers at an advanced age from the universities.

332. (*Sir D. A. Cameron.*) Were the obligatory subjects at the examinations for direct commissions fixed with some reference to what would be useful to an officer to enable him to perform his duties efficiently?—They may certainly have been so fixed by the original Council, but I am only speaking of what the opinion of the present Council is.

333. (*Chairman.*) The education in public schools is, as you are aware, now rather in a state of transition. Do not you think that it would be desirable that the Council should not rest upon the information which they received from the masters of public schools 11 years ago, but that it would be desirable that they should from time to time put themselves into communication with the head masters of the different principal public schools, so as to see what modifications had been made in those schools, and as far as they thought fit to conform themselves to the system prevalent there?—Yes, I think that is a very good suggestion.

334. (*Sir D. A. Cameron.*) I suppose that your examiners are in communication with the heads of public schools?—I do not know whether they are or not; they are not officially in communication with them.

335. (*Lord E. Cecil.*) What opinion has the Council of Military Education formed on the general question of the education and discipline of cramming schools?—We are under the impression that there is a great want of discipline there; that there is little or no supervision; that young men are allowed to do pretty nearly what they please; and that those schools are generally injurious to the morals of the young men. Cramm school

336. Do you speak from evidence which has come before you in any official manner?—No. Some of the members know young men who have been at these schools.

337. The Council have not instituted an inquiry into that subject?—No.

338. And they have not grounded their opinion upon facts coming officially to their knowledge?—No.

339. Are they ever asked to recommend cramming schools?—Yes; occasionally the members of the Council get private letters from parents to that effect.

340. And I suppose the individual members of the Council do that upon their own responsibility, and not upon the matured and collective opinion of the Council?—I do not know that they do recommend them. I myself always refuse, and say that I know nothing about them.

341. Have you had under your consideration any method by which a supervision might be exercised over these schools?—Yes; we drew out a plan of supervision for the information of the Secretary of State for War, at his request.

342. What was the general tenor of it?—The general tenor of it was the appointment of a Government officer who should visit any place of education where candidates were prepared for army examinations. The scheme, in general words, was the appointment of a Government inspector of all these schools or places of private tuition which voluntarily placed themselves in communication with the Government and gave them a copy of their regulations, and were approved of by the inspector and put upon a register; and the inspector was to have the power of going at any time he pleased to inspect these schools; and then the Commander-in-Chief was to be requested not to allow any candidate who had been with a "crammer" who was not so registered, to go up for examination.

343. In short the penalty for not conforming with the regulations was that the school was not to be put upon the register?—Yes; and therefore no candidate from that school was to be taken. I believe that the plan was considered quite impracticable by the Commander-in-Chief and the Secretary of State for War. I do not know positively that it was so considered. We never heard any more about it.

344. Did you consider that this inspector should merely supervise the education, or that he should supervise the discipline?—The discipline not the education.

345. It was concluded that this could not be done without an Act of Parliament?—Yes.

346. Perhaps you can inform the Commission what were the grounds which induced the Council of Military Education to come to the conclusion that an Act of Parliament was necessary?—It was on account of Woolwich. With reference to the direct examinations, and the admissions to Sandhurst there would be no difficulty, because the Commander-in-Chief nominates all those candidates; no men go up for a direct commission or for an admission to Sandhurst without a nomination from the Commander-in-Chief; but he has no power to nominate those who go up to Woolwich. Anybody can go up.

347. When the Council came to this conclusion I understand that they were induced to do so from a

belief that a resolution of the House of Commons was binding in the matter?—We thought that it would require an Act of Parliament.

348. On account of this resolution in the House of Commons?—Yes.

349. Therefore the Council came to that conclusion from an impression that the resolution of the House of Commons was binding in the matter?—Yes, we also wished to strengthen the hands of the authorities in enforcing the plan.

350. (*Chairman.*) Are you yourself quite clear that independently of the question of Parliamentary sanction, subject to the system of open competition at Woolwich, there would not be very considerable practical difficulty in the way of establishing such a supervision as you propose?—I think that all the men who conducted their establishments in a proper manner would be very glad to be put upon a register, because it would show the public that their establishments were well conducted, and it would get them pupils.

351. How do you propose to define the schools which should be put upon the register?—Of course there would be a difficulty in that. I think that the terms of our plan were that anybody professing to prepare candidates for examinations, or sending up candidates for examinations, would come under that supervision.

352. Would it not be perfectly easy for persons to establish "cramming" schools not professing to send candidates for examination?—Then we should not receive their candidates.

353. But you would receive candidates from public schools?—Certainly.

354. Not limiting the term "public schools" to the few which came specially under the cognizance of the Public Schools Commission?—No.

355. You would also receive candidates from private tuition in the sense of home tuition?—Yes.

356. Would there not be a very great difficulty in really preventing the cramming system being set up again outside your supervision if you on the one hand admitted a considerable number of schools calling themselves public schools, and on the other hand admitted candidates from what was called home tuition?—There certainly might be that danger. I see the difficulty.

357. (*Rev. W. C. Lake.*) Would it not be easy in such a case for any one professing to undertake the tuition of a young man to come up to you and say, "I wish my institution to be inscribed on your regis-"ter, and it is open to your inspection at any time"?—Yes, we should invite him to do so. Any person setting up a school, or professing to prepare candidates for any of our military examinations, would be invited to come to us and to get himself inscribed upon our register.

358. And you do not see why that could not be easily done?—There would be no difficulty in their doing it, but the difficulty would be in preventing parents under the head of education at home having their boys prepared at an unregistered crammer's instead of by private tutors in their own family.

359. (*Lord de Ros.*) Could not an outsider be defeated by the great anxiety of the parents to go to the best place?—I think that the parents would be very glad to support the people who were on our books.

360. (*Chairman.*) Your proposal would be that any place of education which chose to apply to you should be put upon the register on consenting to submit to certain inspection?—Yes.

361. Would you reserve to the Council or to the Secretary of State for War the power of striking out schools from that register if the report of the inspector was not satisfactory?—That is part of the plan.

362. Would the inspector examine both into the discipline and into the education given at those schools?—Our intention was chiefly as to the discipline, the education would be tested by the examination; it was entirely with reference to the discipline and the proper moral tone.

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Cramming schools.

363. Do you think that it would be easy for an inspector inspecting occasionally to ascertain what was the nature of the discipline of a school of that description?—No, it would not be easy, but I think that it might be got at.

364. We will take the case of a school of that kind established in London, a certain amount of liberty must necessarily be given to young men at the age at which they would go to that school?—Yes.

365. Would you think it possible that you should insist in a case of that kind that the master of the school should exercise any effective supervision over the conduct of the young men there during the time allotted to their recreation?—No, in London that would be impossible.

366. Are not a good many of these schools situated in London, and in its immediate neighbourhood?—Many of them are.

367. (*Rev. W. C. Lake.*) I suppose that you could have in a London school, and no doubt they have in the other public schools, "callings over," which limit to some extent the hours of absence?—Yes, but still you must let a boy out for some hours at a time.

368. (*Lord E. Cecil.*) If you imposed a species of military discipline upon all these "cramming establishments," would it not in effect be creating so many small military colleges?—I would not impose any military discipline of any sort.

369. But you must in effect have a sort of discipline by which a boy would be restrained, and roll calls would be instituted, and I presume that as a matter of education you might insist upon a certain amount of drill being performed, and that it would have that tendency?—No, we did not propose to enter upon anything of that sort, but our idea was that every master should send his time-table of the studies, and the hours which the boys were allowed to themselves, and especially the hours at which they were obliged to come in at night; because in some of these places they are said to be out all night.

370. You have no intention of interfering further with either the education or the discipline, as to what they should learn or what they should not learn?—Certainly not.

371. (*Chairman.*) And I conclude that you would take no responsibility towards the parents on the part of the Government for the education which was given?—None whatever.

372. You will admit that the moment that you come to Government inspection, unless you are exceedingly careful, the parents will say to you, "This "is a school registered by the Government, and we "are entitled to expect that it should give education "of a certain kind." Is there not a difficulty on that point?—We should decline having anything to do with the education; we should merely care about discipline and morals.

373. Are you quite sure that your inspection could be so effective in that direction as still not to leave you open to considerable complaints on the part of parents as respects the discipline at the registered schools?—I myself would rather have nothing to say to them. We were told to make a plan, and Canon Moseley who was very anxious about it, thought that he could devise a remedy, so we drew out this plan and sent it in as the best thing which we could devise.

374. (*Lord E. Cecil.*) If your inspector visited pretty constantly, he would have the duties of a policeman, or of a detective?—He would have nothing else to do except to visit these schools.

375. If he periodically visited he must give notice?—No, he would not give notice; he should come down upon them without notice.

376. And that would assimilate the duties to those of a detective?—Yes, to some extent perhaps.

377. (*Lord de Ros.*) Would there not be this difficulty, namely, that in a public school the elder boys have a sort of control over the others, and are

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Cramming schools.

so far responsible for their conduct, but that you cannot establish anything of that sort in these schools?—Yes, that is a defect of these private schools.

378. (*Rev. W. C. Lake.*) Did you say that in many of these establishments the boys were allowed to be absent all night?—I have heard so.

379. Are there not many of these schools where no attempt whatever at discipline is made, and where the pupils live in lodgings and merely attend the "crammer" by day?—Personally I know nothing about them.

380. (*Sir C. Russell.*) Do you not think that if a certain number of these cramming establishments were to form rules of discipline, which rules of discipline they submitted to the Council of Education, and which received their sanction, parents would as a matter of course prefer those schools to the haphazard cramming establishments which might be surrounding them?—Yes; but still I think that it would not be perfect without supervision in addition.

381. I suppose that the one would be excessively easy, and that the other would be open to a good many objections which you have pointed out. I will suppose that there are certain hours of study and recreation, and that there are rules controlling recreation. If rules of control were made in certain establishments, and were submitted to and approved and certified by the military authorities as existing, in your opinion would not parents prefer sending their sons to be educated in such an establishment to taking a hap-hazard crammer?—I think that they possibly might, but we could not be resposible for those establishments unless we had the power of supervision.

382. But I understood you to see such serious difficulties in the supervision that you considered it practically impossible?—There no doubt are difficulties, but I do not know that the difficulties are insurmountable.

383. You think that there might be a system of regulation combined with inspection which might meet that objection?—I think so; I am inclined to think that our proposed system might work.

384. (*Rev. W. C. Lake.*) You think that if a certain number of these schools professed their willingness to be put upon your list as admitting your inspector, it would be a great safeguard to parents as indicating to them the best species of cramming school?—I think so, and that it would upset the unregistered ones.

385. (*Chairman.*) Your evidence has been based upon a desire mainly to obtain a greater amount of supervision over these schools with respect to their discipline upon moral grounds?—Yes.

386. Are you not also of opinion that cramming at all is a very bad educational system?—Decidedly.

387. And that it is very desirable apart from moral grounds to do what we can do to eradicate the system of cramming altogether?—Certainly.

388. Would not the most effectual mode of doing that be to induce the public schools, by meeting them as far as they could be met on behalf of the military authorities, to make their education such as would enable boys to go up prepared for these examinations, so that they would be able fully and readily to compete with youths who were sent up from the cramming schools?—Yes, with regard to direct commissions and to Sandhurst, but with regard to Woolwich it is impossible.

389. The style of preparation required to pass the entrance examination at Woolwich is so much higher than that required for Sandhurst and for direct commissions, that you put that aside?—Yes.

390. (*Lt.-Col. Chesney.*) Is not it the case that Cheltenham College is particularly successful for the Woolwich examinations?—Yes, and Marlborough.

391. (*Rev. W. C. Lake.*) Is it not your impression that any boy ordinarily diligent gets a sufficiently good education now at most of the public schools to pass your examination, and that it is a failure on the part of the boy and not of the school if he does not pass?—I have no means of judging what their education is, because they do not come to us direct from school; they leave their public school and go to a crammer.

392. When you say that they leave their public schools you do not include such schools as Cheltenham and Marlborough?—No, because Cheltenham and Marlborough profess to prepare candidates for the army examinations.

393. Do you include Rugby?—Yes, and Eton, and Harrow, and Winchester, and Westminster.

394. Do you mean that none of the boys from those schools which you have last named come to you direct?—Only five per cent. come to us from them direct.

395. (*Sir D. A. Cameron.*) How long are the candidates at these cramming schools before they come up for examination?—We do not know, we have no information upon that point.

396. (*Sir C. Russell.*) Do you not believe that a very general impression prevails amongst parents; that it is useless to send up their sons for examination for a direct commission unless they have passed through one of the cramming establishments?—Yes.

397. (*Lord de Ros.*) Is there not a general impression that the peculiar line of questions adopted by the Council tends to alarm candidates, and to drive them to the cramming schools?—I never heard of it.

398. (*Sir C. Russell.*) Are you aware that it is the case that an impression prevails that some of the cramming establishments contrive to know beforehand what the questions are which will be put at the examinations?—I am not aware of any such impression, but if it exists I have not the slightest hesitation in saying that it is perfectly unfounded; there is not a shadow of foundation for it.

399. (*Lord de Ros.*) Is not almost the same end arrived at by the cramming schools making compilations, which they do of the questions, and drawing from them an inference of what the questions are likely to be?—The questions being published after each examination, anybody who takes the trouble of studying them can become to a certain extent cognizant of the general style of question which is likely to be asked.

400. (*Rev. W. C. Lake.*) Do you not think that that has some bearing upon your present plan of appointing examiners for life?—They are changed; the military men are always changing because they go away. I have no doubt that if they were changed frequently it would be an advantage in that respect.

401. (*Sir D. A. Cameron.*) Is it necessary that the questions should be published?—No; but it is an advantage to the candidates.

402. (*Lord Northbrook.*) I have now a copy of the examination papers for the last examination; are these papers submitted to the Council previously to their being put to the candidates?—Yes.

Subjec examin for dir commi

403. In print?—No, in manuscript.

404. Is the number of marks which the examiner is to give on each question also submitted to the Council?—No; we know the number of marks for each paper, but not for each question.

405. Do you see any objection, for instance, in the English papers to separating the indispensable requirement which I see in the Horse Guards memorandum of the 1st of January—namely, that the candidate shall be required to write correctly in a good legible hand from dictation, and to compose grammatically—do you see any objection to separating that from the general examination in the English language?—You mean to have that portion of it a separate obligatory examination, and then to have the English language besides as another subject?

406. Yes; do you see any objection to making that separation?—The only objection which I see to it, is that you would then leave so little for the separate subject of English.

407. Some examination papers in the English language are very extensive, and of course it would be very easy for an examiner to give a paper in the English language?—I do not know that there is any objection to it, speaking, however, without having

considered the matter; it is not easy to answer these questions off-hand.

408. Looking at the questions in English given in the last examination, I see questions the answers to which would be more readily got up at a cramming establishment than at a public school?—Possibly.

409. And the mixing up of the obligatory with the non-obligatory parts in the same paper appears to me to give an advantage to cramming establishments over a public school; it is with that view that I put the question to you?—I should be inclined, speaking without having fully considered the matter, to say that at present I do not see any material objection to their separation.

410. The same observation would apply to the mathematical examination. Upon looking at these papers it appears to me that there are many questions in the obligatory portion of the mathematical examination which are clearly far beyond the common knowledge of arithmetic and mathematics which is essential not only for an officer, but for an educated gentleman. Would you have any objection to pursue the same course with regard to the obligatory part of that examination, namely, to lay it down that a candidate should have a knowledge of the first four rules of arithmetic and of vulgar and decimal fractions, and to separate that altogether from mathematics in the same way as I have suggested with respect to the English?—I think that you are putting the obligatory portion of arithmetic and mathematics too low.

411. Would you object to separating your present obligatory portion from the rest of the mathematical examination?—I do not suppose that there would be any objection to that.

412. My proposal would be in order to diminish the premium given to cramming in a long examination, and to have the obligatory part of the examination separate from the voluntary part, and that the obligatory part with respect to a knowledge of arithmetic should be quite separate from the whole of the rest of the examination; do you see any objection to that?—No, I do not see any objection to that.

413. For example, if 200 marks are to be got in English, half those 200 marks might be got by an answer to a question which is merely a crammed question, such as the derivation of words?—I dare say that your proposal would be an improvement.

414. (*Chairman.*) I understand you in a former part of your evidence to say that you thought that candidates resorted to cramming schools very much for the purpose of getting up the voluntary subjects as distinguished from the obligatory subjects, and that the voluntary subjects were those which were not often taught at public schools, and that it was with a view to eke out imperfect knowledge in the obligatory subjects by knowledge in the voluntary subjects that the candidates went to crammers?—Yes.

415. Therefore that would in some respect limit the value of the change which has just been suggested?—Still it might have an effect; it might be good, I think. I think that point might be one to be considered.

416. (*Sir D. A. Cameron.*) Do you not think that the marks allotted to natural sciences and experimental sciences are too high, they being mere matter of memory?—They are the same as in languages.

417. For instance, a candidate getting his minimum number of marks in English language, and making up the rest in the natural and experimental sciences, would be very imperfectly educated, would he not?—He might be so.

418. That would not be called a liberal education?—No; but our object is to spread the net as wide as possible in order to get in as many people as we can. The result of decreasing the number of marks would, of course, be that nobody would take up the subjects.

419. (*Lt.-Col. Chesney.*) Would there be any real loss to the country or to the service in totally abolishing from the entrance examination for direct commissions the questions in these sciences; I speak as schools are now?—The object is to let as many men as we can into the army, and any restriction of the number of subjects of examination would be likely to diminish the number of successful candidates.

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Examinations for direct commissions.

420. (*Chairman.*) The whole object of this examination is to test whether or not the candidate has received a general education?—Yes.

421. The question, therefore, is how far those natural or experimental sciences, speaking broadly, enter into the present general education of the country. Are you aware that there is at present a tendency to pay more attention to them at schools than there was formerly?—It is increasing very much.

Royal Military College, Sandhurst.

422. You have stated that the education given at the Royal Military College at Sandhurst is under the general supervision of the Council of Military Education?—Yes.

423. Will you state to the Commission the objects with which that college has been established?—The original object of the establishment of the Royal Military College was to enable the officers of the army to give their sons a good general and military education at a cheap rate. In 1858 this object was somewhat departed from; the college was then remodelled, the age of admission was raised, candidates were expected to have completed their general schooling, and were sent to Sandhurst to acquire military training and knowledge during a shorter course.

424. Then am I correct in understanding that the present object of the Royal Military College is to give to a certain number of candidates for commissions in the army a given amount of professional training before they actually join their regiments?—Yes.

425. I believe that in that way a larger portion of commissions without purchase are given to persons who have passed through the Sandhurst examination?—Yes; no commission without purchase can now be gained (except in the case of non-commissioned officers) without passing through the college at Sandhurst.

426. Will you state the regulations under which candidates are admitted to that college?—They are admitted upon an examination, under the superintendence of the Council of Military Education, held twice a year, in June and December. Twenty Queen's cadets and 20 Indian cadets are admitted to the college, and they receive their education and sustenance at the public expense. Candidates, whether for the infantry or for the cavalry, must be between 16 and 19 years of age at the commencement of the term immediately succeeding their admission examination. Students from the universities are admitted under certain regulations; they must have passed the examinations called responsions and moderations, and so on. Those candidates must not be more than 21 years of age for the infantry, nor more than 23 years for the cavalry. No candidate is allowed to be examined for entrance to Sandhurst in more than five of the following subjects, namely, classics, mathematics, English language, modern languages, history with geography, natural sciences, experimental sciences, geometrical and freehand drawing. Of these subjects a certain portion of the mathematics and a certain amount of English are obligatory on each candidate. The obligatory mathematics include arithmetic, comprising vulgar and decimal fractions, proportion, extraction of the square root, and interest, and they also include algebra comprising fractions, simple equations, and questions producing them, and they include the first three books of Euclid. To these elementary branches of mathematics 1,200 marks are allotted, of which 400 must be obtained, 200 being gained in arithmetic. With one exception, namely, the geometrical drawing, it is exactly the same as for direct commissions, and the qualification is the same, namely, 1,500 marks out of the five subjects.

427. Then the examination for admission to the Military College is almost precisely identical with that for a direct commission?—Yes.

428. And I conclude that the object of that exami-

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Royal Military College, Sandhurst.

nation is the same as that for a direct commission, namely, that the general education of the candidates is tested?—Yes.

429. Are the examiners appointed in the same manner?—They are the same examiners, and they are appointed in the same manner.

430. And therefore any questions which have been asked with reference to the examination for direct commissions would apply equally to the examination for entrance to Sandhurst?—Yes.

Age of admission to Sandhurst.

431. Have you any suggestions to make with respect to that examination, other than those which you have made with regard to the direct commissions?—I would reduce the age of admission to the limits of from 15 to 17 years of age, and I would not allow any extension of age to men from the universities.

432. With what view would you desire to reduce the lower limit for admission?—Entirely with the view of getting officers into the army at an earlier age.

433. And not with reference to any considerations connected with the education at the college itself?—No.

434. With what view would you desire to abolish the present regulation under which gentlemen from the universities are admitted to the college up to a later period?—Because I object to mixing young men of such different ages in the same place of education.

435. Upon what grounds do you entertain that opinion?—It makes everything so much more difficult to carry on; in my opinion it makes the whole system of the maintenance of discipline more difficult.

436. You find that the presence of a certain number of cadets so much older than the general average is disadvantageous to the good discipline of the college?—Yes, I should say so. The system which is very proper to be pursued with a boy cannot be pursued with a young man, and therefore if you mix the two you ought to have two different systems, and you cannot very well have that at the Military College.

437. (*Lord E. Cecil.*) With regard to the question of age, you are aware that, about the year 1857, there was a change made with respect to age?—Yes.

438. At that time I believe that the age of admission was between 13 and 15, and it was then raised to between 16 and 18, was it not?—Yes.

439. Do you not think that lowering it again would be rather a step in a retrogressive than a progressive direction?—It depends upon what you call progression. I am not at all sure that it was a right thing to alter the age at all.

440. Then would you have kept to the original age of from 13 to 15?—I am not at all sure that that was not a better arrangement than the increase of the age. I am not prepared to say that the original intention of the college ought not to have been adhered to.

441. What is your idea of what a military college should be? Should it be a place of education for boys, or for young men?—I think that if you delay sending young men to a military college until they are 17 or 18, they then join the army at too advanced an age. I think that the proper time to join the army is between 17 and 18, that is to say, not younger than 17, and not older than 18. Therefore, any scheme of military education which I should be inclined to adopt would be based upon that arrangement, namely, that an officer should not join his regiment till he was 17, and should not join it after he was 18; that is the general principle upon which I should proceed.

442. That of course would depend upon the period of time which you think necessary for a military education at the college?—Yes, in combination with the age at which you let him in.

443. What period do you consider necessary for a military education at the college?—I consider that a course of two years is absolutely necessary for what I call a good military education.

444. You think that the entrance into the army should not be later than between 17 and 18 years of age?—Not later than 18.

445. As the regulations are at present a cadet enters the college at 16, and with the two years which you say is the proper time for military education, he would be released at 18, and would then enter the army?—Yes, but now he can enter the college at 19, and therefore he does not enter the army until he is 21.

446. Would that be any reason for lowering the age of admittance from 16 to 15, which I understand is your view?—You must have a margin. If you said that they could only be admitted from 16 to 17, it would not give them a sufficient margin for failures. I want 17 to be highest limit.

447. As I understand you, your wish is to reduce the age to 15?—Yes, to the limits of 15 to 17.

448. How would it meet the case if a candidate was to be allowed to compete between 15 and 16, and not over 16, so as to allow a margin for ill health or for any other cause?—It would not give a sufficient margin; he would only have one year between the age of 15 and of 16. I think that he ought to have a margin of two years.

449. Then I understand that you would allow a candidate to enter between 15 and 17?—Yes.

450. If a candidate entered at 17, it is quite plain, from the course required to pass through the college, that it would be impossible for him to enter the army before 19?—Yes.

451. And you think that that would be preferable to keeping the age of entrance as it is now at the Military College?—Certainly.

452. You said that you were not quite sure that you would have altered the age at all from its original limits between 13 and 15?—Yes.

453. I suppose that you fully admit that if a reduction of the age took place again, it would be, in fact, going back to the old system?—No, because under the old system you could not get in after you were 15, and by my proposed system you could not get in until you are 15.

454. But it would be a retrograde step towards the old system?—It would be approaching the limits of the old system in point of age.

455. Do you entirely approve of the old system as to age?—Yes; I think that it was a very good thing to have a military school where officers could have their sons educated, not only in military subjects, but also generally.

456. By reducing the period of age you seem to think it is merely a step in the right direction; you would, if possible, go back to the original entries?—I do not know that I would now go back to the old system. This retrograde movement which we are making of one year would not have that effect; it would alter the college in no way that I can see.

457. (*Lord Northbrook.*) Would not your proposal to enforce the same limits of age as to persons entering from the universities, under the 11th clause of the regulations, entirely preclude any persons entering from the university of Oxford or Cambridge?—That is the object of it.

458. Your alteration would not, as I understand you, change the Military College into a school?—Certainly not.

459. But it would merely prevent the great mixtures of age which you have now?—I do not care so much for that. I want to get men at an earlier age into the army, that is the chief object.

460. (*Lt.-Col. Chesney.*) If I understand you rightly, the object of Sandhurst, before the change in 1858, was merely to keep up a school for the sons of military officers?—Yes.

461. And since that time the object has been to provide a military college, so as to give a number of officers trained to a certain extent for the line?—Yes.

462. Whatever age is now fixed, should it not bear reference to the ultimate object of the college?—Yes, but I consider that question settled; there can

be no return to the old system of reducing it to a school.

463. Were not you at the college yourself at the time when the change took place?—I joined the college exactly at the moment when the change took place.

464. And you saw the two sets of cadets, the old and the new mixed there?—I did.

465. Were the new cadets of an inferior calibre in their manner and bearing to those who had been brought up in the college as boys?—No.

466. In that respect was there any distinction?—I did not observe any.

467. (*Brig.-Gen. Lefroy.*) Would your objection to the late period at which officers obtain commissions under the present system be in any way removed by antedating their commissions, as used to be done at Addiscombe, where they were all dated at the age of 16?—No; I wish the officers to join their regiments younger.

468. When they are plastic?—Yes; that is my object.

469. Taking the ages from 16 to 24, which is now the range at Sandhurst, is there anything incompatible with military education in having an upper and a lower school, as you have at the public schools, under considerably different rules of discipline? At all the public schools a boy in the upper school is in a very different position from a boy in the lower school. Is there anything incompatible with military education in extending that principle to the military colleges?—I think that an upper and a lower school can only be established where there is a long course, where boys remain for five or six years, and then, naturally, all who go in young go into the lower school, and as they grow up they get into the higher school; but I do not think that if there were 100 young men who went into Sandhurst to-morrow it would answer to put all those below a certain age into the lower school, and all above a certain age into the higher school.

470. That is to say that you cannot draw the line at age alone without reference to other considerations?—No; studies and length of residence and other things form, in my opinion, a necessary part of such a scheme.

471. (*Lord de Ros.*) Is it not the general opinion of commanding officers of regiments in the army that a cadet of 22 years of age is not a desirable recruit?—I have no doubt that all commanding officers object to young men joining them at the advanced age of 22, whether from Sandhurst or from elsewhere.

472. Do not commanding officers of regiments generally prefer an untrained officer to a cadet trained at Sandhurst?—That is a point upon which opinions very much differ. I have met with some commanding officers who like cadets, and others who prefer those coming from the public schools.

473. If, within 17 years of age, candidates passed their first examination at Oxford, you would then see no objection to their admission into the college?—Certainly not; it is a mere matter of age. I would not allow them to come in after they were 17.

474. (*Rev. W. C. Lake.*) Do you not think it objectionable for any reason whatever that young men should be allowed to stay at a military college or at any other college until they are 24?—Yes; they ought not to go into a college at an age which would allow them to remain so long. A man ought to be a captain at 24.

475. Ought not a certain age, such as 19 or, at the outside, 20, to be fixed upon, and no young man allowed to stay beyond that age?—Certainly; and by my proposal for a reduction of the age they could not stay after 19.

476. Your proposal is that they should be there for two years, neither more nor less?—Yes, so that they could not be more than 19 when they left Sandhurst.

477. You said that the cadets used to enter at 15?—From 13 to 15.

478. And that they were the sons of officers?—Not all.

479. But that they were chiefly the sons of officers?—That was the original intention; it was to enable officers to give their sons a general and military education, and at the same time a cheap one. Many officers sent their sons there who did not go into the army at all.

480. Is not that object now attained in a great measure by Wellington College?—I believe not.

481. Have not the sons of officers some advantages?—They have, but I believe that they let in very few.

482. (*Lord de Ros.*) Did not the Duke of Wellington at one time make a special order for a distinction, dividing the younger boys into another company from the elder ones?—I think that that was so at one time, the A and B companies were separated.

483. (*Lord E. Cecil.*) Have you ever known anybody of 23 or 24 years of age at a military college?—I understand that there is one now at Sandhurst of 24 years of age.

484. (*Chairman.*) Do you contemplate that candidates who are admitted to Sandhurst should have previously passed through a public school education?—Not necessarily.

485. You do not think it is desirable that the boys who come to Sandhurst should previously have had what is generally understood by a public school education?—I should not wish to limit the cadets at Sandhurst to any such conditions.

486. I did not point to their being limited to any such conditions, but I was merely asking you your opinion, whether you thought it was desirable that those young men who were admitted to Sandhurst, or young men who were admitted to the army by direct commissions, should generally receive what is understood by a public school education?—I think that a cadet ought to have had a certain amount of education, either at a private or at a public school, before he goes to Sandhurst.

487. Do you think that the age of 15 is a good age at which to pass from a public or a private school education to the new description of education which would be given at Sandhurst?—I should prefer the age of 16, if I could limit it to that. If I could rule that everybody should go up to Sandhurst at 16 and remain there till he was 18, I think that that would be perfection, but as I cannot have that, I must give a margin, and I would rather give a margin in the lower limit than in the higher limit.

488. You would do that on account of the strong opinion which you entertain that it is desirable that men should enter young as officers into the army?—Precisely so.

489. And not with reference to what may be desirable with regard to the period during which they are at Sandhurst itself?—No.

490. Under the arrangement which you would suggest, youths would be at Sandhurst between the ages of 15 and 19?—Yes.

491. I think you have told us that you have felt the objection which exists to bringing together in one educational institution young men of different ages?—Yes.

492. Is not that objection considerably aggravated when you go to a lower age? Is not the real nature of that objection, that it is undesirable to bring together, in the same institution, boys and young men?—Yes; but I think that you would have very few of the age of 15, and very few of the age of 19. I think that the practical effect of our plan would be that the majority would enter at 16 and come away at 18. I take the medium.

493. At present the limits of age are between 16 and 19?—Yes.

494. Do you think that it is necessary to give so large a margin as three years?—No; we only propose two years.

495. Then to a certain extent your object would be obtained as regards entering the army by reducing the age from 19 to 18, without reducing the lower

Maj.-Gen. W. C. E. Napier.

1 July 1868.

Royal Military College, Sandhurst.

age?—Yes; but we propose to reduce the higher limit to 17.

496. You said that you thought that the course of study ought to occupy a period of two years?—Yes.

497. The present course, I believe, occupies a period of 18 months?—It does.

498. Consequently you propose, do you not, to increase the length of the period of study by six months?—Yes, that is my own opinion; we did not propose that in our plan. My opinion from my own experience at Sandhurst is that two years is the proper length of the course of study.

499. (*Lt.-Col. Chesney.*) Are you aware of the working of a regulation which was made some little time since by which cadets were only at Sandhurst for one year; the course was reduced to one year for some time, was it not?—It was reduced, and on the representation of the superintendent of studies it was increased again to 18 months.

500. What is your opinion, so far as you know, of of the effect of that regulation?—That increase was made before I joined the Council; I never entered much into that question. When I was superintendent of studies the course was two years, and why it was reduced I do not know.

501. As a fact it was diminished from two years to a year, and it has now been found necessary to increase it to at least a year and a half?—Yes.

502. (*Lord E. Cecil.*) With regard to the term of two years, which you think is necessary, would it not be possible, if candidates came up better prepared in certain subjects of education, and if the course of instruction was confined to purely military subjects, that that term should be reduced?—If the course was confined to purely military subjects I have no doubt that it might be reduced.

503. (*Chairman.*) At the present time, as you have told us, the examination for entrance to Sandhurst is the same as the examination for direct commissions. If you reduced the lower limit of age, would it necessitate any lowering of the entrance examination?—No, I think not.

504. You think that boys of 15 could fairly be asked to pass an entrance examination of that kind?—Yes, I think so.

505. (*Rev. W. C. Lake.*) Do you think that any difficulty in point of discipline is experienced from the peculiar circumstances under which the boys are taken, I mean that they come from a public school at the age of 17 or 18, and are often not disposed to submit so willingly to the new school to which they are introduced?—I do not believe that any difficulty has been found in that respect with regard to the age.

506. Are there not some boys admitted to Sandhurst without examination, or at least without competitive examination, on the ground of being the sons of officers?—No, they all have to pass the entrance examination.

507. Is the entrance examination the same for all?—Yes. It is nominally competitive, but it really is not so, because there are always more vacancies than competitors.

508. Practically, do all the cadets enter at about the same age, or are there great varieties of age?—They enter at different ages; I cannot exactly tell without looking at our books.

509. Between what limits do the whole body enter?—The limits are between 16 and 19.

510. Do the Queen's and the Indian cadets pass the same examination at entrance as the other cadets?—They pass the same examination, but it is a qualifying one.

511. Will you explain what you mean by "qualifying?"—They must get so many marks. They pass the same examination, but they merely require to get 1,500 marks for qualification.

512. (*Lord Northbrook.*) With respect to the places of education from which the candidates come for Sandhurst, will you be kind enough to give us that information, and also the per-centage of rejections?—The per-centage of failures for Sandhurst is 19. Returns, pp. cxlvii, cxlviii.

513. How can you account for the difference, the examination being the same, and the other per-centage of failures for direct commissions being 31?—I do not know how to account for it.

514. (*Sir D. A. Cameron.*) Is it not because they take greater pains to get a commission without purchase?—Yes, they are possibly better prepared, because the inducement is a commission without purchase.

515. (*Lord Northbrook.*) The candidates also are younger in this case than in the other, are they not?—Yes.

516. (*Chairman.*) I understand your opinion to be that the lower per-centage of failures in the case of Sandhurst is probably owing to the fact that there is a greater inducement held out to parents to prepare their boys for the examination, because if they succeed in the college they have a chance of obtaining commissions without purchase?—Yes, I think that may account for it.

517. (*Lord de Ros.*) Are the examiners the same, and is the place of examination the same for Sandhurst and for a direct commission?—Yes.

518. There is no difference in that respect at all?—No.

The witness withdrew.

Adjourned to Friday next at 12 o'clock.

Friday, 3rd July 1868.

PRESENT:

THE RIGHT HONOURABLE EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LIEUT.-GEN. LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. DR. BUTLER.
REV. W. C. LAKE.
COLONEL HAYTHORNE.
LIEUT.-COL. CHESNEY.

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

MAJOR-GENERAL WILLIAM C. E. NAPIER further examined.

519. (*Lord E. Cecil.*) There is one question which I wish to ask you with regard to a question which was put to you by me on the last occasion, in which I asked you whether you did not think that the lowering of the age at Sandhurst was a step rather in a retrogressive than in a progressive direction. The reason of my asking you that question is that I wish to know whether you are aware that in the military schools in France, in America, and in Prussia the system of training very young boys has

been completely abandoned, and whether you are aware of a passage which occurs in the Report of the Commissioners on the Education and Training of Officers for the Scientific Corps, which, talking of the system in France, states, "The plan adopted says in effect, " 'Give your young men a sound education in the " 'best schools of the country till the age of 17 or " '18; at that age let them compete for entrance " 'into a military college where they will be instructed " 'for two, three, or four years, according to the " 'requirements of the service they are to enter; " 'once entered into the school the State will assist " 'them in their education, and will thus enable them " 'to commence a career'"?—I am quite aware of that, but I think that it is too old an age.

520. I merely wish to explain to you why I asked that question, and why I stated that I thought that the course you proposed was in a retrogressive direction.—It is, of course, so in that respect.

study lege.

521. (*Chairman.*) Will you state to the Commission what is the course of study at the Royal Military College at Sandhurst?—The course of study embraces five obligatory subjects, namely, fortification, military drawing and sketching, military history, a portion of mathematics, and one foreign language, and the following voluntary subjects, higher mathematics, higher fortification, chemistry, geology, one foreign language, and landscape drawing. Every gentleman cadet must attend the classes in the obligatory subjects, besides riding, drill, and gymnastics. He may attend the other classes or not at his option.

522. During the course of that study are there examinations previously to the final examination on leaving the college?—Yes, there are quarterly and half-yearly examinations conducted by the college authorities and professors, and these take place during the whole course. Marks gained at those examinations are counted towards final qualification. At the half-yearly examinations a certain qualification is required to enable a cadet to pass from one class to another, failing which he is removed from the college.

523. Will you explain to the Commission the nature of the final examination?—The final examination for a commission is competitive. It is conducted by the Council's examiners. Previous to the examination the number of commissions to be given without purchase is announced, generally one-third of the number of competitors. Those at the head of the list after the examination get these commissions without purchase. The others get their commissions by purchase, provided they pass the necessary qualifying examination, that is to say, they must obtain an aggregate of 1,950 marks in the five obligatory subjects, of which aggregate 1,200 marks must be gained in the three military subjects.

524. Are the obligatory and voluntary subjects in the final examination the same as those in the examinations during the continuance of the course?—Yes, they are the same subjects.

525. Are the Queen's cadets and the Indian cadets examined competitively, or is it a mere pass?—Theirs is the mere qualifying examination, 1,950 marks.

526. And upon passing that examination they receive commissions without purchase?—Yes.

527. When you say that there are generally commissions without purchase for about one-third of the competitors, do you include commissions given to the Queen's and Indian cadets, or do you exclude those commissions from the calculation?—If a Queen's or Indian cadet gets a commission without purchase by competition, another commission is added to the number.

528. And that is given without purchase?—Yes.

529. So that when you spoke of about 30 commissions at each examination, they were 30 commissions available to those who compete?—Yes; I do not reckon the Indian and Queen's cadets as competitors; they very seldom are so.

530. Have you any alterations to suggest to the Commission with respect to the course of study at Sandhurst or the final examination?—No, except that I think that the course of study should be of two years' duration. I should prefer that. It is now a year and a half.

531. What is your reason for thinking that it ought to be lengthened?—I think that everything is too much hurried over in a short course; that the knowledge gained is superficial to some extent, and is not so thorough as it would be in a longer course.

532. Do you approve of the distinction between obligatory and voluntary subjects?—Yes.

533. You think that all the subjects at present studied there ought to be included in the course?—I think that there is no doubt about the necessity of the obligatory subjects, and I have no objection to the others as voluntary subjects.

534. You stated that the Queen's and Indian cadets obtained their commissions without purchase without any competition; do you think that the presence of cadets at the college under those conditions is advantageous to the college or otherwise?—I should say that it is very disadvantageous.

535. Upon what grounds?—Because they are generally idlers, and I think that the presence of a large body of idlers in a college is prejudicial.

536. Then you would recommend that they should receive their commissions without passing through the college?—Yes, upon passing the qualifying examination for a direct commission.

537. I understand that it is your opinion that they have no stimulus, they being almost certain of a commission?—They are quite certain of a commission.

538. Can you tell us whether the Queen's cadets often obtain more marks than the minimum, and whether there are many cases in which they would have obtained a commission by competition?—There have been one or two cases, as far as I remember, in which they have gained a place amongst the successful competitors, but there have been very few such cases. They, of course, gain more than the absolute minimum, because they do not like to run it so close as that.

Returns, p. cxlix.

539. But they do not often come in among the successful competitors?—No, very seldom.

540. I think that there are 40 at a time?—40 are allowed by the regulations, but 40 are never present at the college; I should think that the number is from 25 to 30.

541. Out of 300?—Yes.

542. (*Lord E. Cecil.*) The Royal Military College at Sandhurst was founded, I believe, in 1799?—Yes.

543. By a warrant, dated in 1808, I see that "the " junior department is appropriated to the instruction " of those who from early life are intended for the " military profession, and who by this means may be " grounded in science previous to obtaining commis- " sions in our army;" what value do you attach to the words "grounded in science;" do you think that it means military science, or that it means a general education?—I should attribute to it the meaning of both a general and a military education.

544. There is nothing said about "military" in the warrant?—I do not know; I have not read that warrant for many years.

545. I suppose that that is still the warrant which regulates the college?—Yes.

546. You have no knowledge of any fresh warrant?—There is no fresh warrant that I am aware of.

547. Are you aware whether cadets in those days were ever transferred to Woolwich, or to the staff direct?—I believe that they did go to Woolwich; I am not sure that they went to the staff; certainly not I should say.

548. In short in those days the establishment at Sandhurst must have been looked upon to a certain extent as a preparatory school for the artillery, if cadets were occasionally transferred?—I do not know; the establishment at Woolwich was in existence then. I do not know how that arose, or why they went, but I know that there were cases in those days in which cadets went to both colleges.

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

549. But your impression now is that it would be looked upon rather as a school for general and military education, the latter being a secondary matter to the former?—No; my impression of the original intention of the establishment of the Royal Military College is that it was for the purpose of enabling the officers of the army to give their sons a sound general and military education at a cheap rate. I do not think that one was in any way subordinate to the other, but that they both went hand in hand.

550. I go by the warrant, and I see nothing about military science in the warrant?—But military science was always taught there.

551. The college at Sandhurst, I believe, now provides officers for cavalry and infantry?—Yes.

552. And for the Military Train, or for any other branch of the service?—Yes; there is nothing that I know of to prevent a cadet at Sandhurst from going into the Military Train.

553. Are commissions given in the Military Train?—I am not aware.

554. What number of commissions are given with and without purchase from Sandhurst in a year?—I should say about 200 in a year.

555. Is not 18 months the term of study?—Yes.

556. Is not it practically reduced to 13 months with the amount of vacation which there is in the year?—Yes; there are about eight months' study in the year. Deducting the vacations and the time taken up in the examinations, there remain eight months in the year.

557. That would leave about 12 or 13 months out of the 18 months?—Yes, not more.

558. Do you think that that is long enough to enable a young man to acquire the subjects which are now taught?—No, not a thorough knowledge of them.

559. Or even a superficial knowledge of many of them?—The term "superficial knowledge" is very vague; a superficial knowledge of anything may probably be obtained in six months.

560. Taking some of the studies, for instance higher mathematics, do you think that a cadet can, in the 12 or 13 months allotted to study, have any real grounding in higher mathematics, considering the number of other subjects which he has to take up?—It would entirely depend upon the knowledge of mathematics which he had on entering the college.

561. We know that is very small?—The obligatory knowledge is very small, but a man on entering Sandhurst may have a very fair knowledge of mathematics.

562. But from your experience is not that knowledge generally small?—The amount of mathematical knowledge brought into Sandhurst by the majority of the candidates is certainly small, there is no doubt of it.

563. You have told us that in your opinion every officer ought to have the education of a gentleman. In what professional subjects do you think that an infantry or cavalry officer should receive instruction?—I think that scientific professional knowledge, say in fortification, military drawing, and military history, though very advantageous to every officer, is not absolutely necessary for every officer.

564. For instance, we will take mathematics, do you think that anything beyond arithmetic is of actual use to a regimental officer?—Yes, I think that a little knowledge of Euclid is useful.

565. Does it come at all in his regimental duties?—No, his regimental duties could no doubt be conducted without any knowledge of Euclid.

566. You think that that is not absolutely necessary for his regimental duties?—No.

567. Does not it form part of the general education of a gentleman?—Yes, I believe so.

568. Do you not think that geometry, mensuration, logarithms, and hydrostatics are subjects rather for an engineer, or a staff officer, than for a regimental officer?—They are certainly not absolutely necessary for a regimental officer, but I think he would be much better for knowing some of them.

569. In fortification do you think that a knowledge of permanent fortification, or of the attack and defence of fortifications, is of any service to a regimental officer?—It may at times be of very great use to a regimental officer.

570. In what way?—In enabling him to take his company or his troops to any particular part of a fortress where he is directed to take them, and in enabling an officer to take himself either in or out of a fortress.

571. But I suppose that a very superficial knowledge would suffice for that?—Yes, of permanent fortification.

572. And in the ordinary course of his regimental duties, I presume that the attack and defence of fortifications would hardly ever form a subject of necessary knowledge?—We lately had an instance, in the siege of Sebastopol, where, in my opinion, a knowledge of the attack would have been of immense use to a regimental officer. A knowledge of the principles of the attack would have been of great use to every officer who was employed in the trenches.

573. Do you know of any instances in which infantry officers were extensively employed as engineer officers, or was it a very exceptional state of things?—I have no information as to how many infantry officers were employed under the engineers in the Crimea, but I consider that every officer who commands a body of workmen in the trenches would be much better fitted for that employment if he was acquainted with the principles of the attack.

574. Of what absolute use is the first system of Vauban in these days of the new improvements in the ranges of artillery and musketry?—The great proportion of all the fortresses now on the Continent are based upon that system. The first system of Vauban may be considered, in my opinion, as the A B C of fortification.

575. Would you now fortify a town according to those principles?—No, you might construct an interior *enceinte* according to those principles, but the modern principles of fortification are quite different.

576. Do you not think that a partial knowledge of fortification would be quite sufficient for any service which a regimental officer might be called upon to perform?—Yes, it might be absolutely sufficient, no doubt.

577. With respect to military history, what is the mode of teaching military history at Sandhurst?—It is taught by lecture.

578. Do you not think it rather a subject for an officer who has seen service, who has been in the army, and who has been on the staff, than for a cadet?—I think that it is very useful for a great number of the cadets, for all the best of them, for this reason, that it leads them to the future study of military history; that is the chief object of it; it teaches them the way to read critically the account of a campaign, so as to understand it.

579. Are there any models of fields of battle at Sandhurst by which you can practically teach a cadet?—They are taught by plans.

580. Are there actual models of the ground, for instance, of any particular battle between contending generals?—I do not think that they have any models of battles.

581. I suppose that the cadets never visit the Continent under proper supervision to see any of these fields of battle, do they?—I believe that they do sometimes. Colonel Chesney has often taken cadets abroad, but they are not sent by the college.

582. Do you not think that that practical mode of teaching military history would be superior to the mode of giving lectures without having an actual plan of the field of battle upon which you are lecturing?—I think that it can be perfectly well taught with the plan. I think that the plan of a battle is quite sufficient.

583. What is the mode of teaching modern languages at Sandhurst?—The cadets are taught to translate from the foreign language into English, and from

English into the foreign language. They are taught the grammar of the language, they are taught to write from dictation, and also those who can speak the language are addressed by the professor in that language.

584. Do *vivâ voce* examinations in a foreign language now take place?—Not by us.

585. But by the professors before the board?—No.

586. What means have you of knowing that a cadet has a colloquial knowledge of a foreign language?—We do not insist upon it.

587. Do you not think that a colloquial knowledge is the most important of all kinds of knowledge in that respect?—It is no doubt very important, but I do not know that it is more important than being able to read the language easily.

588. With regard to teaching mathematics, or teaching any of the studies, how are they taught; are they taught in the hall?—Yes.

589. Do you think that a young man can learn difficult problems in mathematics in a crowded hall?—The halls are not crowded; there is nothing to prevent his doing so.

590. How many are generally in a hall?—I do not think more than from 15 to 20 generally. I believe so, but I am not quite certain about all those details.

591. Is there any such thing as private study?—They may work as much as they please out of the hours for study; there is no restriction upon their working out of the hours for study, except in one particular, namely, that no drawings of plates, whether in fortification or in military drawing, for which marks are given, are allowed to be done out of study, because there would be no security that they were done by the cadet himself.

592. But I suppose that you would admit that there are problems in mathematics, particularly in the higher mathematics, where it would be much better if they were studied privately, rather than publicly in the presence of the professors or of the other cadets?—Yes, but there is nothing to prevent a cadet so studying them.

593. Has he a room where he can study them?—He may study them out of doors under a tree, or he may study them in his dormitory. A studious cadet would probably have the dormitory to himself on an afternoon if he wished to study.

594. Is he not obliged, more or less, to depend upon the goodwill of his companions?—I do not myself see any practical difficulty in a cadet working out of study.

595. What provision is made for teaching cadets, for instance, military law and the practice of courts-martial?—None.

596. Do you consider that they ought to have any instruction in that respect?—No.

597. You consider that it is not at all necessary?—Not for cadets.

598. But I suppose that it is a very valuable acquirement for a regimental officer, is it not?—Yes, but I think that the best place for him to acquire it is in his regiment.

599. In fact, no provision is made in the Military College for those studies?—No; it was taught at one time, but it was found perfectly useless, and it was dropped.

600. Are the cadets instructed in what is commonly called regimental economy?—No; it would be impossible to do so.

601. Do they know anything about the ordinary duties of a company officer?—I should say not.

602. Are they instructed, for instance, in the price, quality, and weight of cavalry or infantry soldiers' arms, necessaries, or accoutrements?—No.

603. What drill is taught to them?—They are taught the usual company and battalion drill.

604. On what principle is the drill taught to them, if the other duties of a military officer are not taught?—Chiefly because it is a military establishment, and drill is a necessary part of such an establishment.

605. I suppose that the other duties are equally essential with that of drill?—Yes, but in my opinion the only place in which they can be learned is in a regiment.

606. Do you not think that drill would be better learned in a regiment?—No doubt drill is very well learned in a regiment, but drill is a subject which can be equally well learned at a military college.

607. I suppose that if provision was made for it the other duties of a regimental officer might also be learned at the college?—No, I do not think that it is possible. I do not see how you can teach an officer duties which are intimately connected with a regiment unless he is with his regiment.

608. I suppose that there is a battalion of cadets at Sandhurst, is there not?—There is a small battalion of cadets, namely 300, but they are not treated in any way as soldiers.

609. I suppose that the ordinary duties of guard mounting might be taught?—Yes, that used to be so, but I believe that it is not so now.

610. I suppose that there would be no difficulty in teaching military law?—Yes, I think that there would be every difficulty in teaching military law; it is so dry a subject that it would not make the slightest impression upon any young man's mind unless he had an opportunity of practically using it.

611. Are the cadets practically instructed in bivouacking?—No.

612. Do they ever camp out anywhere?—No.

613. Do they know anything about lighting a fire or cooking a ration under difficult circumstances?—I should say not.

614. Do they know anything about outpost duties?—I am not able to answer that question accurately; I do not know.

615. For instance, should you from your recollection think that a cadet had any distinct notion of putting a house in a state of defence?—Yes, they get that in their course of field fortification.

616. Are they practised in writing reports or accounts of what they have seen and done, in order that some day or other they may be able to write precise and intelligible reports of what they may have seen or heard on service?—I believe not.

617. What acquaintance have they with a cavalry officer's duties, because I understand that the cadets are brought up for both infantry and cavalry?—They learn to ride, and they learn the cavalry sword exercise.

618. Is that all?—That is all, I believe.

619. Are they taught cavalry drill?—No.

620. But they are taught infantry drill?—Yes.

621. Do they understand anything about the duties of the Commissariat or of the Military Train?—No, nothing more than what they get from their military history lectures.

622. I suppose that they would not understand the duties of a subaltern officer in garrison or on board ship?—No.

623. In short it seems to me that when they join the army they join with only the ordinary education of gentlemen, without knowing the duties of an officer, or with knowing very few of them?—No; they have a very good acquaintance with drill.

624. But not with cavalry drill?—No, they know nothing of it beyond riding.

625. Are the cadets taught to swim?—I do not believe that they are taught; they have every opportunity of learning to swim; there is a capital bathing place.

626. You say that they are taught to ride?—Yes.

627. Is that a portion of their final examination?—No; on the public day they ride before the Commander-in-Chief and the Commissioners.

628. Is it obligatory before they obtain their commissions that they should pass through a certain amount of riding? I mean not only that they should receive instruction, but that they should pass an examination?—No; there is no examination in riding.

629. Are they taught to fence?—Some of them;

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

that is a part of the Sandhurst course ; it is voluntary, I believe.

630. Are they taught to shoot?—Yes.

631. Are they taught the broadsword exercise?—They are taught singlestick.

632. Is that obligatory?—I am not prepared to say how much is obligatory and how much is voluntary.

633. Have they a gymnasium? And is there an opportunity of gymnastic instruction?—Yes.

634. Is any portion of it obligatory?—Yes; I believe that it is.

635. Do they attain any great excellence in gymnastic exercises?—Some of them attain very great excellence, to judge by the class which I see perform before the Commander-in-Chief twice a year.

636. Are they taught artillery drill?—A slight amount, I believe.

637. (*Lord Northbrook.*) Do you think that the education at Sandhurst should include a greater amount of instruction in the practical duties of officers in the field, or are you generally satisfied with the present amount of that class of instruction?—I am quite satisfied with it. I want everything connected with the duties of an officer to be taught to an officer in his regiment.

638. With respect to the theoretical education at Sandhurst, I need hardly ask you whether you are aware that a great portion of the British army is employed in India?—Yes.

639. And that in India officers have responsible duties thrown upon them sooner than in any other part of the world?—The officers of our regiments of the line employed in India have no more responsibility that I know of than the officers of a battalion employed anywhere else.

640. Are you aware of the present regulations of the Indian Staff Corps?—No.

641. Do you know whether any instruction in Hindustani, or in any of the Indian languages, is given at Sandhurst?—There is no instruction in Hindustani or any Oriental language.

642. (*Lt.-Col. Chesney.*) As to the instruction in the studies at Sandhurst generally, do you consider that it is under the commandant, or under the second in command, who bears the title of major and superintendent of studies?—Practically it is entirely under the superintendent of studies, but the commandant has the power of interfering in it if he pleases.

643. The major and superintendent of studies, I believe, usually corresponds direct with the Council on all matters relating to study, does he not?—Privately, but not officially.

644. As comparing the drill and the instruction, the instruction is more under him, and the drill is more under the commandant?—Quite so.

645. In your opinion may not that in some way militate against the studies as compared with the drill, namely, that the studies are under the second in command, whereas the drill is under the commandant?—I think that the division of the educational department from the disciplinarian department or the governing department is bad.

646. May it not have a tendency to put the studies in a secondary position as regards the mere military part of the college?—Certainly it may have that tendency.

647. A good deal of survey study I believe is carried on out of doors upon the ground?—Yes.

648. Is it your opinion that a fair proportion of cadets leave Sandhurst qualified to give an eye sketch of a ground which would be useful to a commanding officer?—Yes; a fair proportion of those who leave Sandhurst can do so.

649. That is a regular part of the final examination, is it not?—Yes, a sketch, not an eye sketch.

650. The higher parts of mathematics and higher fortification are considered throughout the college course as merely voluntary, are they not?—Yes.

651. It is possible for a cadet to pass through fairly, and yet not to devote himself to the higher mathematics or the higher part of fortification?—Yes, they are entirely voluntary.

652. As Sandhurst at present stands, is a cadet positively required to know anything of the higher mathematics or anything of permanent fortification on leaving the college?—Not of higher mathematics ; permanent fortification is a part of the obligatory study.

653. But the marks required to be gained on that particular subject, if made up on other subjects, would still leave the cadet qualified, would they not?—No ; he is required to get a certain number of marks in the three military subjects, namely, fortification, military drawing, and military history.

654. You never heard of a cadet being disqualified on fortification, did you?—The minimum required for qualification is 1,200 marks upon the three military subjects taken as a whole.

655. And not in one subject?—No.

656. Do you consider that the course of fortification and military drawing carried on at Sandhurst is likely or otherwise to give in time of war a supply of officers in aid of the Engineers under the name of assistant engineers?—Yes, I think that it might have that effect.

657. You are aware that there were a large number of such officers employed at the siege of Sebastapol?—I know that there were some ; I do not know how many.

658. With respect to the plan drawing which is taught, is it possible for a young man to understand detailed plans or drawings relating to battles and military points without knowing something of plan drawing?—No, I do not think that he would be able to read a topographical plan unless he knew something of topographical drawing.

659. You spoke of the drill as being a useful subject ; I believe that light infantry drill is included in the course?—Yes.

660. Are you aware that not long since a cadet left Sandhurst at the Christmas vacation of one year, and was appointed instructor of musketry to an infantry regiment before the completion of the next, the first year of his commission?—I had not heard that.

661. Supposing that to be the case, in your opinion would it have been possible for a young man to have done that unless he had been to a military college, namely to leave the college at Christmas, and to be appointed instructor of musketry within the following year ; that is to say in less than 12 months from the time that he left the college?—No, I think that it would not have been at all likely.

662. Would the amount of riding which is taught at Sandhurst be an aid to a young man when going to a cavalry regiment?—Although the amount of knowledge acquired by the best riders might be of some use, it would not prevent them from being sent to the riding school.

663. I believe that in the course of military history a good many details are introduced relating to the organization and movements of armies?—Yes.

664. (*Sir C. Russell.*) Can you state how many days are annually passed in examinations at Sandhurst?—In actual examinations a week every half year, and then there is a week or 10 days after that for the Council to make up their reports, in which time there is little or no study.

665. What period is actually given up to recreation in the year at Sandhurst?—The vacations consist of three months, there is also a week at Easter for those who like to go away, and there is no study in that week.

666. Do you think that teaching cadets early in life the mimic duties of soldiers, such as mounting guards and picquets, induces them to look upon such duties as a farce?—No, I do not take that view of the matter, but I think that it is useless to teach them such duties.

667. As we have been told that swimming is not actually taught, and that riding is obligatory, and that fencing can be taught upon application, do you not

think that if a few marks were to be given for these subjects in the examination it would very greatly tend to induce the cadets to qualify themselves in them?—Yes, it would be a very good thing to give marks in all those subjects if it were practicable.

668. (*Rev. Dr. Butler.*) I think that you said that the instruction in military history was given by lecture?—Yes.

669. Is it compulsory upon all?—Yes.

670. Do you know how many hours a week are given to that study?—Hitherto they have given two attendances a week, but it is now to be increased to three.

671. Is each attendance an hour?—An hour and a half. The lecture occupies an hour or so, and then there is half an hour for asking questions. There is only one lecture a week; the other study I believe has hitherto been for the purpose of being examined, but I do not know the exact details of what the two studies have been. I merely know that there has been one lecture a week, and the other study has been occupied, I believe, in questioning upon the previons lecture.

672. Are the modern languages taught by foreigners?—Yes.

673. Do you know whether any considerable proportion of the cadets are found able to converse easily in French or German when they leave Sandhurst?—No, not any large amount. I should say that they would not learn to converse there. Many of them come in who are already able to speak French or German, and of course they continue that; but I should say that they could not learn to converse by the instruction alone which is given to them at Sandhurst.

674. Has any scheme ever been devised for taking them or any portion of them abroad for any part of the year?—No. Some few of them I believe go abroad occasionally, but no scheme has been devised or proposed that I am aware of.

675. Would you attach a very great value to a colloquial knowledge of French and German in a body of officers?—Not on the part of every officer.

676. Generally, is it of great importance that an officer should be acquainted with French and German so as to speak those languages?—I think that it is an advantage to an officer to be able to speak a foreign language, but I do not consider that it is an absolute necessity.

677. (*Sir D. A. Cameron.*) Can you tell us how many hours a day are devoted to study at Sandhurst?—By the time table there are four studies for four days a week, and three studies for the other two days.

678. What is the length of a study?—An hour and a half.

679. How many hours are devoted to drill and military exercises?—The general parade is an hour, but I do not know much about the details of the drill, because they do not come under us in any way.

680. Do you think that sufficient time is given to military exercises?—Quite sufficient.

681. Do you think that every cadet who leaves the college can move a company about well?—No.

682. Would not it be desirable that he should be able to do so?—I think that he will learn that in his regiment. I do not think that it is possible to teach every cadet to drill a company.

683. Would it not be an argument for giving up military exercises altogether if they can all be taught after a cadet joins his regiment?—I think that drill is a capital thing in itself at a military establishment. I think that a military establishment would not be a real military establishment if there was not a certain amount of drill, particularly if boys are a good many hours over a desk; the drill sets them up; they would all be as round shouldered as possible if it were not for that.

684. I believe that the half-yearly examinations are over about 10 days before the vacation begins?—Yes.

685. Is not the interval between the half-yearly examinations and the vacation one of very great idleness?—Yes.

686. In fact I believe that the cadets do not continue their studies at all during those days?—No.

687. Could not that state of things be remedied?—Yes, easily; a plan for altering it came from the authorities at Sandhurst, and it met with our concurrence, but it was not adopted.

688. Why was it not adopted?—Because it was referred to the authorities of the military academy at Woolwich, and they gave reasons, which seemed to be sufficient to the Commander-in-Chief, for the continuance of the practice there, and therefore His Royal Highness wished it to be continued at Sandhurst.

689. (*Rev. W. C. Lake.*) You seem to recommend the study of military history and fortification and the like, not supposing that the cadets pursue those subjects very far, but as being likely to give them an intelligent interest in the study of their profession afterwards?—Yes.

690. On those grounds then you would think Sandhurst a very desirable institution for young men going into the army, supposing that these things were successfully taught there?—Yes.

691. Do you think that they are taught successfully?—Yes, with a very fair amount of success.

692. You apparently do not think that they are taught successfully to all, because you have spoken of a large body who are very idle from the first time that they come in?—Certainly not to all; the idle ones profit very little.

693. Do you think that the presence of that large idle body considerably prevents a great number obtaining such knowledge?—Not only are the Indian and Queen's cadets idle, but the majority of those who do not compete for commissions without purchase are also idle.

694. What would be the proportion of the idlers to the proportion of what you may call the studious cadets?—About two-thirds, perhaps, are idlers.

695. Have you any proposition to make with regard to the idlers; do you think it possible to get rid of them?—There are two ways in which that state of things might be remedied. The first would be to increase the qualifying minimum for a commission by purchase. The effect of that would be that the college would be very much reduced in numbers, because these candidates, who do not expect to get their commissions without purchase, would rather go up for a direct commission examination. The effect therefore of that would be to diminish the numbers in the college very considerably. The second plan would be to reduce the establishment of cadets to a number which would admit of every cadet getting a commission without purchase provided that he passed a qualifying examination, which could be placed very high. The effect of that plan also would equally be to diminish the number of cadets. Therefore, I should not be much inclined to press either of those plans.

696. What disadvantages do you think would arise from considerably diminishing the numbers at the military college?—It would reduce the importance of it as a public establishment, and there would be fewer men entering the army with even the little military knowledge which they do get at Sandhurst.

697. But you state that two-thirds are confirmed idlers?—I do not say that they are confirmed idlers, but they certainly do not work because they can qualify for a commission by purchase with very little trouble, but still they do learn something.

698. Do you think that an establishment is really benefited by the presence of two-thirds who are idlers, and that it would not be better on the whole to get rid of these idlers?—There is no doubt that it would have a very advantageous effect upon the industry, and consequently the discipline of Sandhurst.

699. There is a third course I think, namely, that of raising the present entrance examination; might

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

not that be adopted?—That would have the same effect of diminishing the numbers.

700. Do they all go through precisely the same entrance examination?—Yes.

701. Considering the number of idle cadets of whom you have spoken, do you think that it would be advantageous to diminish the length of the course?—No; I prefer lengthening the course.

702. (*Lord Northbrook.*) Is there not another means which could meet the difficulty, namely, that of increasing the number of commissions without purchase?—No doubt, if it could be done.

703. That would at once give the necessary inducement to young men to qualify themselves to pass a good examination?—Yes; but in that case it would be necessary to have a high qualifying minimum for a commission without purchase.

704. And not to give to those who failed a commission at all?—Yes, I would give them a commission by purchase.

705. In that case you would still leave a certain number of young men who would go through the course thinking that they would be sure, even if they did not get a commission without purchase, of getting a commission by purchase, and therefore the same element of idleness might remain?—Yes; but unless you could give so many commissions that every cadet who was diligent and passed a qualifying examination for a commission without purchase received that commission, it would not be fair to say to those who did not get these commissions that they should not go into the army at all. If you have five competitors and you only give four commissions one of the five must fail to get his commission, and then it would be very hard upon him to say "You shall not have a "commission at all."

706. (*Rev. W. C. Lake.*) The numbers at Sandhurst are 300?—About that. The strength varies.

707. Then 200 are habitual idlers?—I will not go so far as to say that there is actually that proportion; perhaps I may have pitched it too high in saying two-thirds. Certainly those who are at the head of the list of the cadets who get commissions by purchase cannot be called idlers.

708. If the plan which Lord Northbrook has just suggested were adopted, would you not in that way obtain a sufficient number of cadets who were likely to be studious at Sandhurst to enable you to dispense with this residuum of idlers?—It would depend entirely upon the number of commissions which were given. If they could give, for instance, 50 commissions every half year without purchase, that would enable the number of cadets at Sandhurst to be 200; the number of cadets would always be dependent upon the number of commissions which could be given without purchase, and would always be four times the number of the commissions, supposing the course to be two years.

709. (*Rev. Dr. Butler.*) I think that you expressed a fear generally that if the standard of admission were raised the number of students would fall off?—Yes.

710. What is the ground for that opinion?—That they would not get into Sandhurst.

711. It has been found at several of the colleges and at the public schools that the raising of the standard has, if anything, raised the demand; why should it be different with the military college?—At our examination now, even at the standard at which it is at present fixed, we have 19 or 20 per cent. of failures; if we raised that standard I should imagine that we should raise the number of our failures.

712. Might it not be found that more parents would desire to send their sons to Sandhurst if they were convinced that there was a greater certainty of industry?—How would raising the entrance examination affect the industry at Sandhurst?

713. Because the presence of so many idlers practically tends to lower the whole tone?—Whatever the entrance qualification was, the idlers at Sandhurst would continue to exist if there was no inducement to them to work, and there is no inducement to work to those who feel at once that they cannot compete with their comrades for a commission without purchase.

714. (*Sir D. A. Cameron.*) Do you not think that the service would gain if the cadets who joined were all thoroughly instructed, even though the number might be smaller?—Yes, I think that it is a greater advantage to the service to have a few well instructed officers than a great number of superficially instructed officers.

715. That is an argument for having a smaller college, but a higher entrance examination and a stricter examination when going out?—Yes.

716. (*Lt.-Col. Chesney.*) Is it not a vital point in the matter of the working of a professional college that you should be able to put before every student who does his best a certainty of some reward?—Yes; and the present reward is not sufficient for the majority of them.

717. And is it not too uncertain?—Yes.

718. (*Lord E. Cecil.*) Do you think that industry at military colleges, and at public schools, and at the universities, is in a proportionate ratio to the prize which is offered for that industry?—I should say that it is very much affected by it.

719. And you think that that rule applies especially at Sandhurst at the present moment?—Yes.

720. (*Chairman.*) You were asked whether some of the evils which you have been pointing out in your latter answers might not be palliated if a larger number of commissions without purchase were offered for competition at Sandhurst. Is it not the fact that no person except a man raised from the ranks can now get a commission without purchase except by passing an examination at Sandhurst?—Yes.

721. Therefore, from what source would it be possible, consistently with the purchase system at all, to offer a larger number of commissions without purchase than are now offered?—It would be impossible, of course, to offer more commissions without purchase than were at the disposal of the authorities.

722. But the whole of the commissions without purchase under the present system of purchase are now placed at the disposal of Sandhurst, with the exception of those reserved for non-commissioned officers?—Yes.

723. There are, however, about 40 Queen's and Indian cadets at Sandhurst who obtain a portion of those commissions without purchase without competing for them?—The average number of Queen's and Indian cadets at Sandhurst varies from 20 to 30, and a portion of them get commissions without purchase every half-year.

724. But the whole of the other commissions are competed for?—They are.

725. You stated that the object of the entrance examination into Sandhurst was to test that the candidate had had the usual education of a gentleman?—Yes.

726. What do you consider to be the object of the course at Sandhurst; is it to continue that ordinary education of a gentleman, or is it to give a certain amount of professional training?—It is both to continue that general education and to afford a knowledge of military subjects.

727. I understand it to be your opinion that, with the exception of drill, regimental duties could not properly be taught at Sandhurst?—I think that it would be in vain to attempt it.

728. And you apply that also even to any instruction in military law?—I think that military law is such a dry subject that it would be useless to attempt to force it upon young men of that age at a college.

729. Your view then would seem to be that the object of Sandhurst was to provide a certain number of officers for the army who had received instruction in general military subjects as distinguished from subjects of detail?—Precisely so.

730. And you think that that is very desirable, although some of the subjects may not be required

for every officer who enters the army?—I think that it is very desirable indeed.

731. You do not hold it to be an objection to the study of mathematics, or to the study of military history at Sandhurst, that it may not be required for every military officer?—No objection whatever.

732. You conceive that the purpose of Sandhurst is to afford to the army a certain number of officers having received a higher amount of professional training, and having had their interest excited to continue professional studies to a greater extent than is necessary for the general body of officers of the army?—Precisely so.

733. And upon that general principle you think that certain instruction in Euclid and fortification and in matters of that kind, which would be useful to a great many officers, is desirable, although it may not be required for all the officers?—Yes, certainly.

734. It has no doubt been found in many wars that it was necessary, particularly with our limited army, to call for the assistance of officers of the line to come in aid of the engineers?—Frequently.

735. And in those respects it would be desirable that you should always have a probability of any military force sent out having those officers who had turned their attention even to permanent fortification and the attack and defence of fortresses?—In my opinion that is most desirable.

736. Did I rightly understand you to say that you thought that it was impossible to give colloquial instruction in languages at Sandhurst, that is to say, to secure that the students should not be merely able to read, but should be able to talk one or two foreign languages?—I have no expectation of that being accomplished at Sandhurst.

737. You would admit that if it could be accomplished it would be a desirable object?—Certainly it would bevery desirable.

738. Do you think that it is necessary to the useful study of military history that the students should actually visit the scenes of the campaigns which they are required to study?—No doubt it would be a very great advantage to them, but the subject of military history can be sufficiently taught generally to the mass of young students without it.

739. Is it not taught in the way which you suggest in the military colleges of all other countries?—I should imagine so, there is no other way, I think, of teaching it at a college.

740. (*Sir. C. Russell.*) Are not the plans in use at Sandhurst on so unusually large a scale as to give pupils great facilities for understanding the nature and description of the ground?—Yes, the plans are excellent.

741. (*Chairman.*) Then I understand you to say distinctly that it is your opinion that military campaigns and battles can be understood from plans as distinguished from models?—Yes, decidedly so.

742. With respect to the drill which is taught at Sandhurst, do you know whether it is the practice to send cadets coming from Sandhurst again to drill when they join their regiments?—I believe the general practice to be this, that when an officer joins his regiment from Sandhurst the adjutant examines him in his drill practically, and if he finds that he is perfectly *au fait* in it he reports to the commanding officer, who probably will not think it necessary to continue his drill.

743. And do you believe that the drill is so taught that that is generally the case?—I think so; I should myself imagine that the majority of the cadets who leave Sandhurst do not require any more of squad or company drill.

744. You stated that you thought that great mischief had resulted from the interval which exists be- the conclusion of the examination and the end of each term?—It is a time of idleness.

745. What is the cause of the existence of that period?—It is for the purpose of enabling the Council of Military Education to receive the reports of their examiners upon the examination, and to make out their report to the Commander-in-Chief of the cadets who have gained their commissions.

746. I suppose that you mean that it is with a view to enabling the names of those who have gained their commissions to be announced at the termination of the term?—Precisely.

747. It would of course be possible to make that announcement in some other way?—Yes, it could be published in the newspapers.

748. I think that I understood you to say that the Council of Military Education themselves, and the authorities at Sandhurst, were both in favour of getting rid of that period of comparative idleness?—Yes.

749. You said generally that you did not think that it would be desirable to press a reduction of the number of students at Sandhurst to that which would be required if they were only to receive commissions without purchase. Will you state more fully why you think that it would not be desirable to adopt that system?—Besides reducing the numbers it might also have the effect of reducing the status (if I may so call it) of the cadets themselves. Probably the cadets who went to Sandhurst, if they were confined merely to those who could not purchase, would not be of the same high class as a general rule as those who purchase; it might have that effect.

750. By "high class," do you mean socially or intellectually?—I mean socially of a high class.

751. Under the present system are the students at Sandhurst drawn from all classes?—From all classes.

752. Have you ever had that subject under the consideration of the Council?—Yes; we have never yet put it forward officially, but I laid it before the Commander-in-Chief as President of the Council, and His Royal Highness had some very strong objections to it, in which I think there is considerable force.

753. But you are of opinion that the adoption of that system would tend to get rid of that large class of comparative idlers of whom you have spoken?—Yes, there is no doubt of that.

754. As I understand you, those who have little or no hope of obtaining any advantage from their studies at the college, which they would not have possessed if they had never gone there, are the large majority of the students; I mean by that, those who have no hope of obtaining a commission without purchase?—Yes, they are the majority.

755. Because of course any person could obtain a commission by purchase without going to Sandhurst?—Yes.

756. And except that I believe there is a priority of appointment to commissions by purchase given to those who have passed through Sandhurst, there is no other advantage applying to those who fail in getting a commission without purchase?—There is no other advantage.

757. I think that the impression left on the Commission by the statements which you have made is that about as large a proportion as two-thirds of the present students at Sandhurst come more or less under the description of idlers?—Yes, but I would beg to correct that, and to reduce that number to possibly one half. I cannot speak accurately upon that point, it is a difficult thing to do so.

758. Do you think that the students become aware at an early period of their career whether or not they have a chance of getting a commission without purchase?—Yes, very soon.

759. And I suppose that you would think that, if they feel that they have no chance of doing so, it operates disadvantageously upon them, as discouraging them from work?—They then give up work to a certain extent.

760. Their sole object then is to secure the minimum number of marks?—Yes.

761. Do you think that the system of carrying on marks from the examinations which take place during the course of study, has any tendency to give an earlier intimation of the position in which a man will ultimately find himself, than if his position in the final

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

examination was exclusively dependent upon the marks then obtained?—Yes, it would to a certain extent have that effect, but I believe that a cadet knows very well what his chance is on first joining; in fact the result of the entrance examination is sufficient to show that.

762. Do you mean that those who are highest in the entrance examination are, almost invariably, those who are highest in the final examination?—I should think that they are very likely to go out nearly in the order in which they come in.

763. Do you speak of that from experience, or is it merely your opinion?—It is merely my opinion.

764. Have you ever thought whether there was any means of holding out additional objects of competition to students in the college which might infuse a little more life into the studies of the majority?—I hardly know what other prizes you could give.

765. (*Lord E. Cecil.*) If only 60 cadets in a year get commissions without purchase the effect upon the army generally of a very superior military knowledge is infinitesimally small, is it not?—It is just that amount.

766. I understand from what you have said in evidence that one half or more of the cadets only qualify in the same manner that other candidates coming from other public schools or establishments do?—No, the examination on leaving Sandhurst is quite different from the examination on entering; it embraces all the military subjects.

767. For these who get commissions by purchase?—Yes, the examination is the same.

768. In order to qualify for a commission is it, as it is stated in this paper dated the 5th September 1867, a commission by or without purchase that is meant?—That minumum qualification is the qualification which entitles the cadet to a commission by purchase; there is no qualification for a commission without purchase; that is competitive, and of course much higher.

769. Supposing that a cadet has idled away his time, say, for the first six months at Sandhurst, and that he does not see much chance of qualifying for a commission by purchase, is it open for him to leave the college and to qualify in the same way that other candidates do?—Yes, he may be withdrawn from the college at his option. He cannot be removed without the permission of the Commander-in-Chief, but that is merely formal.

770. Being removed, may he go up for the direct examination of other ordinary candidates for the army?—Yes.

771. Do you suppose that a large proportion of cadets, or any proportion of cadets, are in the habit of doing that?—No, I should think not. I may say that they all qualify for commissions by purchase at Sandhurst; not more than one fails at each examination.

772. The examination which they are called upon to pass is very much more severe than the examination for direct candidates, is it not?—It is in different subjects.

773. It seems to me extraordinary that idle cadets under those circumstances should not choose the easier mode of entering the army. Can you explain that?—It is because their fathers send them to Sandhurst with the view of getting a commission without purchase.

774. But suppose that they are incorrigibly idle, would not their fathers prefer to give them the easier examination which the candidates get for direct commissions?—No, because the qualification for a commission by purchase at Sandhurst is such that, idle as they may be, they seldom fail to pass it.

775. Is not the examination harder than the examination passed by the candidates for direct commissions?—No, it is easier, I should say.

776. Then, as I understand, a large proportion of the cadets at Sandhurst are no more advanced in military knowledge than the ordinary candidates who go up for examination for direct commissions in the army?—They have more military, but not more general knowledge.

777. I understand you to say that the examination of the cadets at Sandhurst is rather easier than the examination of direct candidates for the army?—I did not intend to say that the examination in itself is easier, but I think that it is easier to get marks upon that examination, because they get them throughout the course, whereas the marks at the direct commission examination must be got by one examination.

778. If the cadets at Sandhurst have already passed the direct examination of the army, why should they not be allowed to go directly into the army, because they are qualified exactly in the same manner as other candidates for the army are?—They qualify for admission to Sandhurst. If they want to qualify for a direct commission they must leave the college or they cannot go up for examination. No gentleman cadet is allowed to present himself for a direct commission examination during his residence at the Royal Military College, but he may leave the college and then go up for a direct commission examination if he pleases.

779. Does not that appear rather unnecessary? Supposing that there is that mode of entering the army by leaving the college, and that the cadet has already passed the examination necessary for a direct commission, why should he be called upon to pass it again?—He has not passed that actual examination, he has passed an examination for another object, and for another institution; and though they are very much alike, still passing the examination for Sandhurst would not entitle him to a direct commission.

780. In your opinion are the two examinations necessary?—Yes, I should keep them distinct.

781. Does it add to the certainty on the part of the State that a cadet has more military knowledge than a direct candidate for the army?—There is no doubt that a cadet who passes the examination at Sandhurst for a commission has considerably more military knowledge than a candidate who goes up for a direct commission.

782. I am talking of a cadet who has passed the entrance examination into Sandhurst; he possesses quite as much knowledge as the candidate who passes directly into the army, and I want to know why the double examination should be exacted, unless the second examination gives the authorities or the State a certainty that the cadet has acquired more general knowledge?—Cadets seldom go up for the direct commission examination, as they get their commissions from Sandhurst.

783. Can you explain why cadets who are incorrigibly idle do not make use of that privilege oftener? As I understand you, it is a privilege to have only to pass the same examination over again which has been passed before, instead of having to qualify in the more severe examination necessary for a direct commission?—In the first place the cadets are not free agents, they depend upon their fathers, and the father says, "You shall go to Sandhurst and work "for a commission without purchase, and if you do "not get it I will purchase it for you if you pass the "qualifying examination." I presume that the young men are not consulted.

784. With indulgent parents, and with incorrigibly idle cadets, why is not that privilege made use of more frequently?—I cannot explain that.

785. (*Lord Northbrook.*) Was not it contemplated in 1861 to increase the college at Sandhurst, so that all officers should pass through Sandhurst?—Yes.

786. It was increased in 1862, but in consequence of the opposition made to that proposal, direct commissions were still given, instead of commissions only upon passing through Sandhurst?—That proposition was never carried into effect.

787. But still, was not the college increased in 1862?—Yes.

788. With respect to the nomination of gentlemen to commissions, as long as Sandhurst is kept up to its present amount, a considerable proportion of com-

missions by purchase must be given to students from Sandhurst?—Yes.

789. And therefore the number of commissions by purchase is limited?—Yes.

790. And consequently it necessarily follows that a certain proportion of officers must go through Sandhurst in order to get commissions by purchase?—I do not see that this follows.

791. (*Lord E. Cecil.*) With regard to foreign military colleges, are you not aware that at West Point in America, and at St. Cyr in France, when cadets leave those establishments, they leave knowing all the necessary accomplishments of the branch of the service into which they are about to enter; are you not aware that they are perfectly acquainted with all the minutiæ of regimental drill and regimental economy?—Yes, I believe that they are; but at West Point, and at St. Cyr too, I believe they are treated as private soldiers and do the duty of private soldiers.

792. Is not there an attempt to treat the cadets at Sandhurst somewhat like private soldiers?—No.

793. Are they not lodged in similar barrack rooms?—No, not more than four in a room.

794. Are they not drilled as private soldiers?—They are drilled as private soldiers, but that is the only way in which they are at all treated as private soldiers.

795. Are they not called "private cadets"?—No, "gentlemen cadets."

796. But are they not looked upon as privates in the ranks?—Only whilst they are under arms.

797. There is a similitude, if it is not actually carried out, to the organization of a regiment?—A very slight one, indeed, I should say.

798. Are there not non-commissioned officers among the cadets?—Yes, corporals and under officers.

799. Are not the cadets divided into companies with subaltern officers and captains over them?—Yes.

800. And is not the whole under the direction of the commandant?—Yes.

801. In your opinion, does not that amount to the organization of a regiment?—No, I think that the two things are quite distinct. You may call it a military organization, but not a regimental organization. A regimental organization necessarily implies the presence of private soldiers, and there are no private soldiers at Sandhurst, they are all gentlemen cadets.

802. With regard to foreign colleges, is it your opinion that the cadets at West Point and St. Cyr can be made to serve as privates in the army?—It is a very long time since I read the regulations either for West Point or for St. Cyr, but my impression is that they are enlisted as soldiers, and can be tried by court-martial.

803. They are enlisted, but is it not true that they are only enlisted to serve in the college, and not in the army generally?—Yes, but whilst they are in the college they are strictly under the Articles of War, and they are treated as soldiers, I believe.

804. Are the cadets at Sandhurst under the Articles of War?—Nominally, I believe they are.

805. (*Lord Northbrook.*) In entering Sandhurst, is a nomination required?—Yes.

806. It is not by public competition?—No.

807. Have you ever considered whether a military college like that at Sandhurst could be conducted with greater efficiency if cadets on appointment received commissions of some sort or another?—I should object to that entirely; they would be more troublesome.

808. Have you any knowledge of the system on which the naval training ship is conducted?—No.

809. You are not aware that it is on that system?—Yes, I know that much.

810. So that in the other service it would appear that that system is carried out?—Yes, but they are boys.

811. Do you not think that there would be more proper order with regard to the discipline of a college if a young man felt that he would lose his prospects in the service if he did not conduct himself properly?—I am quite opposed to any such system as that of having large colleges composed of officers.

812. Will you be kind enough to state your reasons more fully for that opinion?—I think that all the education of young men should be gained before they get their commissions. I see no advantage in giving them a commission whilst they are at college.

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

813. (*Sir D. A. Cameron.*) In fact, you mean that a man should not be paid as an ensign unless he does an ensign's duty?—That would be a very good illustration of my meaning.

814. If all the cadets, as you say, manage to qualify for commissions by purchase in spite of their idleness, would it not be desirable to raise the minimum qualifying number of marks?—It would, but then it would have the effect of diminishing the numbers of the college, which we do not want to do.

815. (*Chairman.*) Does your objection to diminishing the numbers arise from any opinion that the college would be less efficiently worked within itself with smaller numbers?—No, it would be quite as efficiently worked, and more easily worked.

816. In fact, as I gather from your evidence, you think that, as regards the college itself, it would be more efficiently worked with smaller numbers?—Yes, I think so.

817. Is there any material difference between the cadets at Sandhurst and the cadets at Woolwich as regards their relation to the army? Are the cadets at Woolwich a part of the Royal Regiment of Artillery, and therefore to a greater extent to be considered as officers, than the cadets at Sandhurst?—No, I do not consider them at all more as officers.

818. Are the cadets at Woolwich called the cadet company of the Regiment of Artillery?—Yes, I believe so.

819. But you do not consider that that represents any practical difference in their military status?—None whatever.

820. (*Sir C. Russell.*) If the number of cadets at Sandhurst were reduced, would the cost to the remaining cadets be increased?—No, the Government would pay the difference if there was any.

821. (*Chairman.*) Have you any further suggestion to make with reference to the course of study or instruction at Sandhurst?—I would urge, what I know is in the contemplation of the authorities at Sandhurst, namely, the establishment of workshops, the same as at Woolwich.

822. On what grounds would you desire to see those workshops established?—I consider that it is an excellent means of recreation for young men to learn carpentering and turning and other things which they learn in those workshops at Woolwich; it is an admirable part of the institution.

823. Are they popular with the cadets?—They are very popular.

824. But you would rather regard it as a matter of recreation than as an important part of study?—It is not a part of study.

825. And you would not take any time from studies to be devoted to that purpose?—No, it should be all done out of study hours.

826. (*Lt.-Col. Chesney.*) In a Sandhurst batch is there any advantage at all in the first five or ten over the last five or ten?—I believe that they generally get their commissions according to the order in which they pass out, with the exception of the under-officers, who are entitled to priority.

Officers, Professors, &c., of the College.

827. (*Chairman.*) Will you state to the Commission the arrangements as to the officers for the management of the affairs of the college, and its government?—The governing establishment consists of a governor, a commandant, a major and superintendent of studies, a captain and lieutenant for each of the three companies, and an adjutant.

828. The governor, I believe, is also governor of the Staff College, is he not?—Yes, the Staff College is included in the Royal Military College, and the governor is at the head of both.

829. But the commandant, the superintendent of studies, and the other parties whom you have men-

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

tioned are only connected with the cadet college?—Yes, with the cadet college only.

830. There is a body of commissioners connected with the college at Sandhurst?—Yes.

831. Have they anything to do with the education there?—I think not.

832. How are the officers of the college appointed?—By the Commander-in-Chief with the concurrence of the Secretary of State for War.

833. Are the commissioners, as such, in the receipt of any salary, or are they purely honorary commissioners?—They are purely honorary; they have no salary.

834. There is, I believe, a body of professors at Sandhurst, who are beyond the officers to whom you have at present alluded?—Yes.

835. Can you state their number?—There are five professors and masters of mathematics, six of fortification, six of military drawing and surveying, three of military history, two of landscape drawing, four of French, and one of German. There are a riding master, and a lecturer in geology, and one in chemistry, the three latter being common to the cadet college and to the Staff College.

836. Of those professors, how many are military officers, and how many are civilians?—There are 16, including the riding master, who are military men, and 14 civilians, including the two in common with the Staff College.

837. How are the professors appointed?—They are appointed by the Commander-in-Chief and the Secretary of State for War upon the recommendation of the Council of Military Education.

838. I think that you before stated that the recommendation of the Council of Military Education is practically invariably adopted?—Yes.

839. What method do the Council take when a vacancy occurs in finding a person whom they can recommend for the appointment?—With regard to the civilians, we keep a list of candidates, and we write to them upon the occurrence of a vacancy for their testimonials, and we then make our selection. With regard to the military men, we give notice, by means of a general order issued by the Adjutant-General, that such and such a vacancy has occurred, and we call for candidates, and then we select from them.

840. The professors, I believe, have nothing to do with the discipline of the college?—The professors are charged with the maintenance of discipline in their halls of study, and they are also required to take notice of any irregularity which they may see out of study.

841. What is their power of maintaining discipline in the halls of study?—Their only power is to send the cadet out of study under arrest.

842. Have all the professors the power of placing cadets, under those circumstances, under arrest?—Yes, of sending them out of their halls of study under arrest.

843. Does that apply to civilian professors as well as military?—Yes.

844. To what extent do they exercise any authority with respect to any irregularity out of study?—They merely report it to the commandant, I believe.

845. Have the civilian professors any powers different from those of the military professors?—No.

846. Do you think that the position of the professors with regard to discipline is satisfactory, or would you desire to see it altered in any respect?—I am not an advocate for giving the professors more powers than those just stated, and which were laid down by a board of commissioners.

847. You mean the commissioners of the college?—Yes.

848. Do they take any part in the regulation of the discipline of the college?—On this occasion the whole question of discipline was submitted to them.

849. And considered?—And considered by them.

850. Have they the power of laying down regulations for that purpose without reference to any other authority?—Yes, I think that they must have that power, because they include the Commander-in-Chief, the Secretary of State for War, the governor of the college, and the Vice-President of the Council of Military Education, and there is no higher authority to refer to.

851. Will you state the names of the commissioners?—The commissioners are, *ex officio*, His Royal Highness the Field Marshal Commanding-in-Chief, president; the Secretary of State for War, vice-president; the Quartermaster-General; the Adjutant-General; the Governor of the Royal Military College; the Chaplain-General; the Vice-President of the Council of Military Education. Then there are several specially appointed besides, namely, the Duke of Cambridge, Sir Hew Dalrymple Ross, Sir Charles Yorke, Sir Richard Airey, Sir James Scarlett, Sir Edward Lugard, Lieut.-General Forster, Maj.-General the Honourable A. Gordon, Sir Alfred Horsford, Maj.-General the Right Honourable P. E. Herbert, Sir E. Wetherall, and Colonel Egerton.

852. How long has the Vice-President of the Council of Military Education been a member?—Since the beginning of this year.

853. Then I suppose that we shall obtain a statement of the general powers of the commissioners better from a member who has been longer at the board than yourself?—Yes.

854. The staff which you have mentioned, both of officers of discipline and of professors especially, is numerous?—Yes.

855. Do you think that it is more numerous than is required?—No, I am afraid not. We have often considered the practicability of reducing it, and have not been able to do so.

856. Do you think that with respect both to the officers of discipline, including in that term the major and superintendent of studies, and also as regards the professors, no reduction can be made?—My answer is merely with regard to the professors.

857. Do you think that any alteration could be made with respect to the number of officers of discipline?—I cannot believe that there is sufficient occupation for the captains and lieutenants of companies.

858. There is a captain and lieutenant to each company?—Yes.

859. Do you know their duties?—Their duties are the general looking after the discipline of the cadets in their dormitories and out of doors.

860. They have each a maximum of 100 cadets under them?—Yes; the captain and subaltern have a maximum of 100 cadets.

861. Can you state the duties of the adjutant?—The adjutant superintends all the drill, and he assists the commandant in the orderly room.

862. What are the duties of the major and superintendent of studies?—His duties are chiefly with respect to the studies; he has a nominal duty with regard to parades and discipline, but I may say that his main duties are connected with the entire arrangement of the studies and the superintendence of them and of the manner in which they are carried on.

863. Has he a power of enforcing punishment?—Yes; he settles the punishment for all offences committed in study which do not involve a greater punishment than seven days' arrest; he reports his punishments to the commandant.

864. Do they take effect without requiring confirmation from the commandant?—I do not know.

865. What are the powers of the commandant?—The commandant has the charge and immediate command of the whole establishment, everything is under him.

866. What are his powers of punishment?—He gives arrest of various kinds and duration. I do not remember at this moment the exact extent to which he can administer punishment.

867. Has he the power of dismissal?—No, the commandant has not.

868. Then is the only punishment except dismissal which is used in the college, arrest for a longer or a shorter period?—There is arrest of different kinds. There is isolated close arrest, and there is close arrest,

and open arrest. Every day's arrest carries one day's drill. There is also rustication.

869. What is the nature of isolated close arrest?—The cadet is placed in a room by himself.

870. Is there a room devoted for that purpose?—Yes; each cadet under isolated close arrest is locked up by himself.

871. What is the kind of room?—It is a very good room, it is of the same size as a dormitory.

872. Do you know the longest period for which isolated close arrest can be given?—No.

873. Can you state the general powers of the governor as regards the college?—The governor has very lately been given the power of rusticating, or removing altogether from the college, any cadet whose conduct he considers to require such a punishment, reporting to the Commander-in-Chief that he has done so.

874. Under the existing regulation, does the rustication or removal take effect as soon as the sentence has been pronounced by the governor?—The cadet may be immediately removed by the governor, but he is liable to be sent back by the Commander-in-Chief.

875. As a matter of fact, is the decision of the governor in that respect ever overruled by any other authority?—The only case in which this power was, to my knowledge, exercised since its establishment, which was of a very recent date, was when there was no governor; and then the commandant in conjunction with the acting governor, who was the commandant of the Staff College, thought it necessary to remove a cadet from the college, and he was sent back by the order of the Commander-in-Chief, who desired that he might be punished at the college.

876. Therefore, in that case the removal did not take effect?—No, he was sent back again.

877. Have the commissioners anything to say to removal, or to any individual cases of discipline?—I do not think they have.

878. With respect to the number of professors and masters, are you aware what proportion the number of professors and masters at Sandhurst, in comparison with the number of cadets, bears to the number of instructors at military colleges in other countries?—No.

879. (*Lord E. Cecil.*) Can you state what the relations of the two bodies, the Council of Military Education and the commissioners, are? Are the commissioners over the Council of Military Education, or are the Council of Military Education over the commissioners?—We have no official relations with each other.

880. Nothing passes between them upon any subject?—No, we have nothing to do with the commissioners; we deal with the Commander-in-Chief. Of course the Commander-in-Chief may submit any proposal of ours to the commissioners if he pleases, and he does so occasionally.

881. Through what channel do the commissioners report or suggest; is it through the Commander-in-Chief?—A meeting of the commissioners is called, and they come to certain resolutions, and those resolutions are sent by their acting secretary to the parties concerned.

882. To the Commander-in-Chief?—No, the Commander-in-Chief is one of the commissioners; they are sent to the governor of the Military College, for instance.

883. The Commander-in Chief is, *ex officio*, a member of the Council of Military Education?—Yes, he is the president of it.

884. He is also one of the commissioners?—Yes.

885. Which body of the two would have the influence in matters relating to the college?—There is no conflicting influence at all that I know of; they are quite distinct.

886. Do the commissioners attend the examinations of the cadets?—No, they go down upon the public day, and they hear the report read.

887. Does the Council of Military Education attend the examinations?—Not the actual examinations whilst they are going on. A certain number of the commissioners and a certain number of the Council of Military Education accompany the Commander-in-Chief upon the public days.

888. In short, the two bodies are amalgamated at the end of each half year, and they go down to the public examination at Sandhurst?—They have nothing to say to each other. There is no amalgamation.

889. I understood you to say that the Commander-in-Chief took a few of the Council of Military Education and a few of the commissioners?—Yes; the Commander-in-Chief is accompanied by two or three of the commissioners who are generally of his own staff, the Adjutant-General, the Quartermaster-General, and the Military Secretary; the Vice-President of the Council of Military Education and one of the members also go down; we meet at Sandhurst on the public day, but the commissioners have nothing to do with the examination.

890. It is not in your power exactly to define the duties of the commissioners?—No.

891. As to the number of the professors, there are, in round numbers, 30 professors and masters, are there not?—Yes; that includes the riding master.

892. That would be about one professor to every ten cadets, would it not?—Yes.

893. Is not that a very small number of cadets in proportion to the number of professors?—Taking it in that light it is, but you must look at it with regard to the number of subjects taught, that is what determines the number of professors; there are a number of different subjects which cannot be taught by the same man.

894. Would it not be possible in any way to combine some of those subjects, so that one professor could teach two subjects?—No, I do not think so.

895. Are you aware that, in former days, in the college two subjects were sometimes combined, and were taught by one professor?—I do not know.

896. Latin and history, for instance?—Both those subjects are now expunged from the course.

897. But you admit the possibility of combining two subjects, so that the same man could teach them?—Yes; the same man may no doubt have sufficient information to teach two subjects, so far as that is concerned.

897*a*. I observe that there are a large number also of executive officers added to the professors, which makes something like one professor and executive officer to seven or eight cadets; do you think that by any means the duties of a professor and of an executive officer might be combined?—I do.

898. What should you propose upon that head?—I think that amongst the professors some of them might be chosen to be placed in the positions of captains and lieutenants of companies. I think that they might add to their duties as instructors the duties of the present captains and lieutenants.

899. Within the last few years have not subalterns to companies at Sandhurst been appointed?—Yes, that was a few years ago. I cannot tell the exact date.

900. In former days was not the duty done entirely by captains?—Yes.

901. Why was that change made?—I believe chiefly because it was a custom at Woolwich. I do not know what the necessity for it was; it was done after I left the college.

902. Can you state what are the duties of the captains and the subalterns?—In a general way they have the charge of everything relating to the discipline of the cadets; there are a captain and a subaltern on duty every day; they visit the hospital, and they visit the dinners, and they go round the dormitories. The captains manage the clothing and the accounts of the cadets, they attend the parades, and superintend the drill. I believe that those are their chief duties.

903. What are the duties under those circumstances of the paymaster and the quartermaster?—The paymaster's duties are connected with the payment of

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

all the professors and officers, and all the people connected with the establishment.

904. But I suppose that such an item as paying the pocket money of the cadets might be put under the charge of the captains, might it not?—It is so already. The quartermaster has all the arrangements of the provision department.

905. Although there are certain defined duties for every day, I suppose that there is not more than one subaltern officer present, is there?—Yes, they all go to parade every day, and if they wish for leave they must ask it of the commandant.

906. I suppose that for the rest of the day the attendance of one officer is sufficient?—Two officers, a captain and a subaltern.

907. Is the captain always present?—Yes, I believe so.

908. Do you not think that those duties might be done by one officer?—Certainly; they always were done by one officer in my time.

909. Is there an adjutant?—Yes.

910. Was there always an adjutant in former days?—Not always, he was dropped at one time, and was re-established on the college being converted from a school into a college, in 1858.

911. What are his duties?—He superintends the drill of the cadets, and he assists the commandant in his orderly room.

912. Do you not think that it would be possible for the captain of the day to perform those duties, would he not be competent to drill the cadets and to look after them?—Yes, I think that the captain of the day might perform those duties. There might be so far this difficulty, that he might not know so well, coming merely once every three days to act as adjutant, what had taken place in the two previous days, whereas the adjutant knows everything.

913. I suppose that a report is made to the captains, and that they are furnished with information. If any matter occurs as to the state of college discipline on one day, is not that matter noted?—Yes, the captain of the day makes his report to the commandant.

914. Then the captain who succeeded him would know that report if it was of a grave nature?—I mean that with respect to the correspondence of a military establishment, there would be a certain disadvantage in the proposed plan.

915. (*Col. Haythorne.*) Are there not records and defaulters' books, and those sort of things?—Yes, but those books would be made up one day by one man, the next day by another, and the next day by a third. No officer commanding a regiment could, I presume, carry on the work of his regiment if his adjutant was changed every day; and in the same way I do not suppose that it could be done at Sandhurst without great inconvenience.

916. (*Lord E. Cecil.*) There are the governor and the commandant. There is no lieutenant-governor now, is there?—No.

917. Could not the commandant in some way or other perform the duties of commanding officer and adjutant with captains under him?—I do not mean to say that it could not be done, but I can see a certain inconvenience in it.

918. What is the mode of punishing the cadets; have the captains the power themselves of punishing the cadets?—The captains have lately had the power given to them of placing the cadets under arrest for three days.

919. Have they the power of sending a cadet into confinement?—No; I think that belongs to the commandant. The captains have not that power, I believe.

920. Are you aware that the late governor, Sir George Wetherall, proposed to do away with two captains, or three captains, for military purposes?—No, I never heard of the proposition.

921. Had he any proposition of the kind by which the duties might be economized?—Not that I am aware of, but that would not come to us. We have nothing to say to the discipline.

922. Then would it go straight to the Commander-in-Chief or to the commissioners?—It would go to the Commander-in-Chief.

923. Do you not think that the powers of the different authorities over the college, that is to say, the powers of the Council and the powers of the commissioners, are rather vaguely defined?—The powers of the Council are not at all vaguely defined; they relate entirely to the studies. I am not quite aware of what the powers of the commissioners are.

924. There is a quartermaster, is there not?—Yes.

925. Is there a paymaster also?—Yes.

926. Do they perform the duties of the Staff College as well?—Yes.

927. In former days one officer did the duty of both quartermaster and paymaster, did he not?—Yes.

928. When was that altered?—It was altered about the time of the great change which was made in 1858. All these arrangements were a part of the new system.

929. Are the duties now lighter or more severe?—They are more severe.

930. For what reason?—In the first place, the college has increased; it has nearly doubled, and everything is much better managed with respect to the diet of the cadets, which is now under the quartermaster alone. The Staff College has also been added.

931. In former days was not the diet under the quartermaster?—The quartermaster and the paymaster were combined.

932. Was not the diet under that officer?—It was under the paymaster; but a paymaster does not necessarily know anything of the provisioning of people, whereas a quartermaster does.

933. Was not the officer who performed the joint offices of quartermaster and paymaster either a non-commissioned officer in the army holding the position of quartermaster serjeant or a quartermaster?—No; the present paymaster, who was also quartermaster before this new arrangement, was never a paymaster or a quartermaster before; I believe he was a lieutenant on half pay.

934. Was not the gentleman whom he succeeded a quartermaster in the army?—I do not know.

935. Are the professors allowed to instruct private pupils either in the college or out of it?—No; I think that that has of late been put a stop to.

936. Then that permission did exist in the college?—Yes, it existed at one time.

937. And the professors found time not only to carry on their college duties, but also to give instruction to private pupils?—Yes.

938. Military officers are appointed to professorships—are they allowed their regimental full pay?—The salaries are upon a different footing with regard to individuals; but latterly that has all been revised and altered, and in future they are all to be upon consolidated pay as far as I remember.

939. Then in the future your idea is that there is to be a fixed salary?—Yes.

940. And their regimental pay will be included in the salary?—Yes.

941. I suppose that it sometimes happened under the old system that some professors received very much higher pay than others in consequence of receiving regimental full pay?—Yes, I believe so.

942. Can you tell us what the college at Sandhurst now costs, according to the estimates?—36,731*l.* is the amount in the present estimates, from which are to be deducted the contributions of students and of friends of gentlemen cadets at Sandhurst about 16,000*l.*, and also a contribution from the Indian Government of 3,000*l.*, making a total cost to the public of about 17,000*l.*

943. According to that if you have 300 cadets the cost of each cadet would be about 120*l.*—Yes.

944. Can you state what amount of that money is spent in maintenance and what amount is spent in education?—No, you can get that better from the authorities of the college.

945. (*Lt.-Col. Chesney.*) You spoke of an order which had been lately made that the professors should have certain powers out of study; do you mean by that to state that they previously had no powers out of study?—I believe that they were not required to take notice of irregularities out of study.

946. Would they not have been considered as stepping out of their regular line if they had done so?—I cannot say positively, but my impression is that they would have been so considered.

947. (*Sir Duncan Cameron.*) If it were thought advisable to instruct the cadets in all the military subjects mentioned by Lord Eustace Cecil, would it then be possible to do away with these subalterns of companies without increasing the number of military professors?—That would depend very much upon the amount of military instruction which it was intended to give them.

948. Do you know that at the school at St. Cyr they have about 50 company officers for 500 or 600 cadets in addition to the military professors?—I was not aware of it.

949. (*Rev. W. C. Lake.*) With regard to the difference of the subjects for the examinations at Sandhurst from those for the examinations for direct commissions, I think that at the examinations for direct commissions you make a great point of giving a good many marks to natural sciences, experimental sciences, and English history and composition?—We give the same number that we do to most of the subjects.

950. But you do not give any marks to some of those subjects at Sandhurst; you do not make them subjects for study at all?—No; classics for instance.

951. Then the study which you recommend at Sandhurst is in some material points quite different from the study which you recommend to be pursued for direct commissions?—The study at Sandhurst is chiefly of a military nature; it is chiefly professional.

952. You have a large staff of professors; do you think that there can be any better arrangement as to the lectures?—No; I am not able to propose any.

953. Do you know that in the French schools they have a plan which they call that of *répétiteurs*, who are a sort of private tutors, who carry on the work of the young men in small classes?—Yes, I am aware of that.

954. And that that system to some extent, or something like it, prevails at the English public schools?—Yes; I consider it an admirable system, but I do not know how we could introduce it at Sandhurst. I have never considered how we could introduce it.

955. (*Chairman.*) Has it ever been proposed by the authorities at Sandhurst, or by the professors there, that any such system should be introduced?—Never to my knowledge.

956. But, speaking generally, you are yourself inclined to think that it is a good system?—I approve of the system in the abstract. It would, I think, require a good many more masters.

Maj.-Gen. W. C. E. Napier.

3 July 1868.

Royal Military College, Sandhurst.

Accommodation provided for the cadets.

957. (*Rev. W. C. Lake.*) What is the average number of the pupils in each class to whom a professor lectures?—I am not able to answer that question.

958. (*Chairman.*) Is it your opinion that the existing accommodation for the cadets at Sandhurst is satisfactory and sufficient, or not?—It is deficient in some points, particularly in all that relates to ablution. There are two companies who have no means of "tubbing" except to a great degree in public. They have one ablution room where they go in and wash.

959. There are three companies?—Yes.

960. Is the other company provided with sufficient means of ablution?—The other company has separate washing rooms; not a washing room for each cadet, but quite sufficient. My impression is that the ablution accommodation for the C. company is quite sufficient. There are perhaps too many cadets in each room. There are four cadets now, I think, in each room of the A. and B. companies.

961. How is the C. company accommodated in that respect?—By long corridors with bunks.

962. One bunk for each cadet?—Yes.

963. Do you consider that a preferable arrangement to the arrangement for the other companies?—No, I think that the bunk system is a very uncomfortable system; it is cold in winter and hot in summer.

964. What arrangement with respect to the sleeping accommodation would you desire to see?—I have myself no objection to the system of three or four cadets being in a room, provided that they have the power of private washing in some way.

965. Of course the system of having three or four cadets in the same room is inimical to anything like private study?—I do not attach very much importance to the question of private study at Sandhurst.

966. (*Lord de Ros.*) Would you not prefer three in a room to four?—Yes.

967. (*Chairman.*) Is the accommodation of dining rooms and halls of study and those common rooms sufficient?—I believe that it is so; I have not heard of any complaints on that head.

968. (*Lord Northbrook.*) Putting aside the expense, would you not prefer that each cadet should have a room to himself?—I would not, if they are to be in bunks.

969. You are aware I suppose that the boys at Eton have each a room to themselves, and that the young men at the universities have each a room to themselves?—Yes, with respect to the universities.

970. (*Lt.-Col. Chesney.*) There is a reading room for each company, is there not, for those who like to read, besides the so-called dormitories?—Yes.

971. And there is also special accommodation for the corporals and the under-officers?—Yes, there is a room for the corporals, and there is a room for the under-officers.

972. Besides a general reading room for the company?—Yes.

973. (*Lord de Ros.*) How many have access to the same reading room?—The whole company; the corporals have a sitting room to themselves.

974. (*Chairman.*) The reading rooms are rooms for recreative reading, and not for study?—Yes.

The witness withdrew.

Adjourned to Tuesday next, at 12 o'clock.

Tuesday, 7th July 1868.

PRESENT:

THE RIGHT HONOURABLE EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LIEUT.-GEN. LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. DR. BUTLER.
REV. W. C. LAKE.
BRIGADIER-GEN. LEFROY.
COLONEL HAYTHORNE.
LIEUT.-COL. CHESNEY.

MAJOR-GENERAL WILLIAM C. E. NAPIER further examined.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military College, Sandhurst.

Discipline.

975. (*Chairman.*) I believe that the discipline at Sandhurst is not officially under the supervision of the Council of Military Education?—It is not.

976. Therefore in your present position you have no official knowledge upon the subject?—I have no official knowledge upon the subject.

977. But I conclude that from your former experience at Sandhurst, and from visiting the College there from time to time, you may be able to give the Commission the advantage of your views with respect to that subject. In the first place, do you consider the present state of the discipline of the Royal Military College at Sandhurst to be in all respects satisfactory?—My acquaintance with the discipline of the College relates to a past period when I was there as Major of it, and of course that is of no use now. What you want to know is the present state of the discipline, and of that I have really no means of forming an opinion beyond what I hear mentioned in general conversation. Of course I can give my own opinion upon certain institutions which have been lately introduced there.

978. Will you give that opinion to the Commission?—Yes; I mean with regard to the billiard rooms, and the smoking rooms, and the refreshment rooms in general. I have always been of opinion that it was a mistake to introduce billiard rooms and smoking rooms into an educational establishment.

979. Were they established at Sandhurst when you held office there?—No.

980. But they were in existence before you became Vice-President of the Council of Military Education?—Yes.

981. Will you describe to the Commission the nature of the refreshment rooms, and what is supplied there, and under what arrangements they are?—The refreshment department consists of a "buffet," to which there can be no objection; but there is also attached to that department a private dining room, where a cadet can ask his friends to dinner. This I think objectionable upon the point of expense.

982. What sort of refreshments are furnished?—Beer and cakes, and soda water and ginger beer, and things of that description; but, I believe, no spirits or wine.

983. Are the cadets allowed beer in the smoking rooms or not?—Not now.

984. Was that formerly the case?—It was the practice, but it was stopped at the beginning of the last term.

985. Then beer is only now supplied from the "buffet"?—It is supplied from a tap in a room connected with the refreshment department.

986. Are these establishments to which you have just alluded under the direct superintendence of the authorities, and completely under their control?—Yes, they are in the college itself.

987. Is the "buffet" in the nature of a canteen, let to a tenant, or in what way is it managed?—It is let or lent to a tenant.

988. But it is distinctly under the orders of the authorities of the college?—Yes, it is completely under them.

989. Do you know the grounds upon which the establishment of the billiard tables and the smoking rooms was originally advocated?—The object was to wean the cadets from frequenting the public-houses.

990. Do you believe it to have had that effect?—To a certain extent it no doubt has had that effect.

991. Has it had the effect of putting an end generally to the resort of the cadets to the public-houses?—No, I believe not; certainly not as regards the billiard tables. With regard to the billiard tables I understand the effect to have been this, that whereas formerly the old cadets went to the public billiard tables and the young cadets did not play billiards at all, the old cadets now frequent the college tables and the young cadets go to the public tables.

992. Were not the billiard tables and the smoking rooms established upon the distinct recommendation of the commandant of the college and the authorities under whom the discipline is?—Yes.

993. Have the college authorities any power to put a public house or any shop out of bounds so as to prohibit the cadets from frequenting it?—Yes, all public houses are out of bounds.

994. Then the frequenting of public-houses at all is a breach of the college regulations?—It is.

995. Can the college authorities discommons a shop?—Yes, they can put it out of bounds.

996. The Commission are to understand that in your judgment the establishment of these billiard rooms and smoking rooms has upon the whole had an injurious effect upon the discipline of the college?—I do not know as to its effect upon the discipline, but I think that smoking and playing at billiards are habits to be discouraged in a college of young men, or boys, as many of them are, and I cannot help feeling that the establisnment of them within the college itself, and therefore under the sanction of the authorities of the college, must be an encouragement to young men to indulge in those habits rather than a discouragement of them.

997. Do you think that it tends to interfere in any manner with their studies?—I think that excessive smoking must interfere with the brain and the intellect of a youth.

998. Is there any other point connected with matters of discipline upon which you can give your opinion to the Commission?—Yes. I should give the subalterns of companies some power of punishing the cadets. At present they can only place them under arrest, and report to the captain of the company.

999. You would give them a direct power of punishment?—Yes, and I would also give the under officers a direct power of punishment.

1000. The under officers are cadets?—Yes.

1001. To what extent would you give the under officers the power of punishment?—To the same extent as they have at Woolwich; that is 48 and 24 hours arrest. There is another point. I think that the late power given to the Governor of the college of rusticating or removing from the college on his own authority any gentleman cadet whose conduct shall have merited such punishment, if pretty freely enforced, will have a very beneficial effect upon the discipline of the college. At the same time I think that the cadets should be made to understand that the Governor's decision is final, and that they should not be permitted to found any hopes upon an appeal to higher authority.

1002. That is in regard to the power of rustication and of removal?—Yes.

1003. Does the difference between dismissal and removal consist in this, that a young man who has been

removed may go up for a direct commission in the army?—Yes.

1004. Whereas a young man who has been dismissed cannot go into the army?—Just so. Those cases are reserved for the decision of His Royal Highness the Commander-in-Chief.

1005. You would approve of that?—That is very necessary.

1006. (*Lord de Ros.*) You would have no appeal from the removal?—Not from the removal or the rustication.

1007. (*Lord E. Cecil.*) What was the extent of bounds allotted to the gentlemen cadets during the time that you were Major?—The bounds were merely nominal; two miles from the college; but they were never attended to.

1008. Were they allowed to go beyond the two miles?—Yes, in fact they were allowed to go as far as they pleased.

1009. Were there any specified places put out of bounds?—Yes.

1010. Can you name them?—The square behind the college, the row where the professors live, all private property, and all public houses.

1011. For instance, were they always allowed to go on the lakes?—At certain seasons during the fine weather.

1012. Were they allowed to go to the railway station?—They were allowed to go anywhere within certain limits of time.

1013. You say that they were forbidden to go to public houses; was not that prohibition taken off shortly after you left?—Not that I am aware of. I am not aware of public houses ever having been placed within bounds.

1014. As to the system of espionage which existed in former days, did anything of that kind exist in your time?—There was nothing in my time which could be called espionage. The serjeants were placed upon duty, during the hours of recreation, in the villages immediately near the college, in order to prevent the gentlemen cadets from going into the public houses.

1015. They reported them if they saw them going into the public houses?—Yes.

1016. Can you tell us exactly what were the duties of the staff serjeants and what were their relations with the gentlemen cadets?—They drilled them, and when the gentlemen cadets were under open arrest the serjeant on duty saw that they attended every half hour to answer to their names.

1017. In your time did they ever search the cadets for tobacco, or search their rooms for spirits?—Yes, if there was occasion to suspect that there were any spirits introduced into the rooms.

1018. At what time of the day was that conducted, was it during the time when the cadets were at study, or was it in their presence?—I do not recollect, I think that it was at any time, I do not think that there was any fixed time for it.

1019. It might be done secretly without their knowledge?—I think that the serjeants by order of the Lieutenant-Governor, could go up and examine what were called the cadets' birdcages.

1020. They could ransack all their clothes and little articles to look for tobacco, or any other forbidden articles?—I believe so.

1021. You said that the serjeants were constantly on duty every day, they being sent out for the purpose of seeing whether the cadets went to the public houses, or did anything wrong?—Yes, that was the case formerly.

1022. During the time that you were there was it the case?—Yes.

1023. Between 1858 and 1861?—Yes.

1024. When was it done away with?—I am not sure of the date.

1025. To your knowledge does any portion of the old system remain?—Not that I am aware of.

1026. I suppose that you cannot tell us what the duties of the serjeants now are?—No, I am not aware what they do except drilling the cadets.

1027. Supposing that the cadets misconduct themselves at drill, what does the serjeant do?—He reports them to the officer on duty.

1028. He has no power of punishing them in any way?—None whatever.

1029. Supposing that a cadet was brought in for misconduct before an officer, would the serjeant be believed before the cadet?—The serjeants now I believe have nothing to do with the discipline.

1030. Supposing that a cadet was to misconduct himself at drill, and that he was brought up by the serjeant of the day before the officer, would the evidence of the serjeant be believed before that of the cadet?—The officer is always present at the drill. There would therefore be no "bringing up of a cadet before the officer."

1031. When you were Major was it a common thing to believe the evidence of the serjeant?—Yes. When I was superintendent of studies the serjeants had to do with the discipline.

1032. And their word was believed before that of the cadets?—I am not prepared to say that; I am not prepared to say that the word of a serjeant was taken in preference to that of a cadet; the matter was inquired into.

1033. I suppose that in evidence against a cadet, the serjeant's statement was taken, and that he was never sworn?—He was never sworn.

1034. Will you state what the punishments at the college are now, in the event of the misconduct of any gentleman cadet?—I can give you them in a general way. I know pretty well what they are, but I cannot speak authoritatively as to what they are.

1035. Will you state them in a general way?—In a general way the punishments are expulsion, removal from the college, rustication, isolated close arrest, close arrest, open arrest, and defaulters' drill.

1036. For what time, as a rule, are the cadets under isolated close arrest; is there any limit to the period?—I believe that there is, but I do not know what it is.

1037. Are they ever detained for a proportion of the vacation?—I think not now; they used to be.

1038. Was that the case during the time when you were superintendent of studies?—Yes.

1039. As to the mode of punishment, is there a sort of orderly room held every morning?—Yes.

1040. And are all refractory cadets brought before the commandant?—Yes.

1041. In the event of an officer or a professor reporting a cadet is he brought face to face with the cadet?—I believe that the captain of the company attends the orderly room with his defaulters' book exactly in the same way as in a regiment.

1042. For instance, in the case of disrespect to a professor would the boy be called upon for his defence?—When a professor reports a cadet for any offence committed in study his report is made in writing, and it is now taken as a matter of course, unless the cadet denies it, in which case the superintendent of studies inquires into the matter; and if he cannot settle it, it is referred to the commandant.

1043. In all cases of misconduct in study does the superintendent of studies first of all see the cadets before they go to the commandant?—Yes. Until lately the cadet and the professor used to attend in his office; but that has been abolished of late, as being unnecessary and rather derogatory to the professors.

1044. How is it done now; is a report made by the professor?—There is a written report by the professor.

1045. And I presume that that is read out to the cadet?—I think so.

1046. As to bullying in dormitories, did any such thing come before your notice during the time that you were superintendent of studies?—I do not remember any particular case.

1047. Are the older and the younger cadets put into the same dormitory; or, generally speaking, are the younger cadets put together, and are the older cadets

Maj.-Gen. W. C. E. Napier.

Royal Military College, Sandhurst.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military College, Sandhurst.

put together?—I do not know the practice now in that respect.

1048. What was it in your time?—In my time the younger cadets were put into a separate passage on first joining called the "short passage;" but I do not know anything about those details at present.

1049. You said that you strongly objected to smoking being allowed?—Yes, to smoking rooms.

1050. Would you put a stop to it?—I would not have them. I never would have established smoking rooms.

1051. Would you allow smoking at all?—I would allow smoking in the woods, but not in the public roads or in the streets. Indeed, I believe that it is not allowed in such places now, but I do not know.

1052. Have you any objection to the cadets seeing their friends at hotels or inns?—No, not under proper regulations.

1053. In the evening do the cadets take part in concerts or in play acting?—I believe that they do.

1054. That leads to no disorder?—I am not aware. I do not know these things officially; they are never reported to the Council.

1055. You said that you thought that the under officers ought to have more power; are you aware that in former times the responsible under-officer had the power of sending a cadet to isolated confinement?—No, I do not remember that; it is possible, but I do not know, I do not think that he ever had.

1056. And that the under-officers and corporals all had the power of arrest, for instance, confinement to dormitories?—I do not remember exactly now what was the extent of the power of the under-officers, but I know that they had the power of placing cadets under arrest as a punishment.

1057. Was not there a rebellion of cadets at Sandhurst in 1860 when you were there?—No; it must have been in 1861 immediately after I left. I was at the Staff College at the time of that *émeute*.

1058. You cannot give us at all the facts of the case?—No.

1059. (*Lord Northbrook.*) Do you consider that the questions relating to instruction and discipline are often very closely connected together or not?—At the Royal Military College they are kept distinct.

1060. Is there not an essential connexion between those two matters in conducting a college?—Yes, certainly in conducting an educational establishment.

1061. The Council of Military Education is not, as I understand, referred to in matters of discipline?—Not necessarily. The Commander-in-Chief has occasionally referred certain points to us.

1062. Do you think that it would be to the advantage of the college that questions connected with discipline should be referred to the Council of Military Education?—No; I think that it is better to confine the Council of Military Education to the Educational Department.

1063. For example, take the power of professors to punish certain cadets for inattention or misconduct during their studies, is not that a question of discipline intimately connected with the Educational Department of the College?—The question as to the power of punishment possessed by the professors at a military college is a very difficult one. I myself am not inclined to increase the powers which they at present possess in that respect.

1064. (*Lieut.-Col. Chesney.*) Are you aware that up to last Christmas in each case of complaint by a professor against a cadet, the professor was always confronted with the cadet?—Yes.

1065. Do you not think that that was very likely to put the professor on his defence, supposing that the complaint was dismissed in his presence?—Yes.

1066. That system I believe has been since altered?—Yes.

1067. You have stated that up to that time the professors had in effect no control whatever over the cadets out of their studies?—No; they had, I believe, no control.

1068. The Army List shows that there are no less than 12 or 14 military professors at the college. Was there not a great loss of power in not using those professors at all for any purpose of discipline up to last Christmas?—I think that it would have been better that all the professors, whether civil or military, should long ago have had the powers which are now given to them.

1069. From your knowledge of the professors and of the officers of the college, viewed as two distinct branches as they now are, do you think that the military professors are less likely to be associated with the cadets, and to have personal influence over them?—No, I think that many of the military professors mix very much with the cadets, and have them at their houses.

1070. Taking the officers of the college as a body, are the captains and lieutenants a younger class of men than the military professors?—The lieutenants are younger, but the captains are not.

1071. Has it not occurred to you that there must be great difficulty, if it is not practically impossible, in one captain and one lieutenant being responsible for the morals of 100 cadets, and having a personal knowledge of each cadet in the company?—Certainly; considering the time that the cadets stay there it is perfectly impossible that the captains and lieutenants can have a thorough knowledge of the cadets under them.

1072. Have you ever considered any scheme for breaking the present companies into smaller bodies, and using the military professors attached to the college for the purpose of superintending those bodies individually?—I have had some conversation upon that plan with the present superintendent of studies.

1073. Are you aware that at almost all schools and colleges except the Military College there is some person under the name of a tutor or master, who is either actually responsible, or who is understood to be responsible, for the individual conduct of each student?—Yes.

1074. But at Sandhurst there is no one but the captain or the lieutenant of the company who is supposed to be so responsible?—No.

1075. (*Rev. Dr. Butler.*) To whom do the young men feel that they are practically responsible in matters of discipline?—To the captain of the company and the commandant.

1076. What is about the average age of the captains?—I cannot say.

1077. Roughly speaking would they be called young men?—No, I should call them middle-aged men.

1078. Do the young men see any persons who are married; do they go into families?—Yes, a few who have friends either amongst the officers or amongst the professors do so.

1079. Is it common with the professors to see the young men privately at their houses?—Some of them used to do so. I do not know what they do now, but in my day Colonel Chesney was constantly having young men to his house. Their salaries are too small to permit of much in this way.

1080. To whom would the cadets apply in the case of any difficulty which they had got into, in the same way, for example, as young men apply to their tutor at college, or to the private tutor at a public school?—They would go to the captain of their company.

1081. Are any reports made from time to time to their parents as to how they are going on?—Yes, there is a half-yearly report.

1082. Does that report go into detail?—I do not know what it is now; in my day the progress in study and the conduct were put down.

1083. Do you think that that would keep up the knowledge of the parent as to the character of the young man?—No.

1084. Are returns made of all punishments which are inflicted?—I believe so.

1085. To whom are they sent in?—I presume that the Governor gets a return of every punishment. I do not know how it is now; that used to be the case when I was there.

1086. Are there any minor punishments less serious than the punishment of arrest?—Not that I am aware of.

1087. Do you know what is the greatest number of hours during which any one professor sees his class during the week?—No, I am not able to state that. I know how often they attend, but they have different classes.

1088. Is there a chaplain at the college?—Yes.

1089. Does he see anything privately of the young men?—I do not know; he has been appointed very lately. I am not at all aware whether he does or does not.

1090. Do you know whether he has to prepare them for confirmation?—He prepares them when they are confirmed at the College.

1091. Do you know whether the chaplain is appointed for a definite term of years?—The chaplain formerly was appointed for an indefinite time, but since Christmas last the appointment of chaplain at Sandhurst has been put under the Chaplain-General of the Army. I presume that he now holds his appointment under the same rules, with respect to length of time, as the other chaplains of the army do.

1092. (*Brig.-Gen. Lefroy.*) Is it not correct to assume that about two-thirds of the Sandhurst cadets are most nearly analogous to the boys in the fifth and sixth forms in public schools, and that the remaining one-third are analogous to the undergraduates of colleges?—I do not know.

1093. You cannot state the proportion?—I cannot. I do not know much about the fifth and sixth forms at schools, or about under-graduates.

1094. In both those situations if a pupil misconducts himself it is treated in the first instance as a breach of discipline, but then the head of his house, or the head master, or his tutor, as the case may be, represents it to him in its moral aspects, and endeavours to work upon his better feelings and just convictions. Does any machinery whatever of the like nature exist at Sandhurst, or is anybody responsible for bringing that species of moral influence to bear upon a young man?—When the Commandant is adjudicating upon the offences which are reported to him, I have not the slightest doubt that he gives that kind of advice to the cadets, but I do not know what his system is.

1095. You have alluded to arrest as being the principal minor punishment. The restraint is entirely one of honour, is it not; is there any physical restraint?—I am not aware whether it is so or not. I cannot answer positively, but I believe that they have the option.

1096. I think that you referred to the mischief of appeals against the decision of the Governor: is it within your knowledge that such appeals are usually or often successful?—The discipline not being within the province of the Council I am unable to give any answer to that question. I merely expressed a general opinion that the cadets should be impressed with the idea that the Governor's decision in the case of removal and rustication was final.

1097. (*Sir D. A. Cameron.*) Can you say whether the captains and subalterns of companies are sufficiently among the cadets out of study and off parade to control their conduct?—No, they certainly are not.

1098. Did not the appointment of subalterns to companies take place about the time when the change occurred in the duties of serjeants?—I believe so, but that was after I left.

1099. Do you know that it was intended that they should perform some of the duties which had previously devolved upon those serjeants?—I do not know anything about the object of the change.

1100. (*Sir C. Russell.*) You said that the public houses were all prohibited. Has anything been attempted, such as by a patrol, to inspect the public-houses suspected to be visited by the cadets after certain hours?—Not that I am aware of; the patrol in my day was by serjeants.

1101. Have you any notion of the sort of punishment which is inflicted if a cadet is found in a public-house?—I believe that he gets a certain number of days arrest, but I cannot answer that question exactly.

1102. I suppose that "arrest" means confinement to the college?—Close arrest is confinement to the dormitory; open arrest is confinement to the precincts of the college and grounds.

1103. (*Lord de Ros.*) As a regimental officer of experience, do you not think that the mainspring of regimental discipline is the captain's knowledge of his men, and would not that principle apply even more strongly to cadets?—Yes, it would be very important that captains of companies should be better acquainted with the cadets under them.

1104. A lecturer at Oxford can punish an undergraduate for disrespect or interruption of the lecture; do you not think that it would be advisable that there should be the same power in a study room at the military college?—If a cadet is disrespectful the professor at once sends him out of his class-room under arrest; he has that power.

1105. If any of the matters of the espionage of serjeants or other bad arrangements of discipline met with your disapproval, had you any power when you were superintendent of studies to alter or amend any of the rules of the college?—No, I could only suggest to the Lieutenant-Governor.

1106. (*Rev. W. C. Lake.*) It seems from your statement that very few of the subordinate officers have any power of actual punishment, but only that of reporting to the superiors. Will you enumerate the officers in whom the power of punishment is vested?—The governor, the commandant, the major and superintendent of studies, and the captains of companies.

1107. Not the subalterns of companies?—No; but I presume the adjutant.

1108. Do all the 300 cadets in Sandhurst live in one building?—Yes.

1109. (*Lord E. Cecil.*) Do the Commissioners generally decide points of discipline in the college?—Since I have been a Commissioner, we on one or two occasions have met and considered this very point of punishments, and the powers of the professors.

Proposals for requiring all candidates for commissions in the Line to pass through Sandhurst.

1110. (*Chairman.*) You are aware, I think, that it has been proposed from time to time that all candidates for commissions, whether by purchase or without purchase, in the cavalry and guards and the line, should pass through Sandhurst?—Yes.

1111. What is your opinion upon that proposal?—I am not in favour of it.

1112. What objections do you entertain to it?—I object to passing every officer through the same educational groove in the same college. I prefer that some officers should join their regiments from the public schools, others from private life, and others from military colleges. I think that the mixture is good.

1113. Then you do not think that it is necessary to every officer that he should receive a certain amount of professional training before he obtains his commission?—No, I do not consider it necessary; and I think that the small amount of professional training and education which he would be likely to acquire during the short course of one year to which it would be necessary to reduce the course at Sandhurst in that case, would be of very little advantage to him.

1114. Any scheme of that kind would of course require an increase in the number of cadets at the colleges?—Yes, a very large increase.

1115. Do you think that having a large number of cadets there would render the maintenance of discipline more difficult?—Decidedly so.

Amalgamation of Woolwich and Sandhurst.

1116. Another suggestion which has been made is that you should combine into one military college the college at Sandhurst and the Royal Military Academy at Woolwich. What do you think of that proposal?—I am also strongly opposed to it. I think that the effect of it would be to reduce the standard of education at Woolwich to the level of that at Sandhurst.

1117. And you desire to maintain a higher standard for the scientific corps, than that which you think necessary for the rest of the army generally?—Most decidedly.

1118. It has been suggested by some persons that a

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military College, Sandhurst.

partial union of the two institutions might be effected, in so far as this, namely, that those cadets who came out at the top of the list in the final competition for passing out of Sandhurst might be permitted without further examination to enter at Woolwich. What do you think of that proposal?—I think that there are two objections to it; the first is that the education obtained at Sandhurst by even the best of the cadets would not be sufficient to enable them to go through the course at Woolwich; and the second objection is, that I do not think that any cadet who had been for two years at Sandhurst, and had then the option of a commission in the line would be likely to go for another two years to Woolwich; he would rather go into the line at once.

1119. You therefore object to that proposal on the ground of the instruction at Sandhurst being lower than that which is given at Woolwich, and also on the practical ground that it would not succeed?—Yes, I think that it would fall to the ground.

1120. I understand you to say that you consider that the examination for passing out of Sandhurst does not show that the best of the cadets would have had that amount of instruction which he would require for the entrance examination at Woolwich?—Not as regards the entrance examination, because under the present regulations he could be examined for the entrance at Woolwich.

1121. As a free competitor?—Yes, but I think that his amount of knowledge would not be sufficient to enable him to go through the course at Woolwich. I do not mean the examination for entrance, but the course itself.

1122. (*Rev. W. C. Lake.*) You mean in fact that it would be lower than that of the inferior candidates who pass the entrance examination at Woolwich; you say that the best cadets at Sandhurst would not have received an education fitting them to pass through the course at Woolwich?—With respect to mathematics particularly, I believe that I may say that the amount of knowledge possessed by the highest cadets at Sandhurst is not equal to that of the lowest who go into Woolwich.

1123. Is it not sometimes the case that a candidate for Woolwich by considerable proficiency in classics, and other subjects, gets in with a very small amount of mathematics?—No, I should say not.

1124. (*Lord E. Cecil.*) Have you any information as to the number of old cadets who have obtained commissions at Sandhurst, who have afterwards competed at the Staff College?—No.

Returns, p. cxlix.

1125. Supposing that number of cadets to be very small would it not prove to your mind that the military education given at Sandhurst was of very little use, because supposing that it was of great use, it would be natural that the old cadets would try for the staff?—The education which the cadets get at Sandhurst proves of the utmost value to them at the Staff College with respect to military sketching and surveying and fortification, and also military history.

1126. The military education at Sandhurst I presume is, in your opinion, essential and advantageous to officers in order that they may qualify themselves for staff appointments?—It is not sufficient for qualification for the staff.

1127. It is not sufficient of itself, but it is preliminary?—Yes, preliminarily it is advantageous.

1128. And the great object of such education would be to qualify officers for those appointments, would it not?—I do not know that that would be the great object of it. In my opinion its chief object is to give to a fair proportion of the officers of the army a sound military education.

1129. If the examination for direct appointments is all that is absolutely necessary for an infantry officer, I presume that the superior education which is given at Sandhurst must be useful for some other purpose, and would not that other purpose be to make good staff officers for the army?—It would no doubt be useful for that purpose.

1130. Is not that its main object and use?—I do not know that. For instance, Sandhurst was established years before there was any Staff College, and therefore that could not have been its object. The object of Sandhurst is to educate a certain proportion of officers in a military manner.

1131. Is it your opinion or not that if a cadet having passed from Sandhurst into the army does not compete for a staff appointment, he is apt rather to fall off in his knowledge?—Unless he keeps it up he is sure to forget it.

1132. Then I presume that to keep it up he must have some object before him?—Men have different objects; some men will keep up their education for the sake of knowledge itself.

1133. Would not his principal object be in order to qualify himself to serve upon the staff?—I should think that would be a very powerful inducement to him.

1134. (*Lord Northbrook.*) With respect to the proposal that all candidates for commissions should go through Sandhurst, if that was carried out would not the proportion of cadets who would obtain commissions by purchase, as compared with those who would obtain commissions without purchase, be very greatly increased?—As regards Sandhurst itself of course it would.

1135. The mass of cadets would then only be anxious to pass the minimum of a qualifying examination?—Yes.

1136. Would not that very much increase the objection which you raised the other day, namely, to the effect produced by the idleness of that class of cadets?—Certainly.

1137. With respect to the other proposal of amalgamating in some way Woolwich and Sandhurst, have you any knowledge of the system which used to prevail at Addiscombe in the old East India Company's time?—No, not as to details.

1138. Under that system a certain number of appointments to the Indian army were given to Addiscombe College. The best of those students went out in the Artillery and in the Engineers, and the remainder received commissions in the line and in the cavalry. Supposing that you had to establish a military college in this country upon a fresh basis, do you conceive that some such system as this would be advantageous, namely, that there should be a competition into a college at a certain age, say between 15 and 17, and that there should be a competition out of that college after 18 months or two years study, and that the best of those students who competed out should have their choice for the Artillery and for the Engineers, and that the remainder should receive their commissions without purchase; the numbers being calculated upon a sufficient number of commissions without purchase to take the balance?—I would rather keep the colleges distinct; one college for the scientific corps and the other for the rest of the army.

1139. You think that the course of education is so distinct that that distinction ought to be preserved for the advantage of the scientific corps?—Yes.

1140. (*Brig.-Gen. Lefroy.*) Are you aware that in 1857, when considerable discussion took place on the subject of re-organizing our military education, it was proposed to have but one great educational college for the whole army?—Yes.

1141. But that scheme fell through, partly on account of the great expense which would be incurred in forming the establishment, did it not?—No; it fell through, I believe, in consequence of a discussion in the House of Commons.

1142. Does any part of your objection arise from a sort of feeling of disadvantage which the line might be supposed to labour under if the two ordnance corps skimmed off the cream of the whole establishment?—No, I should not feel any objection in that respect.

1143. You do not think that that would, either in opinion or in fact, be a disadvantage?—No, I do not think that it would.

1144. There was no sense of inferiority nor any idea of it in the Indian army when the Artillery and the

Engineers took the best of the cadets, was there?—I am not aware that there was.

1145. (*Sir C. Russell.*) Has your observation enabled you to form an opinion as to whether the boys who obtain a high number of marks in any way prove to be better officers on the average?—No, I have no means of knowing that.

1146. (*Lord de Ros.*) Without any reference to the staff, is it not desirable that regimental officers should have some good military education?—Yes, it is desirable, but not absolutely necessary for the whole body of officers.

1147. Is it not common after casualties on service for the quartermaster-general to apply to regiments and brigades for officers who have taken pains with themselves and have fitted themselves to come upon the staff?—I should suppose that it was.

1148. (*Rev. W. C. Lake.*) Do you know whether there is any precedent in any of the foreign armies for this attempted union of the different parts of the army in one military college?—No, so far as I know they are kept separate.

1149. (*Lord E. Cecil.*) Is it so in America?—No, all branches, I think, go to West Point.

1150. (*Rev. W. C. Lake.*) But is it not universal in the case of the continental armies?—I cannot say whether it is universal, but that is my impression.

1151. (*Chairman.*) You said that it was very probable that one of the objects of cadets at Sandhurst was that ultimately they might go into the Staff College with a view to obtaining staff appointments; but is it not probable that the principal object of their parents is, if possible, to obtain commissions for them without purchase?—That I conceive to be the chief object with which young men are sent to the Royal Military College.

1152. Do you not think it likely that a cadet having received a certain amount of professional education at Sandhurst, although he might not contemplate seeking employment on the staff, would still be likely to feel that interest in the higher parts of his profession which would induce him to continue his studies after he entered his regiment?—I think that many of the cadets might have that feeling.

1153. And that, therefore, much advantage might be likely to accrue to the army in general?—Certainly.

1154. (*Rev. W. C. Lake.*) Has it ever occurred to you on this question of military education to consider whether there is any other class of inducements in the shape of rewards or honours, besides entrance to the Staff College, which might tend to officers studying their profession scientifically?—Hardly so; but we had a proposition some time ago from, I think, General Lefroy, proposing to give a prize in the shape of an exhibition to the officers of the "Advanced Class" at Woolwich, and we approved of that proposal, and also advocated its extension to the Staff College at Sandhurst; we have not done anything more in that direction.

1155. (*Col. Haythorne.*) What is your opinion with reference to competitive examination generally?—That is a very wide question; I am not an advocate for throwing open everything to competitive examination; I rather prefer nomination and then passing a qualifying examination.

1156. Have you any idea whether it has answered since it was introduced into the Civil Service in India?—No, I have no knowledge at all of that.

1157. (*Lord de Ros.*) From your military experience, has any difficulty ever been found by British armies on service in obtaining efficient assistant staff officers from the regiments?—I am not able to answer that question.

1158. (*Col. Haythorne.*) Does it not sometimes happen that, for instance, at the examination for the entrance to Woolwich there may be 200 competitors and 50 vacancies in one year, and in another year half the number of competitors and double the number of vacancies?—Not exactly in those proportions, but they no doubt vary very much.

1159. (*Chairman.*) I conclude that your answer with respect to competitive examinations expresses your opinion generally, and has not special reference to the Royal Military Academy?—Just so.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

1160. (*Lieut.-Col. Chesney.*) In your opinion would it not have a good effect over the studies at Sandhurst if a certain number of free exhibitions, say of the mere value of the outfit given to a non-commissioned officer from the ranks, were given to those who stand at the head of the list, or if there was any similar system of exhibitions?—I should be sorry to see that system introduced. I have never considered that question of exhibitions with respect to their introduction at the cadet college at Sandhurst.

Royal Military College, Sandhurst.

1161. (*Chairman.*) Would the establishment of a system of exhibitions given to those who passed out highest have any tendency to remove what I understand from you to be the principal evil at Sandhurst, namely, the want of a sufficient impetus to the mass of cadets to study?—I think not.

1162. (*Lord E. Cecil.*) I do not know whether you are aware, but I believe that in America it is the case that military degrees are given to cadets. Have you considered the question whether giving a military degree at the college would be a stimulus to study?—No, I have never considered that question.

1163. (*Chairman.*) I will now ask you to state to the Commission the objects of the Royal Military Academy at Woolwich?—The object of the Royal Military Academy at Woolwich is to educate young men for commissions in the Royal Artillery and the Royal Engineers.

Royal Military Academy, Woolwich. Examination for admission.

1164. Will you state the regulations under which candidates are admitted to that academy?—"Competitive examinations for admission are held in "London twice a year, in January and July. They "are conducted by examiners appointed for the purpose in the presence and under the superintendence "of the Council of Military Education. The candidates must be between 16 and 19 years of age. The "admissions are determined by the result of the "examination, the subjects of which are as follows:—1, Mathematics, pure: Section I., arithmetic, "algebra, Euclid, plane trigonometry, 2,000 marks; "Section II., spherical trigonometry, elements of "co-ordinate geometry, and of the differential and integral calculus, 500 marks; mixed, statics, dynamics, "and hydrostatics, 1000 marks; making a total of "3,500 marks for mathematics. 2, English language "and composition, 1,000 marks; 3, History of "England, its dependencies and colonies, 1,000 marks; "4, Geography (modern), 1,000 marks; 5, Classics: "Latin language, 1,500 marks; Greek language, "1,500 marks; 6, French language, 1,000 marks; "7, German language, 1,000 marks; 8, Hindustani "language, 1,000 marks. The examination in French, "German, and Hindustani includes writing from "dictation. 9, Experimental sciences, that is, chemistry, heat, electricity including magnetism, 1,000 "marks; 10, Natural sciences, that is, mineralogy "and geology, 1,000 marks; 11, Drawing: free-hand "drawing of machinery, architectural, typographical, "landscape or figure subjects, 1,000 marks." Of those subjects every candidate must qualify in geometrical drawing, but he does not count the marks which he gains in it towards admission; and no candidate is allowed to be examined in more than five other of those subjects, of which one must be mathematics. The obligatory portion of mathematics is that comprised in section 1 of pure mathematics, namely, arithmetic, algebra, Euclid, and plane trigonometry. From the other subjects of examination each candidate may select any not exceeding four in number. "In either "French, German, or Hindustani, every candidate "is required to obtain for qualification one-sixth "of the maximum of marks, whether he takes it up "as a subject in which he desires to compete or not." No candidate is admitted unless he obtains an aggregate of 2,500 marks. The minimum of marks in mathematics is 700, that is, in section 1 of pure mathematics.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military Academy, Woolwich.

1165. Is not English a part of the requirements?—No, English is not obligatory.

1166. The competition for admission to Woolwich, is I believe entirely free?—Quite free, it is open I believe to any British subject.

1167. How do the candidates send in their names?—They send in their application to the Military Secretary.

1168. What are they required to state in that application?—"Any gentleman who wishes to present "himself at one of the half yearly examinations must "send in his name to the Military Secretary at the "Horse Guards, one month before the time of examination, forwarding with his application to be noted "the following papers:—1st, an extract from the "register of his baptism, or in default of that a "declaration before a magistrate, taken by one of his "parents, giving his exact age; 2nd, a certificate of "good moral character signed by a clergyman of the "parish to which he belongs, and by the tutor or "head of the school or college at which he has received his education, for at least the two preceding "years, or such other proof of good moral character "as will be satisfactory to the Commander-in-Chief; "3rd, a statement of the subjects of examination in "which (in addition to mathematics) he may desire "to be examined."

1169. What is your opinion of that system of admission to Woolwich by free competition?—I believe that it has worked very well.

1170. Do you believe that it has produced a satisfactory class of officers?—I cannot judge upon that point, as I have very little acquaintance with the officers of the Ordnance Corps. I can only speak as to the amount of education which they receive.

1171. Have you any observations to make with respect to the age of admission?—Yes, I should recommend a reduction in the age, but I am inclined to think that the Council of Military Education in their anxiety to meet the wishes of the service generally in that respect proposed rather too low a reduction of age for Woolwich. We proposed to reduce the limits to from 15 to 17, the same as for Sandhurst; on further inquiry, however, as to the probable results which such a reduction would have upon the standard of education, I think that most of us are now of opinion that from 16 to 18 would be a better limit. It must be remembered that the first commission of an officer in the Royal Artillery or the Royal Engineers is that of a lieutenant, while the first commission of an officer in the line is that of an ensign. This admits of the possibility of an officer of the Ordnance Corps being a little older when he gets his commission than an officer of the line without any disadvantage to the former as regards his comparative standing. It is also beyond a doubt that if the age of admission to Woolwich be much lowered the standard of education must be lowered in proportion. This is perhaps not to be desired. The Royal Military Academy is at present working in a very satisfactory way, both as regards study and discipline, and I have come to the conclusion that the less it is interfered with the better. I do not therefore advocate any greater reduction in the age than to reduce it to the limits of between 16 and 18.

1172. That is to say to reduce the upper limit by one year?—Yes.

1173. Do you think that any change is required in the examination for admission?—No.

1174. The object of that examination, I think, is not like that for direct commissions or for admission to Sandhurst, namely, to test whether the candidate has the general education of a gentleman, but your object is to test something more than that, namely, whether he has had education in certain subjects which are required for the prosecution of his professional studies?—Yes, while at Woolwich.

1175. And you think that the examination is well calculated for that purpose?—I do.

1176. (*Lord E. Cecil.*) Do you not think that more subjects ought to be introduced into the examination for entrance, and that less subjects and more purely military subjects ought to be studied afterwards?—There is a great choice of subjects already for the entrance examination.

1177. I am speaking more especially with regard to the subjects which are studied afterwards. Do you not think that a cadet ought to qualify himself in the ordinary subjects of a gentleman's education as well as in certain subjects (I will not specify what they are) so as to reduce the number of military subjects which should be studied afterwards?—I do not think that I clearly understand your question.

1178. In military drawing, for instance, do you not think that there should be a certain amount of perfection?—No; I entirely object to introducing any amount of military drawing into the entrance examination.

1179. I will specify drawing generally then?—Drawing is one of our subjects.

1180. Do you not think that a certain perfection in mathematics, and a certain perfection in one or more languages, and in history and geography, and English composition, and in drawing, might be required, so as to leave the cadet free to study purely military subjects afterwards?—I should not be inclined to require a greater amount of obligatory proficiency in any of those subjects than we do now. Many of those subjects do not come within the course afterwards at Woolwich. The course at Woolwich is not founded upon this entrance examination at all.

1181. Are not languages taught afterwards?—Foreign languages are; but the English language is not, history is not, geography is not, the classics are not, and geology is not now taught.

1182. Do you not think that a candidate ought to be qualified in languages at the entrance examination, so as not to have to study them afterwards?—Not necessarily. We should very much narrow the field of competition if we made that a requirement.

1183. On the contrary, would you not widen the field of competition, because you would have more subjects at the entrance examination?—We have all those subjects as a field for selection.

1184. Would not, in your opinion, a certain proficiency in languages, so as to prevent their being studied afterwards, be a good thing?—No, I do not see any necessity for requiring a perfect knowledge of a foreign language for an entrance examination.

1185. You would prefer that the languages should be studied afterwards?—I should prefer that they should be studied afterwards rather than that the scope of the examination should be so restricted as that would make it.

1186. What amount of proficiency in languages is required for the entrance examination; must the candidate be able to speak a foreign language?—No; he is obliged to acquire one-sixth of the number of marks in languages.

1187. Is the examination conducted *vivâ voce* or by paper?—By paper.

1188. (*Lord Northbrook.*) I believe from the report, and especially the second report, of the Council of Military Education, that very great pains have been from time to time taken in regulating the entrance examination at Woolwich, so as to avoid giving credit to any crammed questions, and to insist upon the candidates having a sound fundamental knowledge on every subject in which they have to obtain marks. Is not that so?—That was the object of limiting the candidates to five subjects.

1189. And especially as to mathematics, I understand from the reports of the examiners which I have read, that it has been successful, and that those candidates who have obtained the obligatory number of marks in mathematics have really a sound knowledge of mathematics?—I believe so, to that extent.

1190. (*Rev. Dr. Butler.*) Is it the case that mathematics tell somewhat less in entering Woolwich now than they did a few years ago?—Mathematics have always had 3,500 marks, which is what they have now.

1191. (*Brig.-Gen. Lefroy.*) Are you in possession of any information as to the classes of society from

which the candidates come who present themselves under this system of open competition?—No, I do not think that we see the parentage, the Military Secretary has that information.

1192. But such information could be obtained?—It could, no doubt, from the Military Secretary.

1193. From your own observation of the young men at the time when they are personally under your eye at the examination, should you say that there is any perceptible difference between them and those who present themselves under the nomination system at Sandhurst?—No, I do not see any difference.

1194. Is there not a great waste of power in admitting gentlemen cadets upon the strength of their classical acquirements, and from that moment dropping classics as a means of educational development?—The object of allowing them to count marks upon their knowledge of classics is to meet the general education of the country, and the reason for dropping classics while at the academy is because it is considered that other subjects are more necessary to them as officers. From the moment when they enter the academy the object is to instruct them to become officers of Artillery and Engineers.

1195. Then do you frame the system upon a purely utilitarian basis, disregarding the culture of the mind as such?—We consider that the subjects which are taught at the academy at Woolwich are quite sufficient to test or to cultivate anybody's mind.

1196. Do you consider the knowledge of classical languages and of classical literature as being otherwise than a most useful accomplishment for a military man?—In my opinion that knowledge is not absolutely necessary for a military man.

1197. But has not their complete exclusion a very narrowing tendency in any body of educated gentlemen?—But we do not exclude those subjects from the entrance examination. When the candidates go to the Military Academy it is to receive a military education. I can see no advantage in carrying on the study of classics at the Military Academy to the exclusion of one of the present subjects which are more important to military men.

1198. Take such subjects as geometrical drawing, chemistry, and some branches of applied mechanics, and other subjects which are included in the Woolwich course; what influence have they upon the intellectual condition of an officer who learns them under compulsion and who dislikes them and completely drops them when he leaves school, is he any better for having learnt those subjects?—I conceive geometrical drawing to be an absolute necessity for the Engineer officers.

1199. But only one-third of the Woolwich cadets become Engineer officers, and two-thirds become Artillery officers?—But the course is the same throughout, no distinction is made between them, and at Woolwich it never has been made that I am aware of.

1200. Looking to the distinct speciality of the two services, do you consider that identity of course an advantage?—I am told so by officers of the Artillery and of the Engineers. We have often considered the advantage of separating them at a certain point of the course, but there are always objections made either by the authorities at Woolwich or by other officers of the Engineers and of the Artillery. They think that an engineer should know everything which an artilleryman learns at Woolwich, and that an artilleryman should know everything which an engineer learns at Woolwich.

1201. Are you not aware that complaints have been made by cadets who have obtained admission into the army, that they derive no benefit from that accomplishment in their future progress, and have even no opportunity of keeping it up for their own intellectual satisfaction?—I have not heard of any such complaints.

1202. It appears that although the standard of qualification at the examinations at Woolwich is much higher than at Sandhurst, a large number of candidates do qualify, and that out of that number who qualify only 38 per cent. are admitted?—I dare say that that may be the proportion, the number of failures are 47 per cent.

1203. That is down to the latest period?—Yes, from 1858 to 1867 inclusive.

1204. What would be the objection to admitting at Woolwich all who qualified, placing the standard of qualification as high as you thought proper, and discontinuing the present system of periodical examinations when there is a very limited number of vacancies?—Because there are not vacancies sufficient; the academy only consists of a certain number calculated to supply the wants of the Artillery and of the Engineers, and you cannot exceed it; if you do you will have no commissions for them.

1205. You cannot limit the number of competitors so as to proportion the probable qualifications to the probable demand?—I presume that the only limit which can be put to it is the power of examination. We can examine about 150 in the hall at Chelsea. It would be very difficult and I think impossible to limit the number of competitors as you propose.

1206. Is there not a great difference in the value of the marks for the entrance examination at Woolwich and for that at Sandhurst?—Not very much, I think. Most of the subjects for the entrance to Sandhurst have 1,200 marks, whereas those at Woolwich have 1,000 marks; that is the only difference.

1207. Are there not in fact two measures, so that say 3,000 marks at Woolwich really represents far more than 3,000 marks at Sandhurst?—The examination papers for Woolwich are more difficult and of a much higher class than those for Sandhurst.

1208. Would it not be possible to have one scale, so that the marks at the two establishments should be directly commensurable?—No, because the one is a competitive examination and the other is a qualifying examination.

1209. What I am aiming at is, that there shall be something like commensurability between those candidates who have passed their respective examinations, so that any number of marks, say 3,000, whether for Woolwich or for Sandhurst, or for a direct commission, shall mean the same amount of examination, and shall have the same value?—I do not think that that is possible. I do not see how we can arrive at it.

1210. (*Sir D. A. Cameron.*) In the examination for admission to Sandhurst the English language is one of the obligatory subjects, but in the examination for admission to Woolwich it is not so?—Just so.

1211. Can any reason be given for that difference?—It is supposed that the candidates who present themselves for Woolwich are a class so much higher with respect to education that it is not necessary to examine them in English.

1212. A candidate for Woolwich would not be rejected on the score of bad spelling or bad grammar in his answers?—No, English is not obligatory.

1213. A candidate for Woolwich is required to have a certain knowledge of either French, German, or Hindustani. Is it not more necessary that he should have a knowledge of his own language; would it not be more necessary to him as an officer?—It was taken for granted, I presume, by those who framed these regulations, that all those young men who come up for Woolwich are so well educated that they have a competent knowledge of their own language.

1214. And is that shown by their answers at the examination?—I do not know. I cannot answer that question. I do not hear complaints of bad spelling from Woolwich.

1215. Is the English language taught at Woolwich?—No.

1216. (*Lord de Ros.*) With regard to classics for Woolwich, do not you think that Latin is an advantage in the acquirement of French and German and Spanish and Italian?—Certainly.

1217. Is not chemistry becoming of more daily advantage and almost of necessity, both to the Artillery and to the Engineers?—Yes, and it is taught at Woolwich very successfully.

1218. Does not the admission examination at Wool-

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military Academy, Woolwich.

wich absolutely require, to a great degree, the intervention of a cramming establishment?—I cannot say, but I should think so.

1219. In an examination wholly on paper may not a cadet appear very proficient in French or German without being even intelligible, *vivâ voce*, in consequence of his pronunciation?—Yes.

1220. (*Rev. W. C. Lake.*) What do you think leads to the cramming establishments being so much resorted to for the examination at Woolwich?—The difficulty of the examination.

1221. Do you know any subjects for which young men seem particularly to go to cramming establishments, especially for Woolwich?—They almost all go to crammers for Woolwich. I fancy that they go to them for every subject.

1222. As these young men are competitors you might expect that the best, at all events, of those coming from the public schools and passing a good examination at the public schools, would find that education enough for a competitive examination?—It would be sufficient for a qualifying examination, but not for a competitive examination.

1223. Classics and mathematics being taught in the best form in the public schools, how do you explain the fact that your cleverer boys do not seem content with a public school education, but go to crammers?—They go to the crammers because they do not feel equal to the competition without going to them.

1224. Then you mean that the crammers give a better education in certain subjects, namely, in classics and mathematics, or one better fitted for the Woolwich examination than the great public schools do?—No, I should not take those particular subjects, but I think that these private tutors certainly prepare for the Woolwich examinations better than the public schools do. I base my opinion upon the fact that we do not get young men from the public schools for this examination.

1225. Those two subjects, classics and mathematics, are the subjects which obtain much the highest marks?—Yes.

1226. And speaking generally, a boy who did well in those two subjects and in one other would be sure of getting his appointment, would he not?—I do not know; I can lay down no rule of the sort for a competitive examination.

1227. I wish to understand on what grounds you suppose it to be the case that the boys in competitive examinations are not content with the education of the public schools and resort so much to crammers; is it because you think that the public schools do not give a sufficient education in the main branches, or that the boys have a false impression?—It seems to me to be quite clear that if a boy is afraid to go up from a public school for a mere qualifying examination, he will, *a fortiori*, be more afraid to go up for a competitive examination.

1228. The mass of the boys who go up for a qualifying examination are the idle boys at the public schools; and the mass of the boys who go up for a competitive examination are the diligent boys who have used the advantages of the public schools to the best of their power?—Yes, but they compete against each other, and therefore to give them in their own opinion the best chance they go to these men who are in the habit of preparing candidates for such an examination.

1229. Do you think that these men do give them the best possible chance, or is it only that the candidates have a mistaken impression that they give them the best possible chance?—I should be inclined to think that a young man coming from a private tutor, or from one of those schools which profess to prepare for Woolwich, would have a much better chance than a candidate from one of the public schools.

1230. You have said that these cramming schools, or private tutors, do give a better preparation for the Woolwich examination than the public schools?—They give a better preparation for it, they cram up the candidates for the time being, but they cannot cram them in mathematics or classics.

1231. And those are two leading subjects?—Yes.

1232. Still I do not think that it is quite explained why, when classics and mathematics are the two leading subjects, and when by far the highest marks are given for those subjects, and when you say that they do not admit of cramming, the boys should resort to crammers, instead of being content with the education of the public schools?—I do not know, I cannot explain it, except that private tuition is more effective than public school tuition.

1233. Do you consider that the education given by the crammers is better for the purpose than the education at the public school?—I do not consider it better, but it is more successful in getting the candidates through an examination.

1234. Do you not think that the examiner should be able in the subject of mathematics to distinguish between a boy who had been crammed up for the purpose of the examination, and one who had a deeper and more substantial knowledge?—No doubt he would be able to do so, but at the same time I do not think that it would be desirable to cram up for mathematics. I imagine that the candidates for Woolwich go for three or four years to private tutors, that is my impression, although I have no precise ground for saying so.

1235. (*Lord de Ros.*) Are not the crammers for Woolwich rather a distinct class and a higher class than the others?—I do not know.

1236. (*Rev. W. C. Lake.*) Have you had complaints that the new cadets admitted to Woolwich by competition are inferior either in gentlemanly tone or discipline to the old ones?—No, I have not heard any such complaints.

1237. (*Lord E. Cecil.*) When you speak of private tuition do you look upon a cramming establishment, the head of which receives 100 young men, as a private establishment?—It is a private school.

1238. You do not confine it to a few pupils, three or four or half a dozen, as the case may be?—No, we do not know exactly what "private tuition" means.

1239. I should be very glad to know what your definition of "private tuition" is?—I have no definition to give; we get a return that a candidate has been educated at such and such a school and has had private tuition.

1240. If you were asked to define "private tuition" should you say that any gentleman who had 100 young men was giving them private tuition?—No; for instance, I should not call the Wimbledon School private tuition, because that is a large school.

1241. I suppose that there are numbers of those schools?—Yes.

1242. With regard to preparation and education, do you not draw a distinct difference between a preparation for these examinations and a good education?—Yes.

1243. Preparation may be a very good course preparatory to this examination, but it does not imply thorough education?—No, not always.

1244. (*Rev. W. C. Lake.*) You told us with respect to the examinations for direct commissions, that there was an exception in the cases of two schools, namely, Marlborough and Cheltenham, and that boys for those examinations came to you direct from those schools?—Yes, some do.

1245. Do they come direct from those schools also for Woolwich?—They come from Cheltenham, and a few from Marlborough; they also come direct from Wimbledon School. Returns, p.

1246. (*Rev. Dr. Butler.*) Do they come from Wellington College?—I think not to Woolwich.

1247. (*Chairman.*) I think that the result of your evidence upon this point is that, using the word "cram" in the objectionable sense, you are of opinion that the candidates for Woolwich cannot be crammed in the two main subjects for examination, namely, mathematics and classics?—Yes.

1248. But that there may be this resort to the objec-

tionable practice of cramming with respect to the voluntary subjects?—Yes.

1249. Do you know of any cases in which persons who have passed an examination, and who have been admitted to Woolwich, have afterwards been found so imperfectly instructed as to afford any difficulty in pursuing the high class of study which they are obliged to follow in that academy?—No, I have not heard of any such complaints.

1250. So that you would allow that with respect to mathematics they were not merely crammed, but were properly instructed?—I should say that they were properly instructed.

1251. A suggestion was made that you should limit the number of competitors. Would not the effect of that be practically to lower the standard of examination?—Undoubtedly.

1252. (*Lt.-Col. Chesney.*) What you said as to not coming direct to Woolwich from public schools does not apply to Cheltenham College, does it?—No, I except Cheltenham and also to some extent Marlborough.

1253. (*Rev. Dr. Butler.*) Do you know what proportion of successful candidates at Woolwich during the last few years has been found to come from public schools, not including Cheltenham and Marlborough for this purpose?—I can give in a return of that.

1254. (*Chairman.*) Will you now describe the course of study at the Royal Military Academy?—The course of study at the Royal Military Academy is not continuous in the same subjects throughout. It includes, first, mathematics for the three junior classes, namely, the third, fourth, and fifth; secondly, fortification throughout all the classes; thirdly, artillery in the first and second classes; fourthly, military drawing and surveying in all the classes; fifthly, military history in the first and second classes; sixthly, French in the second, third, fourth, and fifth classes; seventhly, German or Hindustani in the same four classes; eighthly, landscape drawing in the third, fourth, and fifth classes; ninthly, practical geometry in the third, fourth, and fifth classes; tenthly, chemistry and metallurgy in the first and second classes; eleventhly, practical mechanics in the first and second classes; and twelfthly, natural philosophy in the first and second classes.

1255. Is your first class the highest?—Yes.

1256. Are all those subjects obligatory?—French is obligatory, and either German or Hindustani is obligatory.

1257. And are all the other subjects obligatory?—Yes.

1258. What is the duration of the course?—Five terms, that is, two years and a half.

1259. Do examinations take place during the course?—There are half-yearly examinations for promotion from one class to another. These are conducted by the professors of the academy. Certain classes are also finally examined every half-year in certain subjects by the examiners of the Council.

1260. Then during the course there are two distinct kinds of examination, one conducted by the professors, and the other an independent examination by the examiners of the Council?—Yes; the examination by the professors is mainly to qualify for class promotion, but they carry on marks towards the final examination.

1261. Do all the examinations, those by the professors as well as those by the examiners of the Council, carry on marks?—Yes.

1262. Supposing that a cadet is not able to pass the examination which you describe as the examination for promotion, does he remain in the lower class, and is he subsequently again examined for promotion?—Yes, he remains in that class during the next term, and he is only allowed one term of grace.

1263. If he failed a second time he would be removed?—Yes; the only exception in that case is in the event of his having been in hospital for a long time. I may add that if a cadet is for seven terms at the academy he is not allowed to compete for place; he is put at the bottom of the commission class.

1264. What is the greatest time that a cadet is allowed to remain?—Five terms are the usual course. He is allowed a sixth term as a matter of grace; and if he has been ill in hospital, upon special consideration of his case he may be allowed a seventh term, but in that case he goes to the bottom of the list.

1265. But there is nothing beyond a seventh term?—No.

1266. Will you explain the nature of the final examination for a commission?—The final examination for commissions is conducted by the examiners of the council and the professors of the Academy, and the qualification for a commission is the obtaining of half the aggregate number of marks.

1267. What are the subjects upon which they are examined?—They are examined in different classes upon certain portions of the course. There is a final examination upon some subject or other, or upon some portion of a subject in every class, so that the last examination is only upon certain subjects; but to qualify they must obtain throughout the whole of their examinations nearly half the aggregate number of marks.

1268. I understand that throughout the whole of their course they are continually gaining marks; is that so?—Yes. I may add that those at the head of the list have the option of joining the Royal Engineers.

1269. Do they almost invariably avail themselves of that option?—Almost invariably; there are cases of exception.

1270. Do you approve of the course of study which is at present fixed?—As I do not belong to either of the scientific branches I cannot form a just opinion upon that subject. To myself it seems an enormous course of study, and I wish to reduce it, but it is very difficult to do so. When we propose to leave out something we are always met with an objection. We do not know what to leave out.

1271. Have you ever heard it stated that cadets leave Woolwich very much exhausted by their studies?—Yes, I have heard General Simmons say so.

1272. (*Lord E. Cecil.*) What is the duration of study daily?—The hours of study at Woolwich are six and three-quarters for five days a week and four and three-quarters on Saturday.

1273. Is military law taught?—No.

1274. I have been told that the final French examination is not *vivâ voce*?—It is not.

1275. And that it is not very much harder in its character, if at all, than that which is required at entrance?—No, I dare say that it is not much harder.

1276. Have the cadets a gymnasium?—Yes, an excellent one.

1277. Have you any opinion as to the term of study, do not you think that it might be reduced to two years if less subjects were taught?—Yes, I think that it might be reduced to two years, if certain portions of the practical part of artillery, for instance, were taught at Shoeburyness. By a reduction of the course of study no doubt the term of residence might be reduced to two years.

1278. Have you any opinion as to the separation of engineer and artillery classes after the first year of study?—I think that if the local arrangements would permit of it (which I am told they do not), a separation of the two after the third term would be advantageous.

1279. That is to say, after 18 months?—Yes.

1280. Not so soon as a year?—No.

1281. Have the cadets during the time that they are there any marks for good conduct, and do those marks count in the final examination?—I am not aware whether or not they have marks for good conduct at Woolwich, but they do not count in any way in their examination for competition if they have.

1282. Has such a question ever come before the Council of Military Education as to either Sandhurst or Woolwich?—Yes; at Sandhurst good-conduct marks existed for some years, and the system was

Maj.-Gen. W. C. E. Napier.

7 July 1868

Royal Military Academy, Woolwich.

abolished at the instigation of the Council of Military Education at the beginning of this term.

1283. For what reason?—Because they found that it very much interfered with the discipline.

1284. That it made the discipline worse?—Yes.

1285. Would not the natural effect be otherwise?—No; the system was this: every cadet was credited with 100 marks at the beginning of each term, and then for every punishment he forfeited so many marks according to a scale. That being the case the punishments were necessarily in the hands of one person, namely the commandant of the college, and the subordinate officers could not therefore punish. In my opinion the discipline suffered from that.

1286. Do you not think that by an improved principle of counting those marks that system would be beneficial to discipline?—There is no other way that I can see which would do away with that objection; it puts the whole of the punishments in the hands of one person, and it takes all power from the subordinates.

1287. (*Lord de Ros.*) Supposing that the marks were given on the recommendation of the captain, as the captain in a regiment would recommend to his colonel any soldier who behaved well, would there be any difficulty in that plan?—Yes; it would be an unfair way, because one captain might be more inclined to be lenient than another.

1288. (*Lord E. Cecil.*) You said that the entrance examination was competitive, and that the after examination was qualifying; but is it not in fact a competitive examination because only a certain number of commissions are given in the Engineers and in the Artillery?—Certainly.

1289. In that sense it is competitive?—It is very competitive so far.

1290. It is not simply a qualifying examination?—It is qualifying as far as a commission in the army is concerned, but it is competitive as to the branch of the service which the candidate gains.

1291. Supposing that a cadet comes up to the requisite amount of marks he may not obtain his commission because there may be no commission to be given to him?—No, he always obtains his commission; they only admit a certain number of cadets.

1292. May it not happen that cadets can qualify before their time, namely, in the fourth half instead of the fifth half?—I do not think that they can, I am not aware of any such case.

1293. Cannot a cadet if he is very proficient in study make a jump over one class for instance?—No; in the last term we allowed that to a certain extent, because the Indian Government wanted more officers of Engineers, and therefore we were obliged to have an intermediate examination at which we admitted cadets from one class to another.

1294. Does it ever happen that a cadet has to wait for any great length of time for his commission after having qualified?—I think not.

1295. (*Lt.-Col. Chesney.*) Respecting the division of studies between Artillery and Engineer cadets, is there not at present some loss of time by cadets who go for the Engineers studying a large portion of the Artillery course, and *vice versâ*?—That is my opinion, but I do not find it to be the opinion generally of the officers of those branches.

1296. On the other hand I suppose that until the cadets have been for a certain time in the Academy it is impossible for them to make their choice between the respective corps. The Engineers being a matter of special choice, would it not be impossible to give them that choice until they had been for a certain time in the Academy?—I would not give them a choice until after three terms.

1297. After those three terms do not you think that it would be a good thing to divide the course?—I think that it would be a good thing, but it is not considered by the authorities of the Academy to be expedient. I do not know whether that difficulty can be got over.

1298. (*Rev. Dr. Butler.*) Do you know whether there are any private opportunities of intellectual development at Woolwich outside the academical course, such as music, for example, or any other intellectual stimulus?—I am not aware of their having anything of the sort; they have a library and they have workshops, and I presume that they would be allowed pianofortes in their rooms; they are allowed pianofortes in their rooms at Sandhurst; I do not know whether or not they are at Woolwich.

1299. Is there a debating society?—I do not know, but I should think not.

1300. (*Brig.-Gen. Lefroy.*) There appears to be no fixed proportion, taking the examinations in detail, between the commissions given in the Royal Engineers and those given in the Artillery?—It depends upon the vacancies in each branch; the normal proportion I believe is generally about one-third in the Engineers to two-thirds in the Artillery, but it depends entirely upon the requirements of the two branches at the end of each particular examination.

1301. So that an individual cadet could have no certainty of his being able to get a commission in the Royal Engineers at the end of his career; it would depend upon the demand in the Royal Engineers at that moment?—Yes, and upon the competition.

1302. But instances, I believe, are not infrequent of gentlemen, who might have gone to the Engineers, selecting the Artillery?—They are not frequent. I have only known of one case at any one examination in which the Artillery was selected in preference to the Engineers, and very often there was not one.

1303. Is there any influence brought to bear at the examination to determine that preference, or from what does it arise?—I suppose that it arises from their own and their parents' wishes.

1304. Has it ever happened that scarcely any commissions in the Engineers have been available at a given examination?—I have known the number as low as six, or I think five.

1305. Out of how many?—Out of 30 or so. Upon the last occasion the number was 19 out of 42; but this is an exceptional state which will last only for the three next terms, and then it will go back to the normal state.

1306. Does relative position in the final examination follow with any regularity relative position at the entrance examination?—I have never looked to that point, but I think that it is very probable.

1307. But may it not be safely asserted that all those who come in upon classics go to the Artillery from the impossibility of getting sufficient mathematics for the Royal Engineers?—No, I think not.

1308. (*Sir D. A. Cameron.*) Do many cadets fail to qualify themselves for a commission either in the Artillery or in the Engineers?—I do not know the number, but there are very few.

1309. (*Lord de Ros.*) Are not the building and mining departments of the Engineers very important features in their art, and entirely different from Artillery duties; and would not earlier information in them be better than advanced study of artillery science?—It must be recollected that Engineer officers, after leaving the academy at Woolwich, go to Chatham for two years on purpose to study those branches.

1310. If they had an earlier initiation into them would it not be of advantage; and is it of any advantage for them to go on with the advanced study in artillery to the prejudice of other studies?—I have already said that I do not belong to the ordnance branch, and cannot give an opinion upon that point.

1311. (*Rev. W. C. Lake.*) I remember that some of the cadets did very well indeed for their age in their classics on their entrance examination. Might it not be desirable to give those who are proficient a moderate opportunity of keeping up their knowledge during the time that they are at Woolwich?—I object to increasing the number of subjects; I should rather reduce them.

1312. They might sacrifice something else. But if some of them are remarkably good scholars does not it appear to be a pity that they should have no opportunity at all of continuing those studies?—That is a

matter of opinion. At Woolwich every study is obligatory, and therefore it must be obligatory upon all; and that would be an objection to it.

1313. Would there be any objection to allowing a select and voluntary class, say in Latin, and letting the men who chose to do so go through that class, and making their marks count in the final examination?—I think that you cannot have any voluntary subject. If you had Latin and Greek you must introduce them instead of something else.

1314. Why?—Because of the competition. There are no voluntary subjects at Woolwich. I suppose that that rule has been established on account of the strict competition for the Engineers.

1315. (*Lt.-Col. Chesney.*) You have said that you would rather reduce the amount taught in Woolwich than increase it. Having reference to the present very high standard of the competition of cadets who go into Woolwich in mathematics, could you not do away altogether with the compulsory study of mathematics at Woolwich without a loss to the service?—Yes, provided that the obligatory qualification at entrance was raised. The present obligatory examination, in my opinion, would not be sufficient for an officer of the Engineers.

1316. (*Chairman.*) Would not that be putting the requirement for the entrance examination very high for youths of that age?—I think so.

1317. Will you now state to the Commission who are the officers entrusted with the government of the Royal Military Academy at Woolwich, and its discipline, as distinct from the professors?—The Lieutenant Governor, the Second Commandant, who is also Inspector of Studies, the captains of companies and the subalterns of companies.

1318. Does the Lieutenant-Governor practically occupy the same position at Woolwich which the Governor does at Sandhurst?—I think so.

1319. The Governor at Woolwich is, I believe, His Royal Highness the Commander-in-Chief?—Yes.

1320. Have you the same opinion with respect to the number of captains and lieutenants of companies at Woolwich as you expressed with regard to Sandhurst?—Yes, I should think that there are more than are necessary.

1321. Have there always been captains and lieutenants of companies at Woolwich?—I think not, but I cannot answer that question positively.

1322. Will you state the number of professors, distinguishing the civilians from the military professors?—There are 19 civilian professors and masters, and 14 military professors.

1323. For what number of cadets is that generally?—The present establishment is, I think, 220.

1324. Will you state to the Commission who are the professors and what they teach?—They are:—

J. J. Sylvester, Esq., M.A., F.R.S., Professor of Mathematics.

Lieut.-Col, J. J. Wilson, Royal Engineers, Professor of Fortification.

Brevet Lieut-Col. C. H. Owen, Royal Artillery, Professor of Artillery.

T. M. Goodeve, Esq., Professor of Mechanics.

Stephen Fenwick, Esq., F.R.A.S., 1st Mathematical Master.

Rev. G. Y. Boddy, M.A., 2nd Mathematical Master.

W. Racster, Esq., 3rd Mathematical Master.

Morgan W. Crofton, Esq., 4th Mathematical Master.

Brevet-Major W. J. Stuart, Royal Engineers, Captain C. N. Martin, Royal Engineers, Captain E. L. Bland, Royal Engineers, and 2nd Captain H. F. C. Lewin, Royal Engineers, Instructors in Fortification.

T. Bradley, Esq., Professor of Geometrical Drawing.

G. S. Pritchard, Esq., F. Bradley, Esq., Masters of Geometrical Drawing.

G. B. Campion, Esq., A. Penley, Esq., Masters for Landscape Drawing.

2nd Captain O. H. Goodenough, Royal Artillery, Instructor in Artillery.

2nd Captain H. W. Briscoe, Royal Artillery, 2nd Captain W. H. Wardell, Royal Artillery, Assistant Instructors in Artillery.

2nd Captain H. Brackenbury, Royal Artillery, Professor of Military History.

Brevet-Major A. W. Drayson, Royal Artillery, Professor of Surveying and Topographical Drawing.

2nd Captain G. A. Crawford, Royal Artillery, Captain A. H. Hutchinson, Royal Artillery, Captain F. E. Pratt, Royal Engineers, and Lieutenant W. H. Collins, Royal Engineers, Assistant Instructors in Surveying and Topographical Drawing.

Alphonse Lovey, Esq., Professor of French.

Theodore Karcher, Esq., LL.B., Edmund Valentin, Esq., French Masters.

C. A. Feiling, Esq., Professor of German.

F. Schlutter, Esq., C. H. Schaible, Esq., Ph.D., M.D., German Masters.

Major R. Robertson, Ret. Indian Army, Professor of Hindustani.

C. L. Bloxam, Esq., Lecturer on Chemistry.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military Academy, Woolwich.

1325. Are the officers of discipline and the professors appointed in the same manner as at Sandhurst?—Yes, I think so; there are some slight differences with regard to the professors, but it is not worth mentioning; we leave the selection of them more in the hands of the authorities there than we do at Sandhurst.

1326. Is the recommendation held officially to come from the Council of Military Education?—The authorities at Woolwich send to the Council a list of candidates for a vacancy in a professorship, and the Council generally request the Lieutenant-Governor to make his own selection from that list.

1327. Then practically the Council takes a less direct part as regards positive influence over the selection of professors at Woolwich than at Sandhurst?—Yes, but I am not sure that we are at all controlled in it. I imagine that we do it because it is supposed that the officers at the head of that establishment, whether of the Artillery or of the Engineers, are better acquainted with their own officers than we are, and therefore we leave it to them to select.

1328. That may apply to the case of military professors, but does it apply to the case of civil professors?—So far as I remember we have had no appointments of civil professors since I have been at the Council, but I have no doubt that we should appoint them in the same way as at Sandhurst.

1329. Do you consider yourselves equally responsible for the appointment of professors at Woolwich as at Sandhurst?—Yes, to this extent, that I have no doubt we should stop the appointment of anybody to whom we objected.

1330. Could you obtain the appointment of the person whom you thought best qualified?—Yes, I should certainly say so.

1331. Have the professors at Woolwich the same position as to discipline as at Sandhurst?— I think there is a slight difference in this respect.

1332. Do you think that the number of professors at Woolwich is proper?—It seems large, but the reason is the same as in the case of Sandhurst, namely, that there are a great number of subjects taught.

1333. I believe that the discipline at Woolwich is not under the Council?—It is not. Discipline of the Academy.

1334. So far as your knowledge goes, do you believe it to be in a satisfactory state?—Yes; from all I hear it is in a very satisfactory state at the present moment.

1335. Are the punishments of the same character as those at Sandhurst?—Yes; the punishments are dismissal, rustication, and reduction of under officers and corporals.

1336. (*Rev. Dr. Butler.*) Is dismissal equivalent to expulsion?—I suppose so. There is also restriction for a limited period from all indulgences or leave, and there are likewise open arrest, and confinement to the room or close arrest.

1337. (*Chairman.*) Has the Lieutenant-Governor at Woolwich that power of rustication or removal which you desired to see in the hands of the Governor at Sandhurst?—No, the Commander-in-Chief being Governor of the academy, the Lieutenant-Governor of course cannot have that power.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

Royal Military Academy, Woolwich.

1338. Then in any case where rustication or removal is necessary there would be a direct reference to His Royal Highness as Governor of the Academy?—Yes.

1339. I have understood from you that the under officers have greater disciplinary powers at Woolwich than at Sandhurst?—Yes.

1340. And that you approve of that?—Yes, I approve of it.

1341. Are there any non-commissioned officers at Woolwich, such as those who formerly existed at Sandhurst?—There are some non-commissioned officers at Woolwich for purposes of drill.

1342. But not for any purposes of discipline, or espionage, or anything of that sort?—No, I believe that there never have been.

1343. Have there been any serious difficulties at Woolwich with regard to discipline within the last few years?—No, I believe not, I have not heard of any lately.

1344. On the whole then, I gather from your evidence that you think that the state of discipline and the internal arrangements of the academy are satisfactory?—Yes, as far as I am able to judge of them, but they do not come within my own knowledge.

1345. Is there any body of Commissioners at Woolwich the same as those at Sandhurst?—No.

1346. With respect to the accommodation at Woolwich, and the arrangement of the buildings, have you any remarks to make?—No, I believe that that is very good at Woolwich.

1347. (*Lord E. Cecil.*) With regard to the professors, what is their power of punishing at Woolwich?—They have no power of punishing.

1348. Do they take notice of anything which occurs out of study with regard to the discipline of the cadets?—I believe not; I believe that they are not required to do so.

1349. What are their powers limited to, are they precisely the same as they are at Sandhurst?—Their powers are limited to reporting cadets for neglect of their work, or for any improper conduct in their hall of study. But there is one thing to be remarked, namely, that at Woolwich the professor is assisted in the maintenance of order by one of the corporals, who in fact is responsible for the discipline of the hall of study, so that the professor has nothing to do with the matter unless the corporal tells him that he cannot maintain order.

1350. Do you think that the military officers and the professors might be combined in any way, that is to say that military officers might undertake the duty of professors, or that professors might undertake the duty of military officers?—They might at Sandhurst. With reference to Woolwich I am not sufficiently acquainted with the details of the duties of the military officers there to form an opinion upon that point.

1351. I believe that you have stated that you think the number of professors large?—It appears large, but I believe that it is not more than is necessary.

1352. Has there ever been any attempt on the part of the Council of Education to reduce the number of professors?—Not that I am aware of.

1353. Or to reduce the number of executive officers?—No, we have nothing to say to them.

1354. That does not come under your observation at all?—No.

1355. With regard to billiard tables, reading rooms, and smoking rooms, do those exist by permission of the authorities?—I believe that they are now building billiard rooms at Woolwich. They have no smoking rooms that I know of.

1356. Are cadets allowed to smoke freely about the college grounds or not?—I believe not. I believe that they are only allowed to smoke under the gymnasium.

1357. Is there a canteen for the sale of spirituous liquors to the cadets under the control of the authorities?—I believe not.

1358. (*Lt. Col. Chesney.*) You spoke of the Council not having quite so much real control over the appointment of the professors at Woolwich as at Sandhurst; but have you not specially Engineer and Artillery members to consult on all such appointments from those branches?—Yes.

1359. Is it not rather a matter of custom than for any other reason that the appointment of professors should not be completely under you as at the other colleges?—I believe that if we chose we could claim as complete a control over that matter as we have at Sandhurst.

1360. But hitherto you have not done so?—No, we have not interfered so much.

1361. Are you aware that there is a difference between the orderly and regular bearing of the cadets at Woolwich and at Sandhurst, and that one class of cadets is considered better than the other? I am speaking of their out-of-door manner and bearing?—From what I have observed and from what I hear I think that the cadets at Woolwich, when they go outside the grounds, are dressed in a smarter manner than the cadets at Sandhurst, and the reason is obvious, namely, that the cadets at Woolwich go out into a garrison town where every officer of the Artillery takes a personal interest in them, whereas the Sandhurst cadet goes into the woods and heath of that country.

1362. (*Rev. Dr. Butler.*) With whom does the power of dismissal rest at Woolwich?—I cannot answer that question from my own knowledge, but I believe that it rests with the Commander-in-Chief. I believe that no cadet can be dismissed without the sanction of the Commander-in-Chief.

1363. Would the same sanction of the Commander-in-Chief be required for rustication?—Yes, he is the governor of the academy, there is that distinction between the two institutions.

1364. Is there any one who would be considered responsible for the moral conduct of the young men as distinguished from a serious breach of military discipline; is there any one for example, who would communicate with their parents, supposing that there was anything wrong?—I presume that the Lieutenant-Governor would be the person to do so.

1365. Is there anybody who would make it his business to study the character of each young man, and to communicate from time to time, if necessary, with his parents?—I should suppose not; these are matters of discipline with which, at Woolwich, I am not acquainted. I happen to know them at Sandhurst from my former connection with the College, but I do not know them at Woolwich.

1366. Are there any periodical reports of the conduct of the young men which are sent to their parents?—I am not aware. I do not know any of those details as to Woolwich; they do not come under us.

1367. (*Brig.-Gen. Lefroy.*) I understood you to say that the conduct of the cadets had been recently unexceptionable; there have been no serious rows?—I have not heard of any, but they would not come to my knowledge officially.

1368. You have given evidence that there is nobody at Woolwich who has a power analogous to the power of the Governor at Sandhurst, and I wish to ascertain your opinion whether that is not unfavourable to the maintenance of discipline there. At the present moment there is nobody at Woolwich who has that power which is vested in the Governor at Sandhurst?—You mean the power of dismissal and of rustication upon his own authority?

1369. Yes?—No, but that is a question of which I have no official knowledge.

1370. Is it not your opinion that for the maintenance of authority over such a body of young men the power must be prompt and decisive, and without appeal?—Yes.

1371. Is there any reason why such an authority should not be vested in the resident Governor or Lieutenant-Governor?—I am not aware of any reason, unless the fact of the Commander-in-Chief being the governor of the place is a reason.

1372. Do the military professors at Woolwich hold

their office for any term of years?—Yes, for six years, and so they do at Sandhurst.

1373. Are the offices generally *de facto* vacated at the end of that time or are they renewed?—The time has not yet arrived for their being vacated

1374. Do you not think it desirable, looking to the beneficial and honourable character of the military appointments, that they should be periodically vacated in order that there may be inducements for other officers to seek for them?—Yes, there is a limit of six years.

1375. (*Lord de Ros.*) Do you not think that rustication is a very unsuitable punishment in a military academy as breaking in upon a course of study, and in fact rather leading to idleness?—It is a very effectual punishment to a young man because it throws him back six months in getting his commission; it is a less punishment than sending him away altogether.

1376. (*Lt.-Col. Chesney.*) Is it not the special advantage of the punishment of rustication that it is one of the few punishments which become known to the friends of the cadets, and that it affects the latter in that way through their friends, an effect which would not follow any ordinary college punishment?—It is a much more severe punishment than any other punishment short of dismissal.

Maj.-Gen. W. C. E. Napier.

7 July 1868.

1377. With regard to the six years appointments of professors, is it not understood that if the Council choose, and if there is no special objection, they will be able to renew such appointments as they deem advisable for the good of the college?—The Council have not the power of renewing the appointments; they have the power of recommending that the professors should be kept on for another period.

1378. (*Lord E. Cecil.*) As to the salaries of the military professors, do you know whether they are allowed to keep their half-pay and to receive their salaries as professors besides?—I believe that their salaries are all to be consolidated.

1379. Are they all to receive a regulated stipend?—Yes.

1380. (*Chairman.*) Are any of the professors or teachers at Woolwich allowed to take private pupils?—I believe that they are, but I do not know. Upon that point I should like to state my opinion that the professors ought to be allowed to take private pupils, provided they are not cadets at the colleges.

1381. (*Brig.-Gen. Lefroy.*) A proposal was made some time ago that instruction in veterinary science should be introduced into the Military Academy, was that proposal ever entertained?—Not that I am aware of. The Council considered that it would not be expedient to introduce it at the Royal Military Academy.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Wednesday, 8th July 1868.

PRESENT:

THE RIGHT HONOURABLE EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
LIEUT.-GEN. LORD DE ROS.	REV. W. C. LAKE.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.	COLONEL HAYTHORNE.
	LIEUT.-COL. CHESNEY.

MAJOR-GENERAL WILLIAM C. E. NAPIER further examined.

1382. (*Chairman.*) Will you state to the Commission what are the objects of the Staff College?—The object of the Staff College is to educate officers for the general staff of the army.

1383. Will you state the regulations under which candidates are admitted to that college?—The Staff College is open to officers of all arms of the service except the Royal Engineers. It consists of 30 students, who compete for admission by examination. There are 15 vacancies annually, two of which may be filled by officers of the Royal Artillery, provided they are among the 15 candidates who are highest on the list. The qualifications requisite for admission are, first, a previous service of not less than five years, exclusive of leave of absence; secondly, a certificate from the commanding officer of the candidate as follows:—

"I hereby certify that I have examined on the various subjects connected with his duty as a regimental officer, and more especially on the points which form the chief qualifications of a staff officer, with a view to his competency for admission to the Staff College, Sandhurst, and to the best of my belief and judgment I consider him, from his general knowledge of the service, character, habits, and disposition, to be qualified in those respects for employment on the staff. He is a (good, fair, or indifferent) rider, and is not short-sighted."

That certificate is signed by the commanding officer of the regiment and countersigned by the general of brigade or other superior officer. "Thirdly, the candidate, if not a captain, must have passed the examination for a troop or company. Fourthly, a medical certificate of good health and fitness for the active duties of the staff" is required. "The competitive examination for entrance to the Staff College comprises the following subjects, the relative value of each at the examination being shown by the number of marks attached to it. Mathematics, 1,200 marks; military history, 600 marks; military geography, 300 marks; making together 900 marks. French 300 marks; German 300 marks; Hindustani, 300 marks; fortification, 600 marks; military drawing, 300 marks; mineralogy and geology, 300 marks; chemistry, heat, electricity, and magnetism, 300 marks. In mathematics, 400 marks are allotted to arithmetic, the first four books of Euclid, and algebra, including questions producing simple equations, and of this number at least 250 must be obtained for qualification. Every candidate must take up either the French, German, or Hindustani language for qualification; the qualifying minimum is, in French, 150 marks, in German or Hindustani, 100 marks. The remaining subjects, as well as the higher portions of mathematics, may be taken up or not at the option of the candidate, the marks gained therein being reckoned in determining his position in the list of competitors. No candidate, however, is allowed to count marks in any subject left optional unless he obtains at least one-sixth of the number allotted to it. The examination of officers serving in the United Kingdom for entrance to the Staff College is held in London about the month of July under the direction of the Council of Military Education." Those examined abroad are examined on the same questions which are set for the examination of candidates in London, and these questions are answered in the presence of a board of officers.

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Staff College. Entrance examination.

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Staff College.

1384. Is there a general minimum?—No; the qualifying minimum is 250 marks in mathematics and 150 marks in French or 100 marks in German or Hindustani.

1385. Can you state the average number of candidates at these examinations compared with the number of vacancies?—The vacancies are always 15. The candidates in 1858 were 56; in 1859 they were 34; in 1860 they were 33; in 1861 they were 32; in 1862 they were 23; in 1863 they were 28; in 1864 they were 27; in 1865 they were 34; in 1866 they were 28; and in 1867 they were 23.

Returns, p. cxlvii.

1386. The number of candidates appears to have been diminishing of late years?—Yes, except in 1866, when there were 28 and in 1865 when there were 34; 1862 and 1867 were the lowest years, there were 23 in each of those years.

1387. Do you know whether the average character of the papers has diminished since the examination commenced?—I am not able to answer that question.

1388. Will you state the number of failures?—In 1858 there were 22; in 1859 there were 4; in 1860 there were 6; in 1861 there were 7; in 1862 there were 6; in 1863 there were 4; in 1864 there were 9; in 1865 there were 9; in 1866 there were 6; and in 1867 there were 3.

1389. Supposing an officer not to be in the list of those who fail, but not to be able to enter the Staff College on account of his not being among the first 15, has he any preference for entering it afterwards?—No; he must go up again for examination.

1390. Do you consider that the officers who offer themselves for these examinations are well calculated intellectually and physically to perform the duties of staff officers?—I should say that most of them are. There are occasional exceptions.

1391. Can you state the average age of the officers?—No; I do not know whether I could give you a return of it or not.

1392. Will you try to do so?—I fear I shall not succeed in doing so.

1393. Have you any alteration to suggest in the regulations for admission to the college?—No, I have no alteration to suggest.

1394. The object of the examination is apparently to test to a certain degree professional acquirements?—Yes; we consider it an advantage to a man that he should possess that knowledge in order to enable him to go on with the course.

1395. But so far as that which is obligatory is concerned, I suppose that your only object is to ensure that a candidate has a sufficient knowledge of mathematics and of French to enable him to go through the course?—One language is obligatory, not French alone; but French, German, or Hindustani, either of the three languages taught at the Staff College.

Course of instruction.

1396. Will you state to the Commission the ordinary study at the college?—The course of study at the Staff College consists of mathematics; French, German, and Hindustani; fortification and artillery; topographical drawing, military surveying and sketching, reconnaissance; military art, military history and geography; military administration, including the organization and equipment of armies in the field; military legislation; elements of natural philosophy, chemistry, and geology as applied to the military sciences; and riding.

1397. Are any marks given for riding?—No.

1398. Has any one ever been objected to for not being able to pass in riding?—No; they are examined by an officer sent down from the Horse Guards.

1399. And a certificate is given that they are sufficiently proficient in riding?—The inspecting officer makes his report.

Of the foregoing subjects the following are obligatory and must be studied by every officer: fortification, military drawing and surveying, military history, military administration and legislation, and French, German, or Hindustani; that is the obligatory course.

1400. What number of marks must the student obtain in those subjects?—He must obtain 1,800 marks on those five subjects for qualification at the end of the course.

1401. I see that at the examination in December 1867 the amount of obligatory marks was 2,500; have they been reduced since that date?—Yes; formerly seven subjects were required from each student, with a higher aggregate, and now the number of subjects is reduced to five; and the aggregate number of marks has been reduced in proportion. Besides those five subjects every student may select two of the following subjects for examination: mathematics, lower course; mathematics, higher course; any modern language; natural sciences; and experimental sciences. In addition to any two of those subjects the student may be examined in spherical trigonometry and practical astronomy. The marks gained in those subjects count for position in the order of merit, but they are not necessary for qualification. There is also another condition, namely, that "any officer who does not take "up mathematics as a subject will be required to "satisfy the examiner that he has a competent knowledge of mensuration; of the mode of determining "heights and distances by ground problems and by "the ordinary trigonometrical calculations with the "aid of logarithms; and of elementary mechanics."

1402. That implies merely a pass examination in those subjects with no marks allotted?—Just so.

1403. Then an officer may pass out of the Staff College without taking up mathematics at all as one of the subjects of his final examination if he simply passes in the marks for mathematics which you have just mentioned?—Yes.

1404. Are there examinations during the course of study for which marks are carried on to the final examination?—Yes, they get marks in many of the subjects for work done during the course, such as for plates in fortification, for military drawings, and for memoirs on military history; and they have also periodical examinations for which they carry on a certain amount of marks.

1405. Can you tell us how often those examinations take place during the course?—They vary in different subjects.

1406. What is the total duration of the course?—Two years.

1407. Is any period of grace allowed, if an officer does not pass out at the end of the two years?—Not unless he has been ill for any period. There is always a probationary examination by the examiners of the Council at the end of the first year in which a certain amount of marks must be obtained, otherwise the officer is desired to rejoin his regiment.

1408. What are the subjects of that examination?—They are the same as for the final examination, but the marks are fewer.

1409. But those marks are carried on to the final examination?—Yes; all the credits gained on the four military subjects are carried on to the final examination, and the officer at the end of the first year may qualify if he pleases in the obligatory language, or in any of the voluntary subjects, provided that the marks gained amount in each case to three-fourths of the allotted maximum.

1410. When you say that an officer may qualify in those subjects, do you mean that his examination is final as far as those subjects are concerned?—Yes.

1411. And the marks then gained in those subjects go on to the final account?—Yes.

1412. What instruction is there of a practical description?—There is instruction in throwing up field works, and in laying out roads, and in constructing bridges, and in taking up positions and defending them, and in defending villages and houses.

1413. Are any marks obtained in those practical subjects?—There are no marks given for throwing up field works, but for the other matters there are, that is to say, for the different operations of placing a village in a state of defence or making a sketch of ground for a position for occupation by troops.

Reconnaissance is a part of the out-door work, and indeed all military surveying is out of door work.

1414. The marks obtained by this out of door work count, that is to say, for military surveying and reconnaissance?—Yes.

1415. Why are no marks given for throwing up field works?—Because they are executed by the sappers under the eyes of the officer.

1416. With respect to surveying, does field sketching on horseback form a part of the course of surveying?—No, I think not.

1417. By field sketching on horseback I mean the making of a rapid sketch of ground, as distinguished from an elaborate survey such as an engineer would make for the purposes of map-making.—The officers are at liberty to make their reconnaissance sketches either on foot or on horseback, and as rapidly as they please.

1418. Are they required to execute those sketches within a given time?—The sketch and the report must be made within a given time.

1419. Have you any alterations to suggest with regard to the course of study or the final examination?—None.

1420. You think that they are satisfactory?—I do.

1421. Can you give us any information as to the number of officers who have passed through the Staff College and have since received staff appointments?—We have no official knowledge or information as to the number who obtain staff appointments, but I think that it would be desirable if the Council of Military Education were informed whenever an officer who had passed through the Staff College was appointed to the staff, and also whenever he left it.

1422. Is the accommodation of the rooms and halls of study at the Staff College sufficient for the number of officers?—It is ample, and it is more than sufficient.

1423. I believe that officers who have passed their final examination are attached to other arms of the service are they not?—Yes.

1424. Have you any suggestion to make with reference to that portion of the arrangement?—I think that the periods for which they are attached to the other branches are too short.

1425. What is the period at present?—Officers of cavalry and infantry are attached to the artillery, either at Woolwich or elsewhere, for a period of six weeks. I should propose to double that period. Officers of cavalry, are attached to infantry for one month. I should double that period. Officers of artillery, horse artillery excepted, are attached to cavalry for one month, and officers of infantry for six weeks; I should make that two months.

1426. Were not the periods originally longer?—They were originally six months in each branch.

1427. Why were they reduced?—They were reduced at the instigation of commanding officers of regiments, who lost the services of the officers for so long a period from their regiments.

1428. But the object of the whole course at the Staff College, and of the attachment of these officers to different branches of the service, is to qualify them, not exclusively for the discharge of their regimental duties, but to become staff officers, is it not?—Yes.

1429. And therefore I understand you to be of opinion that, with reference to their duties on the staff, the period ought to be increased?—Yes.

1430. Do you think that the periods which you have named would be sufficient from that point of view; they are not nearly so long as the original periods?—Merely in that point of view, with reference to fitting officers for the staff, I should prefer that they attended each branch for three months, but I propose the lower period of time in order to meet the very reasonable objections of commanding officers of regiments.

1431. Why is the Staff College not open to engineer officers?—Because the engineer officers are considered as not required to go to it, their education is deemed to be sufficient without it.

1432. (*Lord E. Cecil.*) With regard to the admission to the Staff College, was it not the practice in former days that some payment should be made by the officers?—Never at the Staff College; at the senior department it was.

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Staff College.

1433. Was that abolished at the time when the senior department was done away with?—Yes.

1434. For what reason?—Because the State felt that it was bound to educate staff officers at the expense of the public.

1435. Have you ever heard it mentioned as a matter of complaint by the students at the Staff College that their pay is not sufficient to cover their expenses, and that they are put to a great deal of additional expense?—The only complaint which I have ever heard of to my recollection is with regard to their servants, namely, that they are not allowed to take their soldier servants with them, and that the allowance of 1*s.* a day is not anything like sufficient to provide them with servants.

1436. Would you be in favour of increasing the pay of an officer during the time that he was at the Staff College as an additional incentive to candidates from the army to compete?—No, I think not. With regard to your first question, I might say that no payment is required from students to the funds of the college, except an entrance subscription of three guineas to the college library, and a contribution to the mess.

1437. With regard to the regulations as to the certificate which is given by a commanding officer to a regimental officer, is it necessary that he should examine the officer on points which form the chief qualification of a staff officer?—I have no idea how each commanding officer satisfies himself as to the fitness of the candidates. I only know the terms of the certificate.

1438. If the regimental officer had not been brought up at the Military College, how would it be possible for the commanding officer to decide whether that regimental officer had the necessary qualifications for a staff officer or not?—I think that every commanding officer knows whether an officer under his command is likely to make a good staff officer or not, because it is only as to his general qualifications, and not as to special subjects. The certificate says, "From his "general knowledge of the service, character, habits, "and disposition."

1439. There is the following paragraph at the end of the general order, "As soon as the college "shall be in a position to supply all vacancies in the "staff of the army, no officer will be appointed to the "staff who shall not have passed the final examina- "tion of the college, with the exception of those of "the Royal Engineers and of those substantive field "officers who attained before the 1st of January 1860 "the rank of lieutenant-colonel." Does that mean to say that in future no officer, even if he is applying for the appointment of aide-de-camp, shall be qualified unless he has passed through the Staff College?—No, it refers entirely to the general staff, and not to the personal staff.

1440. What check is there upon the time which is allotted to candidates for examination before a board of officers abroad? What check is there as to the time which they take to answer the papers which are given to them?—They are allowed three hours to answer each paper.

1441. Officers of artillery, I believe, are excluded from the same privilege as the Engineers enjoy, that is to say, if they wish for a staff appointment they must pass through the Staff College. What reason is there for that?—There are certain appointments belonging to the Artillery itself for which they are not obliged to pass through the Staff College; but if they want to get a general appointment, such as a brigade-majorship, or a deputy assistant adjutant-generalship, or a deputy assistant quartermaster-generalship, they must then pass through the Staff College.

1442. But I presume that, as a rule, they have

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Staff College.

gone through the same amount of military instruction which engineer officers have gone through, have they not?—No; because the Engineers go for two years to Chatham after leaving Woolwich.

1443. Are the duties which they learn at Chatham especially requisite for staff officers?— I should imagine that what they learn there is sufficient to qualify them for the duties of staff officers.

1444. I understand that the difference is made between the artillery officer and the engineer officer simply because the engineer officer has an additional course of two years to pass at Chatham?—It was considered that an engineer officer's education was sufficient to qualify him for the staff without any necessity for his going to the Staff College. At first they did go there, but it was found that they had not much to learn.

1445. Why is an officer of the Staff College instructed in English composition while a cadet at Woolwich is not? Why should not a cadet at Woolwich be instructed in composition if an officer at the Staff College is instructed in it?—An officer at the Staff College is not instructed in composition, but he has an opportunity given to him of exercising himself in composition by means of writing his memoirs upon military history and his reports upon reconnaissances.

1446. The paragraph of which I am speaking is to this effect, "The following are the subjects of in- "struction at the Staff College," and amongst them is named "exercise in composition"?—Yes, but there is no professor for it whatever. The only exercise which the officer gets is what I have just mentioned.

1447. Are a certain number of marks received for this work?—The memoirs on military history and the reports on reconnaissance all receive marks.

1448. Supposing that there was a case of bad spelling, would the paper be at once cast?—No, I do not suppose that the examiner would take any notice of it at all.

1449. Or if there was any grammatical fault, would it interfere with the number of marks given for the essay?—In my own practice, when I gave marks for reconnaissance, I did not make any deduction for that, but I always noticed it in the margin so that the officer might see it.

1450. In short, an officer might spell badly and write bad English, and it would not have any effect upon the marks?—I cannot tell what the practice is; it depends upon the examiners. In point of fact, I may say that I never remember any case of bad spelling. As a general rule, all the officers at the Staff College write fair English.

1451. But so far as you know, that consideration does not enter into the examination by the examiner?—No.

1452. As every officer is supposed to have received the general education of a gentleman on entering the army, why should there be any non-military subjects taken up or examined upon in the entrance examination?—Merely to give him an opportunity of choosing whatever subjects he pleases to be examined in.

1453. Do you not think it a great point to diminish the subjects for examination as much as possible?—The only obligatory subjects are a little mathematics and one foreign language.

1454. But why should the mathematics be required, supposing that he had received the education of a gentleman?—Because it is considered requisite to a staff officer that he should have a certain amount of acquaintance with mathematics. We make it an obligatory matter in the course.

1455. As to reconnaissance, is there any instruction given in military signalling or telegraphy, or anything of that sort?—No.

1456. Has that subject ever come under the consideration of the Council of Military Education?—Not that I am aware of.

1457. You gave us a return with regard to the falling off of candidates for competition at the Staff College; do you not think that it is due principally to the disproportion between the number of qualified men who are now waiting to receive staff appointments and the number of staff appointments open to them?—Certainly; I have no doubt of that.

1458. With regard to discipline, what are the punishments in the case of a breach of rules on the part of an officer, is he at once dismissed?—I have never heard of any case of breach of discipline since the college has been established; I suppose that if there was any gross case the officer would be sent back to his regiment.

1459. Would he be placed under arrest by the commandant?—The commandant of course has the same powers over the officers at the Staff College as an officer commanding a regiment has over the officers of his regiment.

1460. (*Sir C. Russell.*) With regard to riding, is it not a fact that some officers are so well aware of the pace at which a horse either trotting or cantering covers the ground, that by the aid of a watch they are able to give valuable information in reconnaissance as to distances?—Certainly.

1461. Do you not think that this should be taught?—I see no objection to teaching it.

1462. Would the Staff College accommodate a larger number of officers than 30?—Yes, it is built for 40.

1463. Would the present professors be equal to the instruction of an increased number of pupils?—Certainly.

1464. As the course at the Staff College occupies two years, would not a severe campaign speedily use up the officers who have passed this examination?—Probably, particularly as they are dispersed all over the world with their regiments.

1465. So that they would be very difficult to get at?—Yes.

1466. Have you a sufficient crop of passed officers to fill your army with staff appointments in the event of a sudden campaign?—I do not know.

1467. Would not a severe campaign speedily exhaust the supply?—It would of course depend upon the magnitude and the duration of the war.

1468. Do the returns relating to the examinations at the School of Musketry at Hythe come before you as Vice-President of the Council of Military Education?—No.

1469. Do you not think that they should?—No, I do not think so; certainly not.

1470. Are you aware of any reasons why the School of Musketry and the Staff College should not be united?—The two are perfectly different subjects.

1471. You think that as they are perfectly distinct subjects they should not be combined?—Just so.

1472. Are you aware that each battalion or regiment has a qualified musketry instructor?—Yes.

1473. Do you think that if each battalion or regiment had a qualified officer capable of instructing not only in musketry, but in such subjects as field fortification, sketching, surveying, reconnaissance, and military history, it would be useful to many officers in the army?—It would be very useful if you could get a man so qualified.

1474. Would an officer who had passed the Staff College examination, as well as the Hythe course, be qualified to undertake such a duty?—I could not say that every officer who had passed through the Staff College would be sufficiently acquainted with those subjects to teach them to others, but I have no doubt that many men who had passed through the college would be able to do so.

1475. Would not an officer so instructed be useful as an aid to the Engineers in constructing field works?—Certainly.

1476. (*Lt.-Col. Chesney.*) How old do you reckon the Staff College to be as an institution?—It was established at the beginning of 1858.

1477. Then it is 10 years old?—Yes.

1478. I find by this return that in the second year and in the eighth year of the college the number of candidates for admission into the college were the same, and that they were the same in the fifth and in

Returns, p. cxlvii.

the ninth years; can it therefore be said that there is really any falling off in the number of the candidates?—On the whole there appears to me to be a slight falling off in the number of competitors.

1479. Do you mean, if you leave out the first year?—In the second and the eighth years there was no falling off. The second and the eighth years are the same.

1480. And the fifth and the ninth years are the same?—Yes, but the third and the fourth years are greater than any of the others; I think that the falling off, if anything, is very slight.

1481. I suppose that if an officer goes up for the Staff College and fails to get in, the circumstance is well known in his regiment?—Yes, it must be.

1482. Would not the fact that no man would like to go up and be known to fail be likely to operate in limiting the number of officers who go up?—It is possible.

1483. With regard to riding in the Staff College, is it not possible than an officer should be absent from sickness on the day of examination in riding, and consequently leave the college without ever being examined at all?—Yes, that is possible.

1484. Is not that likely to be rather a serious defect in a staff officer if he is an uncertain rider?—Yes, if he is a bad rider; but it does not follow that he will be a bad rider because he is absent from the examination.

1485. I believe that there are some instructions used in the college with regard to the style and handwriting of the memoirs prepared by the members; can you put in a copy of them?—I have not them with me; you can get them from the commandant.

1486. A copy can be procured from the college?—Yes.

1487. Is it not part of the reconnaissances that an officer should be practised in rapidly surveying ground, with a view to positions?—He is practised in sketching the ground, but not necessarily with rapidity that I am aware of.

1488 They are limited as to time?—They are limited as to time for their whole sketch and report, but there is no limit that I am aware of as to the time for which they are engaged in the actual sketch; there was not any such limit in my time.

1489. Does it facilitate an officer's passage through the Staff College that he should have been examined and certified as having passed in any of the Indian languages in India? Is there any privilege of marks for that examination, or is it allowed to count?—No.

1490. What objection would there be to allowing an officer who had passed the language examination in India counting that subject at the Staff College?—That probably would be unfair upon the others in the competition.

1491. Are officers of the Staff College allowed any privilege in India as to going upon the staff? Are they recognized as such in India?—They are not admitted to the staff in India until they have passed in the native languages in the country.

1492. In the report of the Commissioners in 1857 upon the education and training of officers for the Scientific Corps, General Shaw Kennedy, in a letter written to a member of that Commission, states, "Here "we at once come to the immense national importance "that should be attached to the army's having a "carefully educated and well trained staff, and the "necessity of the rule being absolute that none but "officers so educated and so trained should be on the "staff." Do you agree with that opinion of General Shaw Kennedy?—No; not entirely. I think that actual experience on the staff in the field is a sufficient qualification.

1493. But when service in the field is not to be obtained, do you not consider that previous training is important?—Yes.

1494. General Shaw Kennedy would include even aides-de-camp in the staff officers who should require to go through a course of study; do you agree with him in that part of his opinion?—No; I would rather leave it to a general officer to choose his own aide-de-camp where he pleases.

1495. Are you aware that in the late American war the armies began at first with a very small staff, and gradually increased the number of their staff officers as the war went on?—I should think that was a very probable and even a necessary consequence of such a war.

1496. Do you not think that it is a subject of national importance to provide a number of officers ready qualified for the staff of the volunteer and militia armies, as well as the regular army, in case of their being called out, so as to have qualified officers ready to take their staff duties?—Yes; I think that might be of importance.

1497. At the present time the expense of the Staff College is about 8,000*l.* a year; is it not possible to conceive of a war costing 30,000,000*l.* a year in the present practice of vast national expenditure upon large wars?—I suppose that a war of great magnitude might cost that amount.

1498. In that case a single day's expenditure would be rather more than the expense of the Staff College for 10 years?—Yes.

1499. (*Sir D. Cameron.*) Is it not desirable to induce the best educated men in the army to compete for the Staff College?—Certainly.

1500. For that reason would you approve of the number of subjects for the entrance examination being increased; for instance, would you approve of classics, English composition, and general history being included among the subjects?—I see no objection to that, provided that the number of subjects were then limited.

1501. Do you think it desirable to alter the present system of examination? Would you recommend any alteration of it with the view of encouraging the best educated men to come into the college?—I hardly like to give a positive answer off hand upon that question, it requires a great deal of consideration.

1502. Is every student at the Staff College obliged to keep a horse during the whole time of his residence?—He is not obliged to keep a horse, but if he chooses to do so he is allowed forage for it.

1503. I suppose that he must keep a horse during a part of the time?—During a part of the time he must either keep a horse or hire a horse for the reconnaissances.

1504. Are reconnaissances generally made in the vicinity of the college?—Yes, most of them are made within a certain limit; but the last reconnaissance is a large one, which sometimes extends from Sandhurst to the south coast.

1505. Should not officers be frequently required to make reconnaissances at a considerable distance, say 15 or 20 miles, and return the same day, and also send in their report the same evening so as to test their endurance of fatigue?—I think that would not be a bad plan.

1506. Is that done now?—No.

1507. How many reconnaissances does an officer make during the time that he is at the college?—You will get that information better from the commandant. I think that the number is about four or five; but I am not quite certain.

1508. If the number is so small I presume that you would not consider it enough, it being almost the principal qualification of a staff officer to be able to make reconnaissances well?—But the extended reconnaissance lasts for eight or ten days, and they are out all that time working every day.

1509. And do they send in their work every day?—No.

1510. They come back to the college and then make their report?—They do their work every day, but they do not send it in until they come back.

1511. Who examines the reconnaissances which are made?—The commandant.

1512. Do the Council of Military Education ever look at them?—Yes, specimens are forwarded to the Council.

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Staff College.

1513. But the marks are given by the commandant?—Yes.

1514. Who are the examiners at the Staff College?—The same as those employed in the other examinations.

1515. Without exception?—Yes. We keep a list of examiners, and employ them in rotation.

1516. Are the officers examined at their final examination in every subject by the examiners of the Council?—In every subject except reconnaissance and astronomy.

1517. (*Chairman.*) But you stated previously that marks were carried on to the final examination from the periodical examinations; are not those marks given by the professors or authorities of the college itself?—In most of the subjects credits given by the professors at their examinations are carried on, and also credits which are gained at the probationary examinations under the examiners of the Council are carried on.

1518. (*Col. Haythorne.*) Do you think that the certificate of the commanding officer is a sufficient guarantee that officers entering the Staff College are thoroughly fitted by their character, and energy, and activity for the staff of the army?—I think that it ought to be, if it is strictly and conscientiously given.

1519. Do you think that, as it is, it has proved to be so?—No. If you mean whether in effect it has been a sufficient guarantee, I must say that it has not.

1520. Are there not many appointments on the general staff of the army now held by officers who have not passed at the college, which in the usual course will be vacant, and which in future will be open to qualified officers from the college?—Yes.

1521. Will this opening provide for all those officers who are now waiting for employment on the staff?—I cannot form any opinion upon that point. I do not know what vacancies there are or what likelihood of vacancies there is.

1522. Can you propose any plan of obtaining a sufficient guarantee for officers entering the college?—No; I have often thought of it, and have even made propositions, but we have never been able to devise anything which would be a certain guarantee.

1523. Does the commandant of the college make any personal report of the officers with regard to their character, activity, and fitness for the staff of the army?—Yes; the Commmandant of the College sends in every year a confidential report containing full information as to the character, the peculiar qualifications and acquirements, and the general fitness for the staff of all the officers who pass out at the end of each year.

1524. To whom is that report sent?—It is sent to the governor, who forwards it to the Military Secretary.

1525. Do you think that it would be advisable to have those reports periodically, like a half-yearly report of officers of a regiment?—The object of that confidential report is to enable the Commander-in-Chief to know the peculiar qualifications which each officer possesses, so that he may appoint one to one department of the staff and another to another. During the whole course, monthly reports of the application and progress of each student are forwarded to the Council of Military Education.

1526. (*Lord de Ros.*) Have officers who are examined in England for the Staff College access to the examiner for explanation, as in the case of examinations for direct commissions?—No, the examiner is not present at the examination.

1527. Have officers who are examined in the colonies any means of obtaining explanations of the questions which are asked them?—No.

1528. What is meant by the study of the art of war; does it mean the study of campaigns by a map, or of military history, or what?—The art of war forms a portion of the subject of military history.

1529. Does the study of military administration mean the organization of an army in regard to the connection between the quartermaster-general's department, the commissariat, the transport, the general head-quarters' accounts, and the purchase of materials, or what?—Yes, everything which you have mentioned.

1530. As French is the language of the military world, especially in regard to professional works, should not a staff officer be proficient in it to a very considerable amount?—I think that it would be a great advantage to a staff officer, but I am not prepared to say that it is an absolute necessity for every staff officer.

1531. You have enumerated the out-door studies. Do you consider the knowledge of deep mathematics essential to the prosecution of those studies?—No.

1532. Do you not consider rough reconnaissance on horseback, with regard to the marching and progress of an army, quite as important as the reconnaissance and sketching of positions?—Yes; they do make reports upon roads as a part of the reconnaissances.

1533. Is it not the practice on service for the quartermaster-general to send out his officers to examine the country, and could that be done on ordinary occasions except hastily and on horseback?—No; on ordinary occasions in actual war it must be done rapidly, and on horseback.

1534. It could not be done on foot by any means whatever?—I do not know that; I cannot say.

1535. Is there any use in attaching officers to regiments of infantry and cavalry and to artillery, as regards the detail of those arms?—A general acquaintance with the details of all arms is, in my opinion, necessary for an officer of the staff.

1536. Would not that general knowledge be better acquired by attending the general staff at Aldershot for two days than by being for two months with infantry or cavalry?—No; I think that the time you propose would be too short; but many of the officers are attached to regiments at Aldershot.

1537. Is it not the object of a staff officer to know intervals, spaces, rates of march, and the general effect of general words of command, rather than the actual movements of a squadron or company?—Yes; but I consider a knowledge of the movements of the different arms very essential.

1538. Are you aware that it takes fully three years to make a tolerable squadron leader, much more to enable a cavalry officer to manœuvre a regiment?—I have no knowledge of that.

1539. May it not happen that from former habits of business and a perfect acquaintance with French an officer may be especially fit for the staff (for instance, Colonel Rose, now Lord Strathnairn) without mathematical or deep scientific knowledge?—Certainly; there are appointments on the staff in which the knowledge above described would be sufficient.

1540. Are you not aware that reconnaissance by the pace of the horse is not merely advisable but is an absolutely necessary qualification for a quartermaster-general's officer?—I suppose that it may be considered so.

1541. You are aware that a brigade-major is the representative of the adjutants of the brigade; what staff knowledge should he acquire to exercise his duties?—It is not absolutely necessary in the case of a brigade-major, but the officers at the Staff College are educated for every branch of the staff. It is supposed that when they leave the Staff College they are fitted to undertake any duty connected with the staff.

1542. If engineers know all that is necessary for the staff do you see any reason why you should not take the whole staff at once from the engineers?—I think that would be neither beneficial to the engineers nor to the rest of the army.

1543. Did you ever hear in any foreign service of the duties of musketry instructor and of general staff officer being combined?—I do not know anything about musketry instruction in foreign armies.

1544. Have you ever met with any practical general

officer who agreed with General Shaw Kennedy in the opinion that the rule should be absolute that none but carefully educated and well-trained officers should be on the staff?—No; I do not know that I ever asked any general officer's opinion upon the point.

1545. Do you think that any training in a college would form a practical staff, capable of managing a corps of volunteers in the field, and would not a few adjutants, however uneducated, be of much more use to the commanding officer entrusted with their movements?—In the event of the volunteers being called out on active service I see no reason why officers of the general staff should not be as useful to them as to any other branch of the service.

1546. In the regulations for admission into the Staff College it is stated that no shortsighted person is to be admitted. Are you aware that Cæsar, Napoleon, Turenne, and Luxembourg were shortsighted?—Those officers were distinguished commanders of armies; but I think that, as a general rule, a staff officer should not be short-sighted.

1547. (*Rev. W. C. Lake.*) Do you consider it desirable to have a very large number of subjects for the entrance examination?—The object of a large number of subjects is to enable officers who are in possession of different kinds of knowledge to get into the Staff College.

1548. The number of subjects is ten, is it not?—Nine; military history and military geography are one subject.

1549. Do you not think that having so many as nine distinct subjects necessarily leads to cramming up some of them?—I think that it very probably has that effect.

1550. Do you think that at all desirable, particularly for young men who are generally about 25 years of age?—No; it is very undesirable.

1551. Do you think that it would be desirable to diminish the number of subjects?—I do not know that. There are advantages and disadvantages in the system, and I am not prepared to say which counterbalances the other.

1552. You allow any marks to count, provided the candidate obtains as much as one-sixth of the marks?—Yes.

1553. You would allow a man to pass who obtained 50 marks out of 300 in French, German, Hindustani, and military drawing, would you not?—No; in French 150 marks are required, and in German or Hindustani 100 marks are required.

1554. In the subjects in which you allow one-sixth to count, does not that imply an extremely small knowledge of the subject?—Yes, a very slight knowledge.

1555. Do you approve of cramming, or do you think that it is practically of any use to a young man?—I did not say that it was cramming; I said that it might lead to cramming.

1556. If you allow so many subjects to be taken up, is it not an encouragement to men, instead of getting up three or four subjects thoroughly well, to cram up nine subjects superficially?—It may have that effect.

1557. Are you aware of the general nature of the answers on the subjects of mineralogy and geology, and of chemistry, heat, and electricity?—No; we do not usually look at the answers.

1558. They do not come before you?—Yes, they come to us, but we merely take the marks of our examiners, we do not look over the work ourselves.

1559. Have you heard any statement that on those subjects the answers are generally of a most superficial description?—No, I have not heard anything about that. Our examiners would inform you on that point.

1560. On what grounds do you give such high marks in mathematics for the entrance into the Staff College; you give a much higher proportion to the mathematics for the entrance into the Staff College, than you do for the entrance into Woolwich, whereas mathematics would seem to be much more required for the Woolwich course?—I do not know upon what principle that was done.

1561. Do you think it desirable to continue the very high proportion of marks given to mathematics for the Staff College?—That is a question which I should like to consider more at leisure, because there may be reasons for it which I am not aware of. I suppose that there was some reason for putting it so high which I am unacquainted with.

1562. Have mathematics a very direct bearing upon any of the most important subjects of study in the Staff College?—They have a direct bearing upon fortification and surveying, but I suppose upon nothing else.

1563. Without any intention to disparage mathematics as a general military study, I wish to ask you whether you do not think the proportion of mathematics at the entrance examination too high?—It possibly may be too high in proportion.

1564. Speaking generally, will you give us your opinion whether it is or is not desirable to diminish the number of permitted subjects at the entrance examination?—I should say that upon the whole it is not desirable to do so, the object being to give an advantage to every officer who possesses knowledge of some sort or other.

1565. Could not you meet that by making two or three subjects matters of necessity, but not allowing their amount of marks to count, and making the competition in three or four subjects?—No; rather than that I would limit the subjects, as we do in the other examinations, to a selection of five of these subjects.

1566. Do you consider the appointments which have been actually made from the Staff College to have been in a reasonable and fair proportion to the other appointments which have been made to the staff?—All the minor appointments, such as brigade major, deputy assistant adjutant-general, and deputy assistant quartermaster-general, I may say, are now given to officers who pass through the Staff College. The higher appointments have not often been given to them, for the simple reason that few of the officers who have passed through the Staff College have had the army rank which, according to the rule adopted at the Horse Guards, qualifies them for the higher appointments. I believe the rule at the Horse Guards is that those higher appointments are only given to substantive lieutenant-colonels.

1567. Do you think that rule is altogether fair to the officers who have studied at the Staff College?—I think it is very important that those higher appointments should be filled by officers of high substantive rank.

1568. (*Chairman.*) With reference to a question which was put to you by Lord de Ros as to General Shaw Kennedy's opinion of the necessary qualifications of staff officers, did you by your answer mean to imply that it was the opinion of practical general officers that careful education, and good training, were undesirable for staff officers?—Certainly not.

1569. I suppose that you are of opinion that, as a general rule, officers for the staff should be carefully educated and well trained?—Decidedly.

1570. Under the existing regulations there is a provision for appointing officers of proved ability in the field direct to the staff?—Yes.

1571. Do you think that in peace time it is desirable that officers, except such as may have proved their ability in the field, should be appointed from a staff college alone, or partly from a college of that kind and partly by pure selection?—I think that there should be but one rule when there is a staff college, and that it should be the only portal to the staff, with the exceptions already existing.

1572. I suppose that you would be of opinion that if you desire to get the best men to go into the Staff College, and to study there, it is essential that you should hold out to them a fair prospect of obtaining staff appointments?—Certainly.

1573. And that the advantage which you are likely to gain from your Staff College depends very much upon the extent to which you are able to hold out inducements of that description to go there?—Yes.

1574. At present very few officers who have passed

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Staff College.

through the Staff College have been appointed to the higher positions on the staff. I, however, conclude that that is an arrangement the effect of which will diminish from day to day as officers who have passed through the Staff College attain the rank which is considered by the Horse Guards necessary for holding those higher appointments?—Yes, that certainly ought to be the result.

1575. I suppose that you would be of opinion that when a sufficient number of officers who have passed through the Staff College have attained that rank, the rule of appointing other persons should cease in time of peace?—Yes, subject to the limitations imposed by the present regulations as to the substantive field officers who obtained the rank of lieutenant-colonel before the 1st of January 1860.

1576. Are there at the present time a considerable number of officers who have passed through the Staff College, and who have not obtained staff appointments?—Yes.

1577. Is not that a reason for reserving for such officers the appointments of brigade-major, although the duties of that office may not be such as to require the higher kind of qualification for staff duties?—Yes.

1578. Do you think that it would be possible to hold out any additional inducements beyond those which are at present offered to officers who pass through the course at the Staff College?—A slight additional encouragement might be afforded by appointing officers who had passed through the Staff College to the different large camps and garrisons as instructors in fortification, and military drawing, and military history, in the same manner as is now the case with the surveying class at Aldershot.

1579. And that would of course give to those officers an extra rate of pay?—Yes, it would give them the usual pay of a brigade-major.

1580. At present the number of students at the Staff College is regulated by the probable requirements for staff officers in time of peace?—I assume that that was the original basis of the calculation.

1581. But in time of war you would require a very much larger number of staff officers?—Yes.

1582. Would not that be a further reason for endeavouring to supply additional appointments for staff officers in time of peace, which might without inconvenience to the public service be at once vacated in time of war by officers who were to be appointed to active posts in the field?—Yes.

1583. Are the professors at the Staff College appointed in the same manner, generally speaking, as those at Sandhurst and Woolwich?—Yes, on the recommendation of the Council of Military Education.

1584. Have you any remarks to make with respect to the staff of professors at the Staff College?—No.

1585. (*Lord E. Cecil.*)—Do you think that it would be possible in any way to institute a system of military degrees at the Staff College?—I can hardly answer that question without knowing some details as to what these degrees are proposed to be.

1586. In the same way as there are honorary degrees of wranglers at one university and of honorary classes at another university, could you not give a degree entitling the holder to some especial honourable distinction, which would be an inducement for more candidates to compete for such a degree than now present themselves?—I presume that there would be no difficulty in that; whether the inducement would be considerable I cannot say.

1587. Do you now classify the officers who pass through the Staff College in any form, so that the merit of one appears pre-eminent to the merit of another?—They are placed in order of merit according to the examination which they pass.

1588. Does that appear to the public? Is any distinction put opposite their names in the Army List beyond the mere fact that they have passed through the Staff College?—No.

1589. Do you not think that it would be a great inducement if officers could append to their names a degree specifying that they had passed through the first class or the second class, or whatever you might like to call it, in the Staff College in the same way as when they have gained the Victoria Cross?—We have no distinction of classes. We do not classify them in any such way.

1590. Do you not think that that would be of itself an inducement for more candidates to compete for the honours of the Staff College?—I can hardly tell whether it would or not.

1591. Has the Council of Military Education ever given that subject its consideration?—No.

1592. (*Sir C. Russell.*) You suggested that an officer capable of instructing officers in fortification and other military science should be attached to our large camps. Do you not think that, when regiments are on Colonial service, officers are peculiarly circumstanced so as particularly to induce them on those occasions to apply themselves to study?—I would extend it to garrisons abroad as well as at home, Malta and Gibraltar, and large garrisons everywhere.

1593. Then you do not think it necessary to extend it to so wide a degree as I have suggested?—No; I should say that it would be useless, and the expense would be great.

1594. What is your objection to extending the advantage of an officer capable of instructing in military knowledge to regiments as well as to garrisons?—I do not see the necessity of incurring the expense of an extra officer to each regiment when you could not force the officers to attend his lectures; he might have nothing to do, and might be perfectly idle.

1595. Are you aware that if volunteers as musketry instructors cannot be found in a battalion, an officer is detailed to undergo the course of instruction necessary to fit him for that duty?—Yes, but you could not apply that principle to the Staff College.

1596. (*Lt.-Col. Chesney.*) You were asked just now whether adjutants of regiments would not be more useful as a staff to volunteers than Staff College officers. Is there any reason why the same character should not be combined in the same individual?—Any officer can go to the Staff College, whether he is an adjutant or not.

1597. A captain of short service can be appointed to the staff though he has passed last in the examination at the Staff College, while a lieutenant of even a longer service with a higher place at the Staff College cannot hold a staff appointment, unless specially recommended. In your opinion does not that tend to prevent a larger competition for the Staff College among the younger officers?—The knowledge that such an officer cannot for want of rank get a staff appointment, or that he has no prospect of a staff appointment for several years after he has passed through the Staff College, will doubtless in many cases act as a deterrent.

1598. (*Sir D. A. Cameron.*) Is not a knowledge of military law very essential to a staff officer, especially when he is employed in the adjutant-general's department?—Yes, and even sometimes to a brigade-major.

1599. Do you think that the study of military law is sufficiently encouraged at the College; do not you think that 100 marks is a very small number to allot to that subject?—This is not the usual number allotted. It was an exceptional case.

1600. Can you inform the Commission as to the number of marks allotted to military legislation at the final examination?—Military administration and legislation, taken as one subject, have a maximum of 600 marks; 400 are given to administration and 200 to legislation.

1601. You admit that every officer who leaves the college ought to have a thorough knowledge of military law?—Yes, as far as it can be gained there.

1602. Do you think that 17 questions are sufficient to test an officer's knowledge of military law?—The paper is drawn out in order to be of three hours' duration, and there are as many questions as could be answered in the time.

1603. Do you not think that it would be desirable to have an oral examination upon the Mutiny Act and the Articles of War?—An oral examination in most of the subjects might be desirable, but there are practical difficulties in it.

1604. (*Chairman.*) A few years ago it was determined to appoint at some of the principal garrisons acting Deputy Judge-Advocates, who were as soon as possible to be selected from officers who had passed the Staff College, and had there received special instruction in military law; have any steps been taken as far as you know for the purpose of carrying out that resolution?—Not that I know of, so far as regards the Staff College.

1605. You have explained to the Commission that a certain number of officers are now appointed to positions upon the general staff without passing through the Staff College; do those officers pass any examination?—Yes, but at present that has become, I may say, obsolete. We hardly ever examine any one for the general staff, because those who are qualified by rank for the superior appointments are not required to be examined; and I may say that the whole of the minor appointments are now given to officers who have passed through the Staff College, the only exception being that we occasionally have to examine an officer of the guards for the local appointment of brigade-major to the guards.

1606. Therefore the practice of appointing officers below the rank of lieutenant-colonel to the staff, without passing through the Staff College, may be said, with the single exception which you have mentioned, to have ceased?—Yes.

1607. Officers for the personal staff, that is to say, aides-de-camp and assistant military secretaries, are not required to pass through the Staff College?—No.

1608. Are they required to pass any examination?—Yes, they have certain examinations as to their knowlege of military duties, which are conducted by a Board of officers, to which the Council have nothing to say. The examination by the Council's examiner for the appointment of aide-de-camp consists of English composition, the candidate's proficiency in which is tested by his answers to the examination papers, and of any modern foreign language which he may select, in which he is examined *vivâ voce*, and is also required to write a short letter on a given subject. He is examined in military sketching, so far that he is required to sketch at least two square miles of country selected by our examiner; and in field fortification he must show a knowledge of the principles and construction of field works, and must be able to explain the particular objects to which they are applicable, as well as the modes of defending and attacking them. An assistant military secretary is examined in military drawing and sketching; judgment of ground, and its occupation by all arms; practical geometry and trigonometry; castrametation; permanent fortification; military history and geography; one foreign language; and in professional subjects. There is thus a much higher examination for assistant military secretaries than for aides-de-camp.*

1609. Do all officers who receive these appointments pass through these examinations?—I do not know; we examine those who are sent to us by the military secretary, we know nothing more.

1610. But it is a part of the Queen's Regulations that they should pass those examinations?—Yes.

1611. Have you any alterations to suggest with respect to them?—I should be inclined not to examine them at all for the personal staff; I think that a general is the best judge of what he wants in his personal staff, and I should not shackle him in any way in his selection.

1612. Not with respect to either aides-de-camp or to military secretaries?—No, I think that he knows best the article he wants, and if he does not get it it is his own fault.

Maj.-Gen. W. C. E. Napier.

8 July 1868.

1613. Do you know whether officers often fail to pass these examinations?—Not often, we have very few assistant military secretaries to examine, and the aides-de-camp very seldom fail; we make the examination as easy as possible.

Direct Staff appointments.

1614. So that practically it does not oppose a barrier to the freedom of choice on the part of a general officer?—It is more of an impediment than a barrier.

1615. (*Lt.-Col. Chesney.*) In saying that a general should always be left unshackled in the selection of his personal staff, are you clear that if he selects those who are not very highly qualified the service may not possibly suffer; is it quite clear that the service itself may not suffer if he selects unqualified persons?—I do not think the service is likely to suffer.

1616. (*Sir D. A. Cameron.*) Are not the duties of an assistant military secretary totally different from those of a deputy assistant adjutant-general and of a deputy assistant quartermaster-general?—Entirely.

1617. Then do you not think that the examination ought to be totally different?—Yes, if there is any examination at all I think that it ought to be quite different.

1618. (*Lord de Ros.*) Do you not think it advisable that the personal staff should be examined in two points, namely, as to writing a good English letter and as to the knowledge of a foreign language?—I think that you may take it for granted that a general would not appoint to his staff an officer who could not write his own language.

1619. (*Rev. W. C. Lake.*) Or who could not speak French?—No. I do not see the absolute necessity of an aide-de-camp speaking French.

1620. Is the examination to which you subject these officers for the personal staff at all a strict one, and do they all of them pass it fairly?—It is not at all strict, we make it as easy as we can.

1621. Do they all meet your requirements?—No, some fail.

1622. (*Chairman.*) In these cases does the examination precede appointment or follow appointment?—Generally speaking it follows a provisional appointment.

1623. And if the officer fails to pass the examination does he lose the appointment?—In that case he is generally examined again at the expiration of a certain period.

1624. How many chances are given to him?—It entirely depends upon the Commander-in-Chief.

1625. (*Rev. W. C. Lake.*) Have you ever known any case in which a person has failed of obtaining his appointment from not passing the examination?—Not to my knowledge. As far as my recollection goes I am not aware of any case.

1626. (*Lord E. Cecil.*) Were not the military secretaries at one time supposed to be examined if they were not of the rank of lieutenant-colonel?—Not since I have been in the Council; I am not aware of it.

1627. (*Chairman.*) Then military secretaries at present are not examined?—No, only assistant military secretaries.

1628. Will you state to the Commission the objects of the Advanced Class at Woolwich for the artillery?—The object is to qualify officers of the Royal Artillery for certain scientific departmental appointments; the intention being that first appointments to all positions of a special scientific character shall be made exclusively from officers who have passed through the contemplated course of instruction.

Artillery Advanced Class.

1629. Will you state the regulations under which officers are admitted to that class?—No officer is admissible under six years' service, and he must have undergone a course of instruction at Shoeburyness. A medical certificate of health is also required.

1630. What are the subjects at the entrance examination?—The officers are examined in plane trigono-

* This regulation has since been altered. The examination for the post of assistant military secretary is now (1869) the same as for that of aide-de-camp.

Maj.-Gen. W. C. E. Napier.

8 July 1868.

Artillery Advanced Class.

metry, co-ordinate geometry, and calculus, in practical mechanics, in chemistry, and in physics.

1631. The object being to ascertain that they are already officers of considerable scientific attainments?—Yes.

1632. Are all those subjects obligatory or are any of them voluntary?—They are all obligatory.

1633. What is the duration of the course?—The duration is two years.

1634. What is the nature of the course?—The subjects of study are statics, dynamics, hydrostatics, and ballistic instruments; electricity, chemistry, and metallurgy; they go through a course in the Royal Laboratory Department and study gunpowder and gun cotton, and they go through a course in the Royal Carriage Department. During the course they visit different places; they pay visits to various metallurgical works, where they see the different processes in practical operation.

1635. In various parts of the country?—In various parts of the country; they go to Waltham Abbey, and to the East London Waterworks, and other places of that description.

1636. That is with a view to studying machinery?—Yes.

1637. And also metallurgy?—Yes. Then they have an examination at the end of the first year, in which they are required to make a certain number of marks, half the marks of the total aggregate. The subjects of that examination are mathematics, mechanism, and the steam engine, metallurgy, chemistry, the Royal Gun Factories, and the Royal Laboratory. At the end of the second year there is a final examination, in which out of 3,100 marks they have to obtain a minimum of 1,860. The subjects of that examination are statics, dynamics, hydrostatics, and ballistic instruments Didion's "Traité de Balistique," electricity, heat, chemistry, metallurgy, Royal Laboratory, gunpowder and gun cotton, the Royal Carriage Department, and the Royal Small Arms department.

1638. Do you believe that the system is working satisfactorily?—I believe that it is working very satisfactorily as far as my knowledge enables me to judge.

1639. Do the number of candidates for admission exceed the number which can be admitted?—Not at the last examination, that is to say, the examination of February 1868. Return p. clxi

1640. By whom are the examinations conducted?—Partly by our examiners and partly by their own professors.

1641. Are the professors appointed upon the recommendation of the Council?—Yes, they were all obtained by the Council.

1642. Have you any suggestions to make with reference to the Advanced Class?—None whatever.

1643. You believe it to be working satisfactorily?—Quite so.

1644. And to be advantageous to the Artillery service?—I have no doubt that it is. Of course, that is a point upon which I cannot form an opinion of much value. I should observe that the class is limited to eight.

1645. That is in order to maintain the proportion between the number of officers passing and the appointments likely to be ready for them?—Yes.

1646. (*Lord E. Cecil.*) Does an officer who has passed the Advanced Class at Woolwich come under exactly the same rule as an Engineer officer?—I am not aware whether it entitles him to the general staff of the army; I should say not.

1647. (*Chairman.*) Do you suppose that it is likely that an officer who had passed through this very high special class, with a view to certain appointments which are hereafter exclusively to be given to those officers, would seek appointment upon the general staff?—I should think that it is not probable. One of them was sent out lately to Abyssinia for special duty there.

1648. (*Lord E. Cecil.*) But I suppose that the higher staff appointments, such as that of military secretary, may under such circumstances form an object of ambition to them?—Of course; they would not be examined for that after passing through the Advanced Class.

1649. (*Lt.-Col. Chesney.*) Are you aware that in the first Advanced Class of artillery there were two officers who had already taken a Staff College certificate?—Yes.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Thursday, 9th July 1868.

PRESENT:

THE RIGHT HONOURABLE EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
LIEUT.-GEN. LORD DE ROS.	REV. W. C. LAKE.
LORD NORTHBROOK.	BRIG.-GEN. LEFROY.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.	COLONEL HAYTHORNE.
	LIEUT.-COL. CHESNEY.

MAJOR-GENERAL SIR FREDERICK ABBOTT, C.B., examined.

Maj.-Gen. Sir F. Abbott.

9 July 1868.

1650. (*Chairman.*) You are a general officer?—I am a major-general.

1651. And you lately served in the Bengal Engineers?—Yes.

1652. You were lieutenant-governor of the East India Company's College at Addiscombe?—Yes.

1653. For what length of time?—For 10 years and a half, between February 1851 and June 1861.

1654. You are now a member of the Council of Military Education?—I am.

1655. When were you appointed to that office?—In July 1862.

Examinations for direct commissions.

1656. You are probably aware that it has been suggested that it would be desirable to reduce the age for admission to the army by direct commissions; do you think that that is necessary or desirable?—The present age is from 17 to 20.

1657. Would you reduce the lower limit?—Certainly not.

1658. Would you desire to reduce the higher limit?—No.

1659. You think that the limits as they stand at present are satisfactory?—I think that they are very fair indeed. I would have a large range for admission into the army without competition, without going through the military colleges, because you would then get men who had finished their education at the large schools and colleges; they would come at a later age. You would get men, for instance, like Sir Herbert Edwardes, and others who had finished their education

at college. They, generally speaking, prove very valuable men in the army.

1660. And I suppose that you would also wish to admit a certain number of men who had passed through the universities?—I certainly would; that, I think, is provided for in the regulations.

1661. Do you consider that the present system of examination for direct commissions is satisfactory?—I do not know that I could specially improve it. I might perhaps suggest a confinement to fewer subjects, but I do not feel very strongly upon the point; I think that the system is working very fairly.

1662. Do you think that the present number of subjects gives any facility for cramming?—Every subject which is added to the list, of course, is *pro tanto* another subject added to the cramming list. The reason of the necessity for having this number of subjects taught is, that we cannot get the young men to pass a good examination in what they ought to pass, that is to say, classics. Boys go to school at 9 or 10 years of age, and learn Latin and Greek till they are 15 or 16, and then we find when they come to us that 50 per cent. of them cannot construe an ordinary line in Virgil.

1663. Is that your experience of public school education?—I am afraid so.

1664. That is shown by the papers which come before you?—By the papers which come before the Council. I do not presume to say that all those young men come from the public schools. We cannot tell where they come from; but they come from classical schools; for, of course, all English gentlemen go to classical schools of some sort during the early periods of their education.

1665. The evidence which has been given to us shows that a very large proportion of those who come up for the examination for direct commissions, and also for the entrance examination to Sandhurst, have been for a time under the instruction given at what are called "cramming" schools?—That is of necessity, because they cannot get the information they require anywhere else.

1666. Speaking generally, do you consider that those schools are of an objectionable character?—Many of them are so from want of discipline.

1667. Then you would prefer to see boys come straight from public schools to the examination?—Most assuredly from the public schools and from the acknowledged private schools. Many of the private schools are admirable, and if we could only get the young men from those we should be very well satisfied.

1668. Do you consider that it is in consequence of the instruction given at those schools not being of a satisfactory character that the intervention of the crammers is necessary, or is it the result of any other part of the system?—I think that it is from the system upon which education is given at a public school. A boy goes to a public school, and if he is studiously inclined he gets on very well. The masters pay a good deal of attention to him, and he rises to the sixth form, and he then comes under the eye of the headmaster; but I believe that as respects the others who are not attentive to their books, very little pressure is put upon them to make them learn, and if a boy is left to his own inclinations he prefers to be idle.

1669. It has been suggested that it might be possible to take the position of a boy in one of the acknowledged public schools of the country in lieu of any examination; that is to say, that if he were in the sixth form at Harrow, or Eton, or Rugby, or any other school of that sort, it might be taken as sufficient evidence that he had received the education required for an officer. Do you think that that would be a good plan?—If you could confine it to the great and acknowledged public schools, and took men from the sixth form, provided they knew arithmetic, I should see no objection to it; but it would be opening a door which I do not think you would be able to close; pressure would be put upon you by the other schools, and they would say, "Why are not our certificates accepted?", and the public, I think, would take their part.

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Preparatory schools.

1670. Do you think that it would be possible to conduct your examinations locally in the principal schools, and to send down your examiners to them, so as to bring the examinations home to the boys, and so to a certain extent to shut off the cramming schools?—That would never do, because the students have not the information. It does not signify whether we examine the boys at their school, or whether they come up to Chelsea, if they have not got the information that is required.

1671. In your opinion the defect is not in the system of examination, but in the education which the boys receive?—Our system, as we hoped, was based upon information afforded by the head masters of the public schools. When General Cameron was at the head of the Council a proposal was submitted as to what a boy of 16 should be able to pass in, and the head masters favoured the Council with their opinion. We struck the minimum at a very much lower limit than they suggested, but it was useless; we found that the young men could not come up to it; they knew no arithmetic and they did not know Euclid; most of them knew very little of Latin; and of course we were obliged to substitute for that something which they did know, and they get that knowledge at what are called cramming schools. "Cramming schools" is a hard term to use. A certain class of schools profess only to give six months' education; those are decided cramming schools, the boys are crammed. But there are other schools of a very superior class, at which they get a very excellent education; they are very carefully taught and prepared; and such schools prepare for the Woolwich examination.

1672. A proposal was submitted by the Council of Military Education with reference to the suggested inspection of these so-called "cramming schools" by a Government inspector; do you think that that scheme could be carried out?—I do not think that it could be carried out efficiently, for several reasons.

1673. Will you be good enough to state why?—I think that it would be almost impossible for an inspector to go to a school and ascertain the whole particulars of the school merely by inspection. We get boys from, I should think, upwards of 100 schools, and I think that it would be impossible for one inspector to go down and ascertain the exact nature of each of those schools.

1674. Do you think that a single inspection in each year, or even half-yearly, would really give you any assurance that the school was satisfactory?—None whatever.

1675. (*Lord E. Cecil.*) Do you consider that a boy who passes through a public school should be able to go up directly to the examination and should enter the army, or enter Sandhurst?—I think that he should be able to enter the army or Sandhurst.

1676. Do you think he ought to be sufficiently prepared to compete in the examination at Woolwich?—He might be able to pass what we call our qualifying examination, but those who go to special schools would beat him in competition.

1677. Do you think that the education at public schools ought to be so arranged or modified that a boy should be able to pass for both the army and the scientific corps?—I think so, certainly.

1678. You would infinitely prefer that boys should go straight up for the army at Sandhurst, or at Woolwich, from a public school, rather than by means of what is called private tuition or cramming schools?—I would.

1679. So far as your observation goes, do you think that the tone of a public schoolboy is far superior to that of a boy who has passed through a cramming school?—Certainly.

1680. With regard to the direct examination for the army, would you alter it in any way? Do you think that all that is required for a regimental officer is simply the ordinary education of a gentleman?—For entering the army by direct appointment I think that

Maj.-Gen. Sir F. Abbott.

9 July 1868.

it is quite sufficient. I would rather take the young men fresh from their schools, and put them into the army at once, under a good commanding officer.

Preparatory schools.

1681. Would you be in favour of the institution of modern or military classes at all public schools?—I should not think it necessary to make separate classes. I think that it would be quite sufficient to teach what they profess to teach; that is to say, the classics, mathematics, history, and geography. We do not want anything else.

1682. How would you propose to prepare the young men for the entrance examination at Woolwich, because I understand you to have said that you would infinitely prefer that boys should go up from the public schools to Woolwich?—Yes. What I say is, that under the present system of education they could not compete with those who go to the special schools; but if the masters would take them in hand and teach them at the public schools, as they might do, there would be no difficulty. There is nothing in our examination that a lad trained at one of the public schools, and taught what they profess to teach, ought not to pass if he has good abilities.

1683. I presume that it would involve special military instruction, at least for Woolwich, at our public schools?—I do not think that it would.

1684. Do you think that the ordinary subjects of education which are now taught, if taught well, would be sufficient to enable a boy to pass at Woolwich?—That is the point; it is not what they teach but what they ought to teach. They do not teach mathematics, and as far as I see they teach nothing but Latin and Greek. Young men come from the public schools who do not fully understand arithmetic.

1685. Then you think that if the teaching at the public schools was good, a boy should be able to go up straight to Woolwich?—Certainly.

1686. During the time that you were at Addiscombe did it come under your observation at all that the candidates for admission came up from what are called cramming schools?—Generally.

1687. They existed even in those days?—They have existed for the last 40 years in some form or another.

1688. But I fancy that it is only within the last 15 or 20 years that any large number of them have existed?—I should think so. I have been in India a great many years.

1689. Do you think that the greater proportion of the young gentlemen who entered at Addiscombe came from a cramming school?—Most of them.

1690. And you have always observed a very great difference between the tone of young men who came up from public schools and the tone of those who came up from other schools?—I scarcely remember any who came directly from the public schools, so that I have hardly any means of judging.

1691. (*Lord Northbrook.*) I believe that the examination for direct commissions has been reduced from time to time with regard to its strictness?—It has.

1692. At the present time how would you describe it; is it a very easy examination indeed?—It is a very easy examination; and a lad who up to the age of 16 has been in a public school, ought to pass our examination very easily.

Returns, p. cxlvii.

1693. From the returns which we have before us, in round numbers since the year 1858 5,000 young gentlemen have gone up for examination, and 1,600 have failed. Would not that show that those gentlemen who came up, who were cast, had received a very imperfect education of any kind?—Certainly.

1694. Have you any suggestions to make whereby the standard for admission to the army could be at all raised?—If we do raise the standard suddenly, the army will want officers.

1695. Do you think that it would be possible to make French one of the obligatory subjects without very considerably increasing the number of rejections?—For a time it would certainly increase the number of rejections.

1696. Do any of the young men now go up for direct commissions in Hindustani?—A very small proportion, perhaps about two per cent.

1697. In fact it comes to this, that, unless the general education of youths of that class in this country is improved, it is impossible to raise the standard of examination for direct commissions?—That is exactly the case.

1698. With respect to what are called "cramming" schools, I see that a candidate is obliged to produce a certificate from the master or tutor under whom he has been educated, of his general moral conduct for at least the two preceding years. Do you think that that clause might be in any way brought to bear on certain places of education where no control whatever is exercised over the moral conduct of the pupils?—I do not quite conceive what your lordship means.

1699. We have been told that in certain cases young men enter the army in a condition of health from which it is quite clear that their moral conduct has not been under control previous to admission. Supposing that one or two successive cases of the same kind came from the same institution, could not the master of that institution be debarred from giving that certificate, and therefore could not youths coming up from that institution not be allowed to compete?—I do not think that that could be done.

1700. What is the value of this certificate; I suppose that its value is little or nothing?—It is very little.

1701. (*Lt.-Col. Chesney.*) We have had it stated in evidence that Cheltenham College is remarkably successful in sending up pupils for the Woolwich examination; is that the case?—Yes, and it has been so for many years.

1702. Is there any particular reason why other public schools should not do something towards approximating to the condition of Cheltenham school in that respect?—There is no reason why they should not; it is entirely at their own option. Generally speaking the head masters of the public schools prefer classics. There is no other reason that I know of.

1703. Can you give the Commission a general idea of what is about the least cost of the education of a boy at one of the less expensive public schools?—I cannot.

1704. If a plan should be carried out for distributing the appointments for the army between the different public schools as they now are, would not it be tantamount to excluding from the army the sons of poor officers?—You would exclude all the sons of those who could not afford to send their sons to public schools, and it would be exceedingly unjust and unfair.

1705. Would not also any plan of that sort be a direct encouragement to what appears to you at present to be an imperfect education?—Most assuredly it would, and it would be very unfair.

1706. (*Brig.-Gen. Lefroy.*) In comparing the results of public school education with those obtained by masters of what are called cramming schools or forcing schools, have you ever compared the number of hours week per week on the average which is got out of the boys under the two circumstances?—I have no means of comparing them specially, but I know very well that at the special schools they work much harder than they do at the public schools.

1707. Is not the difference in the result much more referable to that greater quantity of work than to anything in the method of teaching, or the system pursued?—I do not think so. I think that the method at the public schools is a good deal in fault, inasmuch as there is no pressure put upon boys. If I understand rightly, three classes of boys go to a public school. The first class we will say are studious youths; these work hard and take naturally to their books and so become the pets of the master; those youths seek the universities and the learned professions. The next class are those boys who probably are moderately affected towards learning and are ready to do exactly what their parents tell them to do; many of those boys come to Woolwich; some

of them go to the army, and some of them join professions as desired by their parents. Then there is a third class who are the idlers, and of those we get the most; they can do nothing else, and they say "We "will go to the army; we do not like books; we will "go to a crammer, and we will cram up enough in six "months to pass the examination." These are generally the men who now feed the army.

1708. Do you take idleness at the critical period between the age of 15 and 17 as a criterion of mental inactivity or stupidity?—Not always.

1709. Do not these very idle youths in after life very often turn out in all respects such officers as the service may be proud of?—They sometimes turn out to be splendid officers. I have known a great many instances. I should be sorry to reject those young men.

1710. Therefore any good system from a national point of view should be such as would permit the admission into the army of youths who might present that character of idleness, but who in other respects would have admirable characteristics for soldiers?—Certainly.

1711. (*Sir D. A. Cameron.*) Are commissions without purchase ever given to candidates who at the examinations for direct commissions show that they have received a superior education?—Never now, I believe.

1712. Do you think that desirable?—It would only be removing competition from Sandhurst to the schools. I do not know of any other objection to it.

1713. Do you think that you might without inconvenience require a higher qualification for entrance into the army by direct commissions if the purchase system did not exist?—I should be very sorry to make the admission too high. I think that it would exclude a great many very valuable officers; boys who do not take to their books but who take to the sword, and who attach themselves to their profession with a real good will afterwards. We should be very sorry to lose them. I may add that, under the present system, until the great schools will seriously take up the proposal for giving a general education, any advance which you make in the requisitions for admission to the army must of course increase the cramming.

1714. (*Lord de Ros.*) Must not the public schoolmasters have overstated the qualifications which they could produce in their boys, or else why do not they furnish as good candidates as the crammers?—I can only speak from results, namely, that we do not find that amount of education which the public schools profess to give.

1715. Is it not to be inferred that the crammers specially devote their skill to the study of the questions which are likely to be asked rather than to the general objects of study?—Assuredly.

1716. As an officer, do you not think that good training of the mind and gentlemanly habits are quite as important for a cadet as any amount of mere education?—They are of the highest importance.

1717. May there not be something in the mode of examining which causes the failure of some candidates and the success of others to be uncertain, and not always decided upon a sound and impartial principle?—Wherever a boy comes up with merely what is called crammed knowledge it is just a chance whether he fails or whether he succeeds.

1718. (*Rev. W. C. Lake.*) You have spoken of most of the schools which are called by the general name of "cramming schools" as being objectionable from the want of discipline?—Yes.

1719. Are you aware that the Government inspectors for the national schools inspect considerably more than 100 schools in the course of a year, and as many as 200, and that they give opinions with regard to discipline? Do you think that it would be impossible for an inspector to give an opinion with regard to the discipline of 100 schools?—I think that it would be impossible for him to give an opinion worth having. I do not think that it would be based upon sufficiently accurate grounds by mere inspection.

1720. Admitting that your inspectors might sometimes be deceived, still in cases of a gross want of discipline would they not probably detect it?—They would now and then do so. *Maj.-Gen. Sir F. Abbott.* 9 July 1868.

1721. Do you not imagine that several of these schools are marked by a very great want of discipline?—Some of them are. Preparatory schools.

1722. Such schools would be struck off your roll would they not?—Assuredly.

1723. Would it not be a clear gain if there was an inspection, and if the schools which were worst in point of discipline were struck off your roll?—Yes, if it could be done. It could be done in a few instances; there is no doubt that certain of the worst and notorious schools would be excluded.

1724. Were you in the Council at the time when the opinion of the public schoolmasters was asked?—No.

1725. Do you happen to know who the schoolmasters were who gave that opinion?—Their names are all in the first report of the Council; they were Dr. Jelf, Principal of King's College, Dr. Vaughan, Head Master of Harrow, Dr. Moberley, Head Master of Winchester, the Rev. Charles Scott, Head Master of Westminster, the Rev. Charles Goodford, Head Master of Eton, the Rev. Edward Elder, Head Master of Charterhouse, and Dr. Goulburn, Head Master of Rugby.

1726. Then the head masters of all the great public schools told you that without any doubt they could send up boys who would be fit to compete for the examination for a direct commission?—I do not think that it was in those words, they stated what they considered that a boy should be able to do who had passed through their schools.

1727. Then the masters of the public schools fixed a standard for the examinations in accordance with what they supposed it to be probable that their boys could do?—They did not fix anything; they merely stated what a boy ought to do.

1728. (*Sir D. A. Cameron.*) That is to say a boy of average ability?—Yes.

1729. (*Rev. W. C. Lake.*) But in point of fact very few boys have come straight from public schools to compete for direct commissions?—Very few; a very small per-centage.

1730. You mentioned one or two cases in which public schools or very large schools did send a number of boys to compete for direct commissions; you, I think, named Cheltenham?—I mentioned Cheltenham as being one of the special schools; it is not to be called a classical public school, it has a special department.

1731. It is a very large school which has one special department?—It has a special department, which is called a modern department. The school is a very large school, consisting, I believe, of something like 1,000 boys, and it is divided into two departments, one called the classical department under the head master, and the other called the modern department under a second master; and the boys from the modern department are those who come to the examinations for Woolwich and Sandhurst and for direct commissions.

1732. And they have generally or in a great many cases come direct to you?—Yes, I believe that they do; I used to get a great number at Addiscombe.

1733. Do you see any insuperable difficulty in the way of any large public school doing the same sort of thing as Cheltenham has done?—I see no difficulty in it, it is a mere matter of opinion and matter of taste; I contend that it is not even necessary to have a second department. If the whole of the time were not given to Greek and Latin, and if a fair proportion of that time were given to mathematics, and to subjects of general education, I think that there would be no necessity for having a special department.

1734. You mean that in what the public schools now profess to undertake they entirely fail?—I should be sorry to say that.

1735. They do not send up boys to your examination?—We do not get the boys whom we expected to

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Preparatory schools.

get after receiving these letters from the head masters; we were warranted by these letters in expecting that a greater number would come direct to us from the public schools, especially for the infantry.

1736. Sir Duncan Cameron made a suggestion that it would be desirable to reward some of the boys who had done best at the entrance examination by commissions without purchase. That would not necessarily raise the standard of the examination, would it?—As I said before, I think that it would send more boys to the crammers, and that they would be crammed longer.

1737. Do you find that Marlborough equally with Cheltenham sends boys to compete for the direct commissions?—I think that we have a few from Marlborough, but not many.

1738. (*Lord de Ros.*) Are you aware that there is this difference between Cheltenham and the other public schools, namely, that at Cheltenham the instructors in the modern department on military points are not all extra masters as at the public schools, where the extra masters have not a proper position?—The instructors in the modern department at Cheltenham are permanently established.

1739. (*Chairman.*) You stated that many youths who must be classed perhaps among the comparatively idle boys at the public schools yet made very good officers?—Yes.

1740. I imagine that in your opinion they are not excluded from the army by the present system of examination?—They are not.

1741. You have been asked whether it would not be as easy to examine into the discipline of these cramming schools as it is for a school inspector to examine into the discipline of primary schools in the country, but is not there a certain difference in the meaning of the word "discipline" with respect to those two bodies? Is not the discipline into which you wish to inquire in the cramming schools, the discipline exercised over the entire conduct of the students there, and is not the discipline which the inspector of a primary school looks to, the discipline exercised in the school itself?—I imagine so.

1742. And is it not quite possible that a man might very easily and very fairly report upon the discipline of a scholar in a school, when he might find it extremely difficult to ascertain what was the general discipline maintained over the entire body of young men throughout the whole day?—Certainly; it would be impossible for an inspector to ascertain the discipline of the school, taking what we mean by the term "discipline," without living in the neighbourhood, and without inquiring and being acquainted with the school and being acquainted with the persons who would give him information. It would become a system of espionage.

1743. I believe that it is your practice to keep a list of the examiners at the Council of Military Education, and practically to employ the same examiners?—Yes.

1744. Do you think that that system gives any special facilities to those who conduct the cramming schools to make themselves acquainted with the style of examination which is likely to be carried out, and that therefore it would be an advantage to change your examiners from time to time?—So far there must be some little advantage given to the crammers by our employing the same examiners, but I think that the difficulty of changing them is very much greater than would be compensated by obviating that little objection.

1745. (*Lord de Ros.*) Is it not your opinion that many of those who in early life are idlers, educate themselves after they enter the army from a laudable ambition which has not been roused in their early life?—Certainly.

1746. (*Lt.-Col. Chesney.*) Referring to the question which Lord de Grey has just asked you, supposing that there was a case where a crammer allowed his pupils to reside out of his own house without any control of them at all at night, would not an inspector be likely to discover that system and to report it?—Yes, I suppose that he would.

1747. Of the subjects taken up for the three examinations which we have been speaking of, in your opinion are there any special subjects more easily crammed than the others?—Yes.

1748. Will you state what they are?—History and geography.

1749. What do you think of the preparation in the so-called sciences as they are at present taught in schools?—The little which the candidates bring up is worthless.

1750. (*Chairman.*) Then is not that an argument for striking them out of the examinations?—I should not object to that.

1751. (*Sir C. Russell.*) Do you consider it desirable that more boys should come up for examination direct from the public schools?—Very desirable. Our object has been to get lads from the public schools.

1752. (*Chairman.*) Do you consider that all the preparatory schools which are called cramming schools are to be included under one category?—By no means. There are many schools which are really excellent schools in themselves, and which make it their duty to teach honestly and fairly, and they ought never to be classed with the rest which are called "crammers;" and I think that too little distinction has been made; the word "crammer" has been, I think, used too freely and indiscriminately.

1753. Have you any other suggestion or remark to make with reference to this part of the examination?—I have not.

1754. (*Sir C. Russell.*) Are you aware of any reason which has prevented the Council from communicating with the head masters of schools since they made that statement to which you have referred?—I know no reason.

1755. (*Rev. W. C. Lake.*) Has no correspondence, so far as you are aware, passed between the Council and the head masters of schools with regard to the fact that so few boys come direct from the public schools for examination?—None.

Royal M College, Sandhurs

1756. (*Chairman.*) It has been suggested that it would be desirable to lower the age for admission to Sandhurst, what is your opinion upon that point?—I should be sorry to see it lowered below 16.

1757. Will you state your reasons for that opinion?—Because I think that we ought not to interfere with the natural education of a boy, and to take him to special work before that education is finished. If we lowered the age I should recommend going back to the old system of making it a place of education for the sons of officers and gentlemen, taking them in at an early age; but I would not recommend that in preference to the present system.

1758. Then you do not mean to say that you yourself would recommend a return to that former system?—I would not; but if the age were lowered, I think that it would be better to lower it completely, and to make a school of the place.

1759. You think that it is undesirable to break in upon the school education of a boy at the age of 15, and to transfer him to Sandhurst?—I think so.

1760. Under the present regulations much older men are admitted to Sandhurst who come from the universities?—Yes.

1761. Do you think that objectionable?—Very objectionable.

1762. Because it leads to an admixture of persons of very different ages?—Yes, because it leads to a great variety of ages, and it is not, I think, wholesome for a place to have men of 20 and boys of 16 together.

1763. Are there at present many students who come to Sandhurst from the universities at an older age?—I believe very few indeed.

1764. Have you any suggestions to make to the Commission with respect to the course of study at Sandhurst?—Nothing very important. I think that if I were asked to alter the system in any way it would

be simply to abolish what are called the voluntary studies, but it is not a matter on which I place very great importance.

1765. Were there any voluntary studies at Addiscombe?—None.

1766. All the studies there were obligatory?—Yes.

1767. Were the same number of subjects studied at Addiscombe as at Sandhurst, or fewer?—I think that they were as nearly as possible the same.

1768. When you say that you might perhaps be inclined to get rid of the voluntary subjects, is it from a desire to reduce the number of subjects or because you dislike the practice of having voluntary subjects at all?—It is simply because I dislike the system of voluntary subjects. They must create inconvenience in the routine of the college studies.

1769. Do you think that they lead to a neglect of the obligatory subjects?—No, it is not that; but it is that where a part of a class go to a voluntary study the other part of the class are left idle unless they can find a corresponding voluntary subject to study, which is not likely.

1770. Comparing the systems at Addiscombe and at Sandhurst, can you say that the study at Addiscombe was closer than that at Sandhurst or not?—Very much closer. I consider the study at Addiscombe to have been rather severe; something approaching to eight hours a day, without a half holiday of any sort excepting one now and then; there were no recognized half holidays.

1771. How is it at Sandhurst?—I speak before Sir Duncan Cameron. I think that it is about six and a half hours a day for four days in the week, and that the students have a half holiday twice a week. That makes a very great difference in the study.

1772. Did you find that the course at Addiscombe was too severe?—It was intended for a different object. It was not too severe for what we wanted. The object at Addiscombe was to prepare for the scientific corps and not for the line.

1773. Do you think that the course at Sandhurst is sufficiently close for the purposes for which it is instituted?—I think so.

1774. General Napier expressed an opinion that the presence of the Queen's and Indian cadets at Sandhurst was disadvantageous to the studies of the place; do you share in that opinion?—I quite agree in that opinion. I think that it is highly objectionable that there should be two classes of students studying under different regulations.

1775. Then I suppose you would prefer that commissions without purchase should be given to those Queen's and Indian cadets without their being required to pass through the college?—Certainly. I think that it would be a very great advantage to the Royal Military College and a great benefit to the parents, and I think that it would be cheaper to the country.

1776. You are aware that some years ago it was proposed to pass all officers for the infantry, the cavalry, and the guards through Sandhurst?—I think that it was.

1777. Do you think that that would be a good system?—I think that it would be very difficult to carry it out; and I do not see the advantage of it. I do not think that it is an advisable system.

1778. Do you think that it is a good plan to get men into the army from various places of education, from the public schools, from the universities, and from a military college?—Decidedly.

1779. What where the number of students at Addiscombe?—150 was the complement.

1780. That is half the number of those at Sandhurst?—About half.

1781. Do you think that a small college is more easy to manage than a large one?—I think so.

1782. Of course if everybody who was intending to go into the army, with the exception of the scientific corps, had to pass through Sandhurst, you must increase its numbers?—Giving the very smallest smattering of education, you must have a thousand boys to satisfy the whole demands of the army.

1783. What do you consider to be the object of the present college at Sandhurst?—To provide a certain portion of professionally educated officers, and partly for benevolent objects.

Maj.-Gen. Sir F. Abbott.

9 July 1868.

1784. General Napier told us that the largest portion of the students had very little encouragement to work, from the fact that at a very early period it became evident who was likely to get a commission without purchase, and who had no chance of doing so; do you agree with General Napier in that respect?—Entirely, these lads in the first six months can calculate their places within two or three.

Royal Military College, Sandhurst.

1785. Does that produce a considerable amount of idling?—Most assuredly; those who find that they have no chance merely content themselves with qualifying, just as the Queen's cadets do.

1786. And those who find that they have no chance are the large majority?—Yes, where there are 30 prizes given to 100 competitors.

1787. Do you think that any advantage would accrue from confining the college to those who were to obtain commissions without purchase?—The college itself would undoubtedly be greatly benefited, you would then have a number of young men all studying with some particular object.

1788. When you say "the college itself" you appear to point to some disadvantages of another kind?—I simply wished to guard myself from saying that it was the best system which could be used.

1789. Could you suggest any system which would be preferable to that?—I could not.

1790. And you think that, so far as the college itself is concerned, it would be an improvement upon the present system?—Undoubtedly.

1791. Do you think that it would be desirable to unite Woolwich and Sandhurst into one college?—I should not think that it would.

Amalgamation of Woolwich and Sandhurst.

1792. There is an impression I know among some persons that Addiscombe was in that sense a single college, is not that impression incorrect; ought not Addiscombe rather to be compared with Woolwich?—That view is partly correct inasmuch as we had places for all; a certain number of youths were sent in together; a certain qualification was required for the scientific corps, and all who could not come up to that mark had commissions in the line given to them, but that would be very different from having the great majority of cadets seeking commissions in the line merely.

1793. The principal object of Addiscombe I believe was to train officers for the Artillery and for the Engineers?—It was.

1794. And those who failed to qualify for those branches of the service received commissions in the line?—Yes; there was no profession made at Addiscombe of training for the line, but we simply thought it fair that where a number of lads were collected together all should not be obliged to attain to the same qualifications, therefore the best were selected for the scientific corps, and it would have been very hard to turn out the others without any commissions whatever, and they got commissions in the line.

1795. But the body of officers for the line were appointed directly?—Yes, just as it is in the Queen's service.

1796. Can you tell us what average proportion went out in the scientific corps as compared with those who only got commissions in the line?—I think that I speak tolerably correctly when I say that two-thirds went out in the scientific corps, and one-third in the line.

1797. Do you think that any advantage would accrue from a sort of partial union between Sandhurst and Woolwich, that is to say, from allowing the cadets at Sandhurst who had passed out first to enter Woolwich without competition?—It would be impossible to do that under the present system of competition.

1798. Do you mean by that that it would be an interference with the present system of competition?—Entirely so.

1799. Would the education which the young men

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Comparison of Sandhurst with Addiscombe.

receive at Sandhurst and the test which is afforded by the final examination there be equivalent to the test of the competitive examination at Woolwich?—I think not. I think that generally speaking they would not be able to hold their own against the competitors.

1800. Will you be good enough to tell us what were the number and duties of the military authorities at Addiscombe as compared with Sandhurst?—The resident authorities were one lieutenant-governor, one staff officer, and two orderly officers.

1801. Was there any quartermaster, or paymaster or adjutant?—None.

1802. Or surgeon or medical officer?—Not attached to the place.

1803. Was there a chaplain?—One of the professors acted as chaplain.

1804. Will you explain to us what were the duties of the orderly officers?—To attend all parades and to have an eye to the general discipline of the cadets.

1805. Were the cadets divided into companies?—No, we had what were called divisions.

1806. Were there under-officers or corporals appointed from the cadets themselves?—There were under-officers, whom we called sub-officers and corporals.

1807. What were the arrangements at Addiscombe with respect to discipline? The principal conduct of the discipline I suppose was in the hands of the lieutenant-governor?—Entirely.

1808. Had he a power of dismissal from the college?—Not without reference to the chairman of the board of directors.

1809. Was it the practice of the court of directors to accept the recommendations of the lieutenant-governor upon that point?—They always did so. I may explain here that the lieutenant-governor would remove a boy for any flagrant offence and then take the orders of the chairman of the court of directors.

1810. Do you know of any case in which the lieutenant-governor was not supported by the chairman of the court of directors?—In my time there was no case in which I was not entirely supported by the chairman of the court of directors.

1811. Had a staff officer or orderly officer power to inflict any punishments?—Only to give a few extra drills.

1812. Had the under-officers any power of placing cadets in arrest?—Yes, all the sub-officers could give one day's extra drill of their own authority.

1813. Will you tell us the number of professors that there were at Addiscombe?—Fifteen masters and two lecturers.

1814. Had those professors any disciplinary authority?—None whatever beyond keeping order in their own classes.

1815. Could they put a cadet under arrest?—No; they merely sent him out under the censor of the class.

1816. Was the censor the same as the head officer?—No; censors were appointed to each class from among the cadets.

1817. Supposing that a professor observed any irregularity out of college, would it be his duty to take notice of it?—Not unless it was something gross which brought discredit upon the college.

1818. Do you think that it would have been an improvement, or the reverse, if the professors had had any duties in connexion with the maintenance of discipline?—I was always against the system of giving them any share in the discipline of the college. I think that they get on better with the cadets when the cadets look upon them as their friends and not their tyrants, and I think that the gentlemen themselves liked it better.

1819. During the time that you were at Addiscombe were there any serious cases of insubordination or want of discipline, excepting in individual cases?—I should say none; there have been irregularities, but I believe that there was nothing which I found it necessary to use any extraordinary measures about.

1820. We have been told of certain billiard tables and refreshment rooms which exist at Sandhurst. Do you think that the establishment of arrangements of that kind is a good thing?—I should not have liked them at Addiscombe. I think that they are bad. With regard to billiard tables, I think that we ought not to teach the young men the practice of gambling. I believe that the effect is generally this, that under ordinary circumstances where there are no billiard tables at the college the upper portion of the cadets go to the town and occupy the tables there, and that the younger part are not allowed to play at all, but that when we introduce billiard tables into the college itself, the senior part of the college occupy those tables and the junior part go to the town, so that the whole of the boys play at billiards instead of only one half of them. When there are no billiard tables in the college I am sure that many a moral and well disposed lad never goes to the billiard tables because they are in a public house, and because it is wrong to do so, whereas when you introduce them into the college the cadets are educated in playing billiards and consider it as a legitimate amusement; in fact a boy can hardly help playing, and we know very well that boys will not play for nothing any more than men, so that whatever rules you may make against their gambling they certainly will play for money.

1821. General Napier suggested that the course at Sandhurst should be lengthened to two years. Do you think that that would be a useful change?—Not unless you wish to have a much higher scale of education. I think that a year and a half is sufficient. You would perhaps produce better discipline by having two years; you would have more seasoned sub-officers to assist in the discipline, and so far it would be an advantage.

Royal M College, Sandhur

1822. But you would delay the period at which the cadets would get their commissions?—Yes; and I think that it would be hard upon those who did not get their commissions without purchase to keep them longer in the college, when they might have got their commissions without going there at all.

1823. Do you think that there are any additional military subjects, such as, for instance, military law, which might be studied at Sandhurst?—I am very much against it.

1824. Upon what ground?—That it is so repugnant to youths to study military law; they never could understand it, and would hate it.

1825. (*Lord Northbrook.*) Can you describe generally the qualifications of those cadets who pass from Sandhurst for commissions by purchase; what is the value of the education which those who get commissions by purchase receive at Sandhurst?—I do not think that they gain very much; there must be the seeds of education in them, which may in many cases hereafter produce fruits; but as regards the generality of those who get their commissions by purchase, I should say that the education was a good deal thrown away.

1826. Would you consider the result a fair result from 18 months' study?—No.

1827. Comparing it with the qualifications of cadets who went out from Addiscombe into the line, how would you place it?—I think that it is much the same.

1828. Have you any suggestions to make as to raising the standard of those who pass out from Sandhurst for commissions by purchase?—It is impossible to make idle boys work. I have no proposition to make upon that point.

1829. Have you considered whether a minimum of marks might not be established for the entrance of cadets to Sandhurst, so as to secure at any rate a fair knowledge of mathematics?—There is a minimum of marks.

1830. Would you raise the minimum?—No, I would not; I do not think that it would be of great importance to have a high standard of mathematics for admission, unless the proposal was carried into effect of having few more than could get their commissions

without purchase; and then no doubt the admission ought to be competitive.

1831. Would you increase the minimum number of marks which a cadet has to acquire in order to gain a commission by purchase?—It might perhaps be raised a little, but it is questionable; I think that the system which is now being pursued is one of the best which can be followed, that is to say, making them get a certain minimum each term, instead of waiting until the end.

1832. But still, as you describe it, the result is anything but satisfactory?—It has hardly been tried yet. This is a new system which has just come in, and I believe that it is working well. It is to make each cadet after his first six months pass a qualifying examination, and if he does not do that to reject him. A number were rejected at the very first essay the other day.

1833. And discharged?—Yes, but they were admitted again by order of His Royal Highness, because there had been some misapprehension regarding the understanding of the order.

1834. Do you think that cadets on passing out might be classified, and that a distinction might be given to those who passed in the first class?—I think that it is quite a sufficient premium to give them a commission without purchase.

1835. My question was directed to ascertain any way in which the qualifications of those who did not succeed in getting commissions without purchase could be raised?—I do not see that any special advantage would accrue from it.

1836. At present, assuming that the examination to qualify for a direct commission cannot be raised, those officers of the line who come through Sandhurst represent the only officers in the army who enter the army with anything like a special military education?—Yes.

1837. The army is employed very much in India at the present time?—Yes.

1838. In the end the Indian Staff Corps will be, I believe, officered from the British army, according to the present regulations?—I believe so.

1839. Will not it become a matter of the most urgent importance that there shall be a proportion of officers in the line regiments going to India who shall have received some special military education?—Yes, it will be very advisable indeed.

1840. Therefore any measure which would tend to raise the standard of development of the officers must be a measure of great public importance?—Certainly.

1841. With respect to India, I see that Hindustani is not a part of the course at Sandhurst?—It is not.

1842. Do you think that it would be advantageous that an opportunity should be given to officers at Sandhurst to learn Hindustani?—I do not think that it would be of the slightest use.

1843. You would prefer their acquiring that knowledge in India?—Yes.

combe. 1844. (*Lord E. Cecil.*) What was the age at which the cadets entered Addiscombe?—It was varied several times. Before I took charge it used to be from 14 to 18, subsequently to 1851 or 1852 the age of admission I think was from 15 to 18.

1845. Which age do you think worked best?—The older age.

1846. Was there any such body at Addiscombe as is represented by the Commissioners at Sandhurst?—The chairman of the court of directors was governor of Addiscombe, and the court of directors were official visitors, and so far they represented the Commissioners of the Royal Military College.

1847. Did they attend at the half-yearly examinations?—A deputation always came down.

1848. Did they interfere in any way with the discipline or the finance of the college?—The finance was entirely under them, but they never interferred with the discipline while I was there; they had the power to do so.

1849. Do you know anything at all of the duties of the Commissioners at Sandhurst?—I do not.

1850. With regard to the lodging of the cadets at Addiscombe, were they lodged in associated dormitories, or were they lodged singly?—Just prior to the date of my taking charge every cadet had been given a separate bed place.

1851. Did you not think that a very great improvement?—Very great.

1852. Did any cases of improper conduct arising from ne association of the cadets come before your notice?—I never heard of such a thing.

1853. No boys were ever ordered to leave on that score?—No, I never heard of such a thing, and there was no suspicion of the kind.

1854. What were the punishments at Addiscombe?—Extra drill and arrest.

1855. Had you no such punishment as isolated confinement?—I call that close arrest.

1856. Will you explain what close arrest was?—The confinement of the cadet to his room.

1857. On bread and water?—No, that was never done.

1858. There was nothing of that sort?—No, nothing childish.

1859. Was rustication or detention for a part of the vacation a portion of the punishments?—Rustication was an acknowledged punishment for serious misconduct or for want of proper application to the studies. I very seldom recommended it; I had a great objection to it.

1860. Was there detention?—I myself introduced detention on certain occasions, such as the following: At the end of the term it is always known to be a very great difficulty to keep boys steady, they are full of fun, and therefore if a boy committed a prank towards the end of term, and could not get his fair amount of drill, I detained him for a day or two after all the rest had gone away, and I found that to be the most effective of all punishments; there was nothing which the cadets hated so much.

1861. You think that it worked well?—Perfectly; it put a stop to a great many irregularities on the last night.

1862. Can you give us any idea of what was the cost of the education of a cadet at Addiscombe?—Very much the same as at Woolwich. The nominal contribution was 100*l.*, and then there were extra expenses which raised it up to about 120*l.* or 130*l.* a year.

1863. How was the discipline carried on at Addiscombe; was it carried on by means of serjeants?—I abolished the whole of the interference of the serjeants in the matter of discipline. I did so on my own responsibility, and it was afterwards very much approved of by the court.

1864. Were there certain bounds?—There were no bounds whatever.

1865. Were cadets allowed to enter whatever houses they pleased?—No; I do not exactly call those "bounds;" they were not allowed to enter public houses.

1866. Did you find that having one college for the whole service worked well or ill?—It was sufficient for the whole service, and therefore we could not possibly have had a second.

1867. Did you approve of having only one college for the service; would you have preferred having two?—Certainly not two. We only wanted a certain number of officers, and that number of officers was easily provided by Addiscombe.

1868. I think that you have stated that about one-third of the cadets went into the line and about two-thirds into the scientific corps?—I think so, taking a large average.

1869. And you do not think that the officers of the Indian army were worse instructed or worse conducted, or that their general conduct was lower than that of the officers in the Queen's army?—I should certainly say not.

1870. Do you not think that the competition to

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Addiscombe.

obtain commissions in the scientific corps of the Indian army had a good effect amongst the cadets in increasing the general military knowledge of those who afterwards entered the cavalry and infantry?—There is no doubt that some of those cadets who failed to attain to the scientific corps were very well qualified as officers in a military capacity, but they almost entirely went into the line, and none into the cavalry. The cavalry was a special appointment under the court of directors. It being considered the best service, they used generally to give the appointments to their own relatives and friends.

1871. Would not that be rather an argument in favour of having one college for the three branches of the service?—No, not so far as that; it would be an argument for having a certain portion attached to the Woolwich college who might be run off into the line, but I do not think that it extends so far as to recommend one college for the whole, because it did not extend to that in the Indian service.

1872. Would you be in favour of keeping Woolwich as it is, with a small and separate establishment for officers' sons who are to enter the army without purchase, and allowing the large mass of candidates for the army to go up from the public schools for direct examination?—I should be against any mixture of that sort.

Royal Military College, Sandhurst.

1873. Without saying whether such a school should exist at Woolwich or at Sandhurst, without mentioning the locality of the school, would you be in favour of such a scheme as I have endeavoured to sketch out?—The scheme, as I understood your lordship to sketch it out, is to have the Royal Military College as it is, or slightly modified, so as to receive the sons of officers.

1874. Yes; to have a small separate establishment for officers' sons without purchase?—I think that it would be entirely wrong to give the whole of the non-purchase commissions to officers' sons. I think that it would break down the whole tone of education at once; you must have competition with the public generally in order to have a wholesome education.

1875. I understood you to say that you were in favour of confining the number at the Royal Military College to exactly the number of cadets who could get commissions without purchase?—Not exactly the number, but to leave a sufficiency for competition, so that there might be a fair possibility of a cadet getting his commission.

1876. Would you entertain any objection to having a college for the scientific corps somewhat in the same locality with this school?—If I had my choice I would keep them quite separate. I do not see any advantage in their being in the same locality, and I think that they are better separate.

1877. You would have them in different localities?—Yes. The establishment at Woolwich could not be placed in a better locality than it is in now, and I think that the site of Sandhurst is wonderfully well adapted for its purposes.

1878. You said something about professionally educated officers. Do you think it of very great importance to have all officers who enter the army, namely in the infantry and the cavalry, educated professionally?—I do not. I think that there is work for everybody; there is work for the bold schoolboy, and there is work for the scientific one. We do not want all to be on the staff, we want some men to be attached to the regiments, according to the good old pattern of officers who stuck to their regiments and looked upon their regiments as their own family, and never wished to leave them.

1879. Then as I understand you, you do not think it a very great advantage to have the few cadets which Sandhurst sends up professionally educated for the army?—Yes, I do think it an advantage to have a certain number professionally educated.

1880. For what reason?—Because the army wants staff officers as well as regimental officers.

1881. Then you think that the great object to be served by Sandhurst is to send cadets into the army for the purpose of afterwards obtaining staff appointments?—Certainly, that is the principal object.

1882. As far as the duties of a regimental officer are concerned, you think that that professional education is not absolutely necessary?—It is not absolutely necessary, and it is perhaps better learnt by a great many in their own regiments than at Sandhurst.

1883. What is your opinion of the reason of the general apathy and idleness which is said to exist at Sandhurst?—Simply that to create industry men must have an object before them. When the cadets at Sandhurst have ascertained that they have no fair prospect of obtaining commissions without purchase, they have no inducement to work; they reason amongst themselves, and they say, "I can pass the "qualifying examination taking it easily, and why "should I work? My brother can get into the line "just as well as I can, and do very little for his com-"mission."

1884. Have you ever considered any means by which an additional stimulus might be given to the cadets to study?—I have never considered that point, because I did not know any practicable mode of giving such a stimulus. I suppose that a money bonus is the only stimulus. I do not see much objection to that.

1885. Do you suppose that the founding of military fellowships, or the giving of scholarships, or anything of that sort would answer the purpose?—It certainly would not stimulate the idle boys.

1886. Do you think that giving military degrees would have any effect?—It would not stimulate the idle ones.

1887. Of course there are a certain number of military cadets who would study under no circumstances, but there are a certain number of other cadets who would study if they saw an immediate advantage in so doing?—Yes.

1888. I suppose that all the cadets at Sandhurst, or at any other military establishment, are not so incorrigibly idle that they will not study if a sufficient stimulus is given to them?—I quite agree with that; I have never considered the case, but it is possible that something might be done in that direction if it were worth while.

1889. Are you aware that in America at the military college at West Point all the cadets take a degree and pass out as graduates?—I believe so.

1890. And that that confers a certain distinction?—Yes.

1891. Are you aware that the fact of a young man having passed through West Point would, more or less, entitle him to employment civil or military?—Yes.

1892. Has that ever come under your notice?—I have read the public rules and regulations at West Point.

1893. Do you think that such a military degree would be an advantage or not?—I do not think that it would be an advantage in the British service, because we have no civil employments except those given to the Engineers. The title of the Engineers or of the Artillery is in my opinion quite sufficient to guarantee that the officer is a well educated officer, which is exactly equivalent to the West Point degree.

1894. You are not in favour of any military degree?—No; I do not think that it would be of the slightest use.

1895. Was there a staff college or senior department at Addiscombe?—None.

1896. Something has been said, and a good deal has been written, upon giving probationary commissions to cadets after passing through a military college; would you be in favour of that as applying to the infantry and cavalry?—Certainly not; I would appoint them direct.

1897. You are perhaps aware that in some foreign armies that is the case? I think that it is so in the Austrian and Spanish armies; and in the Prussian army to this day I believe that there is something of the same sort, although the young man is not commissioned. That, however, is not a system which you would at all wish to introduce into the English army?—No, I would leave it entirely to the officer com-

manding the regiment. If an officer is a bad officer it is very easy to get rid of him in our service; the commanding officer has only to bring the matter to the notice of head quarters, and the officer will be obliged to sell out.

1898. I suppose that no such things as rebellions or mutinies ever took place at Addiscombe?—During the whole time that I was there I never had a rebellion, nor any personal affront of any kind.

1899. Nor bullying?—No, there was no bullying whatever. There was a certain amount of what were called "privileges," which were afforded to the seniors, of going to certain particular parts of the establishment, and walking on certain pavements, and such like; they were foolish things.

1900. What has been your opinion of the discipline at Sandhurst for the last few years?—I am not a sufficient authority to speak upon that point as I know so little of it.

1901. It does not come before you?—No, we have nothing to do with the discipline.

combe. 1902. (*Lt.-Col. Chesney.*) With respect to the serjeants at Addiscombe, I have understood that in former years they had a good deal to do with the discipline?—Until I went to Addiscombe they had almost entire charge of the discipline.

1903. Were cadets forbidden to go into public houses?—Yes, strictly.

1904. Were the serjeants allowed to report them for that?—Not under my rule.

1905. Nor the professors?—The professors might have done it if they had pleased, but practically they did not, they were not required to do it.

1906. With only three officers under you in the college, and no one else being allowed to report, how could you possibly secure that the cadets did not go into public houses?—I trusted in a great measure to the cadets managing themselves.

1907. Have you reason to believe that the senior cadets took that sort of moral authority into their own hands?—Not so much as I could have wished; but I consider that the discipline was immensely improved by the change which I made, it was acknowledged by the whole neighbourhood.

1908. You spoke of censors having been appointed in the halls of study, did that apply to the junior classes; had you a cadet in charge of the junior classes?—To explain that matter I may state that our sub-officers were never detailed to take charge of halls of study; we never separated them from their classes, and therefore it was necessary to have some of the cadets of the junior classes appointed to have a general superintendence, and these were called censors. I appointed three and sometimes four, according to the size of the class. The cadets who were called censors had a little distinction, they had extra pocket money, and they were expected to aid the professor in keeping the class in subordination.

1909. To assist him in his duties in the hall?—Yes.

1910. Did those appointments at all lead to their being made sub-officers afterwards?—Yes; if a lad behaved well and fulfilled his duties well he had precedence in becoming a sub-officer.

1911. How did you first select such officers in the junior classes?—I first gave them a month's trial, and I then took the opinions of the professors who had charge of particular classes, and they gave me in the names of three or four cadets, and from those I formed my list.

1912. In the final appointment of sub-officers had position in class no weight at all?—It certainly had. With the exception of a censor who had performed his duty well, and who had *pro tanto* a claim, I gave my appointments by seniority of standing in the class, provided that the characters of such cadets were good.

1913. What power had a censor as soon as he was appointed?—He could only report to the officer on duty.

1914. But I suppose that practically it gave him a control?—Certainly.

1915. (*Brig-Gen. Lefroy.*) I understand you to speak of the education at Addiscombe as having been substantially similar to the education at Woolwich?—I do not think that I said so. We did not teach any practical subjects, such as artillery.

1916. Did you keep up classics there at all?—Nominally one hour a week was devoted to them.

1917. Was not that sufficient to prevent boys who joined with some knowledge of the Latin and Greek languages from quite forgetting that knowledge?—It could not have had much effect upon them, it was so small.

1918. Is not it the case that a considerable stimulus was applied at Addiscombe, first in the choice of presidencies in which the cadets should serve, and next in the variety and value of the prizes given?—Of course the first stimulus was that of getting into the Engineers, that was the grand prize. There was also advantage in the choice of the presidency. But I do not think that prizes had much effect as a stimulus.

1919. As a matter of fact were not the prizes which were given valuable?—I do not think that they were, generally speaking, more valuable than those which are now given at Woolwich. One or two very nice prizes were given, the others were chiefly books.

1920. You do not attach much importance to prizes as an encouragement to exertion?—I do not.

1921. Were any prizes given for good conduct?—Yes.

1922. Did it appear to you that those were generally obtained by the boys who really deserved them on moral grounds?—I object to the whole system of prizes for good conduct, because I think that it is utterly impossible for the head of a college to know who is the best boy in it. I, therefore, gave them according to general rules. I gave them to those who were in charge of classes if they performed certain duties well.

1923. The principal minor punishment was arrest; was it an arrest of honour or under physical restraint?—We had arrests on honour, which were called open arrests, and we had close arrests; there were two distinct systems of arrest.

1924. Do you not think that the maintenance of a system of arrest on honour, such as has always prevailed at Woolwich, is very valuable for its moral effect?—I think so, and I always practised it, and I never confined a man to close arrest unless he had had broken his arrest of honour.

1925. Questions have been asked as to the terms of obtaining commissions without purchase. Is not the number of commissions without purchase a very variable quantity, and independent even of the good will of the Commander-in-Chief?—Yes; it is variable within certain limits. I think that to my knowledge it has varied from 25 to 40 at the commission examinations.

1926. Therefore under our present system it would be difficult to hold out the prospect of commissions without purchase to any unlimited class, such as sons of military officers?—Certainly.

1927. It was formerly the case at Woolwich that negligence in study was a military offence, and was *ipso facto* punished by arrest when it was announced at the end of the month?—I understand so.

1928. Might not some such system as that be applied at Sandhurst?—I do not think that it would do much good. I think that it only irritates without creating much improvement.

1929. You expressed a disinclination to commit any military disciplinary power to the professors. Would that extend to not expecting them to take cognizance of offences under their very eyes; for instance, if they saw a cadet in some unbecoming circumstances out of doors?—I have said that they should be expected to report anything disgraceful.

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Addiscombe.

1930. But not to punish it?—Not to punish it; I would not have them take notice of minor offences.

1931. The professors at Addiscombe as a body were, I believe, very liberally paid?—They were very liberally paid.

1932. Had that the effect of increasing their influence and status at the college?—I think very decidedly; not so much because they were well paid, but because we could afford to get first-rate men.

1933. (*Colonel Haythorne.*) Did not the class of officers who failed for the scientific corps in India often fill very high appointments, both in the engineering department and in the surveying and topographical department?—Yes, I have said that many turned out very well indeed.

1934. What was the standard of those men to whom I have just alluded, with reference to those who pass out of Sandhurst; I mean with regard to attainments in general?—The two colleges were somewhat different in form, that is to say, we studied different things at the two colleges. Some few of those who failed to get into the Engineers and Artillery were very fairly advanced; just as some are at Sandhurst.

1935. Do you think that the rules and discipline applicable to youths of 16 are suitable to those of 22 or 23, which is the space which they run over at Sandhurst at present?—If you go above 16 you must apply the same rules to those of 16 as you do to those of 22 or 23. I look upon it that there can be only two modes of dealing with cadets, namely, either as boys or as men.

1936. Did I correctly understand you to say that you were an advocate for doing away with the voluntary subjects at Sandhurst?—Yes.

1937. Would that tend very much to generalizing the education throughout the army, especially as regards languages?—The voluntary subjects at Sandhurst are of two kinds; thus a cadet has the choice between French and German while the whole of his class are studying languages. But it is not so with other voluntary subjects. One cadet may take up geology while the rest of his class are doing nothing.

1938. Was the standard of examination at Addiscombe on coming out equal to that now in force at Woolwich?—It was not to be compared with the present examination for commissions at Woolwich.

1939. (*Lord de Ros.*) You mentioned drill as a punishment; did that mean instructive drill or what in a regiment would correspond with knapsack and shot drill?—It would correspond with knapsack and shot drill, but we did not use knapsacks or shot.

1940. Did the orderly officers of whom you have spoken go round and inspect the dinners?—Our orderly officers attended daily, and reported upon the provisions supplied.

1941. Was any control attempted over the cadets as to pocket money or contracting debts in the village or the vicinity?—There was a nominal limitation, which was never attended to, with regard to the pocket money, and of course all debts in the town were most strictly forbidden.

1942. Was there ever any question of searching the cadets' rooms or trunks?—On one occasion I found it necessary to do so.

1943. Was it done in the presence of the principal officers?—It was done in the presence of the staff major.

1944. Were any persons whatever employed to watch or observe the cadets when outside the college?—None in my time.

1945. How would it have reached your knowledge if cadets had frequented any public house? Would the elders have interfered for the credit of the establishment to inform you of it?—Certainly not.

1946. You had no means except moral influence of preventing that?—None whatever.

Royal Military College, Sandhurst.

1947. (*Rev. W. C. Lake.*) How long is a boy allowed to remain at Sandhurst?—A year and a half, but it is extended to two years in cases of serious sickness.

1948. Not in case of failure?—No; a cadet is only allowed three half years.

1949. You appear to think that it would greatly benefit Sandhurst if the Queen's cadets were removed altogether?—I think so.

1950. In fact that would be your chief remedy for the existing idleness at Sandhurst, would it not?—Not the chief remedy. I think that the limitation of the numbers is the great remedy, so that the numbers may be somewhat commensurate with the number of commissions given.

1951. Would not that practically be the same as the removal of the Queen's cadets?—No, there are about six or seven Queen's cadets there.

1952. (*Chairman.*) There may be 20 Queen's cadets and 20 Indian cadets, may there not?—So many are admissible, but the number is never full. The Indian cadets are generally kept up to the mark, but what becomes of the Queen's cadets I do not know, there are very few of them.

1953. I think that you have stated that the principal object of the professional training given to cadets at Sandhurst, especially to those who are to obtain commissions by purchase, is to prepare officers subsequently by passing through the Staff College to enter the staff of the army?—It is to prepare a sufficient number of officers who may become staff officers.

1954. Do you not also consider that although it is not necessary to have all regimental officers, or perhaps the majority of them, highly educated, it is an advantage, independently of affording a means of obtaining suitable staff officers, to have among the regimental officers some who have had a general professional training and who have a turn for professional study?—Certainly; and you get that because we send out from Sandhurst a great many more than can ever go on the staff; there are a very large number of well educated professional officers sent out from Sandhurst.

1955. And that is a valuable thing?—Very valuable indeed.

1956. Of course if the system of limiting Sandhurst pretty nearly to the numbers who could get commissions without purchase were to be adopted, it would reduce the number of professionally educated officers whom you would have in the army?—It would do so to a certain extent.

1957. And so far it might be a disadvantage to the army in general?—It might.

1958. Do you approve of the system which exists at Sandhurst of carrying on marks from the intermediate examinations to the final one?—I approve of it because it is found to be the only mode of making the young men work at first. There is a tendency in the dispositions of most young men to put off the evil day of study. They say, "I have a year and a half before "me, I will take it quietly now, and I shall easily get "through it by reading up at the last." They leave it a little too late, and then they fail. By holding examinations every half year and making the cadets carry on their marks from each examination we induce a habit of study, and are able to eliminate those who will not study and to get rid of them.

Addisc

1959. (*Sir. D. A. Cameron.*) At Addiscombe were any periodical reports of conduct sent to the parents or guardians of the cadets?—Every half-year I sent a very special report under my own hand.

1960. (*Chairman.*)—Had those reports reference not only to their progress in their studies, but also to their moral character?—Yes, I stated how many punishments they had had.

1961. (*Sir C. Russell.*)—Was riding taught at Addiscombe?—No.

1962. Were swimming and fencing taught?—Fencing was taught.

1963. Was fencing obligatory?—It was optional; the broad sword was obligatory.

1964. Do you consider that it is advantageous to a man intending to devote himself to military pursuits to be able to ride well, to swim, and to fence?—Most certainly.

1965. You have stated that in the case of arrest

boys were trusted upon their honour. Do you think that trusting boys to a considerable extent upon their honour tends to elevate their character?—Most assuredly; there can be no doubt of it.

1966. (*Lt.-Col. Chesney.*)—Was idleness in study *per se* an offence?—It was not punishable as an offence further than that if I found that a lad would not work, I did not give him leave to go home from Saturday to Monday.

1967. Did you not find considerable practical difficulty in dealing with those cadets who knew that they had no chance for the Artillery or for the Engineers?—I have said that it is always difficult to deal with those cadets.

1968. (*Lord de Ros.*) What were the hours of meals at Addiscombe?—The hour for breakfast was 8 o'clock in the summer, with one hour of study before breakfast; then there was a study of four hours between 9 and 1, with a break of 10 minutes to go to the back yard. At 1.15 or 1.30 there was dinner; then a parade; there was then a study of one hour and three-quarters; tea at 6; there was then a recreation of two hours, followed by an evening study from 8 till 9.30, and then dormitories.

Military ny, ich.

1969. (*Chairman.*) With respect to Woolwich, do you consider that the present system of admission to that academy by open competition has worked well?—I think that it has.

1970. So far as you can judge, do you consider that the officers who have been turned out of the academy under that system have been a suitable class of officers?—I have not had much opportunity of judging personally, but I believe from report that they are very superior men. My Indian friends in the Engineers who have had to deal with them report them to be a very superior class, according to their experience.

1971. Then I suppose that I may conclude that you would regret the adoption of any arrangements which would interfere with that competitive mode of admission?—I was very much against the competitive system before it was introduced; but I must acknowledge that it has worked uncommonly well in furnishing very superior officers for the Engineers, and I believe for the Artillery also.

1972. It has been suggested that the age for admission to Woolwich should be reduced; what is your opinion upon that point?—I think that would be a calamity.

1973. Would you not consider that any reduction of the lower limit of age would render it practically impossible to maintain the present high standard of competition?—I think so. I think that a boy of 15 is quite unfit to compete for admission to Woolwich; his ordinary education is not finished at that time, and his mind has not become steady. I think that it has been by getting men of a superior age that we have effected so very great an improvement in the intellectual qualifications of our officers.

s, p. clvi.

1974. I believe that as a matter of fact very few candidates for Woolwich come up direct from public schools?—I believe scarcely one or two per cent.

1975. In your opinion is there any difference between the character of the "cramming" for the Woolwich examination and that for the entrance examination into Sandhurst, or that for direct commissions?—I should be very unwilling to call it a "cramming" education which prepares a young man for Woolwich. I think that a young man who passes well at our examinations at Woolwich has been carefully and very well instructed upon many subjects. There is no doubt that the young men are crammed a little in history and in subjects of that sort, but in the main points of mathematics, and of course classics, they cannot be crammed.

1976. The examination is of such a character as to render cramming, in the objectionable sense of the word, almost impossible?—Yes.

1977. Do you consider the course of instruction at Woolwich now to be satisfactory?—Yes; I think that it is a very excellent course which they are put through. It has passed through my mind, and through the minds of others, whether it is absolutely necessary to keep the cadets who are intended for the Engineers and for the Artillery together quite to the end of their course, and I think that it is possible that some plan might be devised for separating them after two years' education; but that would necessitate a supplementary school, either at Woolwich or at Shoeburyness.

1978. At present the entrance into the Engineers is a matter of choice to those who pass out best at the final examination, is it not?—They are all reported qualified for admission to the scientific corps, and they take the choice of corps according to seniority on the list.

1979. But as a general rule, do not those who are the highest choose the Engineers?—They either themselves choose the Engineers or are made to choose the Engineers. I believe that many a young man would prefer the Artillery, but he is forced into the Engineers by his parents.

1980. If you separated the two services at an early period, how could you deal with those cadets who passed out the best?—The education at Woolwich would have terminated; one portion would pass to the supplementary school at Shoeburyness, and the other would go to Chatham.

1981. Then your proposal would be rather to shorten the course at Woolwich, and have a course for Artillery officers similar to that for Engineer officers at Chatham?—Certainly.

1982. Do you think that it would be an advantage that those cadets who were intended for the Artillery should go to Shoeburyness in the same way as those who are intended for the Engineers go to Chatham?—Yes.

1983. But you would not propose to separate the course at Woolwich?—I think that it is impracticable; I think that it is advantageous that they should be brought up side by side until they leave the academy.

1984. So far as your information goes, although I believe that the matter is not officially under the Council, do you believe the discipline at Woolwich to be in a good state?—I live in the immediate neighbourhood of Woolwich, and I must say that all that I see of the cadets there impresses me most favourably with the state of discipline at the academy.

1985. Is their appearance out of doors smart and officer-like?—I must say that I never met a cadet doing anything which he should not do, or looking otherwise than he should look.

1986. (*Brig.-Gen. Lefroy.*) Have you never met them smoking?—Never.

1987. (*Col. Haythorne.*) Have they billiard tables there?—They have just set them up.

1988. (*Lord E. Cecil.*) Do you think that the instruction in drill at Woolwich is satisfactory?—That has not come under our knowledge; I believe that it is very good.

1989. With regard to the instruction which is given in mathematics, are not all the cadets instructed in a large hall of study?—In several large halls of study.

1990. Is it your opinion that a cadet can with advantage study the solution of a difficult problem in mathematics in a crowded hall?—I never found any difficulty, and I do not think that there is any difficulty where order is kept.

1991. At Woolwich is there any difficulty in studying privately?—Most of the men have rooms of their own, but I do not think it advisable; I think that they have quite sufficient study in their halls.

1992. In preparing for examination do you not think it advisable that a cadet should have an opportunity of studying privately?—No doubt they do so; they read up a great deal at night.

1993. In foreign colleges I believe that they have masters who are called *répétiteurs;* do you think that system advisable?—It is quite contrary to our system; ours is the tutorial system, but where a *répétiteur* is employed it is the professorial system.

1994. Does not the *répétiteur* instruct the pupil privately?—No, he does not.

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Royal Military Academy, Woolwich.

1995. We know that young men at the Universities are in the habit of coaching their subjects up, do you not think that advisable at Woolwich?—No; the hours of study there are so ample that there is no room for a separate "coach" or tutor.

1996. Do you not think that the work might be better done by means of private study out of school, and thus shortening the hours of study in school?—I do not think so; we give them the very best masters that we can for teaching them these subjects, and it would only be a very great expense to them to find their separate tutors; and then while some were studying the others would be idling. In fact, your lordship wants to ascertain whether the professorial or the tutorial system is preferable.

1997. Yes, or whether there might not be a combination of the two?—I do not think that there is room for it. I think that our system is the best.

1998. I suppose that you consider that the course of instruction in mathematics at Woolwich is very severe, do you not?—It is pretty severe; I will not say that it is very severe. We require what are called half marks, and very few fail to obtain them.

1999. I have heard it stated that some of the papers which are given in the examination are quite as hard as those which are given at the Universities to young men going up for honours, is that your opinion?—I should think that many of our young men at Woolwich take up those papers very fairly.

2000. Do you think it fair that boys of between 16 and 18 should be required to answer the same questions as young men of between 22 and 24 are required to answer at the Universities?—Yes; if they have been taught the subjects sufficiently well it is quite fair to ask them those questions. I do not think that we go beyond the understanding of youths of the age that we have.

2001. Do you not think that it leads to undue forcing of the intellectual powers?—I do not think that our present system does unduly force the intellectual powers.

2002. But must not the mere fact of the young men having to answer these difficult questions in mathematics entail an amount of labour which they are not fitted for, either physically or mentally?—I do not think that that is the case; I do not think we give to young men of that age anything which unduly burthens their minds. Where there is competition you must have high questions given to bring to light the superior talents; with easy questions all pass the same examination, and there is no difference between a good mathematician and a bad one, and I suppose that it is the same with the classics.

2003. Then the competition would lead to a very high standard, and to excessive forcing of the intellectual powers?—There is no doubt that it leads to a full exercise of the intellectual powers.

2004. Some people are of opinion that officers who pass very severe examinations of this kind are sometimes practically useless for their ordinary regimental duties; is that the result of your observations?—I have not been much mixed up with officers after they have passed their examination, but you have only to refer to the returns of the regiments. This system has now been in force for 10 years, and there are now, I suppose, officers in the rank of second captains, both in the Artillery and in the Engineers; those men must be very well known to the heads of departments, and I should recommend the Commission to inquire at the Horse Guards what is the character of these officers who have come out. If you take the Army List I can point out the names of some very distinguished officers. I believe that there are now some superior men in the service who entered the army in 1858, either in the Artillery or in the Engineers.

2005. (*Lt.-Col. Chesney.*) By the regulations it seems that the average age of a cadet entering Woolwich would be nearly $17\frac{1}{2}$?—Between 17 and 18, I suppose; I once carefully went over it, and I found that the age of admission was nearly 18.

2006. And the course at Woolwich is about two and a half years?—Yes.

2007. Consequently the final time would be at about 20 years of age?—Yes.

2008. This very difficult mathematical examination, which is equivalent to the Cambridge examination for honours, is given when the cadet is leaving is it not?—No, but half way through, when he is about 19 or 20; he is very nearly 20 before he passes that examination.

2009. (*Sir C. Russell.*) Do you think that if a less severe examination was instituted, and if you thereby got younger men into the Artillery and the Engineers, you would derive sufficient advantage from that to compensate for the diminished amount of qualification; do you consider that the age of 20 and over is not somewhat excessive for first entering the service?—I do not think so. These men can hardly be said to be entering the service; they have been two and a half years in the service; they have been brought up under strict military discipline, more strict than if they had been in their regiments; they have positively entered the service at 18.

2010. Do you consider that if the examination was less severe than it is, and if officers were therefore enabled to enter the Engineers and the Artillery at an earlier age, that fact would compensate the service for their diminished acquirements?—I do not think that one year deducted from the age of a captain, or of a lieutenant-colonel, is to be compared to the advantage which you get by adding to the age of a young man learning his profession. The most valuable years of a man's life are those between 17 and 20, and therefore that in my opinion would not be compensated by forcing him a year younger into the high grades of the service.

2011. Was not a cadet's time at Addiscombe allowed to count with regard to pension?—It was after the completion of his sixteenth year.

2012. Was the commission itself at Addiscombe ante-dated?—No.

2013. (*Brig.-Gen. Lefroy.*) Referring to the opinion which you expressed that there might be some advantage in separating the special education of cadets intended for the Engineers and for the Artillery, would not that amount to making two schools of application, one for either branch of the service, and one theoretical school open to both branches?—It would.

2014. It would in fact be the French system would it not?—Not quite.

2015. But very nearly?—At Metz the men are trained up very nearly together; they pursue, as I apprehend, exactly the same studies.

2016. You expressed the opinion that in such a case the proper place for locating an artillery school would be Shoeburyness?—Or Woolwich. What I mean is, that there is a great deal of time now expended in a cadet's education in dealing with the practical duties of artillery, and of the laboratory, which I think he might perhaps learn better when he was a young officer with his regiment, and that would be a gain of six months.

2017. Do you see any objection to dividing the subjects of education into two groups, one group being obligatory upon all, and the other group being so far obligatory that the cadets should make their choice as to the subjects which they followed, but that they should be obliged to give precisely the same time to whichever they chose?—At present I do not think that we have more subjects, excepting in the matter of languages, than should be taught or than all should learn.

2018. Do you think that it is advantageous to the artillery cadet that he should devote such an immense time as he does to fortification plates?—There you come to the separation, and that is what I was alluding to. The last part of the course might be pursued by the Engineers at Chatham and by the Artillery at Woolwich or at Shoeburyness, but I do not think that there is any part of the theoretical

course which could be well diminished with advantage to either party.

2019. Looking to the present development of artillery and the mechanical questions which are concerned in it, do you think that a lower mathematical standard is requisite for the Artillery than for the Engineers?—I do not, or at least very little. I think that all engineers require a maximum knowledge, whereas all artillerymen do not.

2020. Then is not the system a disadvantage to the artillery service, by which the mathematical attainments are so largely directed to the Engineers?—On referring to our syllabus I do not think that we do carry mathematics to any excessive depth. Mathematics are given in three terms out of five, and to all alike.

2021. Do you not think that the questions concerned in the conduct of the manufacturing departments, questions of applied mechanics, which are special to the artillery branch of the service, require as much preparation at the Military Academy as any subjects which are special to the engineer branch?—Yes.

2022. Is not that secured under the present system?—It is; they are all taught alike.

2023. (*Col. Haythorne.*) Is it not the case that many of the youths who compete for entrance to Woolwich suffer seriously in health from the severity of their studies?—I do not know; I have no knowledge of that. I can very easily imagine that weakly constitutions will break down under any severe course of study, but I do not think that it is special to the preparation for Woolwich.

2024. (*Rev. W. C. Lake.*) You consider the course at Woolwich one of severe study?—Fairly severe.

2025. Increasing in severity towards the end?—It does.

2026. Do you think that all reasonable means are taken to provide for the health of the students during that time?—I think so; I think that the academy is very well regulated.

2027. Can you give us any opinion as to whether the attainments at Woolwich are generally about the same as at the Polytechnic in France and at Metz?—In my opinion they are not so high at Woolwich as they are at the Polytechnic, especially upon the subject of mathematics.

2028. Do the artillery and engineer students occupy a high place amongst the students at the Polytechnic?—I think that the choice of service is made before leaving the Polytechnic, and that the pupils take their choice by seniority.

2029. Upon final examination?—Yes; but I believe that as a rule the students do not take the military services. I think that they prefer the civil services, but I have not much knowledge upon that subject.

2030. (*Lt.-Col. Chesney.*) At Addiscombe had you formerly any body of professors answering to the present military professors of the two colleges; that is to say, military men in the service on full pay, who were also professors?—We had one or two officers who were at home on furlough.

2031. But they were exceptional?—They were very exceptional.

College.

2032. (*Chairman.*) Do you consider the course of instruction at the Staff College to be satisfactory?—I think so; I think that it is doing very good work.

2033. Have you any notion that there are too many subjects included in that course?—We have been lessening them by degrees, and I think that it is possible that we might strike out another subject. I think that there are now seven subjects.

2034. Do you think that the course is of a sufficiently practical character?—I think that it might perhaps with advantage be ruled that the candidates should come in with a sufficient knowledge of languages, and should then apply more to practical work. I do not think that the Government is at all bound to teach our officers languages; they could acquire languages anywhere.

2035. Then you would make a certain knowledge of languages an obligatory part of the entrance examination?—Yes.

2036. And you would omit it from the subsequent course?—Yes; I should make the rest perfectly practical.

2037. Do you think that the practical duties of an officer in the field, so far as they can be taught in time of peace, are sufficiently taught in the college?—Many theoretical people argue that it is practicable to do so, but in my opinion it is impossible that you can teach the duties of a staff officer, except with troops. It is there that we fail so much as compared with foreign services. The French and the Prussians have always large standing camps, but we have no means of teaching our staff officers.

2038. Does not Aldershot afford you an opportunity of doing so?—It affords us some opportunities, but I think not so much as it ought to do.

2039. Do you mean that the camp at Aldershot does not afford the opportunities, or that they are not used as they might be?—I think that one camp is not sufficient, because all these officers cannot be sent to that one camp.

2040. On the whole are you satisfied with the present arrangements of the Staff College?—Yes, with the exception which I have mentioned; I think that languages might be very well required of the candidates before they enter.

2041. (*Lord E. Cecil.*) Do you not think that it would be also a very good thing to require a perfect knowledge of languages at the entrance examination at Woolwich?—My only fear is of checkmating a great many good officers. Languages are not so absolutely necessary, in my opinion, for the scientific corps as for the staff; but at Woolwich I think that one language might be taught instead of two.

2042. Would it not have the effect of reducing the number of special subjects afterwards, and thus be of immense advantage, considering the number of subjects in which a cadet may have to prepare himself?—Every subject in which you must qualify must necessarily be so much taken away from the course afterwards; but there is also the difficulty of getting a sufficient qualification in languages, and our object is not to make too many stumbling blocks to the admission of the candidates.

2043. Are the students at the Staff College taught military law?—Yes.

2044. They are, I suppose, officers averaging 24 years of age and upwards; do not you think that young men of 18, 19, and 20 might with advantage study military law?—No, I would not attempt it. I think that any attempt which was made to teach them military law would be hopeless; it is a very difficult subject.

2045. (*Lord de Ros.*) Are not most of the best works on artillery and engineering to be found in the French language?—I think that they are.

2046. (*Sir D. A. Cameron.*) Do you not think that it would be an advantage if the students at the Staff College were exercised a little more in military sketching, particularly in rapid sketching and in reconnaissance?—Yes; I would give up the time taken from languages to that very purpose.

2047. Would it not also be an advantage if greater attention was paid to the study of military law?—I am not aware that there is at present any deficiency in the study.

2048. Do not the examiners in military legislation complain of the want of knowledge in the Articles of War and the Mutiny Act?—There are occasional complaints made, but not as a general rule.

2049. (*Lt.-Col. Chesney.*) Have the Council of Military Education applied themselves to the subject of procuring any public acknowledgment from the Indian authorities of the certificate of an officer having passed the Staff College?—I think not.

2050. Do you think that the difficulties in that direction are insurmountable?—The two systems are perfectly different. The staff corps now in India is

Maj.-Gen. Sir F. Abbott.

9 July 1868.

Staff College.

formed of officers who leave Her Majesty's service, and who go into that particular line.

2051. Is there a very serious objection to the Council accepting as passed in one language at the Staff College an officer who has passed in Hindustani, or not?—I should be very glad to have a qualification on admission, and then to drop the language, and therefore that would apply to Hindustani as well as to any other language.

2052. Are you aware that an officer who has passed the colloquial examination in an Oriental language in India has to begin his study again in the rudiments of the language on entering the Staff College?—That has never been brought to my notice.

The witness withdrew.

Canon Moseley.

9 July 1868.

The Rev. Canon Moseley, F.R.S., examined.

2053. (*Chairman.*) You are a member of the Council of Military Education?—I am.

2054. You are the only civilian member upon that council?—Yes.

2055. And you are the only civilian who has ever served upon it?—Yes.

2056. How long have you held that office?—Since the year 1858. I was connected with the examinations before that time.

2057. You were previously to that time employed as an examiner?—I was.

2058. For admissions to Woolwich?—Yes.

2059. And also for direct commissions?—No; only for admissions to Woolwich.

Examinations for direct commissions, and for admission to Sandhurst.

2060. Do you consider that the present examinations for direct commissions, and for admission to Sandhurst, are satisfactory?—I think so. I see no ground for objecting to them.

2061. You were, I believe, in the Council when the scale of examination for direct commissions was drawn up?—I was.

2062. At that time the head masters of the principal public schools were consulted as to what the character of that examination should be?—Yes.

2063. And the scheme of examination as drawn up was, I believe, of a less difficult character than that which they suggested?—Yes, on the average.

2064. It has been stated to us in evidence that very few candidates come up direct from the public schools. What, in your opinion, is the cause of that?—It is because, as a matter of experience, candidates cannot get in directly from the public schools. Private teachers have the advantage of them in this respect, that they devote themselves wholly to the one object of getting their pupils through these examinations. Athletic sports, foot-ball, boating, and cricket, occupy the boys' minds at public schools too much. The public opinion at such schools is all in favour of those sports, and not of learning. When a boy goes to a private tutor he finds the public opinion of the school all in favour of success at these examinations, and every effort bent towards succeeding at them. A boy who perhaps never before in his life devoted himself to learning when he comes to a private tutor does so.

2065. But the object of the examination for direct commissions and for admission to Sandhurst is, I believe, to test whether the candidate has received the general education of a gentleman, is it not?—It is.

2066. And surely that education ought to be given at public schools?—It ought.

Cramming schools.

2067. Do you consider that it is a good thing, either morally or intellectually, for these young men that they should have to pass through the hands of private tutors, or, as they are sometimes called, "crammers?"—If the crammers were the men that one would wish them to be, I think that it would be an admirable thing. I can conceive nothing better than that for a boy who has given the earlier portion of his life to a public school, and who has got what training a lad may get from the associations of a public school, and from the noble manly spirit which pervades a public school, but who has neglected his learning. I should be much in favour of his being in such a school where for a year or two years he would do his best, which probably he has never done before, provided only that the moral and religious influences of that private school were what you could desire.

2068. Is it your opinion that these schools where young men are prepared for army examinations are generally of such a character as you have described?—I wish that I could say so. I do not think that they are. I know of some which are not good, but I ought not to speak in condemnation of all. I have no doubt that some of them are very good, but I think that it is a thing to be looked into.

2069. The Council of Military Education have had that subject under consideration?—They have.

Inspection preparatory schools.

2070. And I am informed that a suggestion has been submitted to the authorities proposing an inspection of these schools on behalf of the Government?—Yes.

2071. Do you think that that could be practically carried out?—I think that it could; I have not a doubt of it.

2072. In what mode would you propose to carry it out?—It was proposed by the Council that an inspector should be appointed by the Commander-in-Chief, and that every private school which took candidates for the military examinations should be under his inspection. The private tutor was in the first instance to apply for the registration of his school. A form of questions was then to be sent to him, having reference to the suitableness of the house in which he kept his school, and the hours which he devoted to study and to recreation, and during which the pupils were allowed to be out of the establishment, and the hour at which they were required to return in the evening; and he was to be required to bind himself to open his establishment to the inspection of the inspector whenever he chose to present himself there, and to produce testimonials of his own personal character and that of his school from persons of respectability.

2073. Was the object of the inspection to examine into the state of discipline and the moral character of the young men, or in addition, to examine into the mode of instruction?—Especially the moral character and discipline.

2074. Was it proposed that the inspector should inquire into the education?—That was only a collateral object to the other, which was that he should inquire into the character of the keeper of the school, and whether his attainments properly qualified him for taking the boys whom he took. It was very much a question of morals, but the inspector could not approve of him morally if he found him educationally incapacitated.

2075. How often do you think that the inspector should visit each school?—That would be very much in the discretion of the inspector, but we thought possibly once a year; and that the visit should be at an uncertain time.

2076. Do you think that it would be possible for an inspector who only made a visit once a year to a school of that kind, to assure himself of the moral discipline of such a school?—I do not mean to say that he could satisfy himself of it, but we thought that it would be a check and would to a certain extent do a great deal of good, though not all the good which could be desired. We thought that it would enable us to place upon our list only the houses so inspected, and that it would enable us to strike off our register a teacher who we might have reason to think was not morally and religiously qualified for his office. We could make three or four applications of that rule at this very moment which would be very advantageous.

2077. You said that the master of the school was

to send in a statement as to the hours spent at the school, and the hours of instruction, and matters of that sort. Do you propose that the Council should lay down any rules of that kind, and should strike off any schools which did not conform to them?—No, but if there were any flagrant neglect in that respect we should refuse to put that school upon our register.

2078. Would not the public be inclined to expect that if such a system was adopted, the retention of a school upon the register kept by a public department like the Council of Military Education would imply the fitness both of the instruction and of the discipline?—Yes, that is the great practical difficulty which we found. It would seem to take the responsibility with regard to those schools off the parents in the selection of their school, and to transfer it to the Council of Military Education.

2079. You feel that that is a very considerable difficulty?—Yes, but the evil on the other side is very great, and I think that any evils growing out of that cause would be less than the others. It would be quite possible for the Council of Military Education to say that they threw off from themselves such responsiblity, and that it rested with the parents to judge, and that the parents must continue to exercise their own discretion.

2080. Take the case of a school of this sort in London, there must be some periods of recreation during which young men of that age would necessarily be permitted to go freely about. Do you think that an inspector visiting a school of that kind once a year could really ascertain what was the moral condition of those young men under circumstances of that sort?—I have thought of that much. The question with the inspector would be whether the school was well conducted. He would not be dependent upon his inspection and visit alone, but the whole business of his life would be to keep his eye upon those schools, he would have collateral means of information, and in the course of a very few years he would thoroughly know the characters of all the schools which were under his inspection. I speak of that as a matter of experience, because I myself have for many years been an inspector of schools, and I did not find it difficult to acquaint myself with them.

2081. But it must be borne in mind that striking one of these schools off the list would practically be putting an end to the power of the master of that school to take pupils, and it would be something very like, if not ruining him, at all events very greatly injuring him; would it be possible for any public department to do that except upon the most distinct and the clearest evidence of matter of fact; could you do it upon any information which might be obtained by indirect means as to the condition of the school?—No, I do not think that it could be done upon that information. The inspector would be very jealous as to that school and would keep his eye upon it. Such bad management could not fail to produce its effects. If the inspector could not in course of time lay hold of any flagrant case which could be proved, then I should say that the suspicion must be unfounded. But I confess that I always looked upon this inspection as a warning to these people, and as something which would make them feel that any man of a loose or bad character might bring upon himself that great calamity or punishment which you have just described. I do not mean to say that this is a perfect arrangement, but it would certainly tend to meet a very great evil although it might not entirely overcome it. Nothing is perfect in this world, but I think that we could thus raise the moral and religious and social standard of those schools above what it is at present. It would be a great thing to raise even by one step the moral condition of schools in which 800 or 1,000 candidates for the army are being continually educated. His Royal Highness the Commander-in-Chief nominates to direct commissions and to Sandhurst *at his pleasure*. Practically he gives his nominations to these private tutors. It is reasonable that he should inquire whose are the hands in which he places them. Inspection is by no means unpopular in schools. On the contrary, whenever it has been tried it has been found popular. The truth is, that the majority of schools are probably good, and they desire inspection because they are good. The rest desire it lest they should be supposed to be bad.

Canon Moseley.
9 July 1868.
Inspection of preparatory schools.

2082. Do you think that there are such wide spread evils among these schools now as to justify the adoption of a machinery so difficult to work?—I think that there are; but I am not in a position to prove it. Perhaps if the Commission were to inquire officially into the state of such schools, they would ascertain the facts with regard to them, but I cannot at present give them.

2083. I believe that some of these schools take only day scholars, and that the young men are allowed to lodge where they please?—I believe that they are.

2084. What control could you possibly have over the moral condition of those young men?—I think that one of our plans was that they should either live with their own friends, or be boarders in registered schools—that we should exact that condition.

2085. Then you would prevent any young men from going up who were living in lodgings in London?—I would.

2086. (*Lord E. Cecil.*) In your opinion would it not be better to do away with the necessity for cramming schools by improving the education which is given at the public schools?—Yes, if it could be done.

Deficiencies of public school education.

2087. Could you suggest any change in the course of education which is given in the public schools which would better fit boys to pass a direct examination for the army?—I could not. The question is too large for me to deal with. Constituted as public schools at present are I could not myself propose any practical plan.

2088. Do you think that boys coming from public schools ought to be able to pass not only the direct examination for the army, but the examination for entrance into Sandhurst and Woolwich?—The examination for Woolwich is a competitive examination, one could not very well speak as to that, it would altogether depend upon who were the competitors. But I think generally that boys from public schools ought to be fit to compete with boys from other schools; in point of fact, they ought to be the very best of the competitors, for those schools have the very best teachers and they ought to turn out the very best scholars; but it is hoping against hope to suppose that they will.

2089. Is it not true that the head masters of the public schools laid down a particular standard of examination for which the public schools could prepare their boys, and that afterwards that standard was obliged to be lowered by the Council of Military Education?—Yes, it is the fact that that was so.

2090. Has any representation been made to the head masters of the public schools by the Council of Military Education on account of the lowering of that standard?—No, we could not venture upon that, we published it in our reports; it is there stated in plain words, and they may gather from our reports how extremely few from their schools can pass and do pass; scarcely any young men come direct from the public schools; they did so at first, but that was before the competition was what it is now. In the first examitions a good many young men came up from the various public schools and passed, and from the universities for provisional commissions. I think that a good many came to Woolwich from the universities, and a great many more from the public schools than now come.

2091. Under the head of "private tuition" do you include Cheltenham and Marlborough, and a good many other schools?—In the earlier examinations we specified from what schools the young men came, provided that they were public schools; if they were private schools we did not specify from what schools they came, but we never included among the private schools Cheltenham and Marlborough, and schools of

Canon Moseley.

9 July 1868.

Deficiencies of public school education.

that class; they would be called public schools. A public school is one under the control of trustees and of a committee; it is under the control of a body independent of the schoolmaster himself.

2092. Is it not perfectly correct to say that the boys who come from Cheltenham and Marlborough come better prepared than the boys who come from other schools?—Yes, they have always been considered better prepared than the boys from other public schools.

2093. I suppose that a large per-centage of the candidates who have succeeded in the examination and who came from public schools, came from those schools?—Yes, and from schools of that class; there were some in Ireland.

2094. Can you specify the schools in Ireland or in Scotland?—The Marischal College, Aberdeen, and certain schools at Enniskillen and Galway.

2095. But there were no schools there of the character of Cheltenham or Marlborough?—No, I believe not; there was a school especially established for this purpose by Mr. Haughton and other gentlemen in connexion with Trinity College, Dublin, and they sent up candidates for the examination who succeeded exceedingly well. They gave up their school after a time.

2096. Were there any schools abroad which sent up their pupils?—Not in any numbers, but there were a few here and there. We have had a few boys from Nova Scotia; several have come from Guernsey, and some have come from schools on the Continent. A school at Paris has sent one or two.

2097. As a rule, were those boys well prepared?—I should say that they were well prepared.

2098. Were they better prepared than those who came from Eton and Harrow and such schools?—I cannot speak positively on that point.

2099. (*Sir C. Russell.*) You have expressed your opinion as to the advantages which a public school gives to the character of a boy?—Yes.

2100. And you admit that from Cheltenham, and from some of the other public schools, boys come better prepared than they do from other public schools?—Yes.

2101. I presume you are aware that at Cheltenham they have what they call a modern side?—Yes.

2102. Is there any reason that you are aware of why, at Eton and at other public schools, towards the close of a boy's studies there, he should not be trained by such a process as is generally described by the word "cramming"?—I think that it is very desirable. If you could remove the rest of the school from him it would contribute to his success; that is to say, if you could take him out of the playground and away from the boating and the cricketing and the like. I quite agree with you that it would be a very good thing, though I am not sanguine of its success. Such a class was at one time formed at Eton, and at the time when I was informed of it, it had only two or three boys.

2103. Then are you of opinion that some place similar to what is popularly called a cramming establishment is necessary to complete the education of a boy who has been educated at a public school previously to his entering the army?—I fear that it is so, although I regret it very much, so long as you have the admission into the army upon its present footing.

2104. If you put these cramming establishments under supervision without carrying out the extreme penalty which has been alluded to, of striking off a man from the list, do you not think that parents would become habituated to apply to the Council of Military Education for the recommendation of schools to which they might send their sons?—They would probably apply to us for a copy of the list of schools registered by us, but we should undoubtedly refuse to give any recommendation upon such an application.

2105. You would not, having the advantage of inspection, contemplate giving the results of that inspection for the benefit of the parents?—I think that that would not be prudent. We should give a list of schools registered by us, and we should refuse to register any school to which we knew that there was objection, but I think that it would be prudent not to take upon ourselves the responsibility of recommending any school.

2106. (*Brig.-Gen. Lefroy*). Is the deficiency which you have remarked in boys coming from public schools referable in any special manner to mathematics, or does it pretty well cover the whole area of their education?—I am afraid that it covers the whole area of their education more or less. Any boy who can get a high number of marks in classics has the ability which is requisite to get up the small amount of mathematics which we require for his passing if he chooses. I think that it may be taken for granted that he may then get in by his classics alone, indeed I do not think that a case can be found on our list, or scarcely any case, of a youth who had high classical attainments failing to get in.

2107. Do you consider that any special inaptitude exists in lads of the class of the gentry of England for mathematical studies?—I think not.

2108. You think that if mathematics were as well taught as other subjects they would be as well learnt?—Yes; it is a very rare occurrence that a boy possesses a natural inaptitude for so much of mathematics as is required by our minimum.

Course of study at Woolwich.

2109. Have you ever seriously considered the possibility of keeping up the classical education of those youths who get into Woolwich upon classics?—I doubt the possibility of it; I think that some arrangement might be made to separate the studies of the high mathematicians from the rest, those for instance who are going into the Engineers. Perhaps the examination which separates the Engineers and the Artillery might be made a little earlier. I have no doubt that if attention were given to the matter, some arrangement might be made in favour of those candidates who get into Woolwich by classics and literature. There is a large class who do not get in either by classics or by mathematics alone, they come in by the other subjects, namely history and geography, and English and natural science.

2110. Looking to Woolwich as a great educational establishment, irrespective of its being a great preparatory establishment for the army, does not justice to the young men themselves require that the education which they have obtained to a certain point should be considered?—Yes, my own view is not that every officer of the army should know all military subjects, but that every officer should know at any rate some subject which is a military subject, so that all kinds of knowledge should not be represented by every officer, but that every kind of knowledge should nevertheless be represented in the army. There should be perhaps some officer to represent every kind of knowledge which is at all connected with military affairs; for instance, surveying, practical mechanics, geology, chemistry, and physics, which have application to military affairs to a very large extent, as has been shown in the recent expedition to Abyssinia. The question is not what is desirable to be known, but what is possible to be taught, and the attempt to teach all these things to one man must of course end in disappointment and failure; but the attempt to teach some man or another who goes through Woolwich some one of these things, so as to get each of these sciences represented well in the army, is by no means an impossibility; on the contrary, I think that our course at Woolwich should be directed to that object.

2111. Do you think that it would be possible so far to raise the obligatory mathematics on entering the Royal Military Academy as to make it possible to drop the study of mathematics afterwards, except in their applications?—I do not think that you could raise the standard of mathematics on admission.

2112. I mean that nobody should get in except with such an amount of mathematics as would at once enable him to take up all the studies indispensable to his military education, so as to relieve him from

the necessity of devoting so much time as is now devoted to the study of mathematics afterwards, the practical application of mathematics being afterwards continued?—It is remarkable how little time they now devote to mathematics at Woolwich; there are but four mathematical masters for the 200 cadets; they get on an average, I think, not more than four studies a week, each study is about an hour and a half. As compared with the time which they devote to other things, for instance descriptive geometry and plan drawing and fortification and surveying, the time devoted to mathematics is extremely small, it is but a fraction of time. I should be sorry to recommend that that small time should be further diminished. Ever since I have been in the Council the tendency has been to diminish the time allowed to mathematics.

2113. (*Lt.-Col. Chesney.*) May not the result of this very small time allotted for teaching mathematics be, that a cadet will go on nominally learning mathematics during the whole time of his course at Woolwich, and yet not know more when he leaves than he knew when he entered?—It may be so. The reports of our examiners as to the teaching of mathematics in the academy are not unfavourable, but the only reference which I make is to the small time which is allotted to mathematics.

2114. (*Sir D. Cameron.*) Do you think that it would be advisable to encourage the cadets at Sandhurst and at Woolwich to keep up their knowledge of classics, by allowing them to take up classics for their final examination without teaching classics at the college?—I do not see why they should not do so. I think that if a gentleman chooses to keep up his knowledge of classics whilst he is at Woolwich it is immensely to his credit, and I do not at all see why he should not have the advantage of it. You cannot possibly add to the staff of teachers, or to the lessons which are now given, but if any gentleman chose to keep up his Latin or his Greek, and to produce it at his final examination, I think that he should be entitled to his marks for that subject at his final examination, provided they could be given him without injustice to other candidates.

nations
mission
olwich.

2115. (*Chairman.*) You were for some time an examiner for the entrance examination to Woolwich; what impression did you form of the character and bearing of the young men who come up for those examinations?—I had no means of forming an opinion upon them except from what I saw at the examinations. I thought that they improved much after the first. There was always a great mixture. At some of those examinations I have thought that there were young men inferior in social position to those who under other circumstances would have got into Woolwich. Of those who came up of this class, a very few might pass. I sometimes observed their names and looked to see whether they got in or not; generally they did not get in. The class whom socially we wanted generally turned out to be superior in attainments to the others. Some no doubt got in of the class we did not want, as must always be the case. If you inquired into the matter I think that you would find that the real social position of the cadets at Woolwich is higher under the competitive system than it was under the system of nomination. I have been told so, but I am not prepared to give it upon any authority. Will you permit me to mention one circumstance which shows how very little importance is to be attached to any impressions which one may obtain from the appearance of the candidates as to what they are? I have on more than one occasion gone round and picked out men whom I thought to be socially below par, and I have found them on enquiry to be members of the aristocracy and gentlemen in every sense of the word, and that I had simply made a great mistake.

Canon Moseley.
9 July 1868.
Examinations for admission to Woolwich.

2116. (*Lord E. Cecil.*) Is it your opinion that the candidates who come up for examination from public schools are really well grounded in classics, and that they thoroughly understand the elementary knowledge which is inculcated in the Greek and Latin grammars?—I must not speak on any authority of my own, but I have been told by our examiners, who are of very high authority, namely, Professor Rawlinson and Mr. Osborne Gordon, and particularly by Mr. Osborne Gordon, that they are quite sure that the standard of classics is going down.

2117. Then it would appear that the candidates are not even taught the special subject which public schools affect to teach, and which is taught at other institutions, namely, the grammatical knowledge of the classics?—Yes; that is my belief. That has resulted from our examinations. It has been told to me, and from papers which I have seen at the examinations that has appeared to me to be the case.

The witness withdrew.

Adjourned to Wednesday next at 12 o'clock.

Wednesday, 15th July 1868.

PRESENT:

THE RIGHT HONOURABLE EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LIEUT.-GEN. LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. DR. BUTLER.
REV. W. C. LAKE.
BRIG.-GEN. LEFROY.
COLONEL HAYTHORNE.
LIEUT.-COL. CHESNEY.

BREVET-LIEUT.-COLONEL WHITWORTH PORTER examined.

Lieut.-Col. Porter.
15 July 1868.
Royal Military College, Sandhurst. Entrance examination.

2118. (*Chairman.*) You are, I believe, a captain of Engineers, and a brevet Lieutenant-Colonel in the army?—Yes.

2119. And you are one of the instructors in fortification at Sandhurst?—Yes, I am one of the junior instructors.

2120. You are not the professor of fortification?—No.

2121. That office is filled by another officer?—Yes, it is filled by Colonel Adams.

2122. Will you give the Commission your views as to the entrance examination at Sandhurst?—Do you mean with regard to whether it is sufficient or not?

2123. Yes?—That would in a great measure depend upon what the object of admission to Sandhurst, or of sending cadets to Sandhurst should be. If you wish that Sandhurst should be a college for the whole of the British army, then I should say that the entrance examination at present is quite sufficient; but if you mean that the education at Sandhurst should be a sort

Lieut.-Col. Porter.

15 July 1868.

Royal Military College, Sandhurst.

of half-way house between that of an ordinary officer and a staff officer, then I should say that the entrance examination might be considerably increased.

2124. Upon the latter supposition you think that it might be raised?—Yes.

2125. To what extent?—It would entirely depend upon what proportion of this better educated set of officers you would wish to have.

2126. Assuming for a moment things to remain at Sandhurst as they now are, and that about the same proportion of officers pass through annually as pass through now, what would be your opinion in that case?—I think that in that case the entrance examination is sufficient.

2127. Therefore you would only propose that the entrance examination should be raised in the event of a considerable reduction in the present numbers?—Yes, but although I think that the present examination, as a whole, is sufficient, there may be certain points in which it might be more advantageously carried out. My idea is that instead of making the examination spread over so large an extent of the different subjects, it should be shorter and more searching in each. I will give an instance, namely, as regards the examination in mathematics. At present if a gentleman who is going to be examined is not a perfect fool, he can get the number of qualifying marks, because it spreads over a considerable extent; but if you made the examination much shorter and more searching in the earlier branches, I think that you would find that the cadets would know more than they do now. To speak of arithmetic—many of the cadets know little or nothing of arithmetic, although they have gone into the higher branches of mathematics. I think that if the examination was made shorter and more searching, you would get a better result.

2128. Does your experience as an instructor in fortification lead you to think that the arithmetical knowledge of the cadets is very slight?—In many cases it is very slight indeed.

2129. Has it been so slight as to have occasioned inconvenience in your course?—Yes, considerably so; of course I speak from my own experience in teaching fortification, and I find that the simplest knowledge of arithmetic is wanting in a great many cadets; and these same cadets are to a certain extent acquainted with mathematics in the higher branches; I mean algebra, and trigonometry, and some even higher.

2130. You have stated that you would make the examination shorter, do you mean by that that you would omit some of the subjects which are now required?—Yes, some of the higher subjects in mathematics; I would make it more elementary and more searching in the elementary branches.

2131. Would you omit any of the other subjects?—I think not, but I do not know that my opinion is worth much upon that point. With that exception, which is rather an important one, I do not think that the present system is bad, assuming that the college is to remain as it is now, and to answer the same purpose.

2132. Would you approve of the proposal to reduce the minimum of age for admission to Sandhurst to 15?—I think not; I do not think that that would be advantageous. If you were to do that I think that you would have entirely to alter the system of discipline, and education, and everything. You would have to make it more a school than it is now, and I do not think that you would gain any advantage by it.

2133. And I suppose that you would then still have the inconvenience, to a certain extent, of mixing persons of different ages?—Yes, and that difficulty would increase, because there is more difference between a boy of 15 and a young man of 19 than between a boy of 17 and a young man of 21. The system of treatment would have to be very different.

Course of study.

2134. Do you think that the time during which the present course lasts is sufficient?—Certainly not; I think that either the course ought to be reduced, or the time ought to be extended.

2135. When you say that the course ought to be reduced do you mean that the subjects of study should be reduced?—Yes.

2136. In the present course there are a certain number of voluntary subjects?—Yes.

2137. Would you retain those?—I think that a rejection of some of them might be most conveniently made, because those subjects take a great deal of time, and the time is now very limited.

2138. Although those subjects are called voluntary, does the study of them interfere with the study of the obligatory subjects?—It interferes in this way, that the time which is occupied by these voluntary subjects cannot be occupied by anything else, and the cadets who do not take up the voluntary subjects do nothing. You cannot arrange that if a cadet does not study a voluntary subject he shall do something else. I do not know that it is always the case, but it is certainly very often the case that there are some cadets who study when the great mass of the cadets do nothing at all, and I do not see how that can be altered.

2139. Do you think that by leaving out some of the subjects which are now studied you would seriously impair the value of the course of training?—My own opinion is that you certainly would not. I do not think that for the education of an ordinary officer many of those subjects are necessary; for instance, chemistry and geology. I think that chemistry and geology, though very good for a staff officer, are not necessary for the education of an ordinary officer.

2140. The object of the course is to provide a certain number of officers who have had more scientific and professional training than you can secure with the general run?—Yes. I look upon this as only an intermediate stage, and that there is a higher stage, namely, the Staff College.

2141. You do not think that those subjects are necessary in that respect?—I do not.

2142. The present system of instruction is by lecture, is it not?—It is not in all subjects by lecture; for instance, mathematics are not taught by lecture, nor is surveying taught by lecture, nor could it be; but military history, and to a certain extent fortification, and geology and chemistry, are taught by lecture.

2143. Do you examine the work of each individual cadet?—Yes. The instruction is by lecture, and there is a considerable amount of individual instruction before the succeeding lecture is delivered.

2144. Is your course an advancing course?—Yes.

2145. Does every cadet pass through it?—Yes.

2146. Do you think that that is a good system?—No; I think that it would be far better if at the end of the first term such cadets as the instructors should report as not having attained a sufficient knowledge of the subject should be put back again. I think that that is better than driving a cadet through a course of which he does not know the elementary principles.

2147. Could he pass through his final examination without knowing the whole course?—Of course his difficulties would increase, but the examination is so superficial, that I think he could do it.

2148. The course by the present system of instruction is superficial?—Perfectly superficial, and in such cases becomes almost nil, because I do not see how a cadet is to grasp the higher parts, having failed to grasp the beginning of it.

2149. And yet he is driven through the whole course?—Yes.

2150. Are there not six professors of fortification at Sandhurst?—Yes.

2151. Does the senior professor regulate in any way the general fortification studies?—No. I do not know how far the superintendent of studies may take his opinion privately, but there is in no way an interference with the studies of the different terms.

2152. You act perfectly independently?—Yes.

2153. At present I believe that no private study is required at the college?—I should say not; there are cases in which private study is used to a small extent, but it is almost nil.

2154. Do you think that it is desirable to encou-

rage it in any way?—I think not. I think that if you give six hours' study a day to a cadet it ought to be quite sufficient.

2155. We have been told that in consequence of the number of commissions without purchase for this purpose at the disposal of the Commander-in-Chief, not amounting to one-third for each examination, a large number of cadets know that they have no chance of getting such a commission and therefore are idle; does that accord with your experience?—Quite so. There are certainly half at each examination who know that they cannot gain a commission without purchase, and who know that they can gain sufficient marks for a commission with purchase, and therefore do not work.

2156. Do you propose any mode of remedying that state of things?—There are one or two ways in which it might to a certain extent be remedied. Either priority of gazetting or choice of regiments could be given. Of course you could not do both; but the cadets might have given to them the choice of regiments or priority; they might have some such advantage offered to them for taking a good place on the purchase list. We have the same principle at Woolwich to a certain extent, there are many cadets there who have no chance of getting commissions in the Engineers and who would have no incentive to work, except that every place which they take puts them one place higher in the Artillery. But there is nothing of that sort at Sandhurst.

2157. At Sandhurst there are a certain number of Queen's cadets and Indian cadets, do you think that their presence there is advantageous or disadvantageous to the studies of the college?—I think that to a certain extent it is disadvantageous, because the Queen's cadets have no inducement to work, and we find that, as a rule, they do not work more than sufficient to gain their marks, and of course they add to the mass of idleness. There have been some honourable exceptions to this remark.

2158. They are sure of obtaining their commission without purchase if they pass the qualifying examination?—Yes; and I think that they might as well go up for a direct examination without coming to Sandhurst at all.

2159. Do you think that there would be more inducement to work if the cadets were reduced to a smaller number, so that each cadet might have a fair hope of getting a non-purchase commission?—Yes; but in that case I think that you must reduce very considerably the college, or increase very considerably the number of commissions without purchase. In such a case I would suggest that there should be a severe competitive examination for entering the college as you have at Woolwich.

2160. So that you would make a non-purchase commission the reward of intelligence?—Yes, and a reward, which was pretty certain to be gained by those who entered the college. The difficulty should then, I think, be to enter, but even then of course the prize should not be gained by those who were idle after entering.

2161. You have said that there is a considerable amount of idleness among a very large portion of the cadets. No doubt there are some cases of thoroughly idle cadets,—are there any punishments allotted to idleness in the college?—That is a difficult question to answer; I consider that hitherto there has been no punishment whatever for idleness. At the close of the term before last I stated that fact to his Royal Highness the Duke of Cambridge, in answer to an appeal from him, namely, that I considered that idleness was not punished in any way; and last term, for the first time, by order of the duke, a return has been sent in monthly of the idleness or attention to study of each cadet in each subject. What the result of those returns may be, I do not yet know, or what is intended to be done with them; but hitherto, with the exception of one or two very gross cases, no punishment whatever has been given for idleness.

2162. What has been the alleged reason for that?—I do not think that any reason has been alleged. The spirit of the place has been that the whole thing is voluntary, and that the punishment for idleness consists in not getting a commission.

Lieut.-Col. Porter.

15 July 1868.

Royal Military College, Sandhurst.

2163. But is it not the fact that very few of the cadets fail to get a commission at one time or another?—Very few indeed, so few as hardly to be worth counting.

2164. So that the punishment is practically nil?—It is.

Discipline.

2165. Will you explain to the Commission the position of the professors with regard to discipline?—That has been changed to a certain extent lately, but whether in consequence of the interview which we had with his Royal Highness I do not know. That was another point which I brought before him, when I stated that the professors had no disciplinary powers whatever, and that any attempt on their part to exercise disciplinary powers had been entirely checked by the authorities; and I suppose, that it was in consequence of what then took place that an alteration has been made to the extent that professors now are called upon to take notice of any offence either in or out of study, with the power of placing the cadet in arrest. The professors have even now no power of giving a punishment. The disciplinary officers on the other hand have the power of punishment.

2166. That arrest is simply an arrest until the question is decided upon by the disciplinary officers, is it not?—Yes.

2167. The professor has that power now, I suppose, in his hall of study?—Yes.

2168. To what extent has he that power?—We are now called upon to take notice of any offence either in or out of study, and to place a cadet in arrest if we think proper.

2169. Does that power apply merely to the military professors, or does it extend to the civil professors as well?—It applies to the whole.

2170. I suppose that you have considered the general question of the powers with regard to discipline which are now in the hands of the professors. Do you think that under the arrangement which has been recently adopted those powers are sufficient?—By no means.

2171. To what extent would you increase them?—I can conceive no reason why the professors should not have the same power of punishment as the captains of companies have; they are in the same rank and in the same position, if not higher, and I think that disciplinary power ought to be placed in their hands, and that only serious offences ought to be passed on to the superintendent of studies.

2172. If such power of punishment as you have described were placed in the hands of the professors, would there be any necessity for the double staff which at present exists of professors and captains of companies?—I think that the double staff is not only an anomaly, but most pernicious to the benefit of the college. I think that both branches should be combined. I think that you have a large branch of military professors who are utterly wasted for military purposes, and you keep a second branch for disciplinary and military purposes. The two should be combined.

2173. Then would you attach the professors to particular companies for disciplinary purposes?—Yes; I would make the professors officers of the companies, not only for instructing, but for disciplinary purposes in charge of their own companies.

2174. In fact you would propose the abolition of the captains and lieutenants of companies?—It would practically become an abolition of them. Upon that point I may urge what I consider a most valuable consideration, namely, that the instructors have much greater opportunity of ascertaining the characters of the cadets during study than the disciplinary officers have. A cadet may be perfectly steady on parade, but he shows his character much more in study than out of it.

Lieut.-Col. Porter.

15 July 1868.

Royal Military College, Sandhurst.

2175. But even if the two branches were kept more distinct, you think that greater disciplinary powers should be given to the professors than they now have?—Most decidedly.

2176. Can you give the Commission any information as to the working of the system of billiard rooms and refreshment rooms which now exists at Sandhurst?—With regard to the billiard rooms, I think that the present system works badly, not so much owing to the presence of the billiard rooms as to the rules under which it is carried out. As it stands now only third-term cadets may play at billiards. That, I think, is a rule made by the cadets themselves; but I believe that it is recognized by the college, or that it is in no way stopped; consequently all the first and second-term cadets must go elsewhere if they wish to play. As regards the refreshment-rooms, I only think them objectionable, so far as they are converted into "free and easies" in the evening. The facility of procuring a good glass of beer at a reasonable rate in the afternoon is, to my mind, an advantage, but there should be no inducement to cadets to stop there drinking.

2177. We have been told that, whereas formerly the senior cadets went to public houses, and the junior cadets did not play at all, the senior cadets now play in the college and the junior cadets go to the public houses?—That, I believe, is true; but it would be obviated if the authorities insisted upon a proper roster being kept, and if there was no distinction as to the senior and the junior cadets playing in the college, and if the rule was thoroughly enforced, that they should not play elsewhere. If you said that every cadet who wished to play should have his fair turn in playing in the college, and if you visited seriously the offence of going to other billiard rooms, I think that the billiard rooms in the college would be a much greater advantage than they are at present.

2178. Will you give the Commission your opinion as to the appearance of the cadets out of study?—It is very slovenly indeed. They go about the town dressed in the most *negligé* way. I, as an old Woolwich cadet, was very much shocked when I first went to Sandhurst, to see the way in which the cadets were allowed to go about, without gloves and without belts, and in a totally unsoldier-like manner.

2179. There was a marked difference in that respect from your recollection of the state of things at Woolwich?—Yes.

2180. Have you any observations to make with reference to the present system of arrest on honour?—I think that it is a bad one. Until of late there was no such thing as arrest on honour as there is at present; it was entirely, I may say, a system of spying as to whether a cadet broke his arrest or not; and it was a recognized fact that a cadet, so long as he was not found out, was not bound to keep his arrest. The attempt was tried by the present commandant to make the cadet keep his arrest on honour, as is practised at Woolwich; but the system has not hitherto been carried out thoroughly, and what is carried out now I think is most pernicious. A cadet is offered his choice, and many of the cadets refuse to be placed on honour, which appears to me to be the height of insubordination; it is practically saying, "I will break my arrest if I can." It seems to me that if you introduce the system of arrest on honour it should be done completely, that no option should be given, and that the first cadet who was found breaking his arrest should be sent away for breaking his word of honour. I think that it should not be made optional at all. The present system, in my opinion, will never work.

2181. Did the system of arrest on honour which existed at Woolwich during your time work well?—Perfectly. During the whole time that I was a cadet at Woolwich there was no instance known of a cadet breaking his arrest, and if he had been discovered by his comrades doing so, he would have been half murdered; the feeling was so strong, I think, that the cadets would have taken the law into their own hands.

2182. We have been told that there exists at Sandhurst a period of entire idleness between the completion of the examinations and the end of the term; is that so?—Yes; they relax the studies, but the relaxation is so complete that it is a complete cessation of study.

2183. For how long a period does it last?—From a week to eight or nine days, certainly upwards of one week.

2184. Do you think that that is disadvantageous?—Most disadvantageous; but I do not quite see how it is to be got over. The reason of it is, that the examiners take that time in making up their marks. The cadets having done all that they have to do, it is a difficulty as to which I do not quite see how it is to be got over.

2185. Is it absolutely necessary that they should be kept at the college?—I think for many reasons that it would be desirable to have what is called the board day, at the beginning of the term instead of at the end; because I have heard cadets say that nothing stimulates them so much as the reading out of the success or failure of the others. It now takes place just before the vacation, and consequently there are all those weeks for the effect to evaporate before a cadet comes back, and, therefore, all the stimulus is gone. If you had the board day and the reading out of the commissions at the beginning of the term, instead of at the end, you would have a double advantage. You would save that week, and you would have a stimulus given to the cadets at the very time when the work was going to begin. I do not think that you need compel any one who had completed his education to return for the purpose of hearing his commission read out unless he wished; but I think the great majority would do so of their own will.

Cheltenham College.

2186. I believe that you can give us some information as to what is called the modern division, or class, at Cheltenham?—I have a son who has just passed through Cheltenham, and who is at this moment under examination for Woolwich.

2187. May I ask your reason for sending him to Cheltenham?—I knew nothing of Cheltenham until I went to Sandhurst, and I selected that college wholly from witnessing the results as regarded the cadets who came up to Sandhurst from Cheltenham, finding them so much better grounded, compared with those cadets who came up from crammers; and also, I may add, from seeing the success which the Cheltenham men had in the Woolwich competition.

2188. I believe that it is the practice to send candidates straight from Cheltenham to these examinations without the intervention of any cramming establishment?—Yes, my son is among the number.

2189. Can you explain to the Commission to what extent the division of the two departments at Cheltenham is carried?—There is the classical department, and there is the modern department. For the classical department, as the name denotes, classics are the principal subjects of study, but they do not exclude the other branches; they teach mathematics, and to a small extent science, in the classical branch, but quite subordinately. In the modern branch mathematics and science are the two most important subjects; the classics are taught as a subordinate subject, languages being taught in each branch.

2190. Classics are taught in the modern department?—Yes.

2191. Does the separation commence from the date of a boy going to the college?—It does, unless he goes as a very young boy into what they call the junior department, where there is no division.

2192. But if he goes into the older school the division commences at once?—Yes, and the parent selects the department into which he will put him.

2193. Is there any distinction between the two departments out of study?—None whatever, beyond what the pupils make themselves; they are perpetually having matches against each other in cricket and football.

2194. Are you satisfied, so far as you can judge,

with the results of the instruction at Cheltenham?—I consider it most admirable.

2195. Is it good in tone and character, as well as in learning?—Yes; I am sure that the cadets at Sandhurst who came from Cheltenham are as a body quite distinguished amongst their comrades; it strikes me so.

2196. Both in tone and in spirit as well as in instruction?—Yes.

2197. (*Lord E. Cecil.*) What do you think is absolutely necessary for the instruction of a regimental officer in the infantry and cavalry?—I should say that he ought to have in mathematics a perfect knowledge of arithmetic, such as every gentleman ought to have, and that he ought to have a good knowledge of field fortification, and perhaps a slight knowledge of permanent fortification. He also ought to be able to survey in a rough manner, he ought to be acquainted with military sketching, and, if possible, to speak at least one foreign language.

2198. You are aware that some of these subjects are not required at the direct commission examination; would you be in favour of preserving fortification as one of the subjects of examination for direct appointments to the army?—I almost think not, because I doubt whether you would get any practical knowledge properly taught. You might get a candidate sufficiently crammed to pass an examination, but it is one of those subjects which are not worth much unless they are carefully taught, and therefore in the case of direct commissions I doubt whether you ought to ask for it.

2199. Do you not think that the ordinary education of a gentleman is sufficient to make a good officer?—Not quite. Taking the subject of fortification, I think that cases may often occur in which a knowledge of field fortification may be most valuable to any regimental officer. He may be placed over and over again in positions where it is of most vital importance that he should know something of fortification, and the same thing holds good to a certain extent as to military sketching, though I do not think that that is quite of so much importance.

2200. Admitting that field fortification, under certain circumstances, would be of use to a regimental officer, do you not think that all that kind of professional education upon purely military subjects is rather intended to fit him for the staff?—No, I think that a certain amount of professional education may at any moment be required from any infantry officer; he may often be placed in positions where he will require a certain amount of professional information.

2201. Do you not think that Sandhurst is more especially intended as a preparatory school for staff officers?—I think that that is what it comes to at present; I do not know what it is intended for.

2202. Do you not think that that was the original intention of the senior and the junior departments at Sandhurst?—I hardly think so. I think that the original idea was to give a certain amount of professional knowledge to a considerable number of the officers of the army.

2203. Are you of opinion that in former days the numbers of the college were very much reduced, compared with what they are now, and that the larger number of officers who entered the senior department had been cadets?—I think that Sandhurst was not merely a stepping-stone to the senior department, and that the senior department represented a very small portion of the cadets who had passed through Sandhurst.

2204. When the college was instituted do you know whether the greater number of cadets who passed went directly to the staff?—I do not know.

2205. Are all the new systems of fortification taught at Sandhurst?—They are not taught in the obligatory course, but they are examined upon—what we may call the polygonal system, taking the citadel of Antwerp as a type of it.

2206. Do you not think that, taking into consideration the present range of artillery and musketry, the first system of Vauban has now become obsolete?—That is a point which is very much discussed. The advocates of the system say that there are fortresses which will have to be manned on this system, and that so long as you have those fortresses officers ought to know what they mean, and that if you send a man to Malta he ought to know what Vauban's system is in order to be able to find his way about; but I agree with you so far that I think that a man who learns Vauban's first system on a small scale upon paper, and who is then put into the middle of the town of Malta, and is told to find his way about, owing to his knowledge of the system, will find he does not know much. A fortress is learnt much better on the ground than upon paper.

2207. Then is the only object of teaching Vauban's first system to enable officers to find their way about fortresses?—I do not say that that is the only object, but that is the only defence which I can give for the system.

2208. Are you in favour of the professorial or of the tutorial system; would you be in favour of the professorial system as it exists at Sandhurst now, or would you have a combination of the two systems?—I think that the same system does not hold good for every subject; some subjects may be dealt with in one way, and some in another; for instance, I do not think that you can teach mathematics on the same system as you teach fortification. Fortification, I think, is eminently a subject which should be taught by lectures given by one person, and then by *viva voce* examination and drawings upon that subject conducted by subordinate instructors. That is the system which I think would work best, but that is only as regards one subject. I do not think that you could lay down a system which would be equally applicable to all subjects.

2209. You are aware that in public schools there is a system of pupil-room and school-room, and that the boys are prepared for their work in school in the pupil-room?—Yes.

2210. Would you be in favour of a system of that kind at Sandhurst?—In a school the principal subjects taught are not so diverse as they are at Sandhurst, and therefore you can carry out one system for all; with us I do not think that you can do it, and I think that by having halls of study, where 12 or 14 cadets can be brought together, you have the advantages of both systems. After having been in the lecture-hall they break up and get individual instruction; it seems to me to be very much the same system. The objection to our present system is this, that each instructor gives lectures in turn. I think that that is a mistake. I think that one person should give all the lectures, and that the other instructors should do the class work. My impression is that the proper system would be to make the professor the lecturer over the whole subject, and the other instructors subordinate to him, as instructors in their respective classes of the work upon which he has lectured. That is not the system which we carry out, but I think that it should be the system. I am now speaking of my own subject of fortification.

2211. Would it not be an immense advantage if the cadets were sufficiently instructed in plan drawing and mathematics, at the entrance examination, so that they might at once begin the higher portion of the study of fortification, if necessary?—It would be an immense advantage. As it is now many of the cadets join Sandhurst without ever having seen drawing instruments of any kind whatever; and, therefore, in so short a time, and in so long a course, a month is wasted before they are capable of drawing anything in the way of fortification. If it could be done, it would be a very great advantage to insist upon a qualifying examination in practical geometry, or in the use of mathematical instruments at any rate.

2212. When the lecture goes on, do you lecture in your hall of study?—No, in the lecture hall.

2213. Have you there the assistance of plans?—We have hitherto had to make our own plans, but there is now a modeller employed, who is making models, and I think that they will be very fairly sup-

Lieut.-Col. Porter.

15 July 1868.

Royal Military College, Sandhurst.

plied. There are models in the college, but they are not useable for lecture purposes.

2214. We have had it in evidence that billiard rooms teach cadets to gamble, is that your opinion?—No, I should say not. They will learn to play billiards when they get their commissions, and I do not see that billiards will teach them to gamble. Billiards is not a gambling game.

2215. Do not they play for money?—It is one of the rules of the billiard tables that they shall not play for money. The same thing may apply to all games. I should say that the custom of billiards was certainly not to gamble.

2216. Do you think that a better system of inspection would prevent anything of the sort going on?—I doubt if it does go on now. My only objection to the present system of billiards is that it is restricted to the third-term cadets, and that, therefore, you drive the others to either not playing at all, or playing in the town.

2217. (*Lord Northbrook.*) I gather from your examination that you are not satisfied with the qualifications of those cadets who do not get commissions without purchase?—Certainly not.

2218. And you would like to see those qualifications improved?—I think that those qualifications might be improved by not requiring from them so extended a course. The evil arises from making them go over decidedly too great an extent of ground.

2219. Do you think that there would be any advantage in making a cadet obtain a larger minimum number of marks in the college, previously to getting his commission by purchase?—That would depend to a certain extent upon whether you mean the college to remain upon its present footing.

2220. I put the question on that supposition?—Then I incline to think that I would not raise the minimum, but would rather do what I suggested before, namely, shorten the course, which could be done by not letting the cadets go on in their second term to the advanced stage, if they had not satisfactorily passed their first stage. The result would be that you would get men not knowing a smattering of so much, but knowing more thoroughly a little.

2221. Has there been a system of monthly examinations started lately?—Yes; and I consider it a very good system.

2222. Has it at all the effect of improving the work of the cadets?—I think so, very much.

2223. Will you explain what sort of examinations they are?—The course for each half year is divided into two parts, and there is what is called a minor examination held at the end of each part, irrespectively of the half yearly examination, and the marks gained in those minor examinations count for the commissions; it keeps a cadet to a certain extent always up to the collar.

2224. Is a cadet ever discharged for inattention to his studies?—There was, I think, a case the term before last; I only know of one case, but I speak under correction.

2225. Would you recommend that a cadet who is incorrigibly idle should be discharged?—Yes; but I would recommend a minor punishment first.

2226. As regards the appointment of under-officers, do you think that they are chosen from those who are likely to keep cadets steady in study?—I can hardly speak to that point as I have had nothing to do with it, but I should doubt it. I think that it is entirely done by the recommendation of the captains of companies, who have no knowledge of what a cadet is in study.

2227. And it is quite irrespective of the professors?—Certainly.

2228. You have made a suggestion to-day with respect to the management of the classes—I mean the suggestion as to not moving any one to a higher subject until he was qualified to go on with it. Have you made that suggestion to the higher authorities?—No.

2229. To whom should you address such a suggestion?—If I thought that there was any probability of its being carried out, I should go to the superintendent of studies, but I doubt whether the superintendent of studies would have any power.

2230. Why do you imply that there would be no probability of a recommendation of that kind being carried out?—Because I doubt whether the superintendent of studies himself could carry out any recommendation of the kind.

2231. Do you think that such a cumbrous machinery would have to be brought to bear, that there would be no chance of any effect being given to the recommendation?—Yes; for I know that the superintendent of studies has endeavoured in my own branch to carry out certain reforms, and that he has not succeeded in so doing.

2232. (*Lt.-Col. Chesney.*) Since the comments made upon the educational deficiencies of the college last Christmas, have the professors of the college ever been consulted with reference to any proposed general reform?—No.

2233. Is it the case now that a report made of a cadet by a professor may be in any way referred to the captain of the company?—Yes; the case has occurred to myself to some extent. I had reported a cadet for leaving the hall of study at a wrong hour, and the superintendent of studies before dealing with the case directed its investigation by the captain of his company.

2234. In such a case the captain of the company might possibly be junior, as a military man, to the professor?—He was so in that case.

2235. And that military professor was not, by being at the college, divested of his actual military rank?—No, I was a supernumerary in my corps, but I was not divested of my rank in any way.

2236. Referring to the teaching of Vauban's first system, are not a large number of existing fortresses in some way modified upon that system as a general outline?—Yes, I mentioned as an instance the fortress of Malta.

2237. (*Rev. Dr. Butler.*) I gather from your evidence that you consider idleness to be very prevalent at Sandhurst?—Yes, among a certain section of the cadets.

2238. Among a large portion of the cadets?—About half. Those who know that they have no chance in competing for a commission without purchase.

2239. I presume that you would not wish to shut the army altogether against idle young men?—No, but I should wish to make idleness a minimum.

2240. But you would draw a distinction between the desirableness of admitting men who are likely to be idle to the army generally, and of admitting them to such a professedly educational establishment as Sandhurst?—I think that idleness is one of those kind of things which ought not to be recognized, it is a kind of disease which you can deal with. I do not think that when a man comes to Sandhurst he should be recognized as an idle man. I think that you can break him of it to a certain extent with due power.

2241. As matters now stand, would it be possible to dismiss him for idleness?—A case occurred in the term before last in which a cadet was dismissed, I believe, for idleness, but it was a very gross case.

2242. If all the cadets had the almost certain prospect of gaining a commission without purchase, supposing that they reached a high standard, do you believe that idleness would be almost abolished?—No, not unless you weeded them out before they came in. If you had the same admission as now, very many cadets would soon discover that they could not reach the point, and then they would be idle as before; they would make an effort, and finding out that which they would very soon know, they would have no incentive. If you have a system of that sort you must have a keen competition for entering the college, so as to prevent the stupid ones from coming in.

2243. If the number of commissions without pur-

chase was largely increased, do you believe that it would be for the good both of the college, and of the army?—It would no doubt to a very great extent decrease the number of idle men, because it would increase the prizes.

2244. Do you think that the college has much value except as a training for those who really work? Do you attach any great importance to the general training of the place irrespectively of its effect upon those who work?—I think not at Sandhurst.

2245. You would wish the professors to have much larger disciplinary powers?—I should.

2246. Would you propose that those powers should be exercised equally by the military and by the civilian professors?—I think that if care were taken in the original selection of the civilian professors, they should be quite as competent to use disciplinary power as military men; because I look upon Sandhurst as a college and not as a regiment, and as you have in public schools disciplinary powers given to civilians, I cannot see why they could not be given at Sandhurst; but I do admit that as the civilian element exists at Sandhurst it might be dangerous.

2247. Why?—Because I think that due care has not been taken in the appointment of civilians. I am trenching upon delicate ground; I mention no names, but it is a notorious fact that there are some civilians now holding appointments at Sandhurst who are not qualified to exercise disciplinary powers. You have a foreign element there. Now I think that the disciplinary power might be restricted to the Englishmen without giving offence to the foreigners. The foreigners might be confined to teaching without exercising disciplinary power, that would very much reduce the difficulty.

2248. You see no reason in the nature of the case why, in a college which is professedly military, professors, if otherwise qualified, should not exercise disciplinary powers?—None.

2249. Are the salaries which are given to the civilian professors on the same scale as those which are given to the military professors?—No, they are far lower

2250. Is that almost universally the case?—Quite universally.

2251. In estimating the salaries of the military professors, do you include their pay as officers in the army?—I include everything. According to the new scale everything has been combined, and they are now to receive a lump sum in lieu of everything, and that lump sum is considerably in excess of the sum paid to the civilians.

2252. Can you state in round numbers what is approximately the difference between the pay given to military professors and the pay given to their civilian colleagues?—The pay to military professors varies in different branches. I do not know any one branch which receives more than my own branch. We in fortification stand first, and then comes the surveying branch; the civil branch stands lower.

2253. Is the amount of work which is imposed upon the civilian professors equal to that which is imposed upon the military professors?—In most cases it is quite equal.

2254. Are any pensions or retiring allowances granted to either kind of professors?—Yes, there are superannuation allowances to the civil professors, but not to the military professors, because they are only temporarily absent from their regiments, and therefore they go back. By the new rule they are only to be there six years.

2255. To whom would a cadet apply in the case of getting into any scrape? Supposing that he got into any scrape on which he wanted to consult a person in authority, is there anyone to whom he could go?—It depends upon what the scrape might happen to be. I should suppose that if it was a scrape which would not bring him into collision with the authorities he might perhaps go to the captain of his company. If it was a scrape which would bring him into collision with the authorities, I do not think that he would go to anybody.

2256. Is there an officer whose recognized duty it would be to study in any way the moral character of the cadets, and to communicate with their parents, if necessary, upon it?—I imagine that the chaplain would be the nearest approach to such an officer.

2257. Would you regard that as one of his recognized functions?—I should think so, but I am hardly prepared to say. I do not know whether it would be recognized; there is certainly no one else. It may so happen that a cadet has a private friendship with one of the professors, and he might state to him what the fact was, but there is no recognized person of that sort.

2258. About how many hours in a week does a professor see his class?—You must bear in mind that he does not see the same cadets every time.

2259. How many hours in a week does he see the same class?—I should say that six hours was the average.

2260. Do you think that that gives him sufficient opportunities of fairly appreciating the characters of the men?—I think that after one term, and seeing the men for six hours a week, you get a very good notion of their character.

2261. So that the professor would have better opportunities of exercising disciplinary powers than one who had no instructional connexion with the cadets?—Whether he would have better opportunities or not may be a matter of dispute, but certainly if you combined the two functions in the same man, and if the same man saw a cadet in study and out of study, he must understand more about him than if you divided it into two separate heads, and had one man seeing him in study, and another man seeing him out of study; that is my view. Of the two I should say that the instructor had a better chance than the other.

2262. What is the number of billiard tables authorized at Sandhurst?—At present there are four, but I believe that two more are to be added; the object being to have two for each company.

2263. Are games at cards authorized?—No, they are prohibited, and they are punished when discovered.

2264. (*Sir C. Russell.*) Is any attempt made at Sandhurst to teach the boys to swim?—I think not. There are gymnasium serjeants, who are beautiful swimmers, and there is also a bathing lake and the cadets do bathe if they are so disposed. Being fond of bathing, I have been there myself when the cadets have been paraded down there for bathing, and I have seen that half of them have not bathed. My doctor having forbidden my bathing for two years, I cannot speak to later than two years ago. It was two years ago that this very thing struck me so strongly. I asked the question, and I was told that the cadets were only paraded there, and that it was voluntary whether they should bathe or not.

2265. Are the boys instructed in practical pontooning, and in making bridges with boats?—Yes.

2266. (*Sir D. Cameron.*) You stated that the cadets out of study at Woolwich were smart and soldier-like, whereas the cadets at Sandhurst were very slovenly?—Yes.

2267. Do you entirely attribute this to a want of discipline at Sandhurst, or are there any other circumstances which would account for it?—My experience of Woolwich is of 22 years ago, when no cadet was allowed to leave the establishment without being in his coatee, as we used to wear in those days, and his belt, and his gloves. I think that the cadets at Sandhurst now are not allowed to wear their belts—I am speaking under correction—but they certainly do not wear them.

2268. Where there are thick plantations and woods would you oblige that to be done?—No; I call that the inclosure, but I speak of the town.

2269. What town is there in the neighbourhood of Sandhurst; there is nothing but small villages, is there?—I think that the idea of a cadet being allowed to go out of the college grounds not properly dressed

Lieut.-Col. Porter.

15 July 1868.

Royal Military College, Sandhurst.

is bad, irrespective of the size of the town in which he appears.

2270. If all the cadets were allowed to use the billiard tables, instead of the third-term cadets, would it not be necessary to increase the number of tables?—I do not think so; it depends how much billiards you think is good for a cadet. If you have two tables for a company, and if no two men played for more than an hour, I think that every cadet who wanted to play would get his hour once a week, or even twice a week; every cadet would not want to play.

2271. Would not the chance be that a cadet would think that too little, and that he would go into the town when he found the college tables occupied?—The question is whether you think it too little; he may think it too little.

2272. But would not that drive him to go into the town?—A moderate amount of billiards all round appears to me to be better than giving it all to one-third of the cadets.

2273. I believe that in most of the military colleges and schools in France they have what they call a *conseil d'instruction*, consisting of the governor and some of the superior officers of the college, and all the professors, which meets periodically to discuss matters relating to instruction; would you approve of anything of that sort?—I should think that such a system would very probably do good.

2274. (*Lord de Ros.*) Was not there a sudden change at Sandhurst from a very strict system, to one of very great liberty; and might not it have been made too suddenly?—I think that the relaxation from a very strict system was made very rapidly, and perhaps hardly sufficient severity was afterwards exercised as regards breaches of discipline.

2275. Do you think that, viewing the liberty as it now stands, and supposing the present relaxed system to be very rigidly enforced as to breaches, it would now be too lax?—No; I think that if breaches of discipline are severely met, the present relaxed system is not too much so.

2276. Do you see any reason why civil professors should not be obeyed by the cadets as well as military professors?—Not if they were furnished with sufficient power, and were carefully selected.

2277. Who selects the professors; have the Council of Military Education any voice in their selection?—I believe that it is entirely in the hands of the Council subject to the approval of the Horse Guards, and of the War Office, but the nomination is in the hands of the Council.

2278. Do you see any reason why the whole of the mathematical instruction should not be carried out by military men?—No; I think that that could be done very well.

2279. Do you not think it better that an officer, on joining his regiment, should try to qualify himself for command by knowledge of his men rather than rely too much on his past character from college?—I think that the two might be combined. One is not very valuable alone; but I think that if a man were qualified to command, and also carried with him a good qualification from his college, it would add to his value.

2280. In your own service have you not seen many men begin as idlers, who, when called into active service, and placed in responsible posts, have shown admirable diligence and energy?—Certainly.

2281. Is it not at present thought rather an invidious thing on the part of a professor to report a cadet? and do the cadets regard it as an obligatory duty laid upon the professors, and therefore submit to it with the same deference as if it were from one of the military authorities?—The system has been for so short a time in operation that, probably, the cadets have hardly yet realized that the professors are invested with that power, but time, I imagine, will obviate any difficulty of that kind.

2282. What sort of men can be got to act as subalterns of companies? Would any good regimental officer go to such a duty without some extraordinary incentive?—I should say that the incentive usually to a subaltern to go to Sandhurst is being married and being able to be in a settled place, but at the same time I may say that I think that the subalterns of the college are very well qualified for the post: by that I mean that they take an interest in the outdoor amusements, of course including looking after the discipline as far as they have power.

2283. As billiards are entirely an indoor amusement, and not conducive to health by fresh air and exercise, would you not rather give more encouragement and facility to the outdoor sports, and might not boating be made more attractive by there being more small boats?—Certainly. As it is now the boating is not very attractive; the cadets have nothing but very large tubs to use.

2284. From your military experience do you think that you will find the most efficient and exemplary subaltern among the habitual billiard players of a regiment?—I do not know that my experience is sufficient to answer that question. I do not know that a man is any worse or better for being a good billiard player.

2285. Are the military studies at Cheltenham bound up with the other studies, or is there, as it were, a separate line for those young men who are intended for the army?—There is a modern department, but that is not exclusively for the army; but the army and the Indian civil service are bound up together.

2286. Will not a fair knowledge of field fortification give a certain insight into the principles of permanent fortification; for instance, will it not enable an officer to judge whether works of a certain form are strong or weak?—I should doubt it; I think not. I do not think that you can give an officer an insight, so as to form an opinion upon permanent works, without instruction upon them, because field fortification is so very different. I doubt whether he would form much opinion from a mere knowledge of field fortification.

2287. Would you approve of the proposal of a half-yearly military inspection at Sandhurst by an independent general officer who should look wholly into discipline, and report on the college in the same way as if it were a regiment, recommending, as any inspector-general would do, such improvements as he thought fit, especially as to any complaints which might arise?—I think that that would not be advisable, because I myself think that the error hitherto has been in looking upon the college too much as a regiment. I do not think that the discipline which is suitable for a regiment is suitable for a college, combining as it does education with discipline. I think that that is an error which is now committed, namely in looking upon the college too much as a regiment; and the more you went in that groove the further I think you would be getting away from the right path. You cannot deal with youths as you do with men, and after all most of the cadets at Sandhurst are youths.

2288. As regards reducing the subjects for entrance, is there no fear that by limiting the subjects you may produce too narrow a line. For instance, supposing that a boy was brought up in France, and became very able in French, would he not be a valuable officer to the service eventually, whether regimental or staff?—I do not want to reduce the subjects, but I want to reduce the extent to which each subject is examined in, and to make the examination more searching whilst going over a more limited space of ground.

2289. (*Rev. W. C. Lake.*) You have spoken of Sandhurst as being a college; did you ever hear of a college which made billiards a part of its training?—I do not think Sandhurst makes billiards a part of its training.

2290. But are there not special rooms for billiards?—Yes, for recreation, but not for training; there is no professor of billiards.

2291. Are you aware that at the universities where the young men are two or three years older, billiards are strictly forbidden?—I was not aware of that. I

wish that we had a proctor to visit the billiard rooms in the town at Sandhurst. I doubt whether any one visits the billiard rooms in the town.

2292. Will you explain generally, on what grounds, whilst other public schools encourage almost exclusively athletic and out-door games, Sandhurst alone encourages billiards?—I do not think that Sandhurst encourages billiards, it takes the evil and tries to deal with it as well as it can; it sees that cadets go into billiard rooms, and it provides billiard rooms in the college, in order to endeavour to stop their going into billlard rooms in the public houses.

2293. Is it impossible to stop what you describe as an evil with youths of from 17 to 18?—I think that if you made a roster and provided that the cadets should play billiards in their turn, and that if you coupled it with an inspection of the billiard rooms in the town, you would soon stop their frequenting billiard rooms in the town.

2294. Why are billiard rooms looked upon as a necessity for youths of 17 and 18 at Sandhurst, whilst they are not so regarded at any other public school?—I do not consider that they are looked upon as a necessity, but they have been provided in order to obviate the difficulty of cadets frequenting the billiard rooms in public houses.

2295. Did you say that too many subjects in mathematics were required for entrance at Sandhurst?—I think that the entrance examination travels over a greater extent than it should do. The evil is that a cadet can qualify in coming in while he is really lamentably ignorant of the most valuable part.

2296. Going high is one thing, and being examined in a great variety of subjects is another. Which do you mean of those two?—Being examined in a great variety of subjects, whereby by a smattering in each a cadet accumulates marks, although he is lamentably deficient in the lower branches.

2297. You have said that each student has to go through the whole course; are not there a senior division and a junior division in each class?—No, am now speaking of my own subject of fortification. Every candidate is supposed to go through the entire course; some candidates do it well, some get through it moderately, and some do not do anything.

2298. Do you know whether that is the case with other branches of teaching?—I think that it is not so in mathematics, but it is in the other military subjects.

2299. You have observed that men coming from Cheltenham have been far better grounded than men coming from private tutors?—Yes; upon the whole that is my experience.

2300. Therefore you would be of opinion that in a large school where these subjects are fairly taught, there is no necessity whatever for young men going to a private tutor?—Not the slightest. I think that the success which the Cheltenham College has had, both at Woolwich and at Sandhurst, proves it.

2301. In speaking of fortification, you have stated that one professor lectures, and that then the cadets receive instruction on that lecture from other professors?—Yes; I wish to qualify that statement. That is only the case with the juniors; it was endeavoured to be carried out with the others, but on account of difficulties it has only been carried out with the first-term cadets.

2302. This is not the universal method of teaching at Sandhurst in all subjects?—No, nor in fortification, except in the first term.

2303. This is very like what is called in France the system of *répétiteurs*?—It is a mild attempt at it.

2304. Do you think that it would be possible that something of that sort should be introduced at Sandhurst?—Yes; my opinion is that it is a very good system, and that it is not carried far enough as we have it at present.

2305. Is it not the converse of what used to be the system adopted at the public schools of first going to a private tutor, and then going to the public work?—Yes.

2306. And that is the system which you would recommend?—I think so. The lecturer gives a general knowledge of the subject, and he maps out the ground, and the explanation of the ground over which he has gone I think comes more satisfactorily afterwards by private instruction.

2307. Do you see any difficulty from the fact that the persons who would go over the lecture would be in rather an inferior position to the professor?—I think that they should be in such a position. I think that the professor in each subject should have command over the whole subject, and you would then gain uniformity of instruction, which you do not have now. That was the aim which induced us to introduce this system.

2308. Do you mean that in each subject you would have one or more professors at the head, each professor having several assistants?—Yes; but I think that the professor ought to have a general control over the whole subject.

2309. Do you think that the adoption of this system would have any particular advantages in remedying what has been a good deal complained of, namely, the general idleness now prevailing at Sandhurst?—I do not think that it would have any effect upon that. The advantage which I imagine you would get from it is that it would produce uniformity of instruction. The cadets have all to be examined by one man, and to be brought to the same test, but they are now instructed by different men, and it is not fair to the cadet himself. Two cadets come up to the same examination having had a totally different system of instruction.

2310. What I meant was that if a large class was broken up into smaller classes, say of from 10 to 12 cadets, it would be more difficult for any cadet who was known to be idle to continue so?—They are now always broken up into classes varying from 12 to 16. It is not the fact that the cadets are not known to be idle; they are perfectly well known to be idle, but the question is as to the want of power to deal with them when they are known to be idle.

2311. (*Lord E. Cecil.*) Do you not think that the misfortune at Sandhurst has been that the treatment and discipline of the cadets has been based hitherto on no uniform system, and that it resembles in some points a university, a public school, and a barrack, without possessing the disciplinary advantages of any of these different systems?—My opinion is that the system at Sandhurst has been an attempt to embrace the barrack system, and not sufficiently the other two. It has been attempted to treat what I may class as youths entirely on the barrack system, and I think that it is that which has failed so far as failure has existed. I would rather see more of a mixture.

2312. Then you think that Sandhurst has been conducted too much on the barrack system?—Yes.

2313. And too much on a strictly military system?—Yes.

2314. Would you prefer that the discipline should be approximated to that which now exists at the university, or to that which now exists at public schools?—I think that you might combine the two. The cadets are of an age half way between young men at Oxford, and boys at a public school; and I think that a combination of the two systems would, perhaps, be best.

2315. You do not think that the civilian element of discipline in the college is sufficiently represented?—I do not think that it is represented at all. I imagine that you mean professorial discipline.

2316. Upon what particular principle, in your opinion, is the college system now based?—It is treated precisely like a regiment upon the battalion system, and, as far as possible, every portion of the discipline is assimilated to that of a regiment.

2317. How long has that been the case?—I think that it has been principally introduced by the present commandant.

2318. And you would be very glad indeed to see that system abolished or modified?—Modified; I

Lieut.-Col. Porter.

15 July 1868.

Royal Military College, Sandhurst.

will not say abolished. It is a military school, and therefore, I think, that a portion of that system might be retained; but I think that it is carried too far.

2319. (*Rev. W. C. Lake.*) Is there not the difficulty, which you have just alluded to, in managing a school which, being partly military, inclines its pupils to think of themselves rather too early as young men and officers?—Yes; I think that that is the evil of the system.

2320. Do you see how that might be got over?—I think that a great deal of it comes from the very distinction between the discipline officers and the instruction branch, the instruction branch is in every way kept subordinate, so as to make the military discipline the pre-eminent thing, and I think that that is an evil. I may say that the battalion system of the college is paramount.

2321. (*Lord de Ros.*) You say that it is the battalion system, but is it not the battalion system without that wholesome connexion between the captain and his company, which in a regiment induces the soldiers to regard their captain as their friend?—Yes, to a certain extent; but I think that the difficulty of carrying out the battalion system is more this, that you have a series of young men coming from different parts of England, from different schools, without any traditions in the place, and without any previous connexion, and they are only there for a short time, they have not that *esprit de corps* which a regiment or battalion would have, and yet they are treated upon a system based upon the regimental sytem. Moreover their under-officers and corporals are not so trustworthy in maintaining discipline when not under the eye of the officers as in a good regiment.

2322. (*Sir D. Cameron.*) Do not the officers commanding companies at Sandhurst mix more with their companies than the captains of the army do with the men of their companies?—Certainly.

2323. (*Chairman.*) Have you any further suggestions to make, or are there any other points to which you wish to direct our attention?—There are one or two smaller points upon which I think that I might throw out suggestions. In the first place, commissions being given entirely by the marks which the cadets gain at the college, you will find that those marks are gained entirely by study. Now there are certain cadets who are selected to act as corporals and under-officers. Of course such duties are presumed to be placed upon these cadets not merely from seniority, but from superior aptitude for command. They involve a good deal of labour, and take time which other cadets can devote to extra study, and yet no favourable result is given to a man because he has been a corporal and an under-officer. I would suggest that you should give certain marks to a cadet from the mere fact of his having satisfactorily carried out the duties of a corporal and under-officer. I think that the mere fact of a cadet being selected as a corporal or an under-officer ought to carry a certain weight, and I think that such a cadet should have a certain number of marks. I want to carry it still further. One of the most important studies which a cadet can pursue is riding, but he gets nothing for riding. Now certainly riding is more important for an officer than chemistry; one of these things carries a large number of marks, and the other carries nothing, although one man is a first-rate rider and the other can hardly sit his horse. I would observe that I do not think that sufficient weight is laid in the competition upon these points although they are really important. I do not say that because a man has been made a corporal or under-officer he should therefore necessarily carry the marks, he should only do so when he has shown that he is well qualified for the position. If he had performed his duty satisfactorily and carried marks for doing it, you would get your discipline better carried out.

2324. Is your proposal that marks should be carried only by corporals and under-officers who have satisfactorily performed their duties in that position, or that they should be given for good conduct generally?—I draw a distinction. I think that good conduct is not at all the same thing. I am more alluding now to the power of command, which is a valuable thing in an officer.

2325. Are you aware that consideration is given to that point to this extent, that under-officers, so far as we have been informed, receive their commissions first, whatever may be their position in the final examination?—I believe so, but that is hardly sufficient to meet the case which I suggest.

2326. You would have a fixed number of extra marks given to corporals and under-officers who had satisfactorily performed the duties of their position?—I would, subject to a veto on the part of the governor with respect to those who, in his opinion, had not reached the proper standard.

2327. But your number of marks would be fixed and not be liable to fluctuation?—Yes; but I would give a higher number of marks to an under-officer than to a cadet who had only reached the rank of corporal.

2328. (*Lord E. Cecil.*) Are you not of opinion that that would bear rather hardly upon the well conducted cadets in the institution? Do you not think that it would be fairer that something of the same system should be carried out as is in existence at West Point in America, where one-seventh of the obligatory marks for a commission are given for good conduct and discipline?—I think that the two questions are distinct. You may if you like give a cadet a certain number of marks for good conduct, but that is not the point upon which I am now dwelling; I am rather using it for powers of command. If a cadet is selected from amongst his comrades as being best qualified to command, I think that that should carry weight.

2329. But may it not turn out that many well-conducted cadets are not promoted because there are not sufficient promotions to give to them?—I think that if such a case did occur, it would be a trifling grievance; you cannot have anything quite perfect, and I think that as a rule the number of men who are qualified to fill the post of corporal and under-officer, are fewer than the posts.

2330. Would you give no advantage to a cadet for good conduct? Would it not be an inducement to the cadets to behave well if they knew that their conduct would be marked by a position being given to them?—I think that it comes to this, that a well-conducted cadet would either be an under-officer, or corporal, or that he would have shown that he was not qualified for the post, in which case I would not give him any marks.

2331. Must there not be many cadets among the 300 who are qualified to hold the post of under-officer or corporal, but who do not get it?—I think that there are very few; it rarely occurs that a man fitted for the post does not get it, it far oftener occurs that a man unfitted for the post does get it.

2332. Then as I understand you, you would only be in favour of rewarding aptitude for military command, and you would not reward good conduct?—No, because good conduct would probably lead to a cadet's promotion, unless inaptitude for command was shown, in which case, I think, that one would balance the other.

2333. (*Chairman.*) Is not a well-conducted cadet of fair average abilities likely to obtain a good position in the examination?—Yes.

2334. Is not good conduct a thing which it is very difficult to test in the shape of marks without introducing an element which might be open to great dispute, namely, the element of partiality?—I think that good conduct can only be tested by the practical result of the defaulter sheet.

2335. That is equivalent to saying that good conduct is simply the absence of bad conduct?—Not exactly; good conduct in that case would be the absence of being found out.

2336. (*Lord E. Cecil.*) Is any report required from the professor as to the conduct of the under-

officers in study?—Do you mean as to their own conduct, or do you mean as to their use of their powers?

2337. Both?—No; their conduct, the same as the conduct of others, has been returned for the first time this last term, but not their conduct as under-officers, only their conduct as cadets.

2338. Do you not think it desirable that some such report should be made by each professor?—I think that it would be a very good thing.

2339. (*Sir C. Russell.*) Do you see any objection to a certain number of marks being given for riding, swimming, and fencing?—I consider that it would be a very good thing. I have already suggested riding, and gymnastics have also been suggested.

ollege. 2340. Are you acquainted with the working of the Staff College?—Yes, to a certain extent, from residence at Sandhurst; I am not connected with it.

2341. Are as many officers educated there as the college can accommodate, and the professors are capable of instructing?—Certainly not.

2342. Do you consider that the nation is benefited in proportion to the expense incurred?—No.

2343. Do you think that many more officers would compete for the Staff College if it were not for the expense of preparing for it, and the difficulty of obtaining leave for such preparation, and of obtaining competent instructors where they happen to be quartered?—I think that what checks the competition for the Staff College, is the limited number which is admitted, and that is owing to the fact that the result of passing through the Staff College constitutes a claim to a staff appointment, which necessarily limits the number who may go in. Every man who has passed through the Staff College has a claim for a staff appointment sooner or later, and therefore the numbers admitted to the Staff College are very limited; it is not that they cannot fill it, but they do not wish to do so.

2344. Then is it your opinion that there would be plenty of competitors if a larger number were admitted to the Staff College?—If they saw an adequate reward I consider that there would be.

2345. What would you consider an adequate reward?—I would suggest that the college might be thrown open to its full extent and capabilities, and that every officer who passed satisfactorily the final examination at the Staff College should become entitled to a slight pecuniary reward, such as a brevet officer has, of an increase of pay of 2*s.* per diem to be received by him until he had received a staff appointment, at the same time withdrawing the guarantee that he ever would receive a staff appointment; the result of which would be that you would get a far larger number of men trained and qualified to act as staff officers when you wanted them, who would be quite satisfied to go through this training for the brevet pay which would follow upon such an officer having the letters "P. S. C." after his name; and then when a war broke out you would have sufficient officers. To prevent that going too far the present restriction might be retained, that only one officer from a battalion should be at the college at a time. The expense would be very trifling, and in each case it would cease the moment that you had given a man a staff appointment.

2346. Do you think that the system, as it is at present carried out, ensures a competent staff at the outbreak of a great war?—Not a sufficiently numerous one. You have all the machinery for creating a large well-trained branch, but it, as a necessary consequence, resolves itself into limiting the numbers who are allowed to go through the competition, inasmuch as it is understood that every person who passes through it shall have a staff appointment.

2347. If some inducement, other than that of a staff appointment, were held out to the army generally, do you think that many more officers would qualify themselves for the staff?—I think that they would.

2348. Do you think that if an officer educated at the Staff College, and capable of teaching musketry, as well as of giving military instruction, was attached as a military instructor to each regiment, such an officer would be equal to instructing the junior officers, and of aiding others in the study of military subjects?—I think that it might be very valuable, but it would depend a good deal upon the regiment. In some cases it might be made use of, and in others not at all. I am almost inclined to think that it would be better to appoint such an officer to a garrison instead of to a regiment.

Lieut.-Col. Porter.

15 July 185

Staff College

2349. Would not such an officer be able to instruct the non-commissioned officers and men in the rudiments of field works and of fortification?—I should say that he would certainly be able to do so.

2350. You served as an officer of engineers during the siege of Sebastopol?—I did.

2351. Are you aware that parties were sent out upon dark nights to construct trenches, commanded by officers and non-commissioned officers who had not any idea of what was expected of them?—Yes, but they were under the charge of engineers or sappers.

2352. Would officers and non-commissioned officers, who knew the rudiments of field works and of fortification, have been useful aids to you in the duties of the siege?—Most invaluable.

2353. In the case of officers who had instructed themselves, or had been instructed in military subjects, were they not found very useful, and were they not occupied permanently upon the staff of the engineers?—They were, whenever they could be found, to a very great extent; they were employed as assistant engineers.

2354. Have the Engineers been called upon to impart instruction in making gabions and fascines in the presence of the enemy, and at a time when their own superintendence was required for other purposes?—They have. As a rule the officers and men of the infantry in the Crimea knew nothing whatever of the subject when the siege commenced.

2355. Would the average of officers who pass at the Staff College be capable of giving instruction to their regiments upon the subjects to which I have alluded?—Certainly.

2356. Do you think that the officers who pass at the Staff College are sufficiently good horsemen to perform the most active duties of the staff in the field?—In some cases which I know they certainly were not so, but taking the average, they were taught riding, and they were fair riders. Individual instances have occurred within my knowledge in which officers, otherwise very distinguished in their scientific attainments, were utterly unfitted to perform any difficult mounted duty. I know of one very distinguished officer who certainly would be perfectly unqualified to perform any mounted duty whatever.

2357. Is there anything further relating to the Staff College upon which you would wish to offer any suggestions?—With reference to a question which has been put to me, namely, as to whether I think that riding ought to have greater weight than it has in the way of carrying marks, I would observe that the whole thing is a question of marks with regard to the Staff College, and that there is a stringent examination in all the other subjects which carry marks. I think, therefore, that riding should carry marks. At the same time there are many staff appointments which do not require riding. A man who had not passed a good examination in riding might be disqualified from holding any mounted staff appointment.

2358. (*Col. Haythorne.*) Is the certificate of the commanding officer with regard to the qualities of officers a sufficient guarantee that proper men go to the Staff College?—I do not know any case of a man who might not be considered a proper man having gone from the Staff College. What do you mean by a proper man?

2359. A man of energy, activity, and ability, and fitted in all respects to hold a staff appointment?—The examination on entering to get into the Staff

Lieut.-Col. Porter.

15 July 1868.

Staff College.

College is a very sharp examination, and is quite a sufficient test for the ability of the officer.

2360. It is understood that a great many officers get in there who are not physically well fitted for staff appointments; is that your opinion?—I do not think so beyond this one point. I have often heard it said that men go there in order to avoid going to foreign stations, because they are married. The question is whether, whatever the object with which they entered, they get a sufficient training there to make them valuable officers, and I think that they do, with some few exceptions.

2361. (*Lord de Ros.*) Was there ever any want of officers taken from the regiments to act as assistant engineers, or deputy quartermasters-general; did the source ever fail?—No; but the supply might be of an inferior quality. There was a certain reward in those posts, and therefore there were always volunteers for them.

2362. In the Crimea were they generally fit or unfit?—I should say that they were scarcely fitted for the post.

2363. In your opinion is it desirable for the general service of the army that the staff should be considered as a scramble, leading your best regimental officers to run after this object without regard to their useful regimental duties?—My answer to that question would be, that the number of staff appointments to be given are so few compared with the number of officers in the army, that you cannot very well do damage to your regimental system by the small number of officers who would hold staff appointments.

2364. (*Chairman.*) You have said that if your plan was adopted of giving to each officer on leaving the Staff College a certain rate of extra pay, until he obtained a staff appointment, you would withdraw the promise of a staff appointment from the officers who went to the college?—Yes.

2365. Am I to understand you by that to mean that you would withdraw the sort of *quasi* guarantee which now exists that every officer who passes through the Staff College shall receive a staff appointment, or do you mean that you would advocate the giving of staff appointments to officers who had never been through the Staff College?—I should still retain the rule that no officer should hold a staff appointment who had not been through the college, but I wish to have a larger body of officers who have been through the college, and yet who do not necessarily receive a staff appointment.

2366. Therefore you would retain the promise so far as it refers to the officers who have passed through the Staff College as a body, but you would alter it so far as refers to each particular individual?—Yes; so that the Commander-in-Chief would have the power of selection among a larger body, all of whom would be supposed to be qualified from having passed through the college.

2367. (*Brig.-Gen. Lefroy.*) Would not the application of such an inducement as that to officers who presented themselves at the Staff College, operate by attracting men who on many grounds might not be a desirable class of staff officers, inasmuch as you would make the attainment of a pecuniary advantage contingent only upon passing an educational test?—If that were the case it would be met by the power of selection, which would be in the hands of the Commander-in-Chief, because, as a larger body of men would be qualified to take staff appointments than there were staff appointments for, his power of selection would meet any difficulty of that sort.

2368. That would be so as regards the selection and appointment, but not as regards the expense to the country of those other officers whom the Commander-in-Chief would not select, but would reject?—I would merely give them 2*s.* a day, as is the case now with a brevet officer. You never hear of a case of a man who gets a brevet-majority merely because he has looked to its pecuniary reward, although it is a certain inducement.

2369. (*Lord de Ros.*) May there not be many self-educated and service-trained officers as fit, or fitter, for the general staff as those who have been passed through the college?—I do not think that I am capable of answering that question. My opinion is that an officer, no matter how qualified he might otherwise be, would be still better qualified after he had passed through the college than before.

The witness withdrew.

The Rev. Canon HEAVISIDE examined.

Canon Heaviside.

15 July 1868.

2370. (*Chairman.*) I believe that you are one of the examiners for the Council of Education?—Yes; in mathematics.

2371. How long have you filled that office?—I think ever since the Council was established, ever since 1858.

2372. You, I believe, examine for direct commissions, for admission to Sandhurst, and for admission to Woolwich?—Yes.

Examinations for direct commissions, and for admission to Sandhurst.

2373. The examinations for direct commissions and for admission to Sandhurst are very nearly identical?—Yes.

2374. What do you consider to be the object of those examinations?—So far as mathematics are concerned, I should say that it was to test the general education of the youths who come up.

2375. Do you mean by general education, such as might be supposed to be given in the public schools of the country?—I do not know that; I do not think that the public schools of the country generally prepare all the youths who come from them with so much mathematics as we require.

2376. What is the amount of mathematics, speaking generally, required for those two examinations?—Very little. There is a certain quantity of arithmetic, there are the common rules of algebra as far as simple equations, and there are the first three books of Euclid.

2377. Of that, how much is absolutely necessary in order to pass?—The marks in the direct commission examination are distributed in this way:—1,200 marks are allowed for what we call the obligatory part of mathematics. Of those marks 500 are given for arithmetic alone, and the candidate is required to get 200 marks out of these 500 to pass; if he does not get 200 marks in arithmetic he cannot pass; there is a great deal of very simple arithmetic, with a few questions in vulgar and decimal fractions, in the papers set by order of the Council. Out of the whole of the obligatory subjects there are 500 marks allowed for arithmetic, 350 for algebra, and 350 for Euclid. There is also another test which the candidates must pass. I have already said that if they fail to get 200 marks in arithmetic they are stopped, whatever they do in the other mathematical subjects; but they must, upon the whole, get 400 marks in mathematics in order to pass.

2378. Therefore it would be possible for a candidate to pass who obtained marks in arithmetic merely, without any knowledge either of algebra or of Euclid?—Yes, according to the present regulations, if he obtained 400 marks in arithmetic only.

2379. I suppose that you consider that the examination, so far as regards mathematics, is not a difficult one?—It is very elementary indeed.

2380. Do you think the examination is of such a nature that you see any difficulty in a boy being prepared at one of our principal public schools to pass it?—I think that it would be very difficult to make the boys at public schools learn these subjects which are proposed for them; there is always a certain number of idle boys who will really learn nothing, or next to nothing, at public schools, and you may prepare all the apparatus for instructing them, but they will not be instructed. Of course, it is quite possible for them to

learn a great deal more than they do. Classes might be prepared at public schools more than sufficient, with a moderate expenditure of time, to pass such an examination as this; but I apprehend that the difficulty lies in making the youths work, and it is only when they are told "You have to go up unexpectedly for the military examination at such a date," that they find themselves pressed for time, and then, in consequence of their previous neglect, they are obliged to go to some one who specially prepares them for the examination. That is my general idea of the matter.

2381. Have you any means of knowing whether the knowledge which they obtain in arithmetic is generally a sound and accurate knowledge, or whether it is chiefly the result of what is called "cram"?—Several of them come up very well prepared, and very well read in the subjects, and capable of doing a great deal more than we require. I have no doubt that there are a small portion at the bottom of the list in every examination who have had the knowledge put into them in a superficial way, in the shortest possible time and in the easiest manner to themselves.

2382. You say that you have been an examiner for this purpose since 1858?—Yes.

2383. Can you state whether the average intelligence and knowledge of the young men who come up for these two examinations have increased or diminished within that period; do they come up better or worse prepared?—They certainly come up better prepared on the whole.

2384. Is that an increasing improvement?—No. I should say with regard to that examination, and indeed with regard to almost all examinations which have become fixed, and where the standard is perfectly settled and well known, that after a year or two those examinations reach their maximum—by which I mean that the youths, as a whole (and I think that the statistical facts would show it), do pretty uniformly. I do not think that there has been any improvement in the course of the last two or three years, because certain alterations were made a few years ago, and I am speaking of progress since that time.

2385. So far as mathematics are concerned, has the standard of examination remained the same, or has it been lowered or increased?—In the year 1860 I think that it was made rather more easy, on account of some complaint at the time; it was said that some of our questions in arithmetic, for instance, were a little too problematical, and were not put in the form of direct sums, if I may so express it, and I think that instructions came from the Council that we should put some more direct questions. Since that time there has been no change in the standard; and I always try to keep the papers as uniform as I can at the standard at which they were fixed in 1860.

2386. Do you think that the examination is one which a boy of ordinary intellect ought to be able to pass, so far as intellectual qualifications are concerned?—Supposing that he had to get his marks out of arithmetic alone, I think that there are many boys in a first class National school who would get the marks.

2387. The examiners prepare the papers?—Yes.

2388. Are those papers submitted to the Council before the examination?—Yes, and sometimes they are sent back with notes and suggestions.

2389. Do the Council, from time to time, make any suggestions which they may think right upon those papers?—They do, but it is principally upon the papers for admission to Woolwich. I do not think that they have of late made any observations upon the direct commission papers, but I should not be at all surprised if they did send back a paper suggesting some alteration.

2390. With respect to Woolwich, the examination is quite of a different character?—Quite.

2391. What is your opinion of the average abilities of the candidates for Woolwich with respect to mathematics?—I think that they are very good indeed, and I was surprised at their progress when I first examined for Woolwich. With a university experience, I did not think that at so early an age many youths could be brought to so forward a state. The examination for admission to Woolwich consists of what may be called the elementary subjects of pure mathematics, algebra, plane trigonometry, mensuration, and arithmetic; and I think that, as a general rule, those who do well for admission to Woolwich could not possibly learn those subjects better than they do. There are also the voluntary papers. Out of these first named elementary subjects each candidate is obliged to get 700 marks for admission to Woolwich; but questions are set in the other subjects which are voluntary, and by which the candidates get marks which admit them to Woolwich, such as the differential calculus. I will not say that some candidates have not attempted those questions without having a proper reading or knowledge of the subject, and I think that the same may be said of the mixed mathematics in some cases; but I think that the subjects in what we call Section I for the Woolwich examination could not be learnt better than they are learnt by some 20 or 25 of those candidates who get the appointments.

Canon Heaviside.

15 July 1868.

Examinations for admission to Woolwich.

2392. Do you think that the standard has had a tendency to rise?—It has risen since I began; but I do not think that it has had any tendency to rise within the last three or four years. I think that it has reached its average, and it is quite extraordinary how very nearly the examinations coincide in their general results. I always write a report to the Council, after every half-yearly examination, as to how many candidates have obtained marks above 800, 700, and 600, and so on; and it is very extraordinary what a near approach there is to uniformity. One examination is occasionally slightly better than another, but rarely in any marked degree.

2393. It is desired for some reasons, different from educational considerations, to reduce the age at which young men are admitted to Woolwich; do you think that if the lower limit of age were reduced, a youth coming up at 15 could pass an examination of this kind, or that it would have the inevitable effect of lowering the examination which the candidates should pass?—I think that the examination in mathematics must be lowered for boys of 15 to pass it well.

2394. You do not think that a young man of 15 could virtually have such a knowledge?—If that question had been asked me 25 years ago, I should have said that youths of 16 and 17 could not deal with the examination, but they have done it; and correcting myself to that extent, my opinion is that we could not set to youths of 15 with advantage the same papers which we now set.

2395. Can you give the Commission any opinion as to the general bearing of the young men who come up for this examination, so far as you are able to judge?—I think that the young men have improved in appearance and general bearing since the examinations first began. I am speaking of my impressions from the beginning. I think that they have improved in their appearance.

2396. Do they show any signs of having been overworked or overstrained intellectually?—I think not at all.

2397. Have you any suggestions to make to the Commission with respect to any of these examinations, or are you satisfied with the mode in which they are now conducted?—I have on several occasions made representations to the Council. I very much doubt whether it would not be better to give up the differential calculus for admission to Woolwich, and I have also urged a plan which the Council have now adopted, in order to cut off any chance of what is ordinarily called cramming; that is to say, of a youth being taught by his tutor to speculate, on questions that may be set, and without reading the subject in a proper way to learn by rote one or two propositions. In order to cut off that chance the Council have adopted the rule that, unless in these voluntary sub-

Canon Heaviside.

Study of mathematics at Woolwich.

jects the candidates get a certain number of marks they are not to count in the candidate's favour. I have also stated that I think that it would be an improvement at Woolwich (it is only in an educational view, without knowing what military objections there would be to it) if the Engineers could be separated from the Artillery during an early period of their progress there. I think that, as regards those youths at Woolwich who take distastefully to mathematics and who get into the college mainly by their classics, and who in consequence find it very difficult to keep up in mathematics, it would be a great advantage if the Engineers and the Artillery were separated early.

2398. Would you propose to separate them from the very commencement?—If they were not separated by their mathematics when they went in, I think that they might be separated in half a year, or certainly in a year, leaving the last year to the separate instruction for the Engineers and Artillery—my view being that a good mathematical education is more imperative for the Engineers than the Artillery.

2399. Then would you propose not to teach mathematics to an artillery officer?—No; I would leave it more as an optional subject.

2400. You do not intend to imply by the answers which you have just given, that you think that the study of mathematics at Woolwich is altogether carried too far, both for the Artillery and for the Engineers?—Only in the respect of making it compulsory upon all. I think that it would be very undesirable to lower the course of mathematics at Woolwich. I would not make it compulsory upon those to whom it was a great drudgery, and who had no mathematical turn or gift at all. I think that they might get enough of the elements of mechanics and so on for their profession, without being forced to the extended line of reading which they now have at Woolwich.

2401. (*Lord E. Cecil.*) You have stated that you send in reports every half-year to the Council of Military Education?—Yes.

2402. Are those reports ever published?—I think always, not *in extenso*, but there are extracts from them.

2403. Can you state why the report in 1865 was published, and why no other report has been given since?—That was a special report.

2404. Can you explain why only two general reports have been published?—I cannot tell you that; my functions are only executive.

2405. As a rule, are general reports sent in by the examiners?—No, only when called for. I was asked to write the report to which you have referred, and I was asked to write one since, in this year, but what has become of that I do not know; whether it was only intended for General Napier, or whether it was intended for general publication, I cannot say. I have not seen it published.

2406. Are you not of opinion that it would be better that a candidate for Woolwich should pass once for all in mathematics at the entrance examination, and should have done with mathematics afterwards?—Certainly not for the Engineers. I think that it is desirable that all at Woolwich should proceed with mathematics so far as regards the simple laws of motion and projectiles, and the elements generally of mechanics and hydrostatics.

2407. As regards the Artillery for instance, would it not be advantageous to let them drop mathematics, and to let them study the other subjects which they have to study?—I would rather give them a chance of showing whether they have any taste for mathematics or not. It is very young to break off mathematics at 15 or 16; but in two years more I think that you discover those candidates to whom mathematics can really be profitable.

2408. If a youth has no turn that way, do not you think that the study of mathematics leaves him less time to devote to other subjects after he has entered Woolwich?—No doubt; but I suppose that you must consider that for an officer in the Artillery, as well as in the Engineers, some knowledge of mathematics is almost a necessary part of his professional education; for instance, so far as regards surveying, he should be able to take heights and distances, and to calculate them. I think that every officer should be able to do that.

2409. Do you not think that every officer should have that knowledge at entrance?—I think not sufficiently. I do not think that it would be satisfactory to give up altogether going beyond the amount of mathematics which is exacted at the entrance examination, though I should be quite prepared to give up mathematics when it is found that a youth learns them with great drudgery, and makes little progress in them at the Academy.

2410. Still you think that the study of mathematics is carried to too great an extent at present?—That is in making it compulsory. I do not think that it is carried too far to induce those candidates who like the subject to study it, but I think that it is carried too far in making it compulsory, or virtually compulsory.

2411. What is the objection to raising the standard of examination in mathematics at entrance?—Only youth. I think that quite as much is required of the candidates as can be expected from youths of their age.

2412. I think you told us that some years ago you would never have supposed that youths of such an age could have acquired knowledge sufficient to pass the present Woolwich examinations?— I wanted experience. If I had been asked 25 years ago whether youths of 16 could be brought to answer the papers so well as they do answer them, I should have said that they could not, speaking from a university experience of older men.

2413. You are not then prepared to say that youths of 16 cannot acquire sufficient knowledge of mathematics before entrance, so as to enable them to dispense with the study altogether afterwards?—I am speaking of rather clever youths of that age, and I should say that even they would hardly bear more than we give them now.

2414. What quantity of mathematics is required for a youth in order to pursue artillery studies after he gets to Woolwich?—It is rather a high course of mathematics. I can best explain it by saying that they require a great deal of some of the higher branches of mechanics, and of dynamics, and of hydrostatics, to which the differential calculus is applicable.

2415. And is all that course absolutely necessary?—They all have to pass an examination in those subjects. There are certain subjects at Woolwich which are called extra and voluntary subjects which youths take up for marks. I believe that now to get through they must get a certain number of marks upon the aggregate of all the subjects. I think that that has been the case within the last two or three years, but the mathematics carry such heavy marks that I should think that it would be a very difficult thing for a youth to get through without mathematics.

2416. What, in your opinion, would be sufficient to enable a boy to pursue his artillery studies?—I should say certainly a good knowledge of such an elementary work as "Parkinson's Mechanics" or almost of such a book as "Dean Goodwin's Course at Cambridge;" either would be, I should think, sufficient for the purpose.

2417. You do not think that in the present course at Woolwich, as far as you know, more is exacted of the cadets than is absolutely necessary for their professional advancement?—I dare say that they would make very good officers if the standard for the Artillery was lowered; but I should like a high course for the Engineers. I do not think that the mathematics at Woolwich are too high, but that it may be a mistake in making them virtually compulsory upon all, because the marks for mathematics are such that the candidates can hardly neglect them and get through. The more searching the examination, the

less cramming there will be; it is the easy examinations for which candidates chiefly cram.

2418. May not cramming have the effect, by prematurely forcing the intellectual powers, of permanently weakening them?—I cannot say that; cramming is a process for imparting knowledge with the least possible trouble.

2419. Have you not known some instances of an utter break-down in mind of the candidates preparing for a severe examination?—No; I have known a good deal of hard work at Cambridge, but I cannot just now recall an instance of anybody who ever injured himself by such work.

2420. Even of those who have passed brilliantly in mathematics, are there not many who have been so weakened, either in physical energy or in the powers of the mind, that they have never fulfilled the promise which they gave at their examination?—Not that I know of; I have known a great many men injure themselves at Cambridge by boating and otherwise, but I have never known anybody injure himself by reading mathematics. I have known many high wranglers at Cambridge for many years, but I do not know of anybody who has injured himself by the hard reading necessary to success in these university examinations.

matical tion at schools.

2421. What is your opinion of the mathematical instruction which is given at public schools?—I have no doubt that public schools provide most excellent instruction in mathematics, but they cannot get their boys to work. I never was in a public school myself, though a great many young men have passed under me who have been in a public school; but I take it that there are not 10 per cent. of the boys in a public school who apply themselves in such a way as to get all the advantage possible from the instruction which is provided there. That is the difficulty with which you have to deal, not only in public schools but in private schools, namely that a vast number of boys will not work unless some very strong pressure is put upon them. A father says, "You are to go up for such an "examination in such a time," and the son says, "I "must go to some man who has directed his attention to this particular examination, and who can "therefore give me all the information which it is "necessary for me to know in the shortest possible "time, otherwise I can not pass."

2422. Do you find that the candidates who come up from public schools are well grounded in the elementary portions of arithmetic—that, for instance, they have a thorough knowledge of vulgar fractions and decimals?—It is rather difficult for me to answer that question, because I know nothing about the place of education of the candidates. I do not know whether they come from a public or from a private school, or whether they come from what is called a "crammer." I was the mathematical professor at Haileybury College for 20 years, and there I saw the state in which boys came from the public schools; most of them knew little or nothing of the most elementary rules of arithmetic, algebra, and so on. My Haileybury experience dates 10 years ago, and as a general rule nothing could possibly be worse than their knowledge on these subjects; but I have no doubt that that was not the fault of the school but that it was the fault of the boys themselves.

2423. Have you had any means of judging of the merits of the different places of tuition?—Only after an examination to see where the successful candidates have come from. Having been so long an examiner I am very often asked to recommend a tutor for these examinations, and I am very delicate about it. I generally say to the people who ask me, "The best "thing which you can do is to get two or three of "the reports of the Woolwich examination, and you "will see where the successful candidates have "been educated; select some man who is successful "and judge for yourself,—I cannot recommend any-"body." When I examine the youths I do not know at all where they come from.

2424. Are you of opinion that if mathematics were properly learnt at public schools, boys might come up straight for examination for Woolwich, Sandhurst, and the army?—The examination for Woolwich is very special, and I suppose that at a public school they can hardly appropriate a boy's time sufficiently for the examination for Woolwich. Supposing that a boy had a good turn for mathematics, and that he wanted to come in upon mathematics, I doubt whether a public school would allow him to devote so much of his time to the special work as would be necessary for that purpose.

Canon Heaviside.

15 July 1868.

Mathematical instruction at public schools.

2425. (*Chairman.*) But in the other examinations there would be no difficulty?—None at all, if you could get them to work.

2426. (*Lord E. Cecil.*) You think that all boys going to Woolwich should pass through some private establishment after leaving a public school?—Do you call Cheltenham College a public school?

2427. It is not included in the report on public schools.—The youths coming up from Cheltenham are uncommonly well prepared for the Woolwich examination. What their system is there I do not know, but I have heard that when a youth is intended to come up for that examination they keep him to those special subjects for a year or two. I do not, however, know that that is true.

2428. I suppose that that is a special case; boys from Eton or from Harrow would hardly be prepared for such an examination?—No.

2429. Would it be in your opinion necessary for boys from Eton or from Harrow to go to a cramming school, before going up for the Woolwich examination?—To go to some special tutor; I do not call it cramming for Woolwich. I think that it would be a very great risk for a boy from Eton or from Harrow to go up for Woolwich relying on his school mathematics.

2430. If the boys come up so well prepared as you say they do from Cheltenham, do you see any reason why they should not come as well prepared from other schools?—Certainly not, if they can adopt the same system.

2431. Do you think that it would be quite safe to risk the chance of boys passing a simpler examination who had been educated at Eton or at Harrow, without the intervention of a cramming school?—I think so certainly, taking those who had attended to the subjects. I suppose that there is facility at a public school for a boy learning algebra as far as simple equations.

2432. But if the candidates do not acquire the elementary portions of arithmetic and algebra, it is impossible that they can come up sufficiently prepared?—Just so. I know Dr. Colenso was mathematical master at Harrow; there is no doubt about his mathematical attainments, and he could have taught the boys there anything which they required to know for a low or a high mathematical examination; therefore I do not consider it the fault of the school, but the fault of the boys, or that mathematical instruction is tabooed in some way or another.

2433. (*Lord Northbrook.*) Do you examine the cadets who pass out of Sandhurst?—Yes.

Mathematical proficiency at Sandhurst

2434. What is the general proficiency in mathematics of the lower half of those who pass?—Of course, there are always a few very bad ones at the bottom; say that there are 150 to be examined, there are some 20 very bad, and who barely scrape through. But I think that the generality of youths who pass out of Sandhurst know algebra tolerably well, at least as far as simple equations.

2435. Not more than that?—No, not the generality of them. Those who are at the top of the list, and those who work and try to get commissions without purchase, do very well indeed. I apprehend that there are many of them who have not got quite marks enough to get into Woolwich, and they go to Sandhurst afterwards, and thus perhaps some half a dozen are nearly as good as some of the Woolwich youths.

2436. The lower half, whom you have described as only knowing algebra up to simple equations, know

Canon Heaviside.

15 July 1868.

very little more than they ought to have known when they entered?—Certainly, excepting, as I have said, that it is not absolutely necessary that a candidate for a direct commission, or for admission into Sandhurst, should touch an algebra paper at all; he may pass by the arithmetic and the Euclid, or by the arithmetic alone, but I do not think that it has often happened that candidates have come in by arithmetic alone; it has very rarely happened.

2437. Speaking generally, the 18 months' instruction at Sandhurst has not been very productive?—Not with the lowest class; there is just the same difficulty in getting them to work there as elsewhere.

Mathematics at the Staff College.

2438. (*Lt.-Col. Chesney.*) With regard to the Staff College, I observe that in one of your reports you mentioned that there was a want of method in the officers' work. Do you believe the benefit of teaching mathematics is in the attainment of method, or in the attainment of a certain knowledge of mathematics?—Certainly, in the attainment of a certain knowledge of mathematics; but there is a good way and there is a bad way of producing it, and I think that my remark applied to that.

2439. The chief value, at any rate, of the teaching in the Staff College you would imply to be the gain of a certain quantity of mathematical knowledge?—Certainly.

2440. Then there is no indirect value which you really look to?—Not to the same degree as with younger men.

At Woolwich.

2441. With regard to an answer which you have given with respect to youths having the appearance of being overstrained, does your remark apply to those youths who leave Woolwich?—I just see them at their examination, and they go away; I do not see any sign of lassitude, or debility, or anything of that kind, and I do not see them again. I do not follow them up in their after career.

2442. You have spoken of the Engineers and the Artillery being easily separated after the first year's course; I suppose that, in your opinion, the two sets of cadets might at some point be easily separated?—No doubt. My answer had not so much reference to the time at which they might be separated, but to the fact that they might be separated at some time.

2443. Is it possible, as I have lately heard, for a cadet going into Woolwich, and not having a natural aptitude for mathematics, to study during the whole time that he is at Woolwich, and yet to come out of Woolwich knowing no more than when he went in?—I cannot say that.

2444. Speaking of an educational establishment, which is said to have a half, or from a half to two-thirds of its pupils idle, would you in these days consider that to be an exceptional amount of idleness? What I ask refers especially to Sandhurst?—Not at all.

2445. Is it your belief that the public schools strictly so called do not give sufficient time to the study of mathematics?—I should not like to answer that question, because I do not know what time they do give, but I only judge of the result. I speak more of what I saw at Haileybury some years ago than of the military examinations; the boys did not come so well prepared in mathematics from public schools as they did from many private schools. I am not saying whether they were better educated or not, otherwise.

Examinations for admission to Woolwich and Sandhurst.

2446. (*Rev. Dr. Butler.*) Have you observed in the last few years any change in the mathematical attainments of those youths who enter Sandhurst?—I think that the maximum attainments of those youths who enter Sandhurst certainly have improved in the course of the last seven or eight years.

2447. You would draw a very wide distinction between the standard required for entrance to Sandhurst, and that required for entrance to Woolwich?—A very wide distinction.

2448. You would say that any boy, if he was taught properly, ought to pass the Sandhurst test with ease, and also the examination for a direct commission?—Certainly.

2449. With regard to the examination for entering Woolwich, would you say that boys of ordinary mathematical ability might be expected to pass it with ease?—Yes, I think so, if they had received instruction for it. I do not think that it would be safe for a boy to come from a public school and to rely upon passing the mathematical part of the Woolwich admission examination.

2450. Are you aware that at most of the public schools very few of the boys look forward to entering Woolwich, either directly from their school or subsequently?—I should think very few.

2451. Consequently that is not one of the objects of the ambition of the able and more industrious boys?—I should think certainly not. I should certainly think that the best boys from those schools went to the universities.

2452. Whereas at Cheltenham a large number of the boys look towards the universities, and an almost equally large proportion look towards Woolwich?—I should think that that is very likely.

Mathematical knowledge requisite for officers of artillery and engineers.

2453. (*Brig.-Gen. Lefroy.*) You have expressed the opinion that a high mathematical examination should be compulsory upon all candidates for the Royal Engineers?—I think so.

2454. Does that proceed from any estimate of the practical duties of all officers of the Royal Engineers, or from the necessity of maintaining the prestige of that body as a scientific one?—I think the last a very important consideration. Of course I cannot be expected to know much about the military duties of the Royal Engineers, except that I have a son in the Royal Engineers, and he is on the Trigonometrical Survey in India, and he often refers to me by letter on questions of advanced mathematics, and he does not seem to be better than the other youths of his own standing; in fact, I think that amongst them there is a very considerable amount of mathematical cultivation.

2455. Of course it is conceded that high mathematics are necessary for all the operations of the Trigonometrical Survey?—Yes.

2456. But they employ those officers in the Royal Engineers?—Yes, of course.

2457. Have you examined the advanced class at Woolwich?—I have.

2458. Have you not seen there that the professional artillerymen have to deal with subjects which have to do with quite as high mathematics?—Certainly; but I did not assume that all artillery officers need be so highly instructed as those for the advanced class.

2459. Therefore, when you say that it should be compulsory for all engineers, you do not mean to imply that it should not be compulsory for some artillerymen?—No. What I mean is that I would have a higher compulsory standard for the engineers than for the artillerymen, and I would allow the artillerymen who had not any turn for mathematics to drop them after they have been for a certain time employed in their study.

2460. But you do not mean that others should drop them?—Certainly not. I would provide the highest standard for them, and those who had any taste for the subject, or desired to pursue it, should certainly have every facility to pursue it.

2461. Then would not your plan, if applied practically to Woolwich, go to making a double college, namely, an engineer college and an artillery college?—I cannot tell what the military effect would be; it would be, I suppose, like having separate classes in a college.

Examination for Woolwich and Sandhurst.

2462. Do the mathematical examinations resemble sufficiently closely those of Cambridge or of Trinity College, Dublin, to admit of an academic value being attached to them? Would any such scale be possible?—It would be scarcely possible, for the range of subjects is almost always so much wider and larger at Cambridge than for the Woolwich examinations, that I should hardly think that a definite comparison could be established which would be capable of any accuracy. An examiner might have general im-

pressions on the subject. When I have examined for the University of London several of the youths have come up so well in high mathematics that I have recommended them to go to Cambridge, and several senior wranglers have gone from the University of London to Cambridge.

2463. If you set identically the same nature of questions for Sandhurst and for Woolwich, do you assign the same number of marks for a perfect answer?—The papers at Woolwich and at Sandhurst are so different, that the number of marks assigned for the examiner to give are not the same.

2464. Is there any advantage in making it easier to obtain 6,000 marks at Sandhurst than to obtain 3,000 marks at Woolwich? Ought not the marks to have something like a comparable value?—The subjects are very different. You may give the same number of marks for an easy or a hard paper, for a high or a low subject, but 300 marks in one case would, of course, represent a very different knowledge from 300 marks in the other. I hardly see how you could institute a comparison between examinations so totally different as the Sandhurst and the Woolwich examinations are, the one being only on elementary subjects, and the other going much further.

2465. The general tenor of your evidence, as I collect it, is, that the mathematics for Woolwich are not usually considered "crammed"?—As far as regards Section 1, namely, algebra, Euclid, trigonometry, and mensuration, they are not crammed. No lad would have a chance who had not learnt and studied the subjects well.

2466. (*Rev. W. C. Lake.*) You have said that only a small number at the bottom of the list do not pass the examinations for direct commissions?—Yes; the examination itself is very elementary.

2467. Is not that rather a favourable view to take? We have generally had a representation of the gross ignorance of the candidates?—I am only speaking of one subject. According to the standard which is given them, I think that upon the whole they get up to the standard very fairly. Of course there are always some who just scrape through.

2468. Do you think that in what you may call the arithmetical subjects in the examinations for direct commissions the candidates are well grounded?—A large proportion of them do very fairly.

2469. But you do not believe that the cadets come from the public schools, but from the private tutors?—I do not know positively where they come from; I have only their index number. My general impression is that, as regards a great many of the public schools, youths who come up for these examinations go to private tutors for a time after leaving school.

2470. Do you think, from what you know of public schools, that if the public schools had something like the separate department which they have at Cheltenham the boys would not learn tolerably well?—It would be an improvement, but at all the large schools, there is a great temptation to boys to be idle, and idleness is so catching that I think that it would be very difficult to do what you propose. I am not talking of those boys who are the best at the school, but there are some whom you cannot get to do anything; they will not learn anything from a book, no matter what it is.

2471. You have had some experience of the Cambridge examinations in mathematics, and also of the matriculation examination in the University of London?—I have, but as regards Cambridge it is very many years ago.

2472. Taking the matriculation examination at the University of London, do any large proportion of the young men who get direct commissions, and of those who enter Sandhurst, do as well as the better pupils for the matriculation examination at the University of London?—As far as mathematics are concerned, I should think that they were very nearly parallel. I should think that very nearly the same per-centage did well, and very nearly the same per-centage did ill. I have not examined for the University of London for the last eight years, but I presume that it is pretty much now what it was then. The matriculation examination for the University of London was very much like this examination with regard to the standard; the algebra and the arithmetic were very similar. I think that there were four books of Euclid instead of three.

2473. Taking the case of the higher candidates, if you compare the best of those who succeeded for entrance to Woolwich and the young men in their first year at Trinity, or in their first year at St. John's at Cambridge, what would be the comparison?—I am speaking of mathematics only, and I should say that the half-dozen at the top of the list for admission to Woolwich would be about equal to the first six at Trinity College in the first year. This I think would be the average, though there would be occasionally brilliant exceptions in favour of Trinity, but I am rather speaking of a university experience of a long time ago.

2474. Do you examine the young cadets on leaving Woolwich?—Yes.

2475. With what at Cambridge would you compare their mathematical attainments at that time?—It would be difficult to say; the style of mathematics is very different. At Woolwich it is made much more practical; at Cambridge, for instance, a man might take a high degree without ever using a book of logarithms, though of course he would know well the theory of logarithms.

2476. If you cannot compare them in actual performances, can you compare them in abilities?—I think that the cadets at the top of the list at Woolwich show such great ability that you might say that if they had gone to Cambridge they would have been among the first ten wranglers. I mean that if one such had gone through the Cambridge course instead of going through the Woolwich course, he would have attained this university distinction.

2477. (*Sir D. A. Cameron.*) Do the candidates for admission to Sandhurst as a rule show greater proficiency in mathematics than the candidates for direct commissions?—I can hardly say that they always do. Some of the candidates at the top of the list for Sandhurst, as I have heard afterwards, are those who have failed for Woolwich, and then they have passed for Sandhurst. The maximum at Sandhurst is so simple compared with Woolwich, that though they fail at Woolwich they do uncommonly well at Sandhurst. But every now and then in the examination for direct commissions you get a very good candidate.

2478. Then they have very much the same knowledge of mathematics?—I think so, except for a very few at the head of the list.

2479. (*Chairman.*) I suppose that looking to the character of the examination for Woolwich, and the age of the young men who pass it, you may fairly say that although some pass who have not a natural turn for mathematics, the majority must have a turn for the subject?—Yes, I think that the majority have the gift of reading mathematics with advantage.

2480. Should you be surprised if you were told that the professors of fortification at Sandhurst had found the young men who enter there so poorly instructed in arithmetic, as a rule, that they were not able to make the ordinary arithmetical calculations necessary for the study of elementary fortification?—It would not surprise me to hear that some were so deficient, but it would surprise me that all were so deficient.

2481. Would it surprise you to hear that such deficiency was common?—I think that it is very possible with some of those who just scrape through; 200 marks out of 500 for admission is a very small proportion, especially when we are obliged to set so many elementary questions.

2482. Then a young man may pass the examination for a direct commission with a very elementary knowledge?—Yes.

Canon Heaviside.

15 July 1868.

2483. (*Sir D. A. Cameron.*) Would you recommend that the minimum should be raised?—The moment that you do so you increase the number of failures to such a degree that there is an outcry, and then probably the standard is again reduced.

2484. (*Chairman.*) As a matter of fact the failures for direct commissions and for entrance to Sandhurst are very few, are they not?—Yes, as regards mathematics, but it is a very elementary examination.

Half-yearly examinations at Sandhurst.

2485. (*Lord E. Cecil.*) It has been stated in evidence that at the end of each half-year at Sandhurst there is a relaxation of study amounting to a week or ten days; can you explain how it is that the examiners take such an enormous time to calculate their marks?—It is very close work. I think that there are generally about from 120 to 150 candidates at each half-year; they have each three papers in mathematics, so that the examiner might have to look over 450 sets of papers, and that takes time; and it is not so much the looking over the papers which takes time as the marking them. You can look over the papers easily, but you have to give marks for the papers, and to tot them all up, and to tabulate them, and you must do it with great care, to avoid mistakes. That is what takes the time; it takes a long time to look over the papers and to make the returns.

2486. You do not think that it is possible that it could be done in a shorter time?—Anything is possible. If you had a separate examiner for each of the three papers, and required that he should send in his marks very soon, it might be done.

2487. I ask the question, because the present system has a serious effect upon the discipline of the cadets, and it produces a certain amount of idleness?—There are so many subjects, that the examination itself at Sandhurst necessarily lasts a long time. My examination, which is the mathematical one, is a heavy one, but it is usually put early, and I rather think that I send in my marks before the other examinations are finished; but I will not be sure upon that point. A long time is taken for the classical tripos at Cambridge.

2488. Could you suggest any way in which that great delay could be obviated?—Yes; I could suggest that instead of having the examination at the end of the term upon all the subjects, the examinations should be distributed over the term, if the present state of things is such a real practical evil that it is desirable to get rid of it.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Thursday, 16th July 1868.

PRESENT:

THE RIGHT HON. EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. DR. BUTLER.
REV. W. C. LAKE.
BRIG.-GEN. LEFROY.
LIEUT.-COL. CHESNEY.

The REV. OSBORNE GORDON, M.A., examined.

Rev. O. Gordon.

16 July 1868.

2489. (*Chairman.*) You are, I believe, one of the examiners under the Council of Military Education?—Yes.

2490. How long have you filled that appointment?—Since 1860; my first examination was in the winter of that year.

2491. You are an Examiner in Classics for Direct Commissions, for Sandhurst, and for Woolwich?—Yes.

Examinations for direct commissions, Sandhurst and Woolwich.

2492. With respect to the examinations for direct commissions, and for entrance to Sandhurst, which I believe are almost identical, will you tell the Commission what you consider to be the nature of those examinations, and whether they are easy examinations or not?—I make them as easy as I can, and the examinations, as far as I am concerned, are identical, and the men are of the same quality.

2493. Is it your object to test the general education of the young men who come up?—Yes, so far as my duties permit me to do so, and as far as I can, examining only in the classics.

2494. Has the character of the classical examination remained the same during the whole time that you have been examiner, or have any alterations been made?—Some alterations have been made as regards Woolwich, but not as regards the other two examinations. Formerly, as respects Woolwich we gave questions in ancient history, and also in classical literature; but those two branches of the examination have been given up.

2495. With respect to the classical examination for Woolwich, is it of a higher character than that for direct commissions, and for entrance to Sandhurst?—Yes, and the men are generally better.

2496. What do you think of the average attainments in the classics of the young men who come up for direct commissions and at Sandhurst?—They are very low.

Defic the c in cla know

2497. Do you think that there has been any improvement in those respects during the time that you have been an examiner?—To a certain extent the number of persons who are absolutely ignorant is not so large as it used to be. Formerly men came, and you could not understand why they presented themselves at all for examination, for they knew nothing; the number of such men has diminished.

2498. Were you surprised at the lowness of the character of the answers which were given?—I certainly was at first.

2499. You expected that, taking young men who had received a public school education, you would have found them more competent?—It was astonishing to me how they could know so little. I am now engaged in an examination for Woolwich; unfortunately I think that the men are not so good as usual, but I should like to show the Commission a specimen or two. This is a paper in Greek (*handing a paper to the Chairman*). I have not had time to look at the Latin. Here is another paper.

2500. (*Sir D. Cameron.*) Are those some of the worst?—These are some of the worst.

2501. (*Lt.-Col. Chesney.*) They are chosen as some of the worst?—Yes.

2502. (*Chairman.*) Is this the whole answer?—Yes. Here is the paper of a man who has written a good deal, but there is not one word of sense in it.

2503. (*Lt.-Col. Chesney.*) This would be no test of those young men who go into Woolwich?—Certainly not.

2504. (*Sir D. Cameron.*) The men who have given these answers of course will not be admitted?—They will not be admitted so far as this paper is concerned.

2505. (*Chairman.*) These papers which you now produce are of course below the average?—Certainly, but I must say that the number of papers of that kind at this examination is much greater in proportion than usual; it is a bad set of papers from some cause or another.

2506. Do you get papers worse than these for the direct commission examinations?—No, they could not be worse; it is impossible. What the men write is not only absolutely wrong in relation to the original, but there is no sense whatever in it.

2507. I understand that you consider the classical examination for direct commissions and for Sandhurst to be as easy as possible?—Yes.

2508. And you desire to make it easy?—Yes; it is a difficulty for me to make it easy enough.

2509. Do you take any notice of spelling in these papers?—I notice it myself, but it does not affect my marks.

2510. Would you be surprised to hear it said that many of the candidates who pass at Sandhurst on coming in are very ignorant of spelling?—They certainly are.

2511. That is the same, I suppose, in the case of direct commissions?—Yes; I cannot distinguish Sandhurst men from the direct commission men in any way.

2512. Of course the great subject of examination at Woolwich is mathematics?—Yes.

2513. Therefore you would not expect so high a standard of classics?—No; I always take into account that the men have been obliged to pay more attention to mathematics, and that they can only be expected to know such classics as they know when they come from the schools.

2514. Still, as a rule, they pass superior examinations to those for direct commissions?—Yes, and very often quite satisfactorily. I am sometimes able to pass nearly the whole of the candidates in Latin; but as regards the paper I have exhibited, I should be compelled to reject nearly one half.

2515. Have you instances of young men coming up with considerable attainments?—Yes; it is not at all uncommon to have very good men indeed.

2516. Men who might have taken honours at the universities?—Certainly so.

2517. Do you find anything of that sort in the easier examinations?—Yes; there was an examination last August where the men were passed for direct commissions; many of them were very good men. There was one man who certainly might have obtained a first class at Oxford; he was the best man that I ever had.

2518. Have you any suggestions to make with reference to the easier examinations; do you think that they could be in any way improved?—I think that it would be a good thing if a few easy books were put before men definitely, so that they should know what to read. I endeavour to approach that result in this way. The Council have given me a list of books which is a great deal too wide, and out of it for direct commissions and for Sandhurst I only use, perhaps, in Latin, Cornelius Nepos, the first book of Livy, the first book of Cæsar's Commentaries, the first book of Cicero's Offices, the first or second Æneid, and the Odes of Horace. In Greek, I use the first book of Herodotus, some portion of Xenophon's Anabasis, the first or second book of the Iliad, and one or two of the easiest plays of Euripides.

2519. But you think it would be a good thing to state what the books will be?—Yes; I would do it six months before the examination.

2520. Would you do the same with respect to the Woolwich examinations?—I think not. I think that the candidates would see pretty well from the papers what books were used; but I would not lay them down more definitely.

2521. Regarding the Woolwich examination as distinctly a higher matter?—Yes. I may observe that I do not wish the papers which I have produced to be considered as average specimens of the Woolwich men. They are exceptionally bad; they are the worst of the lot. (*The Latin paper, subsequently seen by the witness, was stated to be quite satisfactory.*)

2522. (*Lord Northbrook.*) Do you think that by letting the candidates know in what book they were to be examined there would not be cramming; for instance, take one book of Virgil, if it were known that that book would be examined in, would not there be cramming and not learning that book?—I think that cramming consists in learning two or three passages out of several books, upon a calculation that some one of them may be given.

2523. In grammar they could not be crammed?—No.

2524. (*Rev. Dr. Butler.*) Have you examined for the "little go" at Oxford?—No.

2525. Have you examined for a pass degree?—Yes.

2526. Would you at all compare the performances of the candidates for direct commissions with the performances of those young men who go up for a pass degree?—They are much better in the case of those who go in for a pass degree, there is no doubt about that. I know what "little go" men are, and I should say that on the whole they are better, or at least do better, simply for the reason that they bring up definite books.

2527. Have you had occasion to examine men for matriculation?—Yes.

2528. Is there a distinct difference between the performances of those young men who come up for direct commissions, and the performances of those who come up for matriculation?—We never find any man coming for matriculation so bad as the worst of those who have come for direct commissions.

2529. Do you find that the break-down is in elementary grammar, just as much as in translation from Greek and Latin?—Yes, I think so, where men do break down entirely.

2530. Has there been any improvement whatever in this respect in the knowledge of grammar in the last few years?—Yes, generally there has been. The candidates know that we set a high mark upon grammatical questions, and there has been an improvement.

2531. Can you draw any distinction, as respects the candidates, between the Greek grammar and the Latin grammar, or are they equally bad as regards both?—They know most of the Greek grammar, probably because they think that they know the Latin as a matter of course.

2532. Have you examined in any other subjects besides classics?—No, I have not examined in the other papers, but I always take an interest in them, especially in mathematics. There are many subjects of which I know nothing.

2533. Have you reason to think that the classical deficiencies are at all compensated by general knowledge?—I could not say that, but I think that it will very often be found that the men who do best in classics also do best in other subjects. I notice that from the returns which are sent to me.

2534. Does your classical examination include ancient history?—No, there is no history; it was given up about five or six years ago, and I conceive that the reason was that it was entirely got up by cramming; men did not even read manuals; they got it up orally, and you could perceive that the men had never seen the proper names in print, and they transferred the characters from Greek to Roman history, and *vice versâ*.

2535. Are you able to judge whether many of the young men who fail most conspicuously in classics come from the public schools?—One does not know that; you only know from what schools the successful candidates come. Those are advertised, and I myself think that it would be a good thing if those were not advertised, but if the schools from which the failures

Rev. O. Gordon.

16 July 1868.

Military examinations.

come were advertised. The schools which send successful candidates would make themselves known.

2536. Do not you think that boys who come even from low forms in public schools ought to have little difficulty in passing this examination?—I think that it is discreditable to any school that it should send away men who are not able to pass these easy examinations without further assistance.

2537. Many of them, and perhaps most of them, come from the lower forms of the school, and are not particularly studious?—They must be 17 or 18 years of age for direct commissions, but they may be in the lower forms of the school.

2538. Is not the age 16 for entering Sandhurst?—Yes, past 16.

2539. Are you aware that at some of the public schools boys are now obliged to leave at a particular age, unless they reach a particular part of the school?—I was not aware of that, but I am aware that great schools do not like keeping boys after 16, unless they think that they will do them credit in the universities.

2540. (*Brig.-Gen. Lefroy.*) Does not it sometimes occur that a paper may be very badly construed, that is to say, that a boy may be wrong again and again, and yet that the paper may not be so wrongly translated?—Certainly. There may be grammatical error, and yet the sense given.

2541. In that case would you give him marks for his translation, or how would such a paper as that rank?—I should pass a paper of that sort.

2542. And he would get pretty good marks?—Yes, if I saw that he caught the general sense of the passage, I should pass him beyond doubt, and should give him fair marks.

2543. Does not the difficulty of most of these boys, in dealing with unseen papers, arise very much from the slavish way in which they only construe, and do not translate, in most systems of teaching?—I myself hardly think that it does, because many of them show a total want of being able to construe the simplest sentence.

2544. Do many instances present themselves of such an apparent promise of scholarship, so far as it extends, as to make it a subject of regret that classics are not afterwards kept up?—I have never felt that. I do not think that there is any great number of men who could find time to carry on classical studies to any great advantage along with their professional studies.

2545. It has been suggested that it might be advantageous to allow youths who have an aptitude for scholarship, and a taste for it, to keep it up of themselves during their subsequent military education, and to benefit by it at the end as a voluntary subject; do you think that that would be an advantageous arrangement?—I do not think that it would be a bad thing to offer an encouragement to men with classical tastes not to give up their classical studies where they could be carried on consistently with their professional studies.

2546. (*Sir C. Russell.*) In your experience do you find some boys who would pass a fair *viva voce* examination, and who are very indifferent when it comes to a written examination?—I should very much like to have a *viva voce* examination of all of them, if it could be done.

2547. I suppose that the objection would be the loss of time?—Yes; I think that for the East India Civil Service examination the *viva voce* part of it is of the very greatest value, and I have been several times engaged in conducting that part of the examination. One examiner I think could examine 24 candidates in a day in one subject, and could do no more.

2548. (*Rev. W. C. Lake.*) From your remarks I collect that you think that the ordinary examinations show a very low state of knowledge in English schools?—Very low indeed.

2549. Have you any means of comparing the state of knowledge in English schools with the state of knowledge in foreign schools?—I have not.

2550. You have, of course, the means of comparing it now with what it was 10 or 20 years ago; do you think that it has generally declined, or not?—More subjects have been introduced into schools. I do not think that classical knowledge has improved.

2551. Are you aware of the fact that at present 50 per cent. of the men who go in for their "little go" examination are plucked?—I have known that happen, and I think that it is too much.

2552. That would be about the same proportion, or a higher proportion, than fail at the army examination?—I do not think that I have ever allowed more than 20 per cent. to fail. You must take men such as they are. I have passed men whom I would rather not have passed, but men must be supplied, and you do not make them better by plucking a great number.

2553. You have stated that the names of the successful schools are mentioned?—Yes.

Prepa forded school militar nation

2554. Of the public schools you can tell us which are the successful schools?—I should think that more boys come up directly from Cheltenham and Marlborough than from any other two schools.

2555. Cannot you mention any other schools?—I think that a good many come from Rugby, but not many from Eton, which is probably owing to their leaving Eton at an earlier period and going to some tutor; but I have noticed that Cheltenham and Marlborough in proportion send up more men directly.

2556. You know what is, in a great measure, the cause of the success of Cheltenham, namely, that they have a modern department well worked?—Yes.

2557. Do you not think that it would be possible to introduce something of that sort for boys at the public schools not intended for the universities?—Yes, I think that it would be a good thing.

2558. From your experience of the matriculation examinations at Oxford, you think that it would not seriously damage the chances of men who changed their minds and wished to go to Oxford?—Certainly not.

2559. In that case, I suppose that it would be necessary to omit, or greatly to diminish, the study of Greek?—Yes, but at these examinations the number of men who take up Greek is much less; one-third at least of the men who take up Latin do not bring up Greek.

2560. Supposing that you were to take out Greek from the army examination, or to give one paper in order to enable a boy who knew Greek very well to distinguish himself, might not it have the effect of fixing the studies of the boys attentively on Latin?—There is but one paper now in Greek for direct examinations and for Sandhurst, and there are two papers for Woolwich.

2561. You have stated that you do not think that there would be time for a soldier to pursue his classical studies after he entered the army. Supposing that you struck out Greek, surely there would be plenty of time for a man to read the Latin historians?—I do not think that there would be time to enforce study upon all. I do not mean to say that some would not find time.

2562. You think that it would be a good thing to encourage a classical taste?—Yes.

2563. And in the examination for Woolwich a large number show very considerable classical talents?—Yes, they do sometimes. You have almost always very respectable candidates for Woolwich.

2564. Can you devise any explanation for the fact that it seems difficult to get the mass of the boys in most of the public schools, except those who are studying hard, to study at all?—I cannot.

2565. But is not that the fact?—Yes. I do not think that the desire of knowledge is so strong in the human mind as is sometimes assumed.

2566. With regard to physical science, has it struck you that rather too much is made of physical science in the entrance examinations for the army?—I do not feel capable of giving an opinion upon that point, but it has seemed to me that a great deal is required from them.

2567. Do you think that the sort of teaching in physical science which the boys get when preparing for the Woolwich examination is likely to be of much use to them mentally?—I could not give an opinion upon that point which would be worth having.

2568. I believe that some men go from Oxford directly to the army?—Yes.

2569. Do they pass any examination in that case?—I think that they are admitted to Sandhurst if they have passed "moderations," and are qualified for direct commissions if they have passed the examinations for a degree; but I am not sure.

2570. From what you know of Oxford, and from what you have seen of these examinations, do you think that those men would be a desirable class to encourage?—I think so very much.

2571. Then, in fact, you would give every facility for such men coming into the army?—I would.

2572. Do you think that if they have passed their "moderations," it would be quite a sufficient test of their being prepared?—I think so.

2573. Taking the average of answers of the men at the examination for direct commissions, and comparing them with the average performances of men for matriculation at Oxford, would you say that the men for direct commissions and for Sandhurst were much lower?—I think that they are lower, but not very much. I would give the advantage to the matriculation. I am speaking of the successful candidates in each case.

2574. You do not see any objection to men coming from Oxford, though they may be somewhat older, say 20 or 21?—No; I think that their age would be an advantage.

2575. With regard to a question which was asked just now by Dr. Butler, as to the omission of history, are you of opinion that it is a distinct advantage not to examine in ancient history on account of cramming?—Yes.

2576. (*Chairman.*) I understand you to say that with respect to the admission of gentlemen from the universities, you would put the admission for a direct commission and the admission to Sandhurst upon the same footing, that is to say, you would get rid of the distinction which now exists by which a degree is required for a direct commission, and you would let the "moderation" examination do for both?—I think so.

2577. When you say that you think it very desirable to admit university men to the army both for direct commissions and for Sandhurst, have you considered the possible difficulties as regards discipline at Sandhurst in having men of such very different ages, namely, young cadets of 16 and men of 20, or 22, or 23 who have passed through their university course?—I think that the admixture of men of a more advanced age might be an advantage.

2578. Do you find that there is any difference between the instruction of candidates who come up for direct commissions and the instruction of those who come for entrance to Sandhurst?—No.

2579. They are all upon a par?—Yes.

2580. (*Lord E. Cecil.*) Do you think that it is the general mode of teaching at schools which is to be found fault with, or do you think that it is not so much the teaching as the inability which exists in schools of making boys work, or the want of incentive to them to work?—I cannot conceive that such papers as those which I have produced are owing to incapacity to learn.

2581. Then you think that there must be some fault in the teaching?—I think so.

2582. Have you any recommendations to offer upon that point in the way of teaching at schools? Can you suggest any method by which the teaching can be improved?—I think not, except that they should take more pains.

2583. I think you have said that you have no acquaintance with the teaching of schools abroad?—No; I know nothing of foreign schools.

2584. From personal observation should you say that foreigners generally are better in classics than Englishmen?—I should say generally not, but I do not know.

2585. Do you observe that the boys who come up from Scotch schools have a better acquaintance with classics than the boys who come up from English schools?—I do not know where the boys come from until I see the list of successful candidates; but in examining for the East India service I have always been very much struck with both Scotch and Irish boys.

Military examinations.

2586. They are better grounded in the classics?—Yes.

2587. In Greek as well as in Latin?—I think so. Some of the Irish boys are excellent; the Irish are always more ready in a *vivâ voce* examination. There is a school in Galway which I remember as sending up good men, and Trinity College sends up excellent men.

2588. Are the Scotch boys taught to pronounce Latin and Greek in a different way from the English boys?—I think that they pronounce it better, though with a local accent. They always give the broad A, and the Irish do the same.

2589. (*Lord Northbrook.*) Is not an Irish boy of 16 generally speaking sharper than an English boy of 16?—Yes, according to my experience.

2590. There is some difference in the race?—Yes. It is sometimes very lively work examining an Irish boy.

2591. (*Lord E. Cecil.*) Has it not always appeared to you very strange that boys who are engaged in learning two dead languages from the time that they are six or eight years old to the time when they are 16 or 18, should not be turned out better scholars than they are?—Yes, it quite amazes me.

2592. (*Lord Northbrook.*) May not it result very much from the tendency in public schools to remove a boy from one class to another before he thoroughly understands the elements of Latin and Greek?—I think that it may.

2593. (*Lt.-Col. Chesney.*) Referring to your opinion that the mixture of young men of a more advanced age at a military college with lads of 16 might be an advantage, are you speaking theoretically, or from any practical knowledge?—Not from practical knowledge of Sandhurst, but I have always thought it a good thing at Oxford when bachelors associate with undergraduates, which is somewhat a parallel case.

Admission of older candidates to Sandhurst.

2594. (*Rev. Dr. Butler.*) Is there not this difference, that bachelors are mostly men of superior attainments?—Not necessarily so.

2595. As a rule do bachelors stay up at Oxford other than those who have taken fellowships?—Yes, I have known 20 or 30 residents in a term, but as no residence is now required between the B.A. and M.A. degrees this number is probably diminished.

2596. But speaking generally, they are among the more studious men?—Yes.

2597. (*Lt.-Col. Chesney.*) But in this case of Sandhurst the older man would not have taken his examination, and would have no more standing than a lad of 16?—He would not have taken the whole of his examination.

2598. Is not your view altered by the fact that he has no standing whatever in the place, and is just in the same position in the college as the younger lad; in fact he may be actually placed under the orders of the latter?—That would place them in an awkward relation towards each other.

2599. I do not suppose that that had occurred to you?—No, it had not. I was not aware of the organization of Sandhurst. If I was acquainted with the organization at Sandhurst I might see that it was impossible. I only spoke generally of the advantage of younger and older men being mixed together.

2600. (*Rev. Dr. Butler.*) I think you have expressed yourself strongly in favour of the modern department at Cheltenham College?—Yes, as far as I know anything about it.

2601. It undoubtedly enables many men to pass for

Rev. O. Gordon.

16 July 1868.

Military examinations.

Modern departments at public schools.

Woolwich who might otherwise be less likely to pass?—I dare say that it does.

2602. Would you be prepared to recommend the establishment of a modern department at public schools generally?—I think that I should, where the school is large enough to admit of division.

2603. Do you speak in the interests of the army, or of liberal education generally?—I speak generally.

2604. You think that the education of English gentlemen generally would gain if a considerable proportion of the boys at a public school were released in fact from the study of classics, and were allowed to give their chief attention to something else?—I have found it so difficult to induce men to study the classics that I would try something else with them.

2605. Are you aware that the recent report of the Public Schools' Commission appears to take a different view?—No; I have not seen the report.

2606. (*Rev. W. C. Lake.*) The only language which it would be necessary to give up in making such a modern department is Greek, is it not?—You would not advocate the entire giving up of Latin?—For myself I would give up neither; but I have been driven to the conclusion that it may be desirable to give them up. I would not say positively about Latin; but I certainly would give up Greek. I think that anybody who has had the experience which I have had of teaching men, or endeavouring to teach them, at Christ Church, must be anxious to give them a chance of learning some other subject, for they will not learn the classics.

2607. In that point of view you perhaps found the establishment of a school of modern history at Oxford a great advantage?—Yes; I think it a very good thing.

2608. Giving men who, for whatever reason, dislike classics a scope for their talents?—Yes; and I think that more Christ Church men have, in proportion, taken honours for law and modern history than members of any college in Oxford. It shows that it suited one class of men.

2609. An opinion has been expressed that it would be extremely difficult and almost impossible for young men to come up direct from public schools for the examination for direct commissions, and for the examination for admission into Sandhurst, without the intervention of a private tutor; your remarks do not seem to point in that direction?—No; I think that they might come up direct, and that the schools ought to teach them and ought to send them up fully prepared.

2610. (*Chairman.*) And you think that that would be an advantage?—I think so.

2611. (*Brig.-Gen. Lefroy.*) Is not the value of Latin as an aid to the acquisition of some modern languages, particularly Italian and Spanish, with which military men are frequently brought into contact of sufficient use for retaining its place in military education?—I think that it is of the greatest use in that respect; and if it could be done I should be glad to see the study of it encouraged.

2612. Is it not also the case, that as long as a large part of the British army is on the shores of the Mediterranean, officers are brought much upon classical ground, and merely as a point of mental cultivation should be capable of appreciating its interests?—It would be a good thing if it were so.

The witness withdrew.

The Rev. F. W. Vinter, M.A., examined.

Rev. F. W. Vinter.

16 July 1868.

Royal Military College, Sandhurst.

2613. (*Chairman.*) You are, I believe, professor of mathematics at the Royal Military College at Sandhurst?—Yes.

2614. And you were professor at Woolwich, were you not?—I was a master at Woolwich.

2615. How long have you been professor at Sandhurst?—Ten and a half years.

2616. How long were you at Woolwich?—Seven years.

2617. Has your service been continuous?—Yes.

2618. Your experience at Woolwich is an experience of more than 10 years ago?—It extended to a time 10 years ago.

2619. As professor of mathematics at Sandhurst, you are the senior teacher of mathematics?—Yes; all are commonly called professors, but strictly speaking there is but one professor in each branch. The other teachers in mathematics are masters, and in fortification instructors; in French they are masters; a little confusion sometimes arises on that head.

Mathematical studies.

2620. As professor of mathematics have you any general control over the mathematical studies at Sandhurst?—My control, according to the regulations, is simply to give advice when called upon by the superintendent of studies with respect to the whole mathematical education, in connexion with the Council; and I believe that there is a regulation in existence by which the mathematical masters should attend to any advice which I may think it judicious to give them upon minor points. In general my practice has been, except in very minute cases, to suggest anything to the superintendent of studies, and to act intermediately through him.

2621. Are you frequently consulted as to the general arrangements of the mathematical studies?—Yes, I think that very little takes place without my knowledge. I do not say that everything which takes place has been exactly in accordance with my suggestions, but I have been consulted, and my opinion has been taken in almost all cases, and in general my opinion has been acted upon with very few exceptions.

2622. Is the instruction which is given by the mathematical masters independent of you; does each man take a different class; is the instruction of the same kind as you give, but separate from yours?—Not exactly. There are five of us. The cadets when they first come are placed under the two juniors, according, as far as possible, to their mathematical attainments. It is found, according to my experience, that the greatest amount of instruction can be imparted to a class when they are as nearly as possible of the same standard. Arrangements have varied during the 10 years that I have been at the college. At first there were some cadets there for four years, and there were others subsequently for two. After that the majority, I think, came for a year, a few going out in a year and a half. Within the last year or so the majority have stayed for a year and a half, according to the regulations which will be found in the Horse Guards' scheme. The arrangement has been that as time goes on they are promoted to senior instructors, attention being still given to the point that they should be as nearly as possible of the same degree of attainments in each class, but men of the same years, as it were, being instructed together. The result has been that I, as senior instructor, have had the best cadets of those who were going up for commissions. The majority of my class, and in some cases my entire class, has consisted of competing cadets, and I have had very little to do with any but the cadets who were competing for commissions without purchase.

Distrib... the cad... classes.

2623. Is it the practice in the mathematical studies at Sandhurst that a cadet should go on from one class to the other whether he has passed satisfactorily through the lower class or not, or do you require that he should profit by his studies in the lower class?—The classes are arranged together according to the time during which a cadet has been in the college. The first term cadets for the mathematical studies are all taught together, and the second and third term cadets are respectively taught together, with this exception, that the classes may overlap, and then an instructor may have cadets of a second term and cadets of a first term

together. Also, according to the present arrangements, the cadets of the second term, if they have passed a certain qualifying examination at the end of their first term, are allowed to compete with the third term cadets. The cadets of the first term, provided they pass a qualifying examination in certain subjects, not in mathematics, but principally military subjects, are allowed to compete in the ensuing term with second term cadets. In such case those cadets, if sufficiently qualified, would be placed in the first class, and if not sufficiently qualified they would be placed in the second class, for mathematical instruction.

2624. Then the position of the cadets in the different classes depends partly upon the length of time that they have been at the college and partly upon their attainments?—Yes; I have always urged very strongly that the efficiency of instruction and the number to be taught together depend upon their, as nearly as possible, doing the same work in the same class. Of course there is difficulty in arranging this, but from the very first the arrangement is made independently of me. I think that there has been usually some communication between the Council of Military Education and the superintendent of studies with regard to the mathematical marks gained by the cadets on entrance, and according to those marks they are arranged in the two junior classes; and this plan goes on successively through the whole course, but after each half year they are placed in classes of instructors senior to those who had them before. The consequence is that in the senior class of all the mathematical professor has the most advanced cadets. There is this little exception to be made to what I am saying, in order to be quite strict, namely, that there was a little difference last year, in consequence of the striking off one mathematical and one language master, in arranging the cadets in six classes; and they were obliged to call up one instructor to teach French when the mathematics were going on, and one instructor to teach mathematics to the sixth class when the other five were doing French in each company. This is an exception which has little reference to the general classification, but still I wish to be quite accurate.

2625. Is your mode of instruction in the character of lectures, or is it in the character of individual instruction?—It is very difficult to teach mathematics simply by lecture. I have taught three or four of the advanced cadets together, and have combined questioning with lecture, especially upon the practical part of mechanics. I have also a small room with models in it, in which they receive an illustration of the theoretical work in which they are instructed. But I have found from experience that it is impossible to teach by lecture alone. Supposing that I put three cadets together, who are as nearly as possible in the same stage, I should find in a few days that one would get behind the others, and that one would get ahead; it would be unfair to the one who was ahead to keep him back, and it would be unfair to the one who was behind to push him on, because he would be at a loss. Mathematics are so peculiar in many parts of the instruction they require, that the loss of one single lesson, even through illness, would make a break. But still I do manage to teach, especially some of the practical parts of mechanics, partially by lecture, and by writing out just what I think best for those who are under me. What I say in lecture in a familiar way is copied. But I am obliged to alter my plan in some measure every half year, as the cadets vary so much in ability and proficiency.

2626. You suit your course very naturally to the attainments of the young men whom you have to instruct?—I am obliged to do that, except that I am obliged to send up a fixed course to the examiner in mathematics, and the marks are arranged according to the scheme by which one subject tallies with another. There are so many marks for the compulsory part of mathematics, and so many for the voluntary part; and there are so many marks for the compulsory part of fortification, and so many for the voluntary part, and so on; so that, taking the whole course, whether the cadets have done it or not, they have questions set in it. We do the best we can; but in general I have one or two cadets who can complete the whole; I do not say always satisfactorily. I consider that my third section course of practical mechanics and hydrostatics to a cadet of fair ability who knew nothing of it would take him a year. Each cadet at present has four hours and a half weekly of mathematical instruction in the first part of the term, and six hours weekly at the latter part of the term.

2627. You say that your third section course would take him a year?—Yes, if he knew nothing of it before.

2628. What time is now allotted to it?—In the voluntary part we take them as far as we can in the time at our disposal, our object being not to let them do more than they can do well.

2629. Are you able to give the Commission any information as to the state of preparation in mathematics, including arithmetic, in which the cadets come up to the college?—Your question will naturally bear on some remarks which I wish to make, but not entirely. I am desirous to give you every information consistently with my duty to the authorities. With Sir Duncan Cameron present I feel rather in a peculiar position; I feel that, as a subordinate officer in the Royal Military College, I may be asked questions here which I should hesitate to answer.

(*Sir D. A. Cameron.*) You may speak as openly as you like; you must give every information to the Commission without respect of persons.

Mathematical knowledge possessed by the cadets on their admission.

2630. (*Chairman.*) What is the amount of instruction with which cadets come up to the college?—It is important to observe the peculiar character of the acquirements of the cadets who have been admitted of late years to the Royal Military College as regards their mathematical instruction. At entrance the senior cadets and those most advanced in mathematics have, in the great majority of cases, been those who have tried also for Woolwich and have failed. Many have frequently gone into the examinations for admission to both colleges within a month, and on passing for Woolwich have declined their admission to Sandhurst. Consequently we find that those who have read most in passing into Sandhurst are very often those who have failed for Woolwich through the superficial character of their reading; and in such cases we work them up, as it were, from the very beginning of their course. The most satisfactory pupils whom we have are those who come up with some ability and a moderate but sound foundation. There are generally several instances of such cadets every half-year, who make rapid progress, and stand even first in mathematics at the final examination, as was the case last time. Our first man at the last examination in mathematics was one who had gained good marks at entrance, in a small extent of course, but he had learnt the greater part of his work in the college; he was breaking new ground, as it were, till within a few days of the examination. The second and third men had I believe tried for Woolwich and had failed. In saying this, I am not quite certain that the first man had not tried for Woolwich, all I know is that he had not read very much when he came. He may have tried, but I know that the second and the third did try; I am speaking of the second and the third in the mathematical examination, and not in the general list. The second and third had read much and widely before admission; but they were inferior in ability to the first man, who, as it were, emerged from obscurity during his college course. I could mention many others during the whole course of time I have been at Sandhurst who have made very satisfactory progress in their work, but who knew little when they came. The great difficulty is to persuade those who have read loosely and largely to be satisfied with taking up a shorter course even than that to which our limits extend, and to induce them to confine their attention to a limited portion of our course according to their capacities, so as to do

Rev. F. W. Vinter.

16 July 1868.

Royal Military College, Sandhurst.

it as thoroughly as possible. From what I have said it will not be surprising to hear that we are most sensibly affected, as regards the qualification of our mathematical students, by the number admitted to Woolwich on each occasion. I have been very much struck by its effect upon us. If 40 are admitted to Woolwich we get manifestly better men at the top than if 56 are admitted, as has been the case lately. Hence it will be seen that the examiners themselves can form no correct notion of the progress made by the cadets during their mathematical career in the college by comparing the examinations at entrance and at passing out, because many whom they examine for admission to Sandhurst, the best indeed, never appear at Sandhurst. Some even, I am told, undergo examinations merely for the sake of experience in their examination work without ever intending to go to Woolwich or to Sandhurst at all. Competing cadets work very hard; many do, somehow or other, much work out of study, especially the best men. They work in the hall in such parts as require most assistance, and out of study they do whatever they can do best by themselves; but we have no authority to require them to do any work out of study, or even to suggest it. At the same time I have always professed myself most willing to give every assistance in my power to those who wish to work out of study as well as in study, I mean by way of guidance, I do not mean that I am myself to teach out of study or to take the control over them, but simply to guide them as to what they should do, and to give them questions or notes of any kind. My answer so far relates to the best cadets. Now the point of arithmetic is rather a difficult point. I was placed by the examiner in rather a peculiar position on the last occasion. The examiner's report, which I dare say has been read to you, was to the following effect: The first section is the obligatory part, and in the first section work only 30 cadets got half marks. I am speaking from memory; I really cannot be certain about his precise words. The examiner said, in substance, that more than this might have been expected, seeing that they had an examination for admission and that the questions were of a direct nature. That was the first part of his report, on which I felt bound, for reasons which I will explain, to take exception. The cadets have an examination for admission, and we might naturally suppose that they knew arithmetic when they came, and the junior instructors have very often imagined that it was not essential to teach them arithmetic, and that they could not be required to teach them arithmetic; and I think that in some cases some of the authorities have at times said the same thing to me, but merely as a matter of conversation; but before the cadets have been a fortnight or three weeks in the college a complaint very frequently arises from the fortification instructors (I shall be borne out in what I say by the superintendent of studies) that they are deficient in certain parts of arithmetic which the instructors consider of importance, and to which they request our attention; that they are bad in decimals, and even in the rule of three. This has not been done once, but it has been done frequently, and I think that every superintendent of studies must have had the same thing brought before him. Now I have always felt that those representations must be taken as it were *cum grano salis*. A cadet may be puzzled by the way in which a question is put to him, perhaps it was put too hastily, and the cadet did not really see what was meant. However, I have always urged on my colleagues that they should assume that the cadets knew nothing when they came, until they had found out by personal examination that they did know something; that they should not assume that they knew arithmetic until they had proved it; and if the cadets did not know arithmetic I thought that they were bound to teach it; when, therefore, the examiner complained that more might have been expected, in consequence of their examination on admission, I felt from what I have always insisted, both in my conversation with the superintendent of studies, and with regard to my colleagues, that some representation should be made, and that I was in duty to them bound to represent the case, and I have represented the fact, not that my colleagues found the cadets bad in arithmetic, but that the fortification instructors found them bad in certain parts of arithmetic when they came, and that we were obliged to begin from the very beginning; and for that reason I thought that it was unfair in the examiner (however little he may have been aware of it) to refer to the examination which the cadets had had on admission as a reason for expecting more. This I think is a sufficient answer to your question with regard to the proficiency of the cadets in arithmetic on admission.

Privat

2631. You alluded just now to the work out of study, is it your opinion that that should be more encouraged than it is?—I should be glad for the cadets to have every opportunity of working out of study, but I think that it might be fairly left to themselves; they ought to know their own interests well enough. To have every opportunity of working out of study, if they wished it, would be a great thing for them.

2632. How could that opportunity be afforded more largely than it is at present?—I am not sufficiently aware of what the arrangements are to be able very well to answer that question. I think that some cadets are in separate rooms.

2633. But your general impression is that there is not so much opportunity for private study, as would be desirable for those cadets who might be inclined to give themselves to it?—They seem to be able to find opportunities, but my impression is that they have not the opportunities which they should have, because it was never contemplated. The arrangements made are on the supposition that no work should be done out of study, but at present I think that fully half of my pupils take books out of the hall to study privately.

Course themati taught College

2634. Have you any suggestions to make for the improvement of the course of mathematical study at Sandhurst?—My scheme has been rather a varied one from the very beginning, but the present scheme has been in operation for four or five years; it has been drawn up according to the suggestions of the Council of Military Education, and I think that Canon Moseley took special interest in it. Under present circumstances, I do not know that I could suggest any different scheme on the whole for the present class of cadets than that upon which they have been studying. It has been altered lately in the first section in a very important point, that is, with regard to the introduction of a great deal of logarithmic work bearing on the solution of simple cases of triangles, and easy questions of heights and distances, and the application of logarithms to the principal formulæ of mensuration. All this has been lately included in the first section, and makes the work somewhat harder; and of course it makes it more difficult to get a fourth of the marks. It was thought desirable by the Council of Military Education and others that every cadet should have some knowledge of logarithmic work and its application to simple cases.

2635. Was that change accompanied by the omission of any part of the previous course?—There was an omission, but hardly an equivalent one, of the fifth and sixth books of Euclid, the fifth book being taught, not as it is in Euclid, but taught after the algebraical mode according to a tract which I have drawn up, and there was the omission of quadratic equations; what was omitted was transferred to the second section of the course.

2636. Therefore you think that the effect was to make the course somewhat harder?—Yes, but I think that it was a beneficial change, because I think that some cadets who would never have learnt the fifth and sixth books of Euclid and quadratic equations, have willingly learnt the logarithmic work.

2637. I suppose that they have obtained some in-

struction previously in the measuring of heights and distances?—Yes, I think so, that is, in the instrumental part. The cadets would have had to solve triangles by formulæ without understanding them; to this I rather objected, and I adopted a plan which has been embodied in a pamphlet, by which the cadets can divide every triangle into two right-angled triangles, and solving each if necessary, by passing from one to the other can obtain a solution of any triangle from any of the usual data. This was necessary in order that the numerical solution of triangles might be within the reach of *every* cadet.

2638. Is there any instruction in trigonometry?—The instructions which I received from the Council from the very first were as far as possible to confine my instruction to those parts which had a practical bearing upon the future of the cadets, and which would be of use to them, consequently the theoretical parts of trigonometry are only such parts as lead to the fundamental formulæ and mensuration. In the same way with more advanced algebra, they only learn such parts as afterwards have a bearing upon the course which is practically useful. These are comprised in the second section of the course.

2639. Then is the principle upon which your mathematical instruction is given, that it should be such as has a direct bearing upon practical duties connected with the military profession?—Of course, from mixing with and seeing so much of military matters I have a very good idea of what is useful, but I do not profess to say that I, on my own authority, have decided what is practically useful and what is not. At the same time, everything which has been done, has been done with the full knowledge of and in communication with the Council of Military Education.

2640. Do you believe that the object of the course is to teach as much of mathematics as will be of use to an officer in the practical part of his profession?—Decidedly. I have been very much pleased on two or three occasions at finding old pupils of mine from Sandhurst writing to me with regard to mathematical questions concerning military subjects. In several cases it has been with reference to the preparation for the Staff College, but in other cases it has been purely from the continuance of their mathematical studies.

2641. I believe that some alteration has been recently made in the position of the professors as regards discipline?—Yes, we have greater powers; we had no power at all before out of study, we had no authority, but now we have the power in a serious case, if we meet a cadet who is seriously misconducting himself, of sending him home under arrest.

2642. You have also, I believe, the power of sending a cadet out of the hall of study in arrest?—Yes, we have the power of putting him in arrest ourselves.

2643. Do you consider that alteration advantageous?—I think so. The improvement made is great in that respect. I urged that the civilians should have the same power as it was proposed to give the military professors in study, because I thought that we should be placed in a very false position if the military instructors acquired greater authority than the civilians, especially as they might be presumed to have greater natural authority; the regulations apply to both, and any instructor in his discretion can at once place a cadet in arrest. I should, however, mention that my cadets on the whole are well behaved in study. I think that I have on some occasions passed a whole year without reporting.

2644. Do you think that it would be desirable to extend the disciplinary powers of the professors, or not?—I think that there is always a fear of junior instructors not using proper discretion, if they had greater powers they might use them injudiciously. I hardly feel able to express a decided opinion upon the subject.

2645. Has the power of placing a cadet in arrest for misconduct out of study ever been exercised by any of the professors since it was given to them?—I cannot state positively, but a cadet was sent away upon some evidence, I think, for going into a public house.

2646. If you yourself saw a cadet entering a forbidden house, would you feel it your duty to report the circumstance?—I should not feel at liberty to act the spy upon him, or to wait for him to come out. I should not feel justified in doing so. If I knew and saw who it was, I should feel myself bound to report him; in fact, I am under positive orders to do so.

2647. Have you any further suggestions to make to the Commission, either as regards the studies or as regards the discipline of the college?—I have a suggestion to make, but I do not know whether it properly comes within the scope of the inquiry of the Commission or not; it is with regard to the mathematical instruction. It appears to me that the best arrangement which could be made for the mathematical instruction at such an institution as Sandhurst in its present state, in which a portion of the cadets are competing for commissions without purchase, and the remainder are merely passing a qualifying course, would be the following: that a cadet should be allowed to go up for his minimum course at the end of the second term, and that if found qualified, he should then be relieved from the necessity of attending for further study in mathematics, unless he was competing for a commission without purchase. We should then have more willing workers among the cadets of moderate ability, who would probably be glad to have their mathematical studies terminated, and would work harder in consequence during their first and second terms; and we should also be able to give better attention to the competing cadets, as they would thus be separated from the others, who not having the same interest in their work are likely to interrupt those who are anxious to make progress. The difficulty which I believe may stand in the way of the adoption of such a scheme is the not having employment for those cadets who would thus be relieved from mathematical study before their college course terminated. It is not possible for me to point out in what way their time might be otherwise occupied, whether in some other study or in military exercises; but I think that the great object should be to give every opportunity, to those competing cadets who are able and willing to benefit by the mathematical course, of gaining as much instruction as possible. This distinction would be similar to the distinction between the honour and the poll men at the university. They might be plucked after a stated time, if deficient in their minimum course, as at college, and allowed to try again; and possibly under such circumstances the minimum might be made a little more stringent.

Idleness.

2648. It may be gathered from the evidence which has been given before us, and from the facts which I think you have mentioned, that at an early period the cadets become aware whether they are likely to obtain commissions without purchase or not, and that a large proportion of the whole body are early conscious that they will not obtain that which is the prize at the college, and therefore, that a great number of them may be classed as idlers. Is that consistent with your experience?—Quite so, as regards mathematics. I should say so with regard to any study, because after they have got to a certain extent they will not be inclined to study a subject which is distasteful to them.

2649. Is there any express punishment at the college for idleness?—The instructors theoretically can report cadets for idleness if they please, and I believe that if they did report them notice would be taken of it; but I know so little about the punishments which are given in those cases that I am not able to answer the question. I believe impositions have been given recently.

2650. Have you yourself no power of inflicting any punishment for idleness?—Of late the impression generally in the college has been that the cadets at their age ought to know their own interests sufficiently well without punishment. In a case of ex-

Rev. F. W. Vinter.

Royal Military College, Sandhurst.

treme idleness I should probably talk to the cadet; or in any case where I saw that a cadet had ability and did not work, I should talk to him privately and should urge him to study; that has been constantly my practice. I have asked such a cadet whether he was not anxious to get his commission without purchase, and I have tried to induce him to work.

2651. Have you found that that has had a good effect?—In some cases it has. I believe that in many cases a great deal more may be done by persuasion and tact with youths of that age than is generally imagined.

2652. Do you make it your practice to speak to them in that friendly way?—I do with regard to unsteadiness and offences of a minor kind. If I saw a young man of 20 or 21 conducting himself foolishly, I should have some regard for his self-respect, and I would not report him without some private admonition. I had private pupils at Cambridge of that age, after taking my degree, and from an experience there of three or four years I know what the general tone and feeling of young men of that age, who have been educated as gentlemen, ought to be, and in some cases where I have warned cadets that I must report them, stating at the time, which I always do, if they have been previously warned, they have, without any solicitation on my part, given me their honour. I never make a point of soliciting that they should give me their honour, but if they do so voluntarily, I accept it, and I have scarcely ever found them break it. I am speaking of the better class of cadets, the competing cadets, and I have observed that they have a respect for their word, and if they have been inclined to break it, a suggestion of what they have said has been generally sufficient.

2653. Is there any parallel between the relative position of yourself and the cadets under your instruction, and the relative position of a college tutor and his pupils?—To some extent there is; a college private tutor only sees his pupils for instruction.

2654. Do you consider that you exercise any moral influence over the cadets under your instruction?—I feel that this is a delicate question to answer, but as a clergyman I hope that I have been of some use. I have on a few occasions heard something like an oath at a distance, and in those cases, if it was audible, I have at once asked the question publicly, and then perhaps there has been an evasion and a representation that it was not so; but in cases both where I have only suspected it, and especially when it has happened, I have told the cadet in study that I would speak to him afterwards, and I have spoken to him privately afterwards. I have said, "If I report you for "it, it will be a very serious offence, and will damage "you very much. I do not know whether I ought "not to do so, but if ever I hear it again I must do "so." Perhaps he says that it was not the case, and then I say, "Very well, I believe you;" but in another case perhaps he will say, "I am very sorry, and it "shall not happen again;" and I do not think that it ever has in such cases happened again.

Method and course of mathematical instruction.

2655. (*Lord E. Cecil.*) You have said, I think, that it is very difficult to teach mathematics by lecture; is it your opinion that abstruse problems can be worked out in a crowded hall of study?—A problem is not abstruse to a cadet who has gone up to a certain point, and is prepared to understand it. I find no difficulty in carrying out the instruction in the hall of study. My classes are not very large. I think that last term I had three classes, one in each company, and there were only 13 or 14 cadets in each.

2656. Would it not be much easier to a cadet to work out certain problems in mathematics in private rather than in public?—As a matter of instruction, experience shows me that you may teach a cadet too much as well as too little. My idea is to get him to a certain point, and that then he shall go on by himself, as far as he can, but scarcely two cadets are alike.

2657. Is the concentration of thought, which is necessary to work out a difficult problem, as easy to a cadet in a public hall of study as it would be in private?—I do not think that our halls are over-crowded; I have never found any difficulty. But I think the cadets should have every opportunity for private study.

2658. If that concentration of thought which is necessary for mathematical studies is impossible in public, it of course becomes a great argument for private study?—Yes; but the advantage in the teaching room is that the assistance of the instructor is at hand.

2659. Do you see any reason why higher mathematics should be taught at all at Sandhurst?—I think that the reason is what I have already mentioned, namely, that there are officers in the line and in the cavalry regiments who take advantage of it afterwards, and if you do not teach it you must come to the conclusion that there will not be any officers in the line and in the cavalry, or scarcely any, who will be proficient mathematicians; you will cut off the higher branches of mathematics from all except the artillery and the engineers.

2660. You do not think it necessary for their professional study?—I should decidedly say that what I consider the highest stage at Sandhurst is necessary.

2661. Is it necessary for the duties of an infantry or a cavalry officer?—Not for his duties, but for understanding questions of a high character. It is not possible that many should be carried to that point, but I think that the small number who are capable of it should be encouraged in it just as in the case of languages.

2662. Would not the higher mathematics rather be of use for the scientific corps, or for the Staff College?—What we read is a good preparation for the Staff College.

2663. And it would be practically useful for a staff officer, or for an officer of artillery, or of the engineers?—I think that we are not high enough for that purpose; we do not introduce the differential calculus at all. I have avoided that because if we began it, it would be introducing a great deal of theoretical work which the cadets would never learn sufficiently well to be able to apply it in practice. Therefore the object of my course, in concurrence with the Council of Military Education, who coincide with my views (or they might be their views originally), is to introduce as much mechanical work of a practical kind as can be done without the use of the calculus, which is a very great deal more than is usually imagined.

2664. You think that the amount of mathematics acquired by a cadet at Sandhurst who receives his commission without purchase would not be sufficient for the duties of an artillery officer?—Not such as is generally supposed to be desirable for an artillery officer; but I must mention that during the pressure of the Crimean war, when I was at Woolwich, many officers entered the artillery without a much greater extent of progress than our best cadets now attain to.

2665. I believe that you were for some time at Woolwich as a professor?—Yes.

2666. Do you know whether the salaries of the non-military professors at Sandhurst are as high as those at Woolwich?—No; my own is not. The professor of mathematics at Woolwich receives a higher salary than I do. I however think that there has been an assimilation between the Colleges.

2667. Do you think that the salaries of non-military professors at Sandhurst are very low?—They were arranged originally on a different scale; but Woolwich and Sandhurst seem latterly to be assuming an equality with each other as opportunity offers. The salaries are low as compared with public schools.

Control exercised by the professor of mathematics over the course of instruction.

2668. (*Lord Northbrook.*) Will you be kind enough to state precisely what authority, if any, the professor has over the mathematical masters?—I believe that virtually, at the present time, he has no authority except what he can gain by his personal influence; but if he manages well they will listen to any suggestions which he makes; but as a general rule I have found it the best plan, in important cases, to suggest anything which I thought proper to the superintendent

of studies, or, if necessary, to the Council of Military Education through him. In minor cases I have merely, in common conversation, and not of authority, told the masters that I thought this or that should be done. I, however, feel that I have very little power as professor. I have never urged it much, but on one or two occasions I have wished that I had a little more power; but a difficulty has arisen as to whether power should be given to one without being given to all, and it has been thought that there might be branches in which more power could not be entrusted with advantage. I am only giving the sense of an answer which I once received.

2669. If it should be your opinion that any master was incompetent, or habitually careless in instructing the cadets, what should you do?—I should have no power whatever.

2670. Would you consider that that was not a point upon which you could offer any suggestion?—Not until I was asked; I should consider that the superintendent of studies was quite competent to ask me, and if he thought proper to ask me, he would have my opinion to the best of my ability.

2671. Do you ever communicate with the commandant upon the question of instruction?—No, unless the superintendent of studies is absent, and if he were absent (which he has scarcely ever been) the commandant would I think be acting *ex officio*.

2672. Have you ever had any official communication with the Council of Military Education?—Soon after I went to Sandhurst they requested the professors not to communicate directly with them, and I have never done so, excepting once or twice. In consequence of letters which I have received from them, I have written to them again, but not very often. I have written once or twice to Canon Moseley.

2673. If you make a suggestion to the superintendent of studies upon any subject, do you receive a written answer?—Yes; if I wrote I should get a written answer.

2674. Have you ever done so?—Yes, in scores of instances.

2675. Do you know whether your letters or questions are referred to the Council before giving you an answer, or not?—As a general rule, when I have thought it necessary to refer to the Council he has done so. I have had no reason to complain—my suggestions have generally been attended to.

2676. Have you ever made a suggestion that it would be advisable that the professor of mathematics should have some general authority and control over the educational course in mathematics at the college; I mean that he should be responsible that the masters of mathematics upon the whole perform their duty?—No; because I would not undertake that amount of responsibility without a much higher salary than I have at present. I consider that if there is greater responsibility there ought to be much greater pay.

2677. Putting the question of salary aside, do you think that it would be advisable that the professor should have that authority?—I think that if, as the Council appear to have done, they try to select the best men for their professorships, they should have the fullest confidence in them, and should make them responsible, but there should be that understanding from the first. I do not think that you can expect a man to accept responsibility unless it is clearly made known to him from the beginning.

2678. I see that the salaries of the professors and masters at Sandhurst are very considerably lower than those of the professors and masters at Woolwich. For example, your salary, I see by this estimate, is 450*l.* a year?—Yes; my salary rises.

2679. And the salaries of the masters are from 200*l.* to 300*l.* a year, whereas at Woolwich the salary of the professor is 550*l.* a year, and of the mathematical masters 455*l.* a year; therefore the salaries at Sandhurst are considerably lower than the salaries at Woolwich?—Yes; but that admits of explanation. The salaries of the masters at Woolwich and of the masters at Sandhurst (but not the Professor's salary) are exactly on the same scale, because they depend upon the length of service; they begin at 200*l.* and rise every five years until they are 400*l.*; they have been gradually adjusted to the same scale. My salary rises by another 50*l.* to be 500*l.* When I was at Woolwich, I understood the salary of the professor rose from 500*l.* to 650*l.*

2680. Touching the question of salary and the duties of the professors and masters, do you consider that the professors and the masters at Sandhurst have enough to do?—They are liable to 24 hours a week, that is, four hours a day, and some of them have had that lately. I myself have not had quite so much. Latterly my time has been about 18 hours a week; but in addition to that you must remember that, since the studies are only an hour and a half each, if we have three studies a day we have usually to go up and down three times a day from our houses, and at present there is much work besides the study work. Every cadet is examined twice every half year in all his mathematical work as well as at the end of the term.

2681. Do you think that the masters have as much as they can possibly do?—If you made them teach a class more than four hours a day, I do not think that they could stand it. There is a great deal of nervous tension, and it would, I think, often injure a man's health if he had more.

Method of study.

2682. I understand you to say that you have no authority to require the cadets to work out of hours?—No, but if the cadets ask me, I do the utmost for them. The original regulations which have been handed down from generation to generation, are that all the work is done in study; and formerly I believe that a cadet might get punished if he worked out of study.

2683. Do you think that that is a wise mode of teaching mathematics to any man?—No, but under the present regulations, I think that we get as much out of the cadets as we can. The wisdom of the regulation will depend upon whether we can by any change of arrangements get any more out of the working cadets than we do. I do not believe that we can. They are allowed to work out of study now.

2684. At any rate to require the cadets to prepare work out of study would cause a very great diminution in the work of the masters?—Yes, but the cadets who work want so much assistance in mathematics that many cannot do much out of study except Euclid.

2685. Do you know that at the universities such a course is carried out?—I know of no place where students do more work, when not under the eye of the master; but, on the other hand, there is an immense amount of idleness at the universities.

2686. Can you name any place where it is thought necessary to have a young man constantly under the eye of his master, when he is preparing for lectures?—I know of no place, but it depends upon the nature of the institution itself. I do not advocate the present plan, but I do not think that it is working badly with the competing cadets, and if we trusted to the cadets working alone, we should not get work out of them; and the cadets may work privately.

2687. Surely idle cadets might be dismissed?—That is more a question for others than for myself.

Mathematical attainments of the cadets on leaving Sandhurst.

2688. Coming to the question of the amount of knowledge which the cadets possess when they leave Sandhurst, you have said that the knowledge of most of those who get commissions without purchase is very fair?—Yes, but I must add that it varies very much; sometimes I have but one or two who get through the whole course, sometimes I have three or our who are prepared perhaps to take fairly the examination in the whole course.

2689. What is your opinion of the knowledge in mathematics of, say, the lower 20 or 30 cadets who pass out obtaining the minimum number of marks, and therefore getting commissions by purchase?—The question is answered by saying that they get one fourth marks in our first section paper, and I suppose rather more.

2690. Is the first section confined to an obligatory

Rev. F. W. Vinter.

16 July 1868.

Royal Military College, Sandhurst.

course?—Yes, the first section is confined to the obligatory course.

2691. The examination for the first section in which they have to obtain a fourth of the total number of marks is in "arithmetic, algebra, up to simple "equations, Euclid (four books), use of logarithmic "tables, elementary problems in heights and distances, "and mensuration?"—Exactly so.

2692. What amount of knowledge does a fourth of the marks in that paper show?—Anybody can judge of it from knowing the extent of the course.

2693. It would depend upon whether a knowledge up to the four books of Euclid would enable a cadet to obtain a fourth of the marks?—I cannot speak authoritatively upon that point, but the examiner would know.

2694. You cannot give us, excepting by reference to the number of marks, any general idea of the mathematical knowledge which is gained by cadets who get commissions from Sandhurst by purchase?—I do not suppose that there are any two cadets alike; some have a dislike to Euclid, and then they trust to get their fourth of the marks without it; others perhaps will break down in algebra, and others perhaps will get more than one-fourth by help of the logarithmic work. There is no doubt that the last 30 got more than one-fourth, though they did not get one-half.

2695. Do you think that that represents any useful amount of mathematical knowledge?—Yes, undoubtedly, because they are induced to learn the latter part of the first section.

2696. You think that the latter part is very necessary?—Yes, and it is very badly taught in schools, and the examiners even for admission to Woolwich have complained over and over again of the deficiency in logarithmic work. I represented the great deficiency at Woolwich of the logarithmic work when the cadets admitted by competition first came under me at Woolwich; that is 11 years ago, and in consequence of that a note was for several years appended with an asterisk at the foot of the syllabus for admission to Woolwich that a searching investigation would be made as to the proficiency in logarithms and other work bearing upon that subject; and I see still that Mr. Griffin, in a late report (January 1867) of the examination for admission to Woolwich, complains of the numerical work in trigonometry and logarithms of the candidates generally for Woolwich.

Discipline.

2697. It has been suggested that the professors and masters should also have the charge of the cadets in respect of discipline, do you think that that would be a good thing?—No: because I think that it might interfere so much with the military arrangements as to lead to confusion.

2698. To what military arrangements do you refer?—To the drilling and military exercises of all kinds, which are pure military affairs.

2699. You would think that the civil professors should not have anything to do with the military discipline of the college?—I have sometimes thought, without wishing to be in any way responsible, or in any way to have any authority, that I could have been of use, if empowered just to have made a suggestion to those in authority without presuming too much.

2700. Would you consider that it would be so completely out of your province that you would now dislike to make any suggestion upon discipline?—I think that as a general rule in all official establishments, especially under Government, the duty of every one is to do his own work faithfully, and not to allow others to interfere with him to prevent it, and not to interfere with others out of his proper sphere.

2701. What is there essentially different between the young men who go to Sandhurst, and the young men who go to the universities, which would prevent civilians having the same control over the discipline of the young men at Sandhurst as they have at the universities?—There is nothing very different, except that I rather fear that the army is sometimes treated as a refuge for those who are fit for nothing else, and that we have often five or six cadets at Sandhurst who are fit for nothing, and that if we could knock them off, we should be better circumstanced, and the tone of the place would be improved.

2702. You think that if the authorities could get rid of those who misconduct themselves the College would go on very fairly?—I think so, if we could get rid of serious offenders quietly. The way in which it is done at Cambridge is that the matter is brought before the master and senior fellows of the College, and the offender is removed as quietly as possible.

2703. That constantly happens at the universities, in the case of young men who have committed no particular offence, but whose whole course of conduct shows that they are going wrong?—This may be done by correspondence of tutors with their friends, and requesting them to remove the young men, but I do not think that the universities themselves would usually send the young men down, except for a definite offence. There are certain offences which a young man at a university might commit, for which, if found out, he would expect, as a matter of course, to be sent down, but this is done so quietly that scarcely anybody knows it until he is gone.

2704. (*Lt.-Col. Chesney.*) The difficulty which you have mentioned, with regard to combining the teaching and the discipline under the civil professors, surely would not apply to the military professors?—It would not apply, unless it were supposed to give them too much work to do. But I scarcely feel able to give an opinion.

2705. Would it not a good deal facilitate their work in college if there was a proper system by which the cadets kept order over themselves in class?—That is a point which I was going to mention. It has always struck me that the corporals and under officers at Sandhurst have not that authority which they have at Woolwich. The case at Woolwich when I was there was this: I am speaking now of the under officers and corporals, and the apparent authority which they had over the other cadets. At Woolwich if anything happened in a room where there was a responsible corporal or under officer, and if he could not give an account of it, he bore the whole blame, and he was punished most seriously; consequently these under officers had an amount of power over the others which could not be gained in any other way; the cadets, as a general rule, obeyed them immediately, because they knew that they were responsible. During my time there were some very severe cases of that sort in which well-conducted youths in other respects suffered. I can mention the case of a son of a general officer who lived very near me, that young man was a corporal, and he was within six months of getting his commission, but because there was something wrong in his room, this cadet, who as far as I understood it from all that I learnt at the time (I was not officially connected with it), was perfectly innocent himself, yet because he was not aware of the offender, or had not given him up, was rusticated for six months, and it was supposed that he was thrown back in his examination work through it.

2706. In short, you would say that the corporals at Sandhurst have not sufficient responsibility or sufficient power?—If they were made more responsible, I think that they would have the power, but not being responsible, the cadets do not give them the power.

2707. Are you personally acquainted with the system of teaching at Cambridge?—Yes, I was for four years a private tutor there, and had a number of private pupils, and was also a fellow and examiner in my college.

2708. Have not the mathematical masters at Sandhurst, to a certain extent, to do the same work as the college tutor and the private tutor at Cambridge combined?—The fact is, that at Cambridge the work is chiefly done by the private tutors. When I was there, the college tutors, as regarded each individual, did very little.

2709. At Sandhurst the place of the private tutor is supplied by the mathematical master, so far as it

is supplied at all?—Exactly so; as well as the place of the college tutor.

2710. Considering the varied nature of the course at Sandhurst, is it not your opinion that even three terms are rather a short time?—I think that we never got on so well, and had such a satisfactory set of cadets, as when they were there for two years; there was an *esprit de corps* among them. The great want in the place is a sort of *esprit de corps*. I think that if they were there for two years it would be a proper time, and that if it was increased it would even be better. I have had 15 cadets in my class who have behaved as well in the room during study as if they were in my drawing room, that was some three or four years ago. At present I have no great complaint to find with the cadets in study. Out of three companies of competing cadets, who have been under me during last term, I have not had occasion to report in more than one company, but I have had to put the same cadet in arrest twice and to make other reports two or three times in that company; that company was one in which I had not made a report for a year and a half previously.

2711. (*Brig.-Gen. Lefroy.*) I suppose that by *esprit de corps* you mean that species of warm attachment and pride in the place which an Eton boy takes in Eton, and a Rugby boy takes in Rugby?—I think so.

2712. Does not that very much depend upon the antiquity of the place of education, its hereditary character in families, and various historical associations, which you cannot easily centre about a military school?—I think that they do centre about a military school to some extent. It has often come under my knowledge that fathers have sent their sons to the place because they were there before them, and have even requested that they should be of the same number in the company which they were themselves.

2713. Has anything been done at Sandhurst to increase the reasons which the cadets have for taking a pride in the place, by decoration and assembling objects of historical interest there? Is there anything at Sandhurst which is calculated to attract and interest the attention of young men, and which they can take a pride in showing to their friends?—In the entrance hall I think that there is a list of the names of cadets who have distinguished themselves, but I do not know in what way they have distinguished themselves, whether it is as officers afterwards or at college.

2714. Still within these few years there has been at Eton, and at Harrow, and at Rugby, a very great outlay on what may be called pure æsthetic decoration; the Eton chapel has been highly decorated with memorials of Eton boys, and the same has been done at other schools. Has anything of that kind been done at Sandhurst?—Not in that way; it has been endeavoured to do every thing possible to give the cadets recreation during their recreation hours in what was supposed to be of an innocent character, and to take them from what has not been innocent, but I do not think that is exactly the way which you mean.

2715. Would there be any practical difficulty in the professors of each branch hearing all the classes once a month, as is the practice of the head-masters at public schools, to judge personally of their progress, and to call the attention of their immediate instructors to deficiencies?—That is a difficult question to answer at once, and it is one which the superintendent of studies could answer more precisely than I can, because at present I should have to leave my own class to go to another.

2716. Do you make at Sandhurst any extensive use of special books of instruction in mathematics, or do you use the books which are common to other schools?—As time went on I found myself reduced to adopt a plan of this kind; of course, every cadet on joining had learnt something of arithmetic and something of algebra. In these subjects we have fixed class books, which the cadets can buy if they please at the college; but if they have learnt out of any other we never force them to use our class books. In the same way there are certain fixed books for other portions of mathematical study which are not peculiar to the college; these books are recognized as college books, which can be purchased by the cadets. We, however, do not compel them to use them if they have been accustomed to any other books, unless we deem it necessary. The only exception to that is, perhaps, in mechanics; we use the Staff College work on mechanics. I cannot say that I entirely use it, because I also teach this by lecture and from my own notes; but we take it as our guide, and use the examples in it. But there are some books which are peculiar to Sandhurst, namely, the tract on practical trigonometry which is considered essential, and which it has been thought desirable that every cadet should learn in his minimum course. I have drawn up this, as I said before, at the desire of the council. There was also no simple treatise in mensuration exactly adapted to the cadets. I originally drew up a manuscript which they copied, but the council ordered it to be printed; it is, however, merely printed for the use of the cadets.

2717. At all events there is no course of mathematics, such as formerly existed at Woolwich, which is stereotyped, and which goes on from generation to generation?—Those courses do not seem to go on from generation to generation; it is always found that some parts require improvement. I think that it is desirable that our course should be elastic, in order to meet the capabilities of cadets as they come to us, especially as we have been subject to so many changes, sometimes having cadets with us for a year and a half, and sometimes for only a year, and sometimes for two years, and at one time for four years, and sometimes each cadet having 14 hours weekly for mathematics, and afterwards 10 hours, and then 8 or 9, and at present only having from $4\frac{1}{2}$ to 6 hours a week for mathematics.

2718. Is it not also very desirable that young men receiving a military education should be able to carry on a like progress with that of their contemporaries, who are preparing for other professions, by using as much as possible the same books?—I think that you will find that the idea, as represented to me by the Council at first, was that the instruction at the college should be as practical as possible. Their words to me in an official letter, if I recollect rightly, were that they would rely upon me generally to introduce such parts of theory as had a practical bearing on certain portions of the course which they themselves designated, namely, practical mechanics and trigonometry, and mensuration; so that it becomes necessary to drop many portions of theory, which are taught in schools, to the more advanced students at all events.

Maintenance of order in study.

2719. (*Sir D. A. Cameron.*) I think you stated that the under-officers and corporals were not responsible in the halls of study for the maintenance of discipline; do they give no assistance to the professors in that respect?—I did not mean to say that they are not responsible, but that they do not seem to have that authority over the cadets which I think that they had at Woolwich. With regard to the control which the under-officers and corporals have in study, there is a regulation by which if a professor or master calls upon the senior under-officer or corporal in the room he is bound to help him; but the question is whether, under present circumstances, it is advisable to do so. I myself should never do so, unless I left the room. As a general rule even with the better cadets I do not think it judicious to let the reins out of my own hands.

2720. Had the professors any power at Woolwich?—Yes, they had, if I remember rightly; but the arrest was not exactly of the same kind as ours. A cadet was put in arrest, but he did not go out of the hall of study; he was supposed to be in arrest in study, and it was carried out afterwards.

2721. Then do you prefer the present system at Sandhurst to that at Woolwich?—We are under such very different circumstances that it is difficult to say. Although unfortunately there is so much urged against

Rev. F. W. Vinter.
16 July 1868.
Royal Military College, Sandhurst.

our place, there is one respect in which I think that we are superior to Woolwich in its older days (I do not know what it is now), namely, that there is not the bullying at Sandhurst which there used to be at Woolwich. I know no instance of it of late in the Royal Military College; others may have known of cases, but they have never come to my knowledge. Bullying was the great scandal of Woolwich formerly.

Suggestions by the witness.

2722. (*Chairman.*) Have you any further suggestions to make to the Commission?—I would suggest that it would be advantageous that the professor in each branch should have some, perhaps a small, share in the final examination in order to secure proper attention to those special practical subjects which his experience and knowledge show to be best adapted to the training of the cadets professionally; he would then adapt his portion of the examination to his lectures or teaching, and the objection to examinations generally, as a mode of procuring knowledge, would be removed. I quote a remark of a very distinguished Cambridge man, Mr. Leslie Ellis, now dead, before the University Commission:—he says "That schools lack profoundness, and dwell too much "on seeming, is a complaint always more or less just. "A course of study, of which the most obvious pur- "pose is the ἐπίδειξις, can never be quite what a "course of study ought to be, and might be made, "if higher ends could always be kept in view." Speaking on another point I very much approve of mentioning publicly and freely the names of the cadets who are worthy of this distinction at the final examinations. I think that it would much encourage them in their studies. I can mention in particular one case, where a gentleman wrote to me to express his great gratification at hearing his son's name publicly read out on our board day as having distinguished himself as second in the list in mathematics. I would also say, that in my own experience, I do not find that the mathematical tendencies and powers of youths develop themselves very early; in very many cases they do not show themselves till they are perhaps 16 or 17, and then their powers of grappling with mathematical difficulties increase with greater force as time goes on. I would mention another fact, to which I think that it is quite fair to allude. A very distinguished man has alluded in the House of Commons to the highly satisfactory character of the education given at Sandhurst; his son was second in mathematics, and distinguished himself in other things besides.

I will only further observe that when I was at Woolwich, the cadets hardly ever entered the town. I do not know whether it is out of bounds or not. I would suggest that at Sandhurst, as a mode of restriction, the cadets should be made to appear in strict uniform, when in the adjoining village of York Town.

2723. Do you observe a marked distinction in that respect between the present practice at Sandhurst and that which existed at Woolwich in your time?—Not very great; Woolwich is a very different place, the Academy was far off the town, but our village is comparatively near the College.

2724. I gather from you that the cadets at Sandhurst do not go about in their uniform?—I do not mean to imply this; the cadets never wear plain clothes. I only meant that strictness about uniform, when in public, might indirectly check their entering York Town unnecessarily; which would be no great hardship, considering the great extent of the College grounds.

The witness withdrew.

CAPTAIN EDMOND WALKER, R.E., examined.

Captain E. Walker, R.E.
Royal Military College, Sandhurst.

2725. (*Chairman.*) You are a captain in the Royal Engineers?—Yes.

2726. And you are senior instructor in military history at Sandhurst?—Yes.

2727. How long have you been so?—For nearly four years.

Instruction in military history.

2728. Will you state to the Commission the nature and the manner of the instruction in military history at the college?—It has been changing lately. When the cadets first join they are put through a short course of military theory for the first quarter, and before the close of the half year, a series of lectures are given upon some short campaign with the object generally of illustrating strategy. During the next half year, lectures are given more upon tactics, followed by another series of lectures upon a campaign; and during the third half year, the idea of the system has been ordinarily to give lectures upon campaigns in rather greater detail, going more fully into particular portions of the campaign, and especially the passage of rivers, and other operations of that kind. The system has been changing, it has never been quite the same during any two half years that I have been there. The object has been gradually to improve it.

2729. Do you consider that it has been improved?—I think that in some respects it has.

2730. Is your instruction exclusively by lecture, or is there any individual instruction to the cadets?—It is exclusively by lecture, unless the cadets in their subsequent studies, which are called note studies, come up for personal information, in which case the officer is entirely at their disposal. The note study follows the lecture study during the same week, and the cadet either reads or learns the notes which he has taken, or reads from the printed text supplied to him by the lecturer, and makes himself acquainted with that portion of the campaign, or whatever it has been, which has formed the subject of the lecture; and in the course of that study if he finds any difficulties he comes up to the instructor for information so as to make himself more *au fait* in the matter, and in that case he gets personal information.

2731. Is that note study carried on in the halls of study?—Yes.

2732. Is the professor present all the time to be referred to?—Yes, it has frequently been the case that, being carried on in the halls of study, as they accommodate only about 15 or 16 cadets, the class has had to be in two halls of study, but they are connected by large folding doors, so that they are practically one class.

2733. You are the senior instructor in military history?—Yes.

2734. Does the professor of military history exercise any control over the instruction given by the other instructors, or do they act independently?—They act independently of one another, but they are all under the control of the superintendent of studies; the professor has not hitherto had any authority over the others.

2735. Do you think that the course of instruction in military history is capable of improvement?—The only suggestion which I would make is, that I think that a text book upon the theory should be in the possession of the cadets; unless they have a text book to guide them I think that they can never make much progress in it.

2736. Is no such text book in use at the college?—No; I wrote some papers merely as a basis for improvement, but they are not practically in use as a text book.

2737. Have they been published?—Yes. The same thing applies with regard to lectures upon campaigns. I think that it is always desirable that the cadets should have some text book, whether in English, French, or German, so as to let them learn by the eye as well as by the ear.

2738. Do you find that the cadets enter the college with sufficient general instruction to be able to avail

themselves properly of their special instruction in military history?—I should say that two-thirds do, and that the remaining one-third are not up to the mark.

2739. In what are they deficient?—In the ordinary knowledge of history and geography; and they are so very deficient in spelling and in writing that they cannot write rapidly or correctly.

2740. The spelling is very bad, is it?—Yes, it is very bad; it is surprising how it can be so bad in young men of that age.

2741. Do you find it deficient generally, or only in those cadets who have had the worst education?—There is a deficiency in spelling generally; some are worse than others; and there is a great deficiency in ordinary geography and history.

2742. Do those who study military history under you pass through the whole of the three parts of their instruction as a matter of course, or do you require that they should attain a certain degree of proficiency in the first division before they go on to the next?—According to the system of the last half year, they they would go through as a matter of course.

2743. Supposing that a cadet was found not to have sufficiently profited by the instruction which he received in the first term, would he still go on to the instruction of the second term?—I think so; but I think that the officer who had been teaching him would make a report upon the subject, and in that case perhaps the superintendent of studies would take a different course. I do not know any instance in which it has been done.

2744. Do you find much idleness in the cadets?—Not in my department; they all take an interest in the subject, and there is very little idleness now. When I first went there, there used to be a great number of blank papers, and I now hardly ever get a blank paper; but I think that they take more interest now than they did when I first went there.

2745. Do they show a fair average amount of intelligence?—Yes, I think a very fair average amount.

2746. In your experience do you find that those cadets who know at an early period that they are not likely to obtain commissions without purchase pay much less attention to their work, and form the idle portion of the body of cadets?—It is very hard for me to answer that question, because I hardly ever know those who are not quite certain of getting a commission, excepting the very lower ones, and they do not seem to alter at the last from what they were at the first; their powers do not seem to improve very much, the others do improve.

and cadets.

2747. There are, however, a body of cadets who have no occasion to look to competition—namely, the Queen's cadets and the Indian cadets?—Yes.

2748. Do you think that their presence is an advantage to the college?—No; according to the present system of the small number of marks which they have to get, I think that they are prejudicial to the college, and I think that a great number of them are idlers.

2749. Would you like to see them removed from the college?—No, I would rather see a higher standard for them to pass; supposing that the standard were 1,500 marks, I should prefer its being raised to 3,000.

2750. In their case alone?—Yes, because they get their commissions without purchase, and it is not up to the number of marks which others, getting their commissions without purchase, would have to obtain.

2751. Then you would require the Queen's and the Indian cadets to pass a higher qualifying examination than the cadets who get their commissions by purchase?—Yes.

2752. But at present they pass the same?—Yes.

2753. You would prefer that to simply giving them commissions without purchase without passing them through the college?—Yes.

2754. I believe that you have considered the subject of the present arrangements at the college as regards commissions in the army generally. Would you wish to see every officer who was to enter the army pass through the college, or would you reserve the college as it now is for only a portion of the officers of the army?—I should like to see every officer pass through the college as far as possible. I suppose that there must be some exceptions with regard to age; but I should wish that every gentleman under 21 should enter the college.

Advisability of making all candidates for commissions pass through the college.

2755. Why would you desire that?—Because I think that the present system of direct commissions damages the college, and acts very unfavourably upon it; and that a great many gentlemen prefer to get their commissions direct instead of passing through the college, which tests their conduct as well as their studies. The college is not very favourably spoken of in certain places. The newspapers do not speak favourably of it, and fathers get commissions for their sons direct, in order to avoid the college. In that sense they do act unfavourably upon the college.

2756. Your remedy for that would rather be to oblige everybody to go through the college than to improve the state of things at the college itself?—I certainly would wish to improve the state of things at the college as much as possible. I should wish to remove every reason of prejudice against the college.

2757. Do you disregard the advantage of having men in the army drawn from different sources, and educated at different places?—No; I think that there is undoubtedly an advantage in it, but that advantage might be gained by their coming up to Sandhurst from different schools. I would let a mathematical man or a classical man compete upon equal terms. I would take a man from wherever I could get him, and would pass him through the college.

2758. Do you think that there is no serious disadvantage in having men of very different ages brought together in a college of that sort?—Certainly where you take very young men. I think that the system might break down if the cadets entered at as low an age as 15, but entering at 16 I think that there is little comparative difference between 16 and 20.

2759. Then you would not be in favour of a reduction of the minimum of age?—No; I should be very much against it. I think that as regards my own department, I would forbid the teaching of military history under 16. I think that they would not understand military history under 16.

2760. So far as that part of the course goes, you do not think that their minds would be able to study it with advantage at a younger age?—I think not.

Length of the course of instruction.

2761. At present, I believe, a cadet may pass out of the college after two terms, although the general course is three terms?—Yes.

2762. Do you think that an advantageous arrangement, or do you see any objection to it?—I think it objectionable.

2763. On what grounds?—Because I think that the cadet who does so gives up the idea of getting his commission without purchase, and he is only desirous of obtaining the very slight qualification which enables him to purchase a commission, and with that view he does not go into the subject except merely to get sufficient marks to pass; he does not go sufficiently deeply into any subject.

2764. By this arrangement, I suppose, those cadets who pass out after two terms get their commissions sooner than other cadets who stay in the college through the complete course of study?—I should think so; I do not know the Council's arrangements, but I believe that to be the case.

2765. Do you consider that that works disadvantageously?—I think that it does. I think that it makes other cadets anxious to do the same thing, who think that they have not much chance of getting a commission without purchase.

2766. And it thereby shortens their course of education?—Yes; it shortens their military course of education.

2767. (*Lord E. Cecil.*) From what you have said

Captain E. Walker, R.E.

16 July 1868.

Royal Military College, Sandhurst.

The college considered as a general college for the whole army.

with regard to your desire that almost everybody should go through the college at Sandhurst, I presume that you have considered the question whether it would be advisable to have one or two military colleges; what is your opinion upon that point. I mean not only for the infantry and the cavalry, but for the scientific corps?—I do not see the particular advantage of amalgamating the colleges, though I do not know that there is any objection to it. I should like the best Sandhurst cadets to have the power of going into the practical class at Woolwich, with the view of getting into the Artillery and the Engineers.

2768. Would you be in favour of keeping the cadets up to their present numbers, or of reducing the numbers, supposing that any alteration, such as you suggest, were effected, of making Sandhurst a college for the whole army?—I should, I think, keep it up to the present numbers. Wishing everybody to come into the army in that way, I should keep up almost as great a number as you found capable of passing a good examination at entrance. It is impossible to say what that number would be, because I do not think that the present entrance examination is sufficiently severe. Supposing the present number entering the college annually to be 150, you might by a more severe examination reduce it to 100, then the number of these obtaining direct commissions would be added, which would make probably 200, so that the college should be fit to take all those young men. Accommodation would be required for about 300, or a year and a half's supply.

2769. Do you not think it desirable that every cadet, if possible, should have the incentive of a commission without purchase, and that therefore it would be advisable to reduce the number of cadets so as not to have a larger number than could receive commissions without purchase?—If the only method of going into the army were by passing through the college, the very fact of getting a commission by purchase would induce a cadet to work, and a commission without purchase should only be given to a very creditable examination.

2770. There being only a limited number of commissions without purchase, you do not think that it would be better to reduce the numbers in the college?—I think that quite a sufficient proportion now get their commissions without purchase, considering the standard of education.

2771. It has been given in evidence that from one-half to two-thirds of the cadets may be classed amongst those who are idlers, and we have also had it in evidence that the reason for this extraordinary number of idlers is that there is not a sufficient incentive to the cadets to work; would that be your opinion?—No; I have already stated that I think that in my study there is not that proportion of idlers.

2772. And you think that there is quite sufficient incentive to work?—Yes; I think so, under certain circumstances. I think that the number of commissions without purchase is a sufficient incentive to work, considering the low examination which applies; but I think that if the men came to Sandhurst better prepared you would have to give a larger number of commissions without purchase. I do not think that there are so many idlers; it is certainly not the case in my study.

Military history as taught to the cadets.

2773. With regard to the subject which you more immediately teach, do you think that it is a good thing to go into the whole theory of military history with boys who are so young as the cadets?—No; I should never attempt to teach the whole theory.

2774. Do you not think that in many respects it is more suitable to officers preparing for the staff?—Yes; as regards the higher parts of it. I only speak of teaching the cadets the mere elements of the theory.

2775. You have said that you would be very glad if a text book were published giving the theory of the study, which might be placed in the hands of the cadets?—Yes.

2776. Of course if such a book were put into their hands it would be presumable that you thought that the theory of such a study was advantageous to them?—The elements of the theory, but certainly not the high theory. I think that even Colonel Hamley's book would be too advanced for the cadets, but I think that they want a text book upon the theory.

2777. Do you think that, with the models and plans at your disposal, you are able to give the cadets a sufficiently practical instruction in military history?—Yes, I think so. I have had to make a good many of my own plans. I do not think that sufficient assistance in that way is given in the college to the officers, but I think that with what we have and with what we do ourselves we are able to teach sufficiently practically.

2778. You think that the cadets are thoroughly able to understand the different dispositions on a field of battle from the plans and models at your command?—Yes; as regards those who have an aptitude for it, but we consider that rather a higher part of our course of study.

2779. What do you teach them?—We teach them the elements of strategy and of tactics, and a few simple lessons on the passage of rivers, such as Wellington's passage of the Douro and Adour, and Napoleon's of the Danube at Lobau; we also instruct them in the passage of defiles, but we should hardly go into the minute theory. I should rather take Colonel Macdougall's or Colonel Jervis's as more elementary books than Colonel Hamley's book.

2780. Do you teach the cadets the theory of war?—Yes, the elements of the theory of war.

2781. Do you examine them as to any particular war?—Yes.

2782. And do you require them to give the various dispositions, and tactics made use of?—Yes, at the end of each lecture there is a note study which generally follows in two or three days afterwards.

2783. Will you specify what, in your opinion, would be the details of the higher branch of study, because I do not quite see where you draw the line?—It is rather difficult to explain that without giving a perfect lecture on military history. The higher questions at Sandhurst would probably be the lower questions at the Staff College. I should wish to make all the questions at Sandhurst very much more simple than for the Staff College.

2784. Are these examinations founded upon the lectures which are given in the course of study?—Entirely.

2785. As a military man, do you think that tactics can be thoroughly well taught except by experience in the field?—I think that they certainly can be, but I do not believe that a man could thoroughly learn tactics until he had seen the manœuvres of troops and had learnt his drill; he might, however, know the objects of tactics, and I think that it would induce him to learn his drill, and he would come to the subject with some facility to do so, seeing the object of it, instead of being thoroughly ignorant of the object of it.

2786. Do you think that it would be possible for him to apply such knowledge without some experience?—I consider that his experience at Sandhurst in his drill would enable him to understand the small amount of tactical information which is given to him in our lectures.

2787. Do you consider the drill at Sandhurst perfect?—I know very little about it.

2788. Are the cadets instructed in cavalry drill?—I do not know; we do not attempt to teach them much tactics at Sandhurst; we only teach them a few general principles.

2789. I find by the examination paper that both tactics and strategy are touched upon?—Yes, there are brief papers upon them.

2790. You admit that a knowledge of drill is very essential in order to understand tactics?—Certainly.

2791. If, therefore, the knowledge of drill is not perfect at the military college, the cadets will not be able to understand tactics thoroughly?—I do not think that that follows, because what is taught them

is very elementary. I think that the instructor will never teach cadets if they have not already had a pretty good opportunity of seeing drill. If a cadet came up to me and said to me, "I do not quite under- "stand what you mean by echelon," or anything of that kind, I should think that he had missed some of his drill, and I should inform him upon it.

2792. Do you get cadets informed in the movements of artillery and cavalry, as well as of infantry?—No; those are points which we should leave alone; we do not go very far in tactics.

2793. Has the superintendent of studies at Sandhurst the power of interfering with or altering the course of any particular study at any time that he pleases?—I think that he has always done so since I have been there at any time that he has pleased.

2794. Without referring to the Council of Military Education?—I cannot say what has passed between the Council of Military Education and himself.

2795. Do you find these changes in the course of study convenient or very inconvenient to the professors and masters?—Some of them have no doubt been very inconvenient. I think that many of them have been improvements, but I think that some of them have been very inconvenient to the instructors personally.

2796. Would you be in favour of the instructors, as well as the professors, being consulted at certain times with regard to any change which might be contemplated?—Yes.

2797. You think that that would be advisable?—I am sure that it would be.

2798. (*Lt.-Col. Chesney.*) I believe that you are very near the Aldershot camp?—Yes, I think we are within seven or eight miles of Aldershot.

2799. Is there any better place than this one so near you for seeing practically the tactics of the three arms?—I should think that there is no better place.

2800. In your opinion might not some degree of observation there be combined with the course of the military education of the cadets?—Yes; if a class be taken there on duty.

2801. With regard to the frequent changes which you have spoken of in your own particular branch, have they not a considerable tendency to unsettle your teaching, and to make it to a certain degree unsatisfactory?—Yes, to a certain extent, but we have always hoped that they would be improvements, and when one is hoping to improve I think that one looks upon them with a more favourable view. I cannot say that I have always been in favour of them, but I am only a subordinate officer.

2802. Are you at all acquainted with any of the foreign military colleges?—Not personally.

2803. Have you read the evidence of the Commission of 1857 upon them?—Yes.

2804. Are you aware that military history and its connexion with theory form a portion of the teaching at the French, Prussian, Austrian, and Italian colleges?—I think that it is taught at almost all, but I cannot say at which.

2805. (*Rev. Dr. Butler.*) You have stated that the lectures on military history are found to be very interesting to the cadets?—I think that the cadets take great interest in them.

2806. Speaking generally, do you teach theoretically or historically—by which I mean, do you select particular campaigns, or do you rather dwell upon the principles to be deduced from some narrative?—In lecturing upon the theory we first dwell upon the principles, and I have endeavoured to illustrate each principle as much as possible from actual warfare—that is in the elementary course. After that we take a campaign, and follow it through in more or less detail, in less detail for the less advanced cadets, and in more detail for those who are more advanced; but never in so much detail as I should think necessary for an officer. We follow it from point to point, making such remarks as we may think desirable, and endeavouring to explain the comments of good authorities, like Jomini, the Archduke Charles, Clausewitz, &c. To impress these things upon the cadets there is a subsequent note study, and near the end of the time the cadets' papers are taken away from them. A question is set which they have to answer upon the previous lecture—it is some question which they ought to be able to answer well. Their answers are all marked, and those marks count towards their commissions. At the end of the quarter there is a quarterly examination, and at the end of the half year there is a half-yearly examination, so that the examinations are made weekly, quarterly, and half-yearly.

2807. Are the campaigns which are selected as samples numerous, or have you practically a small choice?—I began with the Douro campaign—Wellington's first campaign of 1809; I then gave the Talavera campaign of 1809; in the next half year I gave the Waterloo campaign, after that I gave the Jena campaign. Then I gave part of the campaign of 1796—the campaign in the Apennines—and I have given one or two others; but I have given the Waterloo campaign three times, and the Jena campaign twice.

2808. Is a campaign in ancient warfare ever selected?—Never; it is prohibited. I wished once to lecture upon one of Marlborough's campaigns, but even that was not permitted.

2809. Is much stress laid upon what may be called the general human qualities of the great commanders who have been engaged, or is the instruction merely technical?—I believe that I have done that to a certain extent, but I do not think that it is approved of.

2810. (*Brig.-Gen. Lefroy.*) Do you attribute the preference which boys have for the study of military history over some of their other studies in any degree to their general preference for what is done in a lazy way, by the exercise of the memory, over what requires the exercise of the reflection?—I cannot speak as to that; I do not think that they can do this in a lazy way at all; in fact some of the cadets tell me that the effort of memory is too great for them.

2811. You make it analytical as far as you can?—Yes. The course consists perhaps of six lectures, and I endeavour at the end of each lecture to analyse the proceedings as much as possible, following good annotators upon the subject. I would not wish so much to press forward my own views, as to give the views of approved commentators.

2812. (*Sir D. A. Cameron.*) Considering that the cadets know so very little practically of tactics, and that they hardly know anything of the movements of a battalion, and certainly nothing of the movements of a brigade or division, would it not be better to give up the attempt to teach tactics theoretically?—By the time that they are taught tactics, I think that they know sufficient of drill to understand the general principles of tactics which are taught to them; we go very little into tactics.

2813. You teach them the use of the three arms?—Yes, we make mention of the general use of them; we do not go into the drill of either artillery, cavalry, or infantry; we speak more upon the general principles of echelon, column, line, skirmishing, &c.

2814. And you think that they profit by it?—Yes.

2815. (*Lord E. Cecil.*) You have examinations?—Yes.

2816. Do you find that the examinations are framed so as to bring out the memory?—The cadets have to exercise the memory to a certain extent; but a much greater object is to make them reason upon the thing.

2817. And you think that that is carried out in the examinations?—I think that it is in the military history course.

2818. You at once see whether a cadet has profited by the instruction which has been given to him?—You see it by the sketches; without the sketch the cadet might be supposed to be doing it by rote, but the sketch makes him give a practical example. In the course of instruction I have, generally speaking, lithographed a drawing to accompany every lecture,

Captain E. Walker, R.E.

16 July 1868.

Royal Military College, Sandhurst.

—it has been, upon a small scale, the same thing as we have had upon the lecture walls or upon the slate. This lithograph is put into the hands of a cadet, and before the next lecture he is expected to put upon it all the general movements noted in the particular lecture from the text.

2819. (*Sir D. A. Cameron.*) Do you dwell much upon military geography?—Yes.

2820. Do you teach it upon Lavallée's system?—I should like to do so, but it has not been hitherto a matter of course; I think that it would be desirable.

2821. (*Lord E. Cecil.*) Do you find that the education given in history and geography is good enough to enable a cadet to pursue his studies when he comes under your observation?—I think that with the assistance of the instructor it is. There is no doubt that the knowledge of the cadets when they come there is, as regards a large proportion, very deficient; but they ask questions, and they come up to the instructor, and as they do it very freely, I therefore think that they ought to learn the subject very well.

2822. Do you not think that, in order to pursue the study of military history profitably, it is necessary that they should be instructed in ordinary history and geography?—I think that it is very desirable.

2823. As regards military history, are the duties of the professor, and of what the French call the *répétiteur* (that is, the tutor in a school), combined? that is to say, does the professor or instructor give his lectures and also instruct in school?—Yes.

2824. One and the same man does both things?—Yes; I lecture to my class, and afterwards in the note study I instruct them.

2825. Do you think that that is a good system? Do you not think that the two duties ought to be divided?—I think that it might be desirable to divide them, but I am not prepared to give a positive answer upon that subject without altering the whole system. I think that if you keep the cadets at their present age of 16 and upwards, study in their own rooms, supposing that they had time for it, might be better for them in some respects than the practice of what are called note studies at specified times; and that then the duties of the professors might be entirely those of lecturing at a certain period. I think that the quarterly examinations in that case might suffice, always encouraging the cadets to come to the professors for them to explain any difficult points. I do not see any advantage in dividing the professor from the *répétiteur*.

2826. You think that one man is competent to undertake both duties?—I do.

2827. Have you anything else to suggest on that point?—If that system were carried out I should encourage the cadets reading in their other classes books upon the same campaign. If I were lecturing in English upon the Waterloo campaign, I should like them to be reading Thiers in French, and some German book upon it, and then they would get not merely the English account of it, but they would get an account of it from different points of view.

2828. That is supposing that the cadets are French and German scholars?—They must be either one or the other, and I should wish them to be both French and German scholars.

2829. Are they sufficiently advanced to understand all the professional and military terms in those languages?—I should think so in French; I do not know as to German. The objection made as to Thiers was that it was too easy for them. Of course that plan should be with the entire concurrence of the French and German masters.

The witness withdrew.

Adjourned to Wednesday next at 12 o'clock.

Wednesday, 22nd July 1868.

PRESENT:

THE RIGHT HON. EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LIEUT.-GEN. LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C., M.P.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

CAPTAIN EDMOND WALKER, R.E., further examined.

Captain E. Walker, R.E.

22 July 1868.

Royal Military College, Sandhurst.

(*Witness.*) Will you allow me to make one or two corrections in what I said the other day? In saying that I considered that the professor could always take the after study I did not mean to imply the converse, that any instructor was competent to lecture. With regard also to having referred to a text book, I merely meant that after the lectures of several officers there might be a groundwork upon which a text book might hereafter be formed.

2830. (*Chairman.*) Are there any other observations which you wish to make with reference to the course of education at the college?—No.

Instruction in military history.

2831. (*Lord de Ros.*) Do you not think it advisable to adopt general and useful and practical works upon these military subjects rather than to attempt to select peculiar text books which are supposed to be suitable to peculiar wars?—I do not think so. In the first place I think that a text book of some sort is desirable, and that if you can have a good text book from the books already published you should have it. But my only doubt is whether in such a subject as military theory there is any text book suited to the young men of the college; the nearest approach to it, I think, is Colonel Macdougall's book; and I do not think that in some respects that is suitable to them.

2832. Do you not think that a very great evil arose from the adoption of Mr. Chepmell's text book, which is supposed very much to mislead and puzzle the scholar rather than to make him a good military historian?—Mr. Chepmell's text book was not used in my time, and I therefore cannot judge of it.

2833. Do you not think that there are a great number of very good military histories upon which instruction might be given, such as the life of Marlborough, the life of Eugene, Lord Peterborough's campaigns, Dumas' works, and the Memoirs of the Mareschal de Berwick? We know that those are good works, and have a public reputation; but how can you answer that the text books compiled by the officers of the college have a public reputation?—I think that some of those books are very excellent; some would not be exactly suitable. Dumas' is a most valuable book, but it would be utterly unsuited to the cadets. Dumas' is not difficult French, but many of the cadets are not capable of following him. I should say that no text book compiled by one officer would be sufficiently good for the college until it had

been approved by the Council of Military Education.

2834. Do you think that the Council of Education, a temporary board, are a sufficient authority for constituting these text books so that they shall be satisfactory?—I should think so, considering the constitution of the Council. I should think that with regard to military history the Council would be very good judges indeed.

2835. (*Chairman.*) Have you considered the question of the present system of appointment of under-officers and corporals?—Yes.

2836. Have you any observations to make to the Commission upon that point?—Yes; I think that there is a great want at the college of that chain of discipline which exists in the army. The under-officers and corporals have nominal rank, and have nominal duties to perform, but I think that there is nothing in their position to make it worth their while to keep their places and to do their duty properly.

2837. In what respect should you propose that their position should be altered?—I should wish to attract cadets to take the positions of under-officers and corporals, and in order to induce them to keep those positions, to give them extra advantages in the way of getting their commissions without purchase. I would suggest that the position of under-officer or corporal, carrying great responsibilities with it, should also carry a certain number of marks to count towards a commission. Without stating the proper number, which might easily be arrived at, I should suggest that a corporal might have 500 marks given to him towards his commission; and if he did his duty and kept his post it would very much assist him as regards getting his commission without purchase; and an under-officer would have so many more marks, deductions being made from those marks for every entry in the defaulter sheet, and even for a reprimand. I should say that in the first instance I should always wish corporals and under-officers to be promoted from the general list of proficiency in study, provided there was no veto against them on the part of the captains of companies as being utterly unfit for the work. I would, of course, always give to the captain of the company a qualified, and to the commandant a complete veto.

2838. Do you think that the position in the study list would show that the young men had the qualities necessary for the position of under-officers and corporals?—No; but having gained their position on the study list, I think that they would attempt to keep it, and that they would support one another. When I was at Woolwich, unless there was a decided veto on the part of the captain of the company, the cadets were made corporals according to their standing on the general study list, and it then turned out that many of these young corporals who would not have been selected for their popularity, or the general idea that they would make good corporals, were much better corporals than others who would have been placed in that position according to the Sandhurst system. I know of instances in two half years running in which a popular man was made the senior under-officer in the practical class at Woolwich in deviation from the rule which I have mentioned, and on both occasions he had to be reduced, and afterwards the senior study man was placed in that position and gave complete satisfaction.

2839. Do you propose to make this change in order to give greater encouragement to those who stand high on the study list, or is it because you think that those cadets are the best for this purpose?—I would propose it, first, because I think it the fairest plan, and also because, having gained their positions by their studies, I think that they would do their best to support their authority.

2840. You would reserve a veto both to the captains of companies and to the commandant?—Yes, to be supported by the defaulter sheet; the captains of companies should enter everything in their defaulter sheet; and the veto which I would reserve to the governor would be an unqualified veto.

Captain E. Walker, R.E.

22 July 1868.

Royal Military College, Sandhurst.

2841. Is it not at present the practice to give commissions without purchase to the under-officers whatever may be their position?—No, I think not.

2842. Is it not occasionally done?—It is occasionally done.

2843. But there is no regular system?—No.

2844. Do you think that this general system which you propose, of good conduct marks, could be worked without difficulty, and that it would not interfere with the fair claim which each cadet has to be judged by his progress in study?—There might be an opposition, but I do not think that there could be any real difficulty; it would be entirely the man's own fault, after having gained his position by study, if he lost it by misconduct. I consider that no cadet does anything to deserve his commission without purchase. If, on the other hand, he forfeits his chance by misconduct as a corporal or under-officer, he puts those who may be only a little below him on the study list into that position. I would also propose that at the end of the half year the governor should have the power of making a certain number of supernumerary corporals, so as to give a second chance to those who had been reduced, but had since behaved well.

2845. If a corporal was reduced he would lose the whole of the extra marks?—Yes, in the first instance, except the governor chose to reinstate him.

2846. Are there any other points which you would refer to upon this branch of the subject?—Yes, I should wish that there should be corporals or under-officers on duty in study, as used to be the case when I was at Woolwich, so as to take that work off the professor's hands. It is very difficult for a professor who is lecturing to perform that duty.

2847. Have the under-officers and corporals any duties now in study?—Not at Sandhurst.

2848. Do you think that that system would interfere with their own studies?—Not at all. At Woolwich we used to prefer to be corporals or under-officers, and we thought that we could do our own work with less disturbance. In charge of a study as corporal or under-officer you have an independent desk, and you can frequently, though perhaps not always, do your own work besides. As a rule, at Woolwich the most perfect order was maintained by the corporals and under-officers, and no trouble was ever given to the professors.

Discipline.

2849. Do you think that the present powers of the professors and instructors at Sandhurst as to discipline are sufficient?—I think so under the present system. We have all power now of placing a cadet in arrest, but we should be very much assisted by the corporals or under-officers, if they were on duty.

2850. Do you think that the military professors and masters could, in addition to their present duties, undertake the duties of captains and subalterns of companies?—I should say certainly not, with the present amount of duty to be done. I am speaking merely of my own department. I think that it could not be done without a great increase to the force.

2851. Are you satisfied with the present position of the professors and instructors as regards their disciplinary powers?—Yes; I think that there is one distinction which perhaps places the civilian instructors in an invidious position, namely, that the military instructors always wear uniform, and of course where that distinction is made I think that it almost follows that the civilian instructors are in a false position from not wearing it. It does not seem absolutely necessary for the military instructors, because they have little or no trouble compared with the civilian instructors, and it seems to place the civilians in a false position compared with us.

2852. I believe that there is a difference in the practice at Sandhurst and at Woolwich with reference to placing cadets in arrest on honour?—I believe that there is.

2853. Do you think that the Sandhurst practice is

Captain E. Walker, R.E.

22 July 1868.

Royal Military College, Sandhurst.

a good one, or that it would be better if it were assimilated to that of Woolwich?—I should say that it would be good to place it as it was at Woolwich in my time, when any cadet breaking his arrest would have had to leave the college on account of the feeling of his comrades. There was a strong feeling as to breaking arrest and as to what was called "fudging" at examinations.

2854. At Sandhurst a cadet has the option of being put upon his honour or not?—Yes.

2855. You do not approve of that?—No, I think that he should always be put upon his honour. I am afraid that that limited system of honour at Sandhurst does not work.

Idleness.

2856. We have been told that in consequence of the early period at which cadets become aware whether they can get commissions without purchase or not, more than half of the cadets may be described very much as idlers; does your experience agree with that?—I think that a certain proportion may be so described. I do not think that the proportion is so high as has been believed. None do idle completely, they all work to a certain extent, but some of them do not work nearly so hard as others. My subject is comparatively a new one to them, so they feel that they all may be able to work it up, and I think that they almost all do work at it.

2857. Have you any suggestions to make as to the extra inducements which can be held out to the cadets to study?—Yes; I think that it would be a very good thing if exhibitions were given to the cadets from the college on passing a very good examination. I should be glad to see an exhibition of 50*l.* a year, tenable for three years, or as an ensign, for a cadet who had distinguished himself in military subjects or in languages. I think that it would have a very beneficial effect.

2858. But I suppose that those exhibitions would all be held by cadets who are now successful in competition, and who get their commissions without purchase?—Yes; but I think that it would induce others to try harder. It is very difficult to say whether it would affect the idlers as well as the industrious ones, but I think that it would make the industrious ones work harder still. I think that it might attract several men to Sandhurst who had not a particularly mathematical bent, but who would otherwise go to Woolwich.

2859. Are you aware that young men occasionally go up for the examination at Woolwich and fail, and then fall back upon Sandhurst?—I believe that it is the case. I do not think that it exists extensively, but I have heard of several instances of it.

Amalgamation of Woolwich and Sandhurst.

2860. Would you wish to make any connexion between the college and the academy?—Yes, I should like cadets passing a good examination to have the option of going to Woolwich, not to come in the junior class, but to come in the senior class at Woolwich, what was called in my time the practical class.

2861. Do you think that the knowledge obtained by the best cadets at Sandhurst would be sufficient to enable them to carry on their studies at Woolwich?—I think so, but I very much doubt the necessity of such high mathematical studies.

2862. Do you think that there would be many cadets who would pass pretty well at Woolwich from Sandhurst?—Probably not more than two or three in a year, but the power of doing it would be an encouragement.

2863. Do you propose to do it as an encouragement to the Sandhurst cadets?—Yes.

Under-officers and corporals.

2864. (*Lord E. Cecil.*) Are there any lance corporals at Sandhurst?—I believe not.

2865. Would you be in favour of promoting cadets to be corporals or under-officers on probation?—I do not see any objection to it, the present appointment is probationary; they can be reduced without losing any of the benefit of it.

2866. But I suppose that that would be an extreme case; a corporal, if he was found inefficient, might be reduced to the ranks, might he not?—I imagine so, but I cannot speak upon that matter, as I have nothing to do with it.

2867. Are there any under-officers or corporals in the junior classes?—None in the third division (or fifth and sixth classes).

2868. Do you think it advisable to have corporals in those classes?—I should have corporals from the higher classes to take charge of the junior ones. I should always wish to promote a cadet to be corporal or under-officer out of his own company; I think that he would carry greater weight by that means.

2869. I understand you that by giving the appointments on the ground of proficiency in study you would assimilate the mode of promotion very much to that which exists in the public schools. It is well known that the boys in the fifth or sixth forms who are monitors are entirely chosen from their excellence in study; is that a mode of promotion which you would carry out under all circumstances?—Certainly, with the vetos on the part of the captain and the governor, which I have mentioned.

2870. Would you require a knowledge of drill?—I think that drill, and also gymnastics, should carry a certain amount of marks.

2871. You say that it would be out of the question for military professors to undertake discipline and instruction, judging from your own department?—Yes, in addition to what they have at present.

Duties of professors.

2872. How many hours of study weekly have you?—I have 61 hours a week. This is an analysis of the work done weekly by an instructor of military history at Sandhurst; this is for the last half year: Attendance at college lectures and note studies, six attendances of an hour and a half, nine hours; examination of cadets' notes, say 90 notes at 10 per hour, nine hours; reading for lectures, three nights of four hours each, 12 hours; writing lectures, ditto, 12 hours; correcting proofs, 4 hours; drawing and preparing plans for the lithographer, 10 hours; preparing the larger lecture plans, 5 hours. That makes a total of 61 hours. I have nominally the assistance of a sapper in preparing lecture plans, but the sappers are changed every half year, just as they are beginning to learn their work. Practically I have done a great many of the large lecture plans myself.

2873. Do you mean that you have done those plans in term time or in vacation time?—In term time; very seldom in vacation time. My analysis does not include the walking to and from the college. I live two miles off, and when I have to come to two studies it involves eight miles a day.

2874. Then you reckon that you have 10 hours work out of the 24?—Yes.

2875. In addition to any other exercise which you may have in getting to and from your work?—Yes; I find that I invariably have to work from 10 at night till 2 in the morning in preparing for the lectures alone.

2876. Do you think that your department is a very fair sample of the other departments at the college?—I think so. I think that they are all hard working and equally inclined to do the work.

2877. Do you think that as a rule all the professors have to work equally as hard as you have?—No, some of them probably have more out-of-door work, that is to say, the surveying department, who have to work in the heat of the day and who have less work to take home with them. I think that all the officers have to work pretty hard.

2878. Is it not true that some of the professors at Sandhurst have time to teach private pupils?—I believe that some of them had private pupils, but whether they were only living in their houses and were receiving instruction from other instructors or not I cannot say. I cannot state how far they had assistance from other instructors. I had my own son, and I managed to find time to teach him. Although the work was very hard, I made time to devote an hour a day to him.

Discipline.

2879. When a cadet is put under arrest by a professor, is he sent out of study to his dormitory?—

He is sent out of study, but I think that he is sent to the guard room and not to the dormitory.

2880. Does he remain idle in the guard room until released from arrest?—I cannot state what the system is. There is one point which I may mention which is indirectly connected with the discipline, namely, that I would respectfully suggest that no cadets should be allowed to go to Aldershot. I think that it is an extremely mischievous thing.

2881. Do you think, from your recollection of what the cadets were at Woolwich, that the cadets at Sandhurst are much less smart in dress and military bearing?—I think not, but I think that there is a greater slackness in the ranks; it however, appears to me that that is the same thing in the army generally.

2882. When you have observed cadets out on pleasure, for instance, in the neighbourhood, have you observed them to be dressed in a slovenly style?—Yes; they have certainly not been as smartly dressed as they used to be at Woolwich.

2883. We have had it stated in evidence that cadets have been seen in different dresses, some with one kind of uniform on and some with no uniform at all. Have you seen cadets walking together in that way?—Yes; I have seen some in scarlet and some in blue. I believe that out of the college I have seen them in both scarlet and blue.

2884. And with their coats off?—No, I think not.

2885. Will you kindly explain to the Commission what is meant by the term "independent studies"?—There are certain cadets who have the option, I believe, of not taking up chemistry, geology, French or German, and landscape drawing, and when the time comes for the rest of their class to go into their studies these cadets are allowed to have what is called an "independent study." At present, I believe the rule is that upon their word that they will not quit the college grounds they are allowed to lie about smoking or to go about the grounds.

2886. Under what circumstances are they allowed to pursue these "independent studies"?—Under the circumstances which I have mentioned, that if a cadet does not take up chemistry or geology, or landscape drawing, or French or German, then when his class goes to that work he has the privilege of having an independent study, which means pursuing no study at all.

2887. Are you in favour of that system, or not?—I am very much against it.

2888. You think that it has a very bad influence upon the cadet, both in the disciplinary point of view and as regards study?—Yes, in both ways I think it has a very prejudicial effect upon the cadet, and also upon the college. It has been seen at almost all hours of the day that some cadets have been lying about on the grass smoking, and a general idea has been entertained that they are allowed to do what they like. I have heard the observation made by both officers and civilians.

2889. Is there any plan which you have thought of by which you could get rid of the system of independent study?—I have not very much considered the subject, but I think that the independent studies might be got rid of; it would require some alteration in the arrangement of the studies, but I would not allow any cadet to idle away any part of the time devoted to study. If he did not choose to take up the particular study he should take up some other study and work at it.

2890. During the time that those cadets amuse themselves in independent study are they under any supervision?—None at all, they are out of doors if they choose.

2891. There is no professor on the ground nor any one to watch them?—No, they can go anywhere in the college grounds within certain bounds. The system of honour is that these cadets are allowed to go about with the understanding that they do not break the bounds. At night, when I have been going home from my evening studies I have almost invariably met a body of the cadets coming from the direction of the Staff College gate, running as hard as they could to be within time. I cannot say that those cadets had been out of bounds, but my belief is that they had, and that they were doing their best to report themselves in time. These cadets were upon "independent studies." I am not now mentioning the thing for the first time, I have drawn attention to it.

2892. (*Lord Northbrook.*) With respect to independent study, does not the difficulty entirely hinge upon the system which you have at Sandhurst, namely, of confining the study to the hour and a half for which the cadet is in the presence of the professor, he not being required to prepare beforehand. Would you not make the cadet bring a certain quantity of work day by day or week by week?—It seems to me that that would make all the studies independent studies except the lectures.

2893. Would not it do away with the labour which the professor now has?—Yes, but it would alter the whole system.

2894. What is your opinion of the present system?—I think that it is a good system, if you do away with those independent studies I think that letting the cadets have their own time to prepare things would do very well with older boys or those disposed to work, but not with the others, they practically would do nothing, or copy from others.

2895. Is it not the system which is carried on at the public schools and the universities?—I do not know; I believe that it is.

2896. Taking your own subject of military history, is it not rather a clumsy mode of teaching military history by having a lecture, rather than by obliging the boys to get up a campaign, and then for the professor to examine them?—I think that either mode would work well.

2897. Do you give your cadets anything to do out of study?—Yes, I give them a printed paper to read, and they read a good deal in their own time.

2898. Have you the power of obliging them to do so?—No, not in the least.

2899. Do you think that it would be an advantage that you should have it?—I hardly know how the cadets would have time with their various studies. Their time averages about five and a half hours a day at study alone, besides drill, and I doubt whether they would have very much time to work in the way which you suggest. They might do it in my particular subject, but I doubt whether they would do it in the others.

2900. For instance in mathematics, might not that system work?—It might do so, but I have heard it condemned at the public schools.

2901. The principle at Sandhurst, as I understand it, is that the cadet is not expected to work excepting in the study hour in the presence of the professor?—Yes; but practically the cadets do work just before the examination.

2902. Is not that confined to a very small minority?—It is certainly a minority. It is easier to read up some subjects by yourself than it is to read up others. I do not think that many of the cadets would study mathematics by themselves.

2903. Would they not learn Euclid and algebra?—Some might do it but it is not a subject which those who had not a particular mathematical bent would read in after time.

Appointment of under-officers.

2904. (*Lt.-Col. Chesney.*) If a junior cadet behaves himself particularly well before the professors in study, is it of any advantage to him in being made a corporal?—Not that I am aware of.

2905. And high standing in the studies is also of no advantage to him?—Not that I am aware of.

2906. Is it possible that at present the senior under-officer may be the very lowest in point of studies at the final examination of all who leave the college?—Yes.

2907. Under the old Addiscombe system, it appears from the evidence that, after the first month, in the junior classes cadets of the description of acting corporals were appointed, and upon the professors'

Captain E. Walker, R.E.

22 July 1868.

Royal Military College, Sandhurst.

reports afterwards they had a claim to be made corporals at a later date. Do you see any objection to such a system being applied at Sandhurst?—No; but I should prefer the old system of placing the older cadets in charge.

2908. You would prefer the Woolwich system?—Yes, the Woolwich system acted very well.

Combination of instructional and disciplinary duties.

2909. You spoke of some of your own branch of professors not having time enough to undertake the military duties of the college. From your knowledge of the college, if it was left to the governor to make a selection from the military professors, do you not think that some of them would undertake those duties?—I believe that many of them would undertake those duties, but we should have to reduce our time for study. I do not think that any person could undertake those duties without having their other duties reduced. I think that taking their present work as it is they could not do both properly without a reduction of the work. I do not think that any man can perform the duties of the captain of a company and do all his study work besides. I think that it is impossible if he does his duty properly.

2910. Have you heard that the late governor had a project for the combination which I speak of?—No.

System of study.

2911. With regard to the study of military history, do you consider it to be a popular one among the cadets?—Yes, very popular.

2912. Do you not think that with many cadets it has a positive effect in making them more attached to the profession which they are about to embrace than they would be without any knowledge of military history?—Yes, I think that it tends to remove the common opinion that war is quite a hap-hazard thing.

2913. (*Sir D. A. Cameron.*) With regard to your statement that you have 61 hours of work a week, do you write fresh lectures every term?—I have done so every term except two, and then I have thoroughly revised the lectures. I took the Jena campaign twice. I first took it from the French point of view, and then I took it from the German point of view, and I did the same thing with the Waterloo campaign.

2914. When was the system of independent studies introduced?—I cannot say. I think that there have been independent studies ever since I have been there, but it is only latterly that the cadets have been allowed to leave the college. I do not know how far the power of the commandant and of the other officers extends.

Discipline.

2915. (*Lord de Ros.*) Should you approve of fines for misconduct out of study?—No.

2916. What are the objections to cadets visiting Aldershot, where one would suppose they could see various matters which might one day be of great use to them?—Because I think that they mix too much with young officers of regiments, those who have been cadets like themselves, and I think that it leads to great wildness on the part of the cadets.

2917. What is the objection to the senior cadets being allowed as much liberty of bounds as young men of a similar age at Oxford?—I think that the objection is that in the one case they are under military discipline to which so much liberty is unsuited, and that in the other case they are not, and are, moreover, older and steadier.

2918. How many young men are there attending a lecture?—The numbers are varied. They were originally about 90, and now the numbers are limited to about 30.

2919. To what do you attribute the difficulty of managing 40 young men at a lecture, bearing in mind that no such difficulty is ever found at Oxford or Cambridge, where no students are employed to watch the conduct of others?—Most of the military instructors can maintain order, but it is very difficult for a professor to keep up a lecture if two or three men are talking in a corner; if there was a corporal he could very soon stop it.

Method instruction.

2920. By your account a lecturer is in fact a sort of author. Would it not be better to lecture from well-known and appreciated military works with plans attached superior to what could be specially prepared on short notice?—I think that if you could always obtain those works it might be good to do it, but from my experience the writers on military history vary so much that you can hardly get the date of a battle until you have consulted half a dozen authors. I have known authors to be out seven or eight days in the date of a battle, and few works with which I am acquainted are suited to cadets.

2921. Is it not better that a cadet should be made really master of some selected portion of military history than that he should get up a quantity of abbreviated barren history and dates, such as make little impression and are soon dismissed from his mind?—I should certainly say so.

2922. Can the Commission see any of the prepared military lectures?—Yes. (*The witness produced the same.*)

2923. (*Rev. W. C. Lake.*) Can you tell the Commission for how many hours of study the cadets work on a full working day, and for how many hours they have exercise?—On a full working day they have six hours in study. On the other working days they have only four and a half hours, namely on Wednesday and Saturday.

2924. The only work which they do is what they do in study, that is to say, under the professor's eyes?—Yes.

2925. Are any means taken for insuring that they have attended to that work? Is anything like notes required of them?—Yes; I can only speak of my own department. According to the system in my own department we do test them pretty severely in that way; the note study is an hour and a half, and in that note study they are expected to make themselves fully masters of the subject of the lecture. At the end of an hour and ten minutes work the professor asks them a question upon his lecture and they write the answer to that question. Sometimes it is only two lines, but sometimes it is two pages or more. Those papers are collected and taken home at the end of the study by the professor or instructor, and are marked by him according to a prescribed scale.

2926. Do those marks tell?—Yes: the cadets work very hard for them. At the next study the papers are given back, and the cadets are able to ask any question about them and to have any error pointed out to them; the professor is present, who can explain any extraordinary mistakes which they have made.

2927. Besides that the cadets are not expected to study by themselves?—No.

2928. Is it your impression that they do study?—Yes, some do.

2929. Might it not be desirable to adopt the plan of some independent study, and according as the cadet answered the questions on that study to credit him with marks?—I do not think that there would be any objection to it if time could be found for it. Speaking for myself alone, I should very much prefer an authorized text book being given to me than to prepare it myself; and if those books were well selected, I think that it would do the cadets a great deal of good. A suggestion was made some time ago by me which would perhaps carry that out, namely, that in addition to the text of the lecture as to a campaign, the cadets should be encouraged to read that campaign in the French study and in the German study, and that they should also study the theatre of the campaign or the battlefield, in the topographical study, so that the different subjects should centralize round one.

2930. Would you have that before or after the lecture?—I think that it would be better to have it before the lecture.

Suggested changes College.

2931. What do you think of the plan of making Sandhurst a college at which every cadet except those cadets who failed from idleness or from want of discipline should obtain a commission without purchase?—I should think that it would be a very good

thing if you put the standard which they had to pass sufficiently high.

2932. Would it be necessary with that object considerably to raise the standard of entrance?—I think so. I think that it must be very much higher than it is at present.

2933. In such a case probably you would make the only failures result from gross idleness or want of discipline?—Yes, but I should also be inclined to make the course such that cadets should keep up their work, and that they should not be entirely dependent upon the entrance examination, but should go on working and should pass other examinations.

2934. (*Lord E. Cecil.*) Would not the standard under those circumstances be very much assimilated to that which is in force at Woolwich?—Yes, in some respects, but I would not have such high mathematics at Sandhurst as at Woolwich. The higher mathematics at Woolwich are not absolutely essential even to artillery and engineer officers, but I do not wish to lower the standard of mathematical studies at Woolwich.

2935. Why?—Because I think that mathematics are a very good test for the mind independently of the absolute necessity of certain parts of them for artillery and engineer officers; and therefore, when you are endeavouring to get clever men for what are called the scientific corps, I think that mathematics would test them better than anything else.

Captain E. Walker, R.E.

22 July 1868.

Royal Military College, Sandhurst.

2936. But do you not think that it interferes with the acquirements of other subjects?—It very probably may do so.

2937. (*Chairman.*) Are there any other points to which you wish to draw the attention of the Commission?—I do not remember any others.

2938. (*Lt.-Col. Chesney.*) Is there not a practical difficulty with regard to the teaching of military subjects generally without lectures previously, namely that it involves the necessity of a large library being accessible to the student?—Yes.

2939. (*Lord de Ros.*) Do you not think that abbreviated military history loses a vast deal of its charms to the student, and that it becomes a much drier study than when he enters into the characters of the persons and the features of the events in the detail of a more extended history?—I think that very much depends upon the abbreviation. There are some abbreviations of military history which should only be used as mere books of reference. Selecting a portion of a campaign or a campaign out of a whole war is not necessarily abbreviation. The lectures upon campaigns which we have given at Sandhurst I do not think could be considered as abbreviations, as may be seen from those produced.

The witness withdrew.

CAPTAIN L. A. HALE, R.E., examined.

Captain Hale, R.E.

22 July 1868.

Royal Military College, Sandhurst.

2940. (*Chairman.*) You are a captain in the Royal Engineers?—Yes.

2941. And you are one of the instructors in fortification at Sandhurst?—I am.

2942. How long have you filled that office?—Six and a half years.

2943. Do you find that the young men who pass the entrance examination come to you sufficiently instructed to follow your lectures?—No, they generally know nothing about the subject of fortification.

2944. But do you think that their general knowledge is sufficient to enable them to take up their studies?—Yes, excepting mathematics. We generally find that even in the simplest calculations which occur in fortification there are a large number of failures. Very few of them can calculate a very simple example correctly.

2945. Those are simple arithmetical calculations?—Yes.

2946. Then do you find a general imperfection in arithmetical knowledge among the young men?—Yes, decidedly.

2947. Do you approve of the present age of admission to Sandhurst?—It depends upon what the object of the college is. I myself am unable to state what the object of the college is, whether it is to give a good military education or whether it is to teach military discipline. With regard to military discipline, I do not think that we can teach it. As regards education there appear to me to be two alternatives, either to reduce the age considerably, and to keep the cadets at the college for a very much longer time, altering the system entirely, or else to keep or even to raise the present age, eliminating from the college all the cadets who do not come with the intention of working, reducing the number to one-third, and giving these a sound military education, which I am sure they would accept.

2948. The effect of the latter recommendation would be to reduce the number to the number of those who could obtain commissions without purchase?—Yes; there are some statistics which Colonel Addison called for which show very clearly what the class of boys who come to us is. He asked us to send in independently to him a nominal list of the cadets under our charge, showing those who had learnt anything, those who had learnt nothing, and those who had profited by the instruction. The numbers and names were sent in by us, and out of 100 cadets I think that we reported that it was of advantage to about 37 per cent. to have been at the college; that about 35 per cent. must have learned something and were not absolutely idle, and that the remainder had learnt nothing. That has been my experience all the time. Therefore if we get rid of those who learn nothing at all, and of half of those who learn a little, I think that we should have a set of young fellows who would profit by the instruction.

2949. You think that the majority of the cadets do not profit by the instruction?—A vast number.

2950. To what do you attribute that?—First of all, I attribute it to the cadets themselves. There is a listlessness and apathy among two-thirds of the cadets who come to Sandhurst. I do not speak of in study, but out of study. They do not seem to care to play at cricket or at racquets, but they seem to prefer smoking about the woods. I have talked to the cadets themselves, and I have talked to the cricketers about it. I spoke to one of the eleven last term about it, and he said, "It is no good, we "cannot get fellows to practise cricket." That is merely to show the general apathy among the cadets.

2951. You describe that as the nature of the cadets; do you think that there is anything in the cadets which render it so *ab initio*, or is it from the system at the college?—It is certainly not from the system at the college, but it is so from the very first time that the cadets come.

2952. Do they come from a different class in society from that from which public school boys are drawn?—They have no *esprit de corps*. We have no leaders who can set a tone to the place. You can make an impression upon a certain number of cadets, but they pass away from you directly.

2953. Do you think from that point of view that the time of residence is too short?—Yes, much too short. However much we may mix with the cadets we have no set of monitors upon whom we can work. Directly that we know a cadet intimately and can make an impression upon him he goes.

2954. Are we to understand that you think that this general listlessness does not proceed from the want of disposition to study?—It depends upon circumstances. When a cadet comes to the college he soon knows whether he will get his commission without purchase or not, and if he sees that he has no chance of getting a commission without purchase he knocks

Captain Hale, R.E.

22 July 1868.

Royal Military College, Sandhurst.

off work. The cadets know that not more than about 30 or 40 will get their commissions without purchase, and I think that in that way they get idle. I have also known a cadet tell a professor that 450*l.*, the price of a commission, was a matter of no consideration to his father, and that therefore he did not see any reason for working.

2955. Would not that part of the evil be met if you reduced the numbers in the college according to one of the plans which you have suggested?—Undoubtedly.

2956. In the event of doing that would you propose to raise the entrance examination?—Yes.

2957. You were educated at Woolwich?—Yes.

2958. Did you see a difference of tone in the cadets at Sandhurst as compared with those at Woolwich at the time when you were at Woolwich?—Yes; the old cadet system, bad as it was, was undoubtedly a great instrument in the hands of the authorities for maintaining discipline. I was a young cadet for two years, and during that time I was careful to behave properly in the presence of an old cadet, or still more of a corporal or under officer, but that system does not now exist at Sandhurst, as the cadets are there for such a short time.

2959. Do you think that the presence of the Indian and Queen's cadets has a bad effect upon the college?—I think not.

2960. You do not think that it creates a number of listless young men?—No, I think that you will find them as energetic as the others. Out of 150 cadets entering the college you would find the best in every way amongst the first 50. At Sandhurst a man who is good in study is good out of study.

2961. You say that you would desire to increase the duration of the course. Do you think that that would be desirable upon the supposition that the college was reduced to about the number who could obtain commissions without purchase, and that the limits of age were retained as they now are?—I think that if we sent out the idle ones we should do very well, knocking out also of the study of fortification the advanced part of it, which in my judgment need not be taught to officers who are going into the infantry or the cavalry. The view which I take of fortification is to give every officer a sound education in field fortification. Of course when he goes to his regiment he will have three or four years idleness, but he will afterwards pick it up again.

2962. I understand you to say that if the college was reduced to the working numbers you need not increase the period of residence?—No, if we cut out a certain portion of the work.

2963. Do you think that if that was done there might be a sufficient incentive to industry?—Yes, because all the cadets would take interest in the work. At present I cannot give sufficient time to them all. I am obliged to take the whole of a class, and to work through a certain course in six months; I must go at a certain pace. I must drag through slow cadets, and I must try to get them all through together.

2964. I believe that under the present system when a cadet has completed the course of his first term he has to proceed to the course of the second term, whether the instructor thinks that he has understood the first course, or not?—Yes.

2965. Do you think that a bad system?—Yes, but we cannot do it in any other way. At present we have to teach in classes; it is not the right system of instruction.

2966. Could not a cadet who had not understood the first course be left behind, and have to take it up again?—He cannot. The system of instruction is very unsatisfactory, both to the cadets and to the instructors.

2967. Supposing that it was not thought desirable to reduce the present number of cadets, and that cadets did not seem to profit by the instruction, could you suggest any other course which could be adopted?—I would punish them for idleness.

2968. Is there now any punishment for idleness?—No, there is no incentive to a cadet to work, and the standard is so low for a commission with purchase that the greatest idler can get a commission without working. I do not know what will become of a cadet who fails to get his commission with purchase.

2969. You think it very essential that there should be a sufficient punishment for idleness?—I do. Moreover, all punishments for study offences should be inflicted by order of the superintendent of studies instead of the commandant, as is the practice in serious cases. Of course under these circumstances the cadets look upon the commandant as the great man and upon the superintendent of studies as the small man.

2970. You think that the superintendent of studies under those circumstances has not sufficient powers?—I do.

2971. You would combine the duties of superintendent and commandant?—Yes.

Comb
instru
and d
nary

2972. Would you similarly combine the duties of professors and officers of companies?—Nearly entirely. I imagine that a professor has each cadet for a sufficient number of hours a week to know a very great deal more about his cadets than the captain of the company can know about them. I have at the end of a month a knowledge of every cadet in my class, but he goes out of study to a man who cannot possibly have the control over him which the professor can acquire. The subaltern officer on duty is up at 6 in the morning, and is on duty till half past 10 at night; I do not think that a professor could do that, but that is merely a minor point. The tendency of the Sandhurst system has been to treat the military professors as regimental officers. I will mention a case which occurred where an order was given by the commandant with respect to some detail in study, and the order was such that I thought it desirable to mention to the superintendent of studies that I was of opinion that it would have a very bad effect upon the discipline in study, and I did so in a most respectful manner; I was asked to withdraw that letter upon the ground that a regimental officer had no business to cavil at any order of his commanding officer; I declined to withdraw the letter, and then the matter was referred to the commandant; the commandant also spoke to me in the same manner, but I still declined to do it, and there the matter rested. It was not done in an insubordinate manner.

2973. You think that with the exception of the duties of the subaltern of the day, the professors could undertake the duties of the officers of companies?—Yes.

2974. And you would desire to see that change introduced?—Yes, if we are to retain the military system.

2975. Do you imply that you would desire to alter the military system, as it exists at Sandhurst?—I should myself rather do so unless we reduced the college to a small number, and I think that then we could keep the cadets in order by military discipline, but if we do not reduce the college I think that the military system is rather a failure.

2976. As I understand the system which you propose for the Military College, it is retaining the present number, but introducing the limit of a much earlier age?—Yes, it is one of the systems I propose.

2977. Making the college a school?—Yes.

2978. And then you would not introduce military discipline?—No.

2979. But you think that if the college were reduced to more limited numbers, what you have described as the military system might be retained?—Yes.

Syste
instru

2980. At present I believe that the professor of fortification does not take any general charge of the instruction in that branch?—No.

2981. Each instructor works independently?—Yes, or rather we work in couples. There are six instructors, including the professor in the branch of fortification.

2982. Do you think that it would be a good thing if the professor had a greater power of general superintendence over the instruction in fortification?—I certainly think so; to my mind the professor of fortification should see that the instruction in the lower branches is properly carried on, and the alterations which he might suggest should be attended to. The superintendent of studies should also be referred to.

2983. Do you know anything of the system which exists in some of the French colleges of a *répétiteur*?—I have read about it, and it strikes me that it is a very admirable system. We tried it at Sandhurst some years ago. At that time the cadets were there only for a year and the college was divided into first term cadets and second term cadets; and in the case of the first term cadets there were three instructors—one instructor lectured, and the other two were present—and on the cadets going back to the halls of study notes had to be written by them, and explanations given by each of the three instructors to his own class. We found that system advantageous both to the instructors and to the cadets.

2984. Why was that system abandoned?—I think that there were rather personal grounds for abandoning it; there were objections by some of the senior instructors, and unless that system is worked *con amore* by everybody I do not think that it succeeds.

2985. But in the abstract you consider it a good system?—Yes.

2986. Will you proceed with what you have to state?—I think that the course of fortification should be thoroughly practical, and confined as much as possible to field fortification. During the last twelve months we tried with a class of second term cadets to practise out of door fortification, and we found it perfectly successful. Our system as a rule is to give the cadets a certain amount of indoor instruction, not very long, on the work to be executed, and then to take them out on the ground and to make them build embrasures and revetments and different kinds of field works, and to form bridges, and also to make gabions and fascines; the cadets do it themselves, and we find the system succeed admirably.

2987. Do you think that it should be further extended?—If we had more time to take it a little further I think that it would be useful. In the last term we only had 90 hours in which to do this. Fortunately we had fine weather, but nevertheless we had to throw over a portion of the course.

2988. Do you find that the cadets take more interest in outdoor instruction than indoor instruction?—Yes, the difficulty is to keep them indoors.

2989. Then there is less of listlessness in that class of study?—Yes, but the idle cadets will be perhaps two hours and a half or three hours doing work which the more active cadets will finish in an hour and a half.

2990. Do you compel them to stay until they have completed their work?—As far as possible we drill them by squads, dismissing each squad as its task is completed.

2991. Would you omit altogether instruction in permanent fortification?—Yes, I think so, except a month at the end of the last term.

2992. After the instruction in field fortification was completed?—Yes.

2993. Is has been suggested that in the halls of study, the corporals and under-officers should be charged with the maintenance of discipline; do you approve of that suggestion?—It would do very well at Woolwich as the halls there are built, but I do not think that it would do with us; I think that it would sometimes be rather awkward. I hear everything that goes on in the hall of study. At Woolwich the instructor does not hear everything that goes on.

2994. Do you find any practical difficulty in maintaining discipline in the halls of study?—No; I did so on one occasion only, where the cadets behaved so badly that we had to bring them up to the commandant, and that practically stopped it.

2995. Have you not the power now of sending a cadet out of study under arrest?—Yes, but there is no occasion to exercise that power except in a very few and isolated instances.

2996. Do you think that the present position of the corporals and under-officers is satisfactory as to the maintenance of discipline?—I do not think that they exercise it. They are of the same standing and are in the same hall of study as the other cadets, and they do not exercise their authority unless they are absolutely obliged, and then you have to call their attention to it.

2997. Do you think that they have less inclination to exercise their authority than the under-officers at Woolwich in your time had?—Yes, much less, because the under-officers at Woolwich were senior cadets, and they had a position for it. I may here mention that one great element for maintaining discipline, namely, that of indirect supervision, or supervision without *espionage*, is wanting at Sandhurst. At Woolwich the officers' quarters were in the centre of the main buildings appropriated to the cadets; whereas at Sandhurst the officers live well away from the cadets, who are left, comparatively speaking, entirely to themselves.

2998. Your view I understand to be that it would be desirable to combine the disciplinary staff with the educational staff?—Yes.

2999. Supposing that not to be done, and the separation still existing to be maintained, is there any greater extent of disciplinary power which you think advantageous to be given to the professors and instructors?—I should like to have some more power than I have now in study. I should like to be able to send to the superintendent of studies any cadet whom I thought worthy of punishment. If he pleased to appeal against my report, well and good, but I should in the report suggest a certain amount of punishment.

3000. Supposing that you send a cadet out of the hall of study under arrest, do you make a report of it to the superintendent of studies?—Yes, and the cadet goes before him.

3001. What change in that system would you like to see?—I should like that a report of mine for inattention should entail three or four days arrest, or that the cadets' leave should be stopped for a week, or something of that sort.

3002. You would like in fact that the power of stopping idleness should be given to the professors?—Yes.

3003. Are any reports which are made by you as to improper conduct of any sort on the part of cadets referred to the captains of companies?—There are some offences which are considered disciplinary offences and not study offences, and which are referred to the captain of the company. If he considers it necessary to report the offence he does so, or otherwise deals with it.

3004. Have you any objection to that?—I object most strongly to the captain of the company dealing with any offence committed in the study hours.

3005. And you would desire that the superintendent of studies should at once act upon your report?—Yes.

3006. Can you suggest any further encouragement which could be given to the cadets which would be likely to induce them to take a greater interest than they now take in their position?—It has been suggested to me by a cadet himself that they should have some sort of rank. They constantly go over to the camp at Aldershot, and they find that they are nobody there, and I believe that it would have a great effect upon their conduct if they had some rank given to them.

3007. It has been stated to us that their appearance at present out of college is not very soldierly, particularly in comparison with the Woolwich cadets; is that your experience?—Yes; but that is owing to our not having a large town near us. York Town is a very insignificant place and the cadets slouch out there and do not think it worth while to take any

Captain Hale, R.E.

22 July 1868.

Royal Military College, Sandhurst.

trouble with themselves, but in my time at Woolwich if I had gone out dressed half as slovenly as is the case at Sandhurst now I should have been reported.

3008. You have mentioned that the cadets are in the habit of going to Aldershot; some objection has been taken to that by some of the witnesses before us. Do you see any objection to that practice?—It depends very much upon whom they go to. I am afraid that they have not a very good name at the camp.

Attainments of the cadets.

3009. (*Lord E. Cecil.*) You say that very few cadets can calculate. Have they any elementary knowledge in fractions and decimals?—It sometimes may be so. I understood Canon Heaviside to say that that want of accurate knowledge of fractions and decimals was general and not peculiar to Sandhurst alone.

3010. Can you state how it is that they are able to pass the entrance examination for Sandhurst?—No; If we give them the calculation of an ordinary profile very few of them will calculate it correctly; if we give them the calculations of an ordinary scale they say that they do not understand how to do it.

3011. Then I understand you to say that they have not very much general knowledge in arithmetic?—Certainly not, judging by results.

3012. You have said that only 37 per cent. of the cadets passing through Sandhurst obtain any advantage by the education?—My intention was to state that they obtained a great advantage; and that the next division, which was 35 per cent., could not help learning something; but the really beneficial effects of the college I think are confined to that 37 per cent.

Returns, p. cxlvi.

3013. From the return furnished to us, in the last 10 years about one-fourth of the officers in the infantry and cavalry have been supplied from Sandhurst. If it be the case that only 37 per cent. of the cadets at Sandhurst obtain a very great advantage the effect of Sandhurst upon military education must be infinitesimally small, and much less than one-eighth of the officers of the army must be benefited by that education?—Yes, but even this proportion can hardly be called infinitesimally small.

3014. Do you think that the college at Sandhurst really serves the purpose for which it is intended, namely, of giving a good military education to officers of the infantry and cavalry?—I do not.

3015. You state that the greatest idler at Sandhurst can get a commission; what amount of military knowledge can he have under those circumstances?—Very small indeed.

3016. In your opinion is the education in your own department sufficiently practical?—I think that it is. Within the last year it has been so. Colonel Addison has quite changed the whole system of instruction in fortification by introducing as far as practicable practical instruction.

3017. What would you propose to teach in the way of permanent fortification?—I cannot answer that question because I have been instructing chiefly on field fortification.

3018. Of what benefit is permanent fortification to an infantry or a cavalry officer?—Those cadets who come from Sandhurst probably go through the Staff College, and I think that it would be a good thing for a cadet to have an introduction when he was younger to the principles of fortification. Of course he can learn it elsewhere, but I think that he will pick it up more readily by learning something of it at Sandhurst.

3019. Then it is not with the view to instructing him in his duties that permanent fortification would be desirable, but with reference to his afterwards entering the Staff College?—Yes; we should have more time, if we eliminated a certain portion of permanent fortification, for siege work, which I do not now teach; but all the siege works would be included in the field work course.

3020. Do you think that there is any great benefit now, in teaching the first system of Vauban?—No.

3021. Do you not think that the improvements in the range of artillery and musketry have very much altered the advantages of that system?—Yes.

Organiza

3022. You have said that you are in favour of a combination of the disciplinary and the instructional duties of the professors and officers at Sandhurst?—Yes.

3023. We have it in evidence that the professor of one particular department devotes at least 10 hours a day to his work; is that generally the case amongst the professors and instructors at Sandhurst?—I should think not. There is one branch, namely, military history, the course in which changes every six months; it is a different style of instruction; the professors have to prepare their lectures afresh each term, whereas in field fortification in three or four years there is not very much change, and much preparation is not necessary.

3024. You stated that the subaltern officer of the day collected reports at 6 o'clock in the morning and went on till the close of the day?—Yes.

3025. Do you think that there is any necessity for his doing that work? Could not it be done by the serjeant of the college?—I know nothing whatever against the character of the serjeant, but I think it rather a dangerous power to give to the serjeant; he is not I suppose above pecuniary considerations, and I think that he might occasionally be influenced by them; he might forget the name of a cadet who was absent.

3026. You say that you would prefer to make Sandhurst a large public school; you are no doubt aware than ten years ago there was a junior department at Sandhurst which answered very much the purpose of a public school?—Yes.

Discipline

3027. You say that on one occasion the cadets behaved very badly in your hall of study; will you state to the Commission what was the particular nature of that offence?—It was a case of improper language to an extent which I had never experienced at the college before.

3028. Would you, as a professor, if you heard a cadet swearing or using very bad or obscene language think it right to reprove him or to report him on the spot?—I have done so.

3029. Is swearing looked upon as a matter of disrespect to the professor, and punishable?—Yes, but as a rule I should not report a cadet for swearing; I find it infinitely better to appeal to them upon it.

System o study.

3030. What is your opinion of the independent studies?—They were very bad; there are no independent studies now.

3031. Would you be in favour of private study being more encouraged amongst the cadets than it is?—Anything to increase the incentive to learning I think would be good.

3032. With reference to your own particular department would it not be a very great advantage if some of the work could be got up out of study?—Yes.

3033. And if the subject could be explained afterwards by the professor?—That is so as to the voluntary course, but there are so many marks given to cadets for the voluntary portion of the fortification course that they are rather inclined to neglect the obligatory portion. I should like to see them study the obligatory portion out of study and not only the voluntary portion.

Under-of &c.

3034. I think that you have stated that there is nothing like a sixth form at Sandhurst. What position do the under-officers and corporals fill at Sandhurst; do not they lead the tone of the place?—Some of them do, because you select the best cadets for that purpose, but I think that their influence is very small. Sometimes you get a cadet who has very great influence. A case occurred the other day where I am perfectly sure that it would have answered to have given the cadet a commission and to have kept him at the college in some way; he had a marvellous power over the cadets of his company.

3035. With regard to the system of promoting cadets to be under-officers and corporals, are you in

favour of the system of seniority combined with selection, or would you promote them for their excellence in study?—Not for their excellence in study only, but we generally find that those who are good in study are the best altogether.

3036. As a rule you would prefer to take the study marks first, and that then the captain of the company, or the superintendent of studies, or the commandant, or whoever had the power of promotion, should be consulted afterwards as to the general character of the cadet?—I should not be too much in favor of the study marks. The cadet to whom I have just referred attracted my attention at once by his conduct in study, and simultaneously he attracted the attention of the captain by his conduct out of study. The captains of companies sometimes now ask me as to the character of the cadets.

3037. Then I suppose that some promotions take place entirely in consequence of the recommendation of the captain, and that the professor has nothing whatever to say to it?—Just so.

3038. You would be in favour of altering that?—Yes; I should think that the recommendation of the professor as to character would be very advantageous. At one time the instructors were asked to send in the names of the junior cadets whom they would recommend to take charge of their classes.

tone.

3039. (*Lord Northbrook.*) You have said, I think, that the cadets on joining the College appear to be listless, and rather of a bad tone?—They are of a listless and an idle tone.

3040. Do you think that that is at all attributable to a good many of them coming from private tutors, and not from public schools?—It is I think attributable to the system at many of the private tutors, where they are entirely left to themselves, except while they are being taught. I think that they pick up habits of idleness.

3041. Do you think that a young man who is with a private tutor has not the same inducement to join in games and sports, and is therefore at a disadvantage compared with youths at a public school?—Yes.

3042. And therefore you would think that youths from a public school would have a better tone?—Yes.

ation
cipline.

3043. You say that you would recommend that there should be a smaller college at Sandhurst, and of a higher standard?—Yes.

3044. Would you recommend it to be carried on in the same way as the present college is carried on?—No, I would combine the military and the disciplinary parts of it.

3045. You would have no double government?—No.

3046. You consider that to be essential to the proper carrying on of an educational establishment?—I do.

3047. Would you continue the system of calling the cadets a battalion; what in your opinion is the advantage of that system?—It is of no advantage now. I do not know what the advantage of it is; they cannot learn discipline; you cannot treat young fellows as strictly as officers of a regiment. To my mind you bring them up with false notions. Arrest with an officer is a vital point of honour, and he must not break it; but arrest at Sandhurst is nothing. A very short time ago they had at Sandhurst arrest either on parole or without parole. I think that that is a false system.

3048. So far from there being any advantage as regards military discipline, it would rather tend to create false notions of what military discipline is?—I think so.

3049. What would be your plan for the college at Sandhurst, supposing there to be a smaller college? How would you carry on the discipline of it; would you, for example, call the students cadets?—I do not see that there would be any advantage in having a military tone; I would simply have it as a place of instruction. The difficulty of course would be to find a head for that establishment; as the knowledge is specially military, it would rather point to a military man being at the head of it. If you could find a good civilian who had been accustomed to deal with young fellows, I think that you might abolish the military system altogether.

3050. On the reduced system, if you appointed a man to be a cadet with a certain military rank, and who should be promoted from being cadet to being an ensign, or a cornet, in the same way as with the naval cadets who now enter the "Britannia," do you believe that it would create a more healthy tone?—It would create a more healthy tone.

3051. Do you think that a young man would be more careful as to how he conducted himself, if he thought that he might forfeit his military career by misconduct at the college?—Yes.

3052. In your opinion it would be an alternative between a military organization and a civil organization?—I do not know as to its being an alternative, but it would be an advantage to give the students rank in a military college, with a military organization.

3053. (*Lt.-Col. Chesney.*) Are you aware that their arrests are kept strictly by the cadets at Woolwich?—I believe that they are; that is the tradition of the place.

3054. Is there any reason why it should be impossible to introduce at Sandhurst military discipline like that at Woolwich, or like that which existed at the extinct college of Addiscombe?—It is rather a difficult subject to give an opinion upon, because the cadets are now treated as half military and half collegiate. The discipline at Woolwich was far stricter in my day than it is at Sandhurst. Sandhurst is in many ways a sort of half college, and in some ways it is military.

3055. Speaking of Woolwich, is there any reason why the system of Woolwich should not be introduced at Sandhurst?—The academy at Woolwich has many advantages over the college at Sandhurst, having a large garrison town, and many officers interested in keeping up the discipline of the place.

3056. But those advantages do not happen to exist in the great military colleges of France, and Austria, and America. Is there any special reason why Sandhurst should not be kept up as a military college?—I am hardly acquainted with those colleges.

3057. You have said that there was more supervision at Woolwich; what did you mean?—I meant on the part of the officers of the garrison.

3058. You spoke of the case of a cadet being found to be useless as an under-officer, though he was high in his marks. In your opinion, if the professors gave proper reports of the cadets would not their veto prevent such a cadet being made an under-officer? If there was a proper report of the conduct and personal character of the cadets, ought it not to prevent such cadets being made under-officers?—It ought to do so; the reports of at least the military professors ought to do so.

3059. Did I correctly understand you that you did not desire as a professor to have any assistance at all from the corporals or under-officers?—Not as the halls of study are constituted. I would rather take charge of the cadets myself, as I know what to overlook and what to take notice of.

3060. You said that for a single term there was a power of putting a cadet in charge in study?—Yes; during our absence the senior cadet is now in charge, but the man who happens to be senior is often incapable of doing it. There is many a man who is not capable of doing it.

3061. The Addiscombe system was to put a man after the first month, according to the professors' reports, in charge of the rest of the class, which charge, if duly carried out, gave him a claim to be made a corporal; is there any reason why that system should not be applied at Sandhurst?—It is rather a short time for a new cadet, but in the second term, of course, you could do so at once.

3062. Is not the fact of the corporals and under-officers being chosen and retained without any

Capt. Hale, R.E.

22 July 1868.

Royal Military College, Sandhurst.

Results of the college education.

reference to the professors a prejudice to the instructional side of the college?—Decidedly.

3063. By the return before me it appears that rather more than one-third of the officers of the army for the last four years have been appointed from Sandhurst. You say that something less than one-half of those who leave Sandhurst for the army really profit by the instruction at Sandhurst?—Yes.

3064. Does not it appear to you that if one-sixth of the officers of the army enter it with some military knowledge it may be an advantage generally to the army?—Yes.

3065. In your opinion is not it plainly a benefit to our army that about one-sixth of our officers should enter the army with some military knowledge?—It is certainly some benefit.

3066. (*Sir C. Russell.*) Do you find that the cadets show aptitude in acquiring their practical instruction in field works?—Yes, very great aptitude.

3067. And greater aptitude than in the theoretical part?—Yes, they take more kindly to it.

3068. Do you think that a cadet who has been instructed in the practical part of constructing either a redoubt or a bridge would be more useful on real service than a man who might have passed a good examination in the theoretical part only?—I think that it must depend very much upon the two individuals who are compared. A man who has passed a good theoretical examination must have some brains, and a very little attention on service would show him how to turn his attention to the practical part. A man who has passed a theoretical examination of course is not to be compared with a man who has wholly the practical work.

3069. (*Sir D. A. Cameron.*) I suppose that it is the commandant who appoints the corporals and under-officers on the recommendation of the captains of companies?—Yes.

3070. Is the superintendent of studies consulted by the commandant in the appointment?—I do not know.

3071. I think that you have said that the cadets do not receive a good military education at the college?—I am speaking of fortification; I do not know anything about the other branches.

3072. They are not well instructed in fortification?—No, because there is no time for it; it is an entirely superficial knowledge.

3073. (*Lord de Ros.*) Would not a system of private study taken up weekly and given credit for by the authorities at Sandhurst promote a tendency to less idle habits in the cadets?—Yes; but I should like to confine that to the obligatory portion of the work.

3074. As regards field fortification, does it not prepare the student in a certain degree for permanent fortification; for instance, enough to avoid such a mistake as that of Bergen-op-Zoom, of a storming party plunging into the streets before the rampart was occupied?—I have never myself been in actual service, but from what I have seen of fortifications I think that a man, however well instructed he might be in fortification from a book, would be exceedingly puzzled in an attack to find out where he was.

3075. My question is, whether his instruction in field fortification would not rather prepare him for permanent fortification?—I do not think that it would help him to find his way out of the difficulty which he had got into.

3076. Do you consider that there is proper latitude given for buying tools, brushwood, and for making gabions, fascines, and so on?—I think so. I do not think that we have run short to any extent; we may occasionally have run short, but not to any extent.

3077. When the cadets are taken out in a party and shown how to strengthen a pass, or ford, or the the rise of a road, do you find a spirit of rivalry among them which promotes improvement?—We do not go to that extent of taking them out for that practical work.

3078. Do you not think that that sort of practice would give great interest, and would rouse some energy in those cadets whom you describe as idlers?—It might.

3079. Have you not known many cadets who were averse to hard study, but who when their interest was excited on real service turned out excellent regimental officers?—I dare say that that is the case.

3080. Supposing every cadet to be reported upon monthly, how could he get through the college without learning anything?—If he were punished for his idleness, he could not do so; but the monthly reports are now of no good.

3081. As to public schools, supposing that it were well known by the head masters that your difficulties arose from want of elementary knowledge, would not it be likely to produce more forward scholars from the public schools?—They have to pass an examination in that particular branch in order to get into the college.

3082. But supposing that it were known by the head masters of those schools that you found this want of elementary knowledge, would not it be likely to produce more forward scholars in the public schools?—Yes; I should presume that it would.

3083. Supposing that you allowed cadets an acknowledged undress for going into the country and for games, and that you insisted at other times on strict uniform, do you think that it would have a good effect?—They have at present an undress. It is of course a disciplinary question out of the college grounds; I should prefer their being in full dress. The college grounds are very large indeed.

3084. What should you say to having no uniform worn at all at Sandhurst except on parade?—I think that if it is a military college the students should be in uniform; I think that they should be able to be recognised outside the grounds.

Organiz

3085. Supposing that there were no captains and subalterns, but that there was a good active adjutant, would not that be better than divided authority?—Combining the two I think would be better.

3086. (*Rev. W. C. Lake.*) Are we to understand that the alteration to which you would rather incline at Sandhurst is to make it a college like other civilian colleges, with the sole addition of military studies?—No, I did not intend to imply that; I rather meant that there should be a combination of the military and the civil elements, with a reduced military organization.

3087. You would keep the college as it is now, but reducing the numbers?—Yes.

3088. And giving greater powers to the professors?—Yes; combining the two staffs, and not having a second staff.

3089. Supposing that you were to have such a smaller college as you now speak of, would you have all the cadets to go through precisely the same course of studies as at present, or would you have a senior and a junior division in each class, with some difference in the studies?—I think that I should be inclined to go through the same course of study.

3090. You do not see any difficulties, or at all events any insuperable difficulties, in the more advanced and the less advanced cadets being driven through the same course?—Just so; that is to say, provided the entrance examination is raised so as to keep up the standard.

3091. However much you raise the entrance you will always have a certain number of men who will be beyond the others?—Yes; but with better men I think that we should be able to take the good men through a better course, though nominally the same.

3092. With reference to idleness, how would you secure that a young man with this better examination did not become idle afterwards?—I think that upon the report of a certain amount of idleness a cadet should be removed, or rusticated.

3093. You would make a certain amount of idleness a bar to the cadets finally obtaining commissions?—Yes, certainly.

3094. But for the good conduct of such a college you think that idleness should be taken notice of?—Yes.

3095. You think that at present no notice is taken of it?—There is now no notice taken of it whatever.

3096. So that the cadets become absolutely indifferent to the reports of the professors as to idleness?—Yes.

3097. (*Chairman.*) You have spoken of the special duties of the subaltern of the day, mentioning principally among them that of collecting reports; do you think that those duties might be performed by an active adjutant?—It would be very hard following day after day. I think that it would be too much for one officer day after day, especially as the subalterns' quarters are a quarter of a mile away from the barracks of the cadets.

3098. Do you think that it would be too much for an adjutant upon the supposition of a reduced college?—I could hardly give an opinion about that; other witnesses can best tell the number of times that an adjutant has to come up to parade, and how he is constantly at work, of which no notice is taken.

3099. (*Lord Northbrook.*) You mentioned that the monthly reports as to the cadets were all sent up?—Yes; but no notice is taken of them.

x p. x.

3100. In the memorandum which we have from Colonel Addison there is the following paragraph:—"Monthly reports are sent to the Horse Guards of "the application and conduct in study of every cadet. "Where the report is bad I make a point of drawing "attention to it, and a reprimand or warning has "always followed?"—I should be sorry to dispute Colonel Addison's statement, but I have reported cadets over and over again, and no notice has been taken of it. It is, I know, a standing order that cadets are bound to do any work set by an instructor, and failing to do this they will be punished. This is, however, punishing for disobedience of orders, not for idleness. It imparts, moreover the military *régime* into the class room, and is calculated to injure the friendly feelings which should exist between teacher and pupil. What I advocate is punishment for general idleness or inattention, and not for specific instances of this kind of behaviour.

3101. Have you sent in monthly reports of the bad progress of the cadets during the last term?—Yes.

3102. Has any notice been taken of those reports?—No, not that I am aware of.

3103. (*Sir D. A. Cameron.*) Would it not to some extent cure the idleness at Sandhurst if the qualification for a commission with purchase were raised?—Yes, undoubtedly on that point. I think there would be another incentive to study, namely, that instead of having the present competition for the cadets who get their commissions without purchase there should be a high qualifying minimum. Unless a cadet is in the first 30 or so he knows that he cannot obtain a commission; but if he knew that by working and getting a certain number of marks he would obtain his commission, I think that a large number of that second class of cadets of whom I have spoken would get commissions.

3104. Would there be a sufficient number of commissions to give?—That is the question.

3105. (*Chairman.*) The number of commissions without purchase being limited under the present system, by what means could they be increased?—That is the difficulty.

3106. (*Sir D. A. Cameron.*) But you think that the qualification for a commission with purchase might be raised at once?—Certainly.

3107. (*Chairman.*) Have you any further suggestions to make to the Commission?—I may refer to the last report upon fortification made by the public examiner in June. The examination was considered to be unsatisfactory, and he drew the particular attention of the Council of Military Education to the fact that the cadets who got commissions without purchase had passed a satisfactory examination in fortification, but that all below that had passed an unsatisfactory examination. The incentive in their case was gone, and they did not care so long as they had the qualifying minimum for purchase. Then I would say that the results of our examination in fortification have been reported as constantly unsatisfactory. I do not think that sufficient notice has been taken of the very short time that the cadets are with us. Last term we had only 16 weeks, and in the next term we shall have 15 weeks. We began in last term on the 4th of February, and the examination was at the end of May. We had Easter struck out of the time, and we had some examinations during the term. Therefore, the instruction finished at the end of May, and we do not begin again till the 1st of August, and out of that period we shall have some days taken away. The examination is hurried on account of Woolwich.

3108. Would you advocate any alteration in the arrangement of the terms and vacations?—I should like to see three terms instead of two, but it has been objected to on account of the expense to the cadets in going backwards and forwards. If we had three terms the cadets would see the future before them; but I think that they do not now see it.

3109. By the "future" you mean the examination?—Yes. As a proof that those cadets who are at the bottom of the batch are not all deficient in ability I may mention the fact that my experience among the cadets has shown me that some of those who pass out worst have the very best memories.

3110. And do they show general intelligence besides?—Yes.

3111. (*Rev. W. C. Lake.*) Do you attribute the extreme listlessness of which you spoke at the beginning of your evidence to any particular causes which you can assign?—No, I cannot; I have often tried to fathom it; whether or not it is that the cadets have been hard worked to get in, and find facilities for enjoying themselves by lying about and smoking.

3112. I understood you to say that you thought that it prevailed to a much greater extent than at public schools?—I am sure that it does.

3113. Has it struck you that they come from any of the private establishments in a state of bad *physique* generally?—No, I do not think so.

3114. Are not a good many hospital cases reported?—I do not think that there are very many.

3115. What do you think of the permission to smoke as bearing upon the mind?—Doubtless the fact of being able to do it so freely makes men smokers; but I do not see how smoking could be prevented, and perhaps it is better to legalise it.

3116. It is one thing to allow it to some extent as inevitable, and it is another thing to legalise it and to encourage it, is it not?—Yes. Recently, owing to our power being increased, the cadets have been forbidden to smoke upon the public roads, and that practice has to a great extent ceased.

3117. As a mere matter of health, is any check put upon the extent of smoking?—Not that I am aware of.

3118. May a young man if he likes smoke during his whole time out of study?—Yes, except in certain places.

3119. Has it struck you that the habit of what is called "independent study," which you seem to describe as no study at all but as mere lying about, tends to encourage these habits of listlessness?—I do not think that many cadets go to independent study.

3120. Should you say that it is the idlest cadets who go to independent study?—Yes; cadets who decline to go to geology, and so forth.

3121. (*Lt.-Col. Chesney.*) Has it never struck you that the year and a half at Sandhurst is considerably less than the period at most military and civil colleges?—Certainly.

3122. Do you not think that it would be an improvement as regards the instruction, and indeed the

Captain Hale, R.E.

22 July 1868.

Royal Military College, Sandhurst.

discipline, if the period were extended to two years?—I think that half a year would make very little difference.

3123. Still that half year would be in favour of giving authority to senior cadets, would it not?—Yes; it would have that tendency of course, especially if a number of them got out at the end of three terms, and the number of seniors would be thus reduced.

3124. (*Sir D. A. Cameron.*) In that case would you not think it advisable to make the final examination higher?—Yes.

3125. (*Chairman.*) Do you think that there is any objection to the plan which now exists, by which a cadet can pass out in two terms?—No objection at all.

3126. (*Lord de Ros.*) Do you think that the use of the billiard table rather tends to encourage the lounging habits?—I think not, because the billiard tables have already existed in the village, and they do now exist under control. I think, however, that drinking beer and smoking to a late hour in the evening in the refreshment room must destroy energy at early study the following morning.

3126*a*. (*Chairman.*) Have you any further remarks to make?—In the early part of my examination I have referred to the want of good tone among the cadets; I may perhaps be allowed, nevertheless, to express my firm conviction that the discredit which is occasionally brought on the college by the misconduct of the cadets, is due to a few ungentlemanly young men who find themselves free to pass an idle useless existence at the college. I have had constant opportunities of mixing with the cadets out of study, and, as a rule, no young men could have behaved in a more gentlemanly manner than they have always done.

The witness withdrew.

BREV. MAJOR WILLIAM ROBERTS FARMAR examined.

Major W. R. Farmar.

Royal Military College, Sandhurst.

3127. (*Chairman.*) You are, I believe, one of the captains of companies of cadets, at Sandhurst?—Yes.

3128. How long have you held that appointment?—Nearly eight years.

3129. Will you describe the nature of your duties?—I have the general superintendence of the cadets at all times, in the dormitories, and during their casual movements, and at all other times as well.

Duties and powers of captains and subalterns of companies.

3130. That is to say of the cadets in your company?—Yes, the A company, the senior company.

3131. How are the cadets arranged in companies, do they always remain in the same company throughout the whole of their course?—Yes.

3132. Therefore a cadet is under your charge during the whole time that he is at the college?—Yes.

3133. Do you consider yourself entirely responsible for the discipline of the company under your charge?—Yes.

3134. Do the duties of the adjutant relate almost exclusively to drill?—Yes, he has nothing to do with the dormitories, he has the general supervision out of doors, as other officers.

3135. Do you exercise any supervision over the cadets out of doors, except such as any officer of the college may exercise?—No.

3136. Of course if you saw any misconduct out of doors you would equally report a cadet from another company, as well as one from your own?—Precisely so.

3137. Does the subaltern of the company act under your orders?—Yes.

3138. Has he any special duties, or are his duties similar to yours?—He has special duties on the day when he is on duty at the college, which is every third day; but otherwise he performs his duties under me, and when the cadets are in their dormitories he is responsible under me.

3139. Is there a captain of the day?—Yes.

3140. What duty does he perform?—He first of all has to attend prayers in the morning, and he has to see that the drills are carried out at proper hours; he attends general parade, and he has to see that everything goes on properly at the dinner hour, in fact he is all day at the college and has to see that the studies and the routine go on properly.

3141. When you say that you have charge of the cadets in their dormitories, are your quarters close to the dormitories of your own company?—They are quite close, they are within one minutes' walk.

3142. If any disorder took place, would you be sure to become acquainted with it?—Certainly.

3143. Do you visit the dormitories?—Yes; frequently.

3144. You say that the captain of the day has duties in connexion with the messing of the cadets?—Yes.

3145. Are those merely ordinary duties of inspecting the mess and seeing that it is of a proper kind, or does he remain in the room?—He does not remain in the room all the time; he goes through the halls to see that everything is done properly.

3146. Those duties are much of the same nature as in a regiment?—Exactly.

3147. Is there any officer present during the whole of the mess time?—Not present in the room.

3148. Have the under-officers any duties as respects maintaining order?—Yes, the responsible under-officer is the responsible person at the dinner hour, and in his absence the next senior under-officer; there are five under-officers, and the senior of the five is called the responsible under-officer.

3149. How many corporals are there in each company?—Ten.

3150. Are there any supernumerary, or lance corporals?—None.

3151. What punishments is it in your power to inflict?—We can give three days' close arrest; that is the severest punishment which we can give.

3152. For any severer punishment you have to refer to the commandant?—Yes.

3153. If you inflict punishments of that kind, do you make an immediate report to the commandant?—No, it goes in to the commandant on the Monday following.

3154. What description of offences do you punish?—Any irregularities which we think not necessary to bring before the commandant.

3155. In the event of a complaint of irregularity being made by a professor, have you anything to do with it?—No, it goes up to the superintendent of studies.

3156. Supposing that a cadet was reported for coming late to study, would not that be referred by the superintendent of studies to you as the captain of the company?—He might pass it to me, if it was the first time.

3157. What would be your duty in that case?—I should give him some reprimand, or warn him to be more careful in future.

3158. Would you deal with it yourself?—Yes; I should consider that it would be handed over by the superintendent of studies to me to adjudicate upon in the way I have stated.

3159. But you would not take it up unless it was referred to you by the superintendent of studies?—No.

Discipline.

3160. Have you any observations to make to the Commission with reference to the present state of discipline in the college?—I think that there should be no divided command, such as now exists, between the superintendent of studies and the commandant. The professors I think are taught to look up to the superintendent of studies as their chief. I think that the commandant, under the governor, ought to be looked upon as responsible for what goes on during the studies. I think that he should be responsible for all the arrangements in the studies, and the professors to him. A major of a regiment would not hold

a separate orderly room, but the colonel would be responsible for everything.

3161. Do you think it desirable to treat the cadets at Sandhurst as a regiment?—Yes; I think that the commandant should know of everything, and I think that the professors do not sufficiently look up to him.

3162. Do you think that the professors have now sufficient disciplinary powers?—Yes. I think that the military professors are much more able to command obedience than the civilian professors. In fact very few irregularities, I think, take place in those halls of study which are under the military professors.

3163. Do you think that there are more irregularities in the halls of the civil professors?—Yes.

3164. Do you say that from the fact that there are more reports from the civil professors?—Yes, and from my own knowledge.

3165. Have they not the same power as the military professors?—Yes, precisely the same.

3166. But in your opinion they are not able to exercise it so effectively?—No; they have not the same moral influence as the military professors have.

3167. Do you think that it arises from the difference in professors?—Partly so. I think some of them never would have the powers of command.

3168. Do you think that the conduct of the cadets generally is satisfactory?—I think so.

3169. You are aware that considerable complaints have at times been made of the conduct of the cadets out of college?—Yes.

3170. Do you think that those complaints, as they came before the public, have been exaggerated?—Very much.

3171. Were you present on the previous occasion of a disturbance?—I was.

3172. Can you tell us what occurred then?—I think that it originated from some mistake which was made by Sir Harry Jones; he spoke to the cadets, and I think did not make himself clearly understood to them, and they seemed to think that he had broken faith with them. The people who had been aggrieved, and whose property had been destroyed at the Blackwater fair, came and endeavoured to recognize the delinquents. The cadets did not like it, and would have dispersed had not an under-officer of my company refused to pass the word to break off, and therefore stopped the whole insubordination, as my company remained steady and saved the whole line.

3173. Were the cadets under arms at that time?—Yes, and in line.

3174. The occurrence of such an event as that by cadets under arms would seem to imply a want of discipline, would it not?—They were very much excited. My under-officer was always anxious to do his duty; a report of his conduct was forwarded to the Commander-in-Chief, who expressed himself very much pleased with him.

3175. Was that expression of approval made known to the under-officers?—Yes.

3176. Was it made known publicly in the presence of the other cadets?—Not on a public parade, I think. I am not sure about that.

3177. I gather it to be your opinion that the discipline generally at Sandhurst is satisfactory?—I think so, if allowed to be properly carried out.

3178. Will you tell us a little more in detail what you mean by its being allowed to be properly carried out?—I think that if the commandant under the governor was made the responsible person, as the head of a college is at Oxford, the discipline would be quite sufficient to maintain order.

3179. You are of opinion that the commandant has not sufficient authority?—I mean with regard to rustication, or powers which the head of a college at Oxford has.

3180. You think that the commandant under the governor should have the power of rustication without appeal?—Yes.

3181. Would you extend that to dismissal from the college?—Yes.

3182. That I believe is not the case at present?—It is not.

3183. We have been told by most of the witnesses who have appeared before us that there is a considerable amount of idleness and of listlessness existing among the cadets, do you find that to be the case?—There is the "independent study," and that I think is a premium for idleness. If a cadet is inclined to be idle, he elects not to take up a particular study, and he can lounge about and smoke, not going out of the limits of the college. System of independent study.

3184. Then "independent study" is merely the study of smoking cigars?—Yes.

3185. Can you give any estimate of the number of cadets who abstain from a voluntary subject, so as to come under the head of independent students?—I could not give the number, but there are many.

3186. Are there every day a certain number lounging about in this way?—Yes.

3187. I suppose that it gives to them a general habit of idleness?—Yes; and it is not fair upon the others, it disturbs the work of those who are in study; it has a bad effect upon them. I think that it unsettles their minds, and I think that it is not fair upon the parents.

3188. Do you believe that the cadets at independent study generally keep to the bounds?—I think they do, but they can very easily break the bounds; it is only just to cross a road to break the bounds, and we cannot always be at that point.

3189. If you met a cadet without the bounds, would you know by the time of day whether he ought to be within bounds or not?—Yes.

3190. And therefore would you report him?—Decidedly.

3191. Are the corporals and under-officers appointed upon the recommendation of the captains of companies?—They are. Under-officers and corporals.

3192. Upon what principle do you make those recommendations?—I consider the subject. I always judge by the study marks and their good conduct, the two together.

3193. How do you judge of the good conduct; is it by the entries in the defaulter sheet or by your general knowledge?—By both.

3194. Do you enter everything in the defaulter sheet, do you enter admonitions?—Yes, I enter everything.

3195. Do not the professors now make monthly reports of the conduct and progress of the students, which are forwarded to the Commander-in-Chief?—Yes. Idleness.

3196. Do you know whether any cadets have been punished for inattention, or whether any report has been made as regards those who have been inattentive?—No, that is beyond my sphere.

3197. Would the commandant or the superintendent of studies inflict a punishment or give an admonition to a cadet in your company without your being aware of it?—An officer of the company is always present when the commandant punishes a cadet. I have seen them warn cadets that they were not making sufficient progress. I have been present when that has been done.

3198. There is, I believe, no recognized punishment for idleness?—No.

3199. Did you ever know a cadet dismissed solely on account of making no progress in his studies?—I have known cadets to be taken away for that reason. Their friends have been recommended to remove them.

3200. Have such cases been frequent?—No.

3201. In fact, that has been only in very bad cases?—Yes.

3202. Do you think that it would be a good plan to introduce the Woolwich system, by which I believe the under-officers have themselves the power of punishment?—We are differently circumstanced from Woolwich, because our cadets are only with us for eighteen months, and therefore the under-officers have not so much power as at Woolwich, they are too much of the same age. Under-officers, &c.

Major W. R. Farmar.

22 July 1868.

Royal Military College, Sandhurst.

3203. Do you think that a difference of six months is material in that respect?—Yes. In former days I think that there was more power of enforcing discipline because the ages ranged over a number of years, and therefore the seniors were very far removed from the juniors, and consequently were able much better to maintain discipline; but now a bad cadet may be punished one day by the under-officers, and in a very short time he may himself be the senior in some regiment, and I think that that may often cause an under officer not to do his duty.

3204. Do you think that that is a reason against giving the under-officers more authority than they have now?—No, I consider the under-officers have sufficient authority now. When an under-officer sends in a report to me he states the punishment which he wishes to be inflicted, namely, one or two days arrest, and so on, and I always have it carried out.

3205. Are you satisfied with the conduct of the under-officers as a body?—Very much so.

3206. Do you find any difficulty in obtaining those who are fitted to be under-officers?—The number is rather limited now to select from.

3207. Is it an object of ambition, or the reverse, for the cadets to obtain those posts?—I think that it is decidedly an object of ambition.

3208. Do they get any advantages in passing out of the college?—As they get their commissions under-officers and corporals are gazetted first.

3209. Does it make much difference in the time of getting a commission?—No. It is not always considered a boon to be gazetted first.

3210. It is not a power of choice of regiments, is it, but merely a priority of appointment?—Simply the latter.

3211. (*Lt.-Col. Chesney.*) They very often wait for their particular regiment?—Yes.

Billiard and recreation rooms.

3212. (*Chairman.*) We have had some evidence with respect to the system by which billiard tables have been introduced at Sandhurst; what is your opinion as to the working of that system upon the tone and discipline of the college?—I think that we have everything under our own eye there, and that no gambling or drinking ever takes place in the billiard rooms or recreation rooms. Since this system has been established the public houses have been comparatively deserted; therefore think the system may be considered a success.

3213. We have been told that one effect of the introduction of billiard tables into the college (although I believe that it is a regulation among the cadets themselves) is that, whereas the senior cadets used to go to play in the public houses in the town and the junior cadets did not play at all, the senior cadets now play at the authorized billiard tables and the junior cadets play in the town; do you think that that state of things exists?—I think that some do play in the town, but only a small number.

3214. Is that regulation among the cadets themselves, of excluding juniors from the recognized billiard tables, strictly enforced by them?—To a great extent I believe it is, and acknowledged as the right of the strongest. The junior batch of cadets are not allowed to be in the billiard rooms at night.

3215. Do you mean by the regulations of the college?—Yes.

3216. Are they allowed to be there in the day?—Yes, and when they get a good-conduct decoration they are allowed to go to the billiard tables from tattoo till 10 o'clock. To get a good-conduct decoration they have to be four months clear of the defaulter book.

3217. Is that given to every cadet who has been for four months out of the defaulter sheet?—Yes, it also carries an additional amount of pocket money.

3218. Are no cadets, whatever may be their standing at the college, allowed to play at the billiard tables of the college unless they have a good-conduct decoration?—They are not allowed at night unless they have a good-conduct decoration.

3219. Would a junior cadet be allowed to play at the college billiard tables?—I have seen cadets of all grades there; they are not perhaps playing, but looking on or reading.

3220. What is the present regulation as to beer; is it only drawn at the tap, or is it allowed to be taken to the recreation room?—It is only allowed to be taken over the counter. The cadets cannot take beer away from the bar, even to the smoking room, which is the adjoining room.

Military ganizati the coll

3221. (*Lord Northbrook.*) In your opinion is there an advantage in the military organization of the college at Sandhurst?—Yes; I think that you must have some discipline for young men of that age to teach them their duties, which they will shortly have to perform when they join their regiments. Everything which goes on there goes on as it does in a battalion. I have seen officers on service derive the greatest advantages from their Sandhurst education.

3222. Do you mean that it gives a cadet a thorough knowledge of the organization of a company?—Yes.

3223. Do you mean that it produces a state of discipline superior to what would be the case if the institution was managed by civilians?—Yes.

3224. For example, I understand by the reports which we have, that "independent studies" means that when a cadet does not elect to go in for a voluntary part of the course, he can be on his parole in the grounds?—Yes.

3225. Does it happen occasionally that a cadet does not keep his parole?—I do not think that there has been such a case; although it might be very easily done from the nature of the ground.

3226. Is the general tone of the institution at present such that it would be felt to be a dishonourable thing for a cadet not to keep his parole, and in your opinion would it be considered a breach of the spirit of the corps?—I do not think that any one has ever been discovered breaking his parole during independent study. If a cadet has given his word, I do not think that he would break it. In close arrest the cadets are given their option whether they will take it on parole or not; and those who say that they will not take it on parole, do so in order to break it if they can.

3227. Do many of them elect that?—No; it is chiefly among a few very irregular cadets, who are reported over and over again.

3228. Do you think that that is a proper system?—No, I think that all ought to be placed on parole on honour.

3229. With regard to the knowledge of military discipline, which is now given at Sandhurst, do you think that to teach a cadet that arrest is a punishment which, if he is sharp enough, he may break, is a proper method of instruction?—No. I do not think that he ought to have the alternative.

3230. From your knowledge of the cadets, do you think that when they join a regiment they have a good spirit of discipline, and are generally approved among the commanding officers?—The discipline under which they live at Sandhurst must be to their advantage; from what I am told I am afraid that they are considered too conceited, the commanding officers often do not like them; they fancy that they know more than the commanding officers think they do.

3231. Do you think that it is possible that the regimental system which is carried on at Sandhurst may make them a little neglectful of their duty afterwards?—No, I think not.

3232. (*Lt.-Col. Chesney.*) I observe that you have used the word "battalion," are the orders now issued to the college as a battalion?—Yes.

3233. Was that always done throughout your time?—Yes; since the present commandant has been there.

3234. Has not that a tendency to put the instructional part of the college in the background?—I think not, if it is all under the commandant. In Colonel Scott's time he held the reins of government entirely, and the superintendent of studies simply had to carry out the orders under him. Since then it has been changed. Things used to go on smoothly in Colonel Scott's time with regard to the professors.

3235. And you consider that now the powers are too divided?—Yes.

3236. With regard to the powers of the captains, have you always had this power of punishing cadets?—We have never had the power before of putting a cadet under arrest for three days.

3237. How long have you had that power?—I think since last year.

3238. With regard to corporals, have you not sometimes a considerable difficulty with respect to being obliged to appoint corporals from cadets who have just got into their second term?—I have not been obliged to do it; but I have done it. It was, however, simply as an experiment, which did not answer. I now always take the under-officers and corporals from the third term cadets; it gives them more power over the others.

3239. If the present three terms were raised to four, do you think that it would have a tendency to give the corporals and under-officers more control over the juniors?—I think so, decidedly.

sci- 3240. (*Sir D. A. Cameron.*) Are the cadets paraded and inspected before they go to bed?—My under-officer visits the rooms.

3241. Is it possible for a cadet to go to bed in a state of intoxication without its being known?—No. There is a corporal or a senior responsible cadet in every room.

3242. Would he be sure to report any cadet who went to bed in a state of intoxication?—He ought to do so.

3243. What other arrest besides close arrest is there?—Open arrest.

3244. What is that?—That is confinement to the college grounds.

3245. Is a cadet who is under open arrest at the regular roll calls?—Yes.

3246. To how many days open arrest can the captain of a company sentence a cadet?—Three.

3247. Has he any power of sending him to extra drill?—The extra drill is simply now instruction drill.

3248. It is not used as a punishment?—No. If a cadet comes late to parade, or is unsteady on parade, he is sent to instruction drill.

3249. Does the superintendent of studies dispose of all cases of misconduct in study, or where they are of a serious nature does he refer them to the commandant?—He refers the most serious cases to the commandant. The power of the superintendent of studies allows him to give seven days' close arrest, and the commandant can give 14 days.

3250. The superintendent of studies is also major?—Yes.

3251. Has he the power of punishing cases of misconduct out of study?—Yes.

3252. And he does so as major?—Yes.

3253. What notice was taken of the conduct of the cadets on the occasion when they were nearly breaking off under Sir Harry Jones?—I think that two or three were sent away, but that they had their commissions given to them afterwards.

3254. (*Chairman.*) Without purchase?—No, not without purchase.

3255. (*Sir D. A. Cameron.*) Was there not a very bad riot in the time of Colonel Scott, one of the worst which have occurred at Sandhurst?—Yes. When I made the remark previously, I meant that Colonel Scott had the reins of government with regard to the professors entirely in his own hands, and he knew everything that passed.

3256. Do you think that the state of discipline was more satisfactory in his time than it is now?—No, I am quite sure, speaking of the cadets, that it is carried on with much greater fairness now; but I think that most of the professors show a deplorable want of *esprit* for the college.

3257. (*Lord de Ros.*) If you were to hear oaths or bad language, what course would you pursue?—I should immediately place the cadet under arrest and report the case to the commandant.

3258. Are quarrels ever decided among the cadets by fighting?—No, not in my experience.

3259. Do you go round the college, or does any officer go round the college at any uncertain hour of the night?—Yes, I go round the college once a week, and my subaltern twice at least, during the night, and at other times at uncertain hours frequently.

3260. Do you ever visit the billiard rooms unexpectedly at night?—Yes.

3261. Do you ever visit the halls of study while the study is going on?—No, the subaltern has to visit them.

3262. Are you aware whether there is any possibility of bullying going on in the bedrooms at night?—No, there is very little bullying now.

3263. Do you visit the cadets of your own company in hospital?—Yes.

3264. Are there any limited hours for smoking?—No, not for smoking. Of course they are not allowed to smoke in the dormitories.

3265. Is the riding instruction at Sandhurst popular?—I think that it is very popular.

3266. Do you ever look into the riding school?—Yes.

3267. Is the riding master well obeyed and attended to?—Yes, I think so, certainly.

3268. As to drill, is it carried into the battalion movements, and do the cadets act as company or field officers?—They act as both in their turns.

3269. Are they often changed and tried in the drill of the regiment?—Yes.

3270. Do you ever visit the parties when they are out for field fortifications?—No; I never interfere with the professors.

3271. Have you ever met with any disrespect from a cadet?—Never.

3272. Do you believe that if drunkenness were common it could pass unobserved by the officers of the college?—No, I think not; I do not think that drunkenness is common.

3273. Would the daily state exhibit every case of arrest for drunkenness?—There is the morning punishment report, which would tell it; the daily state would not.

3274. Would it be desirable to have fines for swearing, such as a magistrate can impose at sessions?—I do not think that it would be a good principle.

3275. With reference to any mutinous movement among the cadets, from your regimental experience, do you not think that any officer used to command a regiment would be able in a moment to stop such a movement?—Yes, I feel convinced that with regard to my own company I could do so.

3276. As a regimental officer do you not think that the cadets, if properly addressed on a general parade, might from their habits as gentlemen be brought to order without any difficulty?—I think so.

3277. (*Rev. W. C. Lake.*) Do you think that the functions of the captains of cadets and of the professors in any way clash?—Not that I am aware of.

3278. Complaints are often made that the professor has not the power of punishing for any misbehaviour in his class, but that he is obliged to refer the case to the captain of the cadets, who possibly may not take the same view of it?—The professors do not report to the captains of cadets, but to the superintendent of studies.

3279. Has the amount of the punishment been such as the professor thought should be inflicted?—If a professor reported any case to me I should think it my duty to confer with him. If a cadet is sent out of study during the day there is no option, but to send him to his room and report the case to the superintendent of studies.

3280. So that you do not think that any disadvantage arises from the fact that it is not the professor who punishes for any misconduct in study, but the captain of the cadets?—The captain of the cadets has nothing to do with it, it is the superintendent of studies.

3281. (*Chairman.*) Are you satisfied with the ap-

Major W. R. Farmar.
22 July 1868.
Royal Military College, Sandhurst.

pearance of the cadets out of college as regards their smartness and soldier-like appearance, or do you think that there is any defect in that respect?—I think that they are as smart as they can be expected to be; they are at rather a difficult age to manage, and it is not easy to bring them into a state of proper military discipline in six months.

3282. We have been told that there is a marked difference in that respect between the cadets at Woolwich and the cadets at Sandhurst?—At Woolwich they are in residence for at least double the time, and are always under the eye of the regiment to which they will go, and in a large garrison town; but with us they have the whole country to roam about in; and the professors, military and civil, do not support us, with one or two exceptions.

Military knowledge acquired by the cadets.

3283. Did I correctly understand you to say that you thought that regimental duties and the knowledge of the internal economy of a regiment could be taught at Sandhurst upon the present battalion system?—The cadets are taught a good deal; they are instructed in the duties of the orderly room, and all duties are carried out as nearly as possible on the regimental system.

3284. Do you think that they are efficiently taught at Sandhurst, so as to supersede the necessity of its being all taught over again when the cadet joins his regiment?—It may be necessary in some cases for him to be re-instructed; a man in the ranks is not fitted to drill a company as a matter of course; so every cadet cannot move a company. I do not doubt that in a very short time when he goes to his regiment, he will be able to do so. The under officers and the corporals can drill their companies.

3285. The mass of the cadets when they leave the college are not competent to take the command of a company?—No, I think not; but as the rank and file of a battalion they know their duties perfectly.

3286. Would the under-officers be competent to take the command of a company?—Yes, I think so. quite.

3287. Practically do you think that the commanding officers of regiments are of opinion that a Sandhurst cadet has sufficient drill, or that they wish it to be learnt over again?—I think that practically there is a prejudice against the Sandhurst cadets, and that commanding officers generally think their knowledge of drill is not sufficient; but time will not admit of further instruction at the college.

3288. You do not think that any change in the Sandhurst system would tend to diminish that difficulty?—No; except by giving commissions without purchase to all cadets of good character, and by lengthening the period of residence at the college.

3289. Does what you have said apply to all the cadets equally? Does it apply to those who get their commissions without purchase, and who are the best of their kind?—The under-officers and corporals know their duties very well; but the mass of the cadets only go through the mechanical part of it in the ranks.

3290. I was alluding more to this objectionable absence of knowledge, which you say that regimental officers attribute to Sandhurst cadets. Do you think that it applies to the whole of them?—I think cadets are generally quick in acquiring their drill; but commanding officers of regiments cannot expect a gentleman cadet who has been serving in the ranks, to be able immediately to take command of a company. He knows his duty in the ranks perfectly, and requires very little practice to give him sufficient confidence to tell off a company.

Separation instruction and discip nary duti

3291. (*Lt.-Col. Chesney.*) You have spoken of the subaltern officer visiting the study; for what purpose does he do so?—He visits the study to see that the instructor is there, and if he is not present, to make arrangements for the instruction of the class, and to collect reports.

3292. Do you not think that the fact of the subaltern officer visiting the study to see that the professor is there, would have a tendency to lower the professor in the eyes of the cadets?—No, I do not see that it would, for this reason, that he goes there merely to make arrangements in a possible event; the professor would have to report his own absence.

3293. Yet, if as you say the subaltern officer visits the study to see that the professor is there, would not that rather have a tendency to lower the authority of the professor with the cadets?—There is a book in which every professor enters the time of his arrival in college, which is shown to the superintendent of studies immediately; therefore if his name is not entered he virtually reports himself, but the subaltern officer goes into halls of study for other objects.

3294. (*Lord de Ros.*) You mean that in case the professor was absent from sickness, or any casual cause, the subaltern officer would be present?—Yes.

3295. (*Lt.-Col. Chesney.*) Did you ever hear of a case of a cadet saying to a professor who reported him, "This will be worse for you than for me"?—Yes.

3296. He was, I suppose, punished for it?—I should think that he must have been. I remember the instance.

3297. From your knowledge of the college, do you think it conceivable that a cadet would have used such words to one of the disciplinary officers?—Certainly not.

3298. (*Sir Duncan Cameron.*) Do you think that the duties of the superintendent of studies might be abolished with advantage, and that the duties which he performs might be thrown upon the commandant?—I think that the superintendent of studies has a great deal to do in order to see that every thing is carried out properly.

3299. Might not the commandant undertake the duties of the superintendent of studies?—Yes, with great advantage to the institution.

3300. I suppose that the commandant also takes the superintendence of the studies?—No; that devolves on the superintendent of studies.

3301. (*Lord de Ros.*) Is the action of the commandant entirely confined to the discipline?—Yes, at present.

The witness withdrew.

Adjourned to Friday next at 12 o'clock.

Friday, 24th July 1868.

PRESENT:

THE RIGHT HON. EARL DE GREY AND RIPON IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	REV. DR. BUTLER.
LIEUT.-GEN. LORD DE ROS.	REV. W. C. LAKE.
LORD NORTHBROOK.	BRIGADIER-GEN. LEFROY.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.	LIEUT.-COL. CHESNEY.

Col. Hallewell.
24 July 1868.
Royal Military College, Sandhurst.

BREVET-COLONEL E. G. HALLEWELL examined.

3302. (*Chairman.*) You are commandant of the Royal Military College at Sandhurst?—I am.

3303. How long have you held that appointment?—4¼ years; I joined on the 1st of April 1864.

Duties a powers commar

3304. Will you state the nature of your duties as commandant?—I have the immediate command of the cadet college, and I am responsible to the governor for the conduct of it.

3305. What is the nature of the governor's authority over you?—The governor's authority over me is complete in every way.

3306. You consider yourself in the management of the college entirely under the orders of the governor?—Entirely so, and responsible directly to him. I regard the governor's position as that of a general officer in command, and my own position as that of a colonel of a regiment serving under him.

3307. What is the nature of your authority as regards the studies of the college?—The studies of the college are directly under an officer who is specially appointed for that duty, namely, the superintendent of studies, who is also the major, but he is under me; no changes can be made in the studies of any sort without their being referred to me, and they would be submitted by me to the governor.

3308. The superintendent of studies has no authority to make changes without reference to you?—Certainly not.

3309. Of course you act upon certain points on your own authority. Will you state, however, what are the points which you necessarily refer to the governor, both as regards the discipline and the studies?—With regard to the studies, I should refer to the governor any alteration in the studies. With regard to the command of the cadet college, and the discipline, I should use my own discretion in referring to the governor matters which I thought should be decided by him; they would be serious matters.

3310. Will you state the extent of your own powers as to discipline, and the nature of the punishments which you can inflict, without reference to superior authority?—I can sentence a cadet to 14 days' arrest, which entails an hour's daily drill with it—marching order drill—the cadet attending all parades and studies, and being confined to his room during the hours of recreation. I can also order a cadet up to 14 days' drill without arrest, and can, of course, give admonitions or reprimands.

3311. What is the nature of that drill; is it only instructional drill?—It is not instructional drill now; it used to be so; it is now simply what is called in the service "marching order drill;" that is to say, that the cadets under punishment march up and down with their accoutrements.

3312. Have you any power of rustication or dismissal in your own hands?—No.

3313. Has the governor such power?—At the beginning of the last term the power of rustication was put into the governor's hands, more particularly for the offence of visiting public houses, and I know that there is a letter which is in existence in the governor's office at the Royal Military College, in which, alluding to a case which had taken place, it reminds the officer who was then in command that the power of rustication is in the hands of the governor of the college.

3314. Does it refer also to dismissal?—No, it does not refer to dismissal at all.

3315. But it is simply as to sending a cadet home to his parents?—Yes; rustication I understand to be a cadet being sent away for six months from the date of his being sent from the college.

3316. Do you hold that the governor has no power in his own hands of complete removal from the college?—He has not.

3317. Do you think that there should be in some of the authorities of the college the power of rustication and removal?—I think that most undoubtedly it ought to be in the hands of the governor.

3318. Should it, in your opinion, be a final power?—Yes. I do not think that there ought to be any appeal from the governor's decision upon matters of that sort.

3319. Do you think that an important alteration?—I think so, and I have always thought so ever since I have been at the college.

3320. I understand from your evidence that until recently there was not even the power of rustication which now exists?—There was not. When I say that, I am of course speaking of late years. I am not speaking as to the state of the college in days gone by, when I believe the governor had very supreme power there.

3321. Will you explain the position and duties of the superintendent of studies, so far as he acts under your orders?—The arrangement of the studies is completely under the superintendent of studies. The professors are directly under him. For instance, if a professor required leave, the application would come to me through the superintendent of studies. The superintendent of studies disposes of all study offences reported by the professors, unless they are of such a nature that he considers it necessary to bring them before me. As major he is exactly in the same relative position with me as the major of a regiment would be. He attends all parades, and in fact he supports me; and if I am not on the ground, or if I am away from the college, he takes my place in the same way, and if he was away, the officer next in seniority would take his place, exactly in the same manner as in a regiment. Superintendent of studies.

3322. We have had it stated to us that in some respects there is a want of smoothness of working between the functions of the superintendent of studies and those of the commandant, and that it is desirable that the commandant should have more complete control with respect to the studies. Is that at all your opinion?—No, I cannot say that, because there is the most perfect understanding between us, and no people could be more *d'accord* with each other than the superintendent of studies and myself. I speak now of the two individuals who are working there. The superintendent of studies could not be more completely under my authority than he is.

3323. Do you consider him to be completely under your orders?—Completely.

3324. Do you consider that the presence of captains and subalterns of companies is necessary?—I do. Captains and subalterns of companies.

3325. Will you state shortly their duties?—The duties of the captains in command of their companies are similar, as far as the two things can be similar, to those of captains of companies in the line. They are responsible for the interior economy of their companies. They are immediately over the cadets, and are answerable for the quarters occupied by their companies. They are answerable for the staff serjeants attached to their companies, and the servants who are on the roster for orderly duty, and in the same way the subalterns support their captains. They assist in the interior economy of the companies, and also perform orderly duties. The captains are present at all parades.

3326. I believe that some time ago there were no subalterns of companies?—No, there were not; but there have been subalterns ever since I have been there.

3327. And you consider that two officers per company are required?—I do, certainly, with the present establishment of the companies.

3328. I have no doubt that you have heard of a suggestion that the duties of the executive officers, namely the captains and subalterns of companies, should be combined with the duties of some of the military professors?—I have.

3329. What do you think of that proposal?—I think that it would be a very good thing indeed.

3330. You would be favourable to the adoption of a change of that sort?—Yes; in my opinion it would be a most excellent thing.

3331. I believe that the late Sir George Wetherall made some proposal of that kind, did he not?—I think that he did; the matter was frequently discussed between himself and myself.

3332. Do you think that it would be a good thing, because the professors have a greater power of becoming acquainted with the character of the cadets?—If the captains of the companies had the instruction of the cadets, of course they must become better acquainted with the cadets under their command; there is no doubt about it.

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

Adjutant.

3333. By combining the two functions?—Yes.

3334. Do you think that among the professors you could find officers who had time to perform the duties of captains of companies in addition to their duties as instructors?—Yes.

3335. You have, I believe, an adjutant at Sandhurst?—Yes.

3336. What are his duties?—His duties are chiefly as to drill; the drill is carried out under him, and he assists in the orderly room with me. There is a morning drill, the same as in the regiments of the line, under the adjutant, and there is a drill again at the commanding officer's parade, which takes place in the forenoon.

3337. Do you consider that the adjutant is an essential officer?—I consider that it is absolutely necessary to have an adjutant; at least in order to have the duty done as it ought to be.

3338. You think that it is necessary to have an additional officer for that purpose?—Yes, on purpose for that duty.

Professors and instructors.

3339. With respect to the position of the professors and instructors, it has been suggested that it might be an advantage if the professors of each subject had a certain amount of authority over the instructors, and over the general instruction to be given in that branch; what do you think of that proposal?—That is not my opinion. As there is a superintendent of studies, under whom the professors and the instructors are, I have a strong objection to any of the professors having power over their colleagues.

3340. You prefer the existing system?—I prefer the present system.

3341. Looking at matters as they stand, and without alluding to the proposed change in the position of the professors by making them undertake executive duties, do you think that they have now sufficient powers of discipline?—I think that they have.

3342. Do you find that the civilian professors have equal authority over the cadets with the military professors?—The civil professors most certainly have not the moral power over the cadets which the military professors have.

3343. Then do you think that military professors, so far as is possible, should be appointed to instructional duties?—I think so. With regard to the French professors I know that there has been a difference where a French professor has been a military man as compared with cases where he has not been a military man. I know that there is a very strong feeling among the cadets with regard to being instructed by officers.

3344. You think that they prefer it?—I am quite certain of it.

3345. I believe that you consider that the college is now organized as a battalion?—Yes, as far as possible.

3346. Is it your desire to make it resemble as closely as possible the organization of a battalion of the line?—Yes, that is the view which I take of it; I think that that is the proper view to take, looking to the service which the cadets themselves are going into. I think that the impressions which they form at Sandhurst should be such as to assist them in the branch of service into which they are going.

3347. Then you approve of the battalion organization?—I do.

3348. And you think that you have the means of giving effective instruction to the cadets in the regimental system which they will afterwards have to deal with?—Not to the extent that I think it ought to be, but I make it so as far as possible; in fact, I do everything in carrying on my duties to assimilate my dealing with the cadets as closely as possible to the way in which I should deal with a regiment, always bearing in mind that I have gentlemen to deal with, instead of private soldiers.

Punishments and discipline.

3349. You have mentioned the nature of the punishments which can be inflicted by your authority; will you explain to the Commission the principle upon which you deal with the cadets whom you have to punish?—If a cadet, for instance, is reported for a crime (that being the military term), the captain of the company inquires into it. If it is a trivial matter, the captain of the company has the power of disposing of it, and he has the power of giving punishment up to three days' arrest or three days' drill. If he considers it a case which ought to be brought before the commandant, he brings the cadet before me at what is called the orderly room hour, or immediately after the parade; all the evidence attends, and the case is inquired into and disposed of exactly in the same way as it would be in the orderly room of a regiment.

3350. Then you decide the case in the presence of the cadet?—Certainly.

3351. And with the person who may have brought the charge against him present?—Certainly.

3352. Is there any exception to that principle?—There is an order which recently came out with regard to the superintendent of studies disposing of the study offences. If a cadet is reported by a professor for misconduct in study, the report goes to the superintendent of studies; if the cadet does not deny the charge, the superintendent of studies has the power of punishing him, but he has not the power of obliging the professor who reports him to give evidence before the cadet. If the cadet denies the charge, the superintendent of studies is not allowed to inquire into the case at all, but he brings the cadet before me, and I have the power of obliging the professor to be present.

3353. Do you consider that arrangement to be inconvenient, or have you any objection to it?—I have an objection to any person being punished without the accuser being placed face to face with him; it is in my opinion completely contrary to the rules of the service.

3354. I believe that there existed at Sandhurst a short time ago the system of what was called conduct marks?—Yes.

3355. Will you explain it to the Commission?—At the beginning of every term the cadets had 100 conduct marks, and certain punishments took away a certain number of marks. If a cadet in consequence of misconduct and the punishment awarded to him lost 75 of his conduct marks, he was reported to the Commander-in-Chief with a view to a mark being made against his name and his commission being delayed, unless a more favourable report came in the ensuing term. If a cadet lost the whole of his 100 marks, the governor had the power of sending him home at once for rustication.

3356. How long is it since that system was abolished?—That system was abolished during last term, and one reason which led to its being abolished was this;—as the loss of marks affected the cadets in that way it was absolutely necessary that one head should award the punishments, consequently the captains of companies had no power of awarding punishment, or at least nothing to speak of. Now that the marks are done away with, the captains of companies have the power of awarding up to three days' arrest, or three days' drill.

3357. Do you think it was a good or a bad thing to abolish these conduct marks?—I think that it was a very good thing to abolish them; I never liked that system of marks.

3358. You say that if a cadet lost the whole of his marks in one term he was, as a matter of course, rusticated?—Yes.

3359. Did that ever occur?—I think that it only occurred once during the whole time that I was there.

3360. These marks had nothing to do with the marks for final examination?—Nothing whatever.

3361. They were entirely distinct?—They were entirely distinct.

Question obliging candidate commissi in the lin pass thro Sandhurs

3362. You are probably aware that it has been more than once proposed to require all persons seeking commissions in the line to pass through the college at Sandhurst?—Yes.

3363. Do you approve or disapprove of a proposal of that nature?—I have always thought that there should be only two ways of getting a commission, either through the work at the college or from the ranks.

3364. If a plan of that sort were to be adopted, would you propose any alteration in the course of study at Sandhurst?—Certainly.

3365. What would be the nature of the change which you would suggest?—I should propose what I should term a more practical course.

3366. Will you explain to us a little more in detail what you mean by that?—I should cut off certain studies which are now carried on at the military college. I should, for instance, cut off mathematics, because I think that they are not necessary for a practical course such as an officer of the line would have to go through; the cadets on coming should have a sufficient knowledge of mathematics for that. Speaking broadly, I should restrict the education under those circumstances to, we will say, military history, field sketching, and fortification.

3367. Will you specify what you mean by fortification?—Chiefly field fortification, and strengthening outposts. I should also include landscape drawing, and the interior economy of troops, companies, and regiments, the Mutiny Act and the Articles of War.

3368. Would that be the whole course which you would wish to see established?—Broadly speaking, I should say so. I should have arrangements made so that cadets should follow other studies, but I should consider them extra to the course. For instance, as to languages, I should let cadets have the means of keeping up their previous knowledge of languages. Under the present system I do not think that cadets learn languages at the college; they may keep up what they know, but I do not think that they know much more when they go than when they enter.

3369. When you say that those subjects should be extra, do you mean that they should be like the voluntary subjects at present, or that they should be taken out of recreation time?—I think that they should be taken out of recreation time.

3370. Do you think that it would be possible to give efficient instruction both in military law and in the interior economy of a regiment at Sandhurst?—Yes, I see no reason why that should not be done; in fact that instruction would devolve upon the officers commanding companies.

3371. Do you think that instruction of that kind would be accepted (if I may use the term) by commanding officers of regiments, or that they would be inclined to insist upon the cadets, when they joined their regiments, going through the whole thing?—A commanding officer would never be satisfied with being told that a cadet had done this or had done that. If I commanded a regiment I should immediately send a cadet to drill, and put him likewise supernumerary on duty, but of course if I found that he knew his duty I should not keep him there.

3372. And you think that those matters can be so taught at Sandhurst as to enable a cadet when he joins his regiment, as a rule, to be dismissed from drill quickly?—I think so.

3373. Do you think that the present education at Sandhurst is in all respects satisfactory?—No, I cannot say that I do think so. I think that it is very superficial. I think that the cadets who work very hard, and who go out at the head of the list, get an education at Sandhurst which they retain; but I think that if you take the body of cadets and those who only go there to qualify and to get their commissions, the education which they get at Sandhurst is a very superficial one; and I think that a great number of them in a few months forget almost everything which they have learned.

3374. Then with respect to them you would almost regard the education as a system of cramming?—Yes, I do regard it as a system of cramming.

3375. Are you favourable or opposed to a reduction of the age at entrance?—I am opposed to a reduction of the age at entrance, unless the whole system was changed, and they came there as little boys and it was more a boys' school. I object to the reduction of age, because I have a very great opinion of public school education, and I should be sorry to see any arrangement made which would bring boys from the public schools before the time. I would give them an opportunity of being at the public schools as long as possible.

3376. Therefore you think that there is no alternative between either converting the whole of the college into a regular boys' school, or retaining the lowest limit of age for admission as it stands?—No; I do not think that a half measure would be conducive to the good of the service.

3377. Under the existing regulations gentlemen from the universities are admitted at a much more advanced age to Sandhurst, do you thing that that is an advantage or not?—Taking the ages at which the cadets generally go there at present, I cannot say that I see any disadvantage in it.

3378. Would you recommend any alteration in the duration of the stay at the college?—I think that for the education of officers of the line three terms ought to be sufficient.

3379. Supposing that it should not be thought advisable to adopt your suggestion of passing everybody who was going into the line through Sandhurst, what should you say to a proposal which has been made of reducing the numbers of the existing college so as to bring them nearly to the number which could obtain commissions without purchase?—I am not prepared to give any opinion against it, but at the same time my opinion has always been that I would either pass everybody through Sandhurst, or send everybody into the service by a direct commission and do away with Sandhurst altogether.

Alterations suggested in the mode of granting commissions without purchase.

3380. Is there any other proposal with regard to giving away commissions without purchase to Sandhurst cadets to which you would like to draw the attention of the Commission?—A scheme has been talked of at Sandhurst between myself and the superintendent of studies, and others; and three days ago I happened to take up a Manchester paper and I there saw an article, copied from the "Broad Arrow," headed "Sandhurst Cadets," and this article referred to the fact that the only cadets who worked hard were those who were competing for commissions, and that therefore the others were idle; and it then proceeded to suggest the breaking up of some of the commissions into money rewards, which is the very question which we have so often discussed at Sandhurst; that is to say, that supposing that 30 commissions were going to be given away on what is called the "A" list, namely, commissions without purchase, there would be 10 commissions given away which would be actual *bonâ fide* commissions, and that you should then take 10 commissions and cut them in half, and that the next 20 cadets would each get 225*l.* and so on, bringing it down to 100*l.* That is an outline of the scheme which we have talked about, and which I saw mentioned only a few days ago in a newspaper.

3381. As I understand the scheme which you have just proposed, it would be this: that if you had 30 commissions without purchase to give away, 10 of them would be given away under this scheme as commissions without purchase altogether?—Yes.

3382. We will say that the next 10 you would sell in fact to the 10 next best cadets for 100*l.* a piece?—Yes.

3383. And the next 10 you would sell for a somewhat larger sum?—Yes.

3384. And by the money so obtained you would enable the first cadets below the A list as it now stands to buy a certain number of saleable commissions at a reduced price?—Yes.

3385. But that would involve a limited traffic on the part of the government in commissions?—Yes.

3386. Are you inclined to think favourably of a scheme of that kind?—Yes, I am; I think that it would have an influence on the studies of the cadets.

3387. But you would yourself desire to combine with it the system of passing all officers through Sandhurst, excepting those for the scientific corps?—Yes, I have always felt strongly on that point.

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

Opinion entertained of Sandhurst cadets in the service.

3388. You are I suppose aware that there is now a certain amount of public feeling against the education afforded at Sandhurst?—I am aware of it.

3389. And that there would be great complaints if the only mode of entering the army was necessarily to be through Sandhurst?—Yes, I have understood so.

3390. I believe that there is also a considerable feeling of the same kind among the commanding officers of regiments against Sandhurst cadets; can you explain the causes of that feeling?—Ever since I have been in the service there has been, I think, amongst the commanding officers a prejudice against the Sandhurst cadets. I know that it was so in the regiment which I first joined. The idea then was that the Sandhurst cadets fancied that they knew a great deal, but did not know anything, and that they were not so easily moulded into officers as those who came in direct; and I have myself heard commanding officers express themselves to this effect with regard to the Sandhurst cadets. I think that upon their entrance into a regiment there is for a year a prejudice against the Sandhurst cadets.

3391. You said that that is a feeling which has always existed, both under the former Sandhurst system and under the present?—I know that it existed years and years ago.

3392. Do you think that it has increased or diminished of late, have you any means of judging of that?—I have frequently gone over to Aldershot, and I have questioned adjutants and commanding officers, and people whom I knew, about Sandhurst cadets, those in whom particularly I took an interest, and who I knew would make first-rate officers, and I have heard very high opinions expressed of some, but then again of others I have heard different opinions.

3393. Do you think that the "A" list, as you call it, are generally men who will make good and valuable officers?—As far as that goes, I think that you will get just as good officers out of the "B" list. I I think that there are many men in the "B" list who cannot manage to get into the "A" list, but who make as good duty officers as any whom you will find in the "A" list.

Idleness at the College.

3394. We have had a good deal of evidence to the effect that there exists, particularly among those cadets who think that they have no chance of getting commissions without purchase, a good deal of idleness, and that there is a general tone of listlessness amongst the cadets at Sandhurst; does that accord with your experience?—I cannot say that I think that there is any amount of listlessness amongst the cadets at Sandhurst. I think that there is idleness, but I think that the idleness is very easily explained. A cadet has to get so many marks to qualify, and if he does not intend to compete for a commission, but merely goes there to study, if he gets a certain number of marks there is nothing to induce him to work very hard.

3395. But you would not say that there was a general listless tone extending throughout the college?—I certainly do not consider that it exists at present.

3396. You have at Sandhurst a system called that of "independent studies"?—Yes.

3397. According to the evidence which has been given to us, those "independent studies" seem to be no studies at all?—They are not.

3398. Do you think that a bad system?—Very bad indeed.

3399. You would desire to see it abolished?—Yes.

3400. How would you have it abolished?—By a course of education which everybody was obliged to go through, and I think that there should be no voluntary subjects in that course.

3401. You would altogether abolish the voluntary subjects as such?—Yes.

3402. And such as you would retain you would make what are called at public schools extra subjects, to be done out of school time?—Yes. The fact of competition for commissions without purchase prevents the cadets having other studies provided for them during the hours of what are called independent studies; because supposing that a cadet did not take up French, thereby giving him an independent study, and supposing that arrangements were made for him to have mathematical instruction during that time, it would be unfair towards other cadets in competition for commissions. That has been the difficulty in getting rid of the independent studies.

3403. Therefore your object would be the abolition of what are called voluntary subjects?—Yes, in my opinion the course should be for every body to go through, and I think that certain subjects which are voluntary should come out of the hours of recreation. I believe that that is the case at the public schools. I know, for instance, that at Rugby drawing was a voluntary subject, and that came out of the hours of recreation.

3404. What do the cadets who are described as being engaged in independent studies do?—They amuse themselves.

3405. Are they allowed to play games?—Yes; but they may not go away from the grounds.

3406. They might play cricket if they liked?—Yes; the arrangement some three or four years ago was for them to be marched into the study, and there they were left; this led to the greatest possible inconvenience, because, of course, there was no study going on, and there was nothing but noise, and it was found much more convenient for the other studies which were going on that they should be out of the way, in fact there was no object in keeping them together.

3407. Do you think that that system at all interferes with the studies of those who are studying the voluntary subjects?—Certainly, I think that the fact of those independent studies has led to certain cadets who had commenced voluntary subjects giving them up and being idle. I think that the whole system of independent studies is bad for discipline, and bad for study, and bad for everything.

3408. We have been told that there is now a period of rather exceptional idleness, namely, when the examination is over and before the completion of the term; is that your opinion?—Yes, that is a question which the late governor and myself frequently went into; in fact, a suggestion, I think, was sent up by Sir George Wetherall to do away with it. It is what is called the relaxed study week; why it should be called the relaxed study week I do not know, because no studies take place. In fact we make use of the mornings in working up drill, and for the rest of the day the thing is to provide as much employment as possible for the cadets. It is a regular idle time, and it would be a very good thing to do away with it.

3409. You think that the existence of that relaxed study week is mischievous to discipline?—I think that it is bad for discipline; there is a reaction after the examination has been gone through and the studies are over.

3410. I believe that some proposals have been submitted for abolishing that state of things, have they not?—I feel certain that Sir George Wetherall submitted such a proposal, I cannot exactly at this moment say in what form, but I am almost certain that I saw a letter of the Duke of Cambridge's, in which he seemed to take the same view, but I think that elsewhere there was a difficulty raised about it.

3411. What do you suppose to be the nature of the difficulty raised?—It would be impossible for the result of the examination to be made known to the cadets before they went home from the college, if they went away directly after the examination; it takes a week to make out the result of the examination.

3412. Do you consider it of very great importance that the result of the examination should be made known to the cadets before they go away?—I have never thought it to be so.

3413. You would be satisfied that it should be made known at the commencement of the next term?—Or that it should be published as soon as the result was known.

3414. Some of the witnesses have given an

opinion that the presence of Queen's and Indian cadets rather tends to foster idleness, do you think that that is the case?—I should say that certainly it is the case as a general rule; there are some Indian and Queen's cadets who are hard working and industrious cadets, and who come out in the "A" list; but the fact that the Indian and Queen's cadets only require a necessary number of qualifying marks to be gazetted to commissions without purchase itself tends to their idleness.

3415. Then I conclude that you would rather not have them at Sandhurst if such arrangements could be made?—My own opinion is that it would be better to give them a sum of money.

3416. Is any encouragement given to the cadets for private study?—When I went to Sandhurst, one of the things which I was told was, that according to the system of education carried on there, connected with the competitive examinations for commissions, private study was rather discouraged than otherwise. I know that towards the end of the first term after I went there a good many cadets were brought before me for disobedience of orders in having lights burning after the proper hours in the dormitories; and on going into the question I found that the cadets whose prospects in life depended upon their getting their commissions without purchase were in the habit of working very hard, and for a great part of the night, and of using all sorts of dodges to keep lights burning and to hide those lights; and with the sanction of the governor I made an arrangement that towards the end of the term for about six weeks the cadets who were working for commissions should be permitted to have certain rooms lighted up till 12 o'clock, and that facility should be given to them for doing so. Every cadet has at the foot of his bed what is called a tosh pan, and one of their arrangements was to lie at full length in the corridors and the dormitories with their heads inside these tosh pans and a candle inside it and a book also.

3417. When you found that to be the practice you thought that it was high time to afford certain facilities for private study?—Yes, I thought that it was better that they should work if they wished to work.

3418. Is the arrangement which you have made much used?—Yes.

3419. Do you imagine that hard work at night to have been in order to make up for idleness during the day, or that it was simply additional hard work which the cadets thought necessary?—In many cases it was not to make up for idleness during the day, but to make up for idleness during the previous part of the term, and in other cases it was *bonâ fide* hard work on the part of cadets who had worked hard during the term.

3420. Do you consider that as a rule the cadets who compete for commissions without purchase work hard during their stay at the college?—Some do, and some do not. Sometimes we have several idle at the beginning and they work hard afterwards. I know some cadets now who have worked hard and steadily from the very day when they entered the college.

3421. We have been told that in some of the dormitories the lavatory arrangements are very unsatisfactory; is that your opinion?—There are two completely different kinds of arrangements of that sort. In the old part of the college there is the old system of bath, the water is let on all round the room. In the new part of the building, where one company is, they have another system altogether; they have there a new system of baths, and it depends upon the strength of the company as to how many cadets go into a bath. It is probably about two or three, as the case may be; and I look upon these baths, so far as the building is concerned, as a complete failure. There is always leakage in the building, and there are difficulties about them; they are always having something done to them. Of course the water is changed for each cadet.

3422. Do you think that every cadet should have the means of comfortable and private ablution every morning, such as he will have in barracks when he becomes an officer?—I have often discussed that subject with officers, and I do not go in for such very great comforts. I do not see any objection to washing in the presence of other people.

Billiard and recreation rooms, &c.

3423. We have had considerable objections urged before the Commission with reference to the establishment of billiard tables at Sandhurst, and of recreation rooms in connexion with them. I believe that they were established at your request?—Yes, they were established during my time.

3424. Will you be good enough to explain the reasons which led you to desire that they should be set up?—When I joined the Royal Military College I found that there was a great deal of public house life amongst the cadets; they went to public houses and public billiard rooms, and I thought that it would be a very good thing to wean them as much as possible from those places, and billiard rooms were established in the college. I have every reason to be perfectly satisfied with the result of the establishment of the billiard rooms. The Government gave us two tables to begin with, and then they gave us the accommodation for putting up two tables of our own, so that we have four tables. Of course that is not nearly sufficient to prevent the cadets going elsewhere to play at billiards; but we hope to put up more. The whole system of the working of those tables has been very jealously watched to prevent even the end of the wedge being put in for the introduction of anything like money on the tables. The cadets do not even pay for their games, that is to say, that the tables are not supported by the play upon them. The tables are supported by the amusement fund.

3425. Are you yourself satisfied with the working of the system?—Perfectly so.

3426. Do you think that it has had no injurious effect upon discipline?—No; on the contrary, my opinion is that the effect is the reverse.

3427. It has been stated to us that what has occurred is this, that whereas formerly the senior cadets only used to play in the public houses, and the junior cadets played nowhere, now the senior cadets play on the billiard tables of the college and the junior cadets play in the public houses; is that consistent with your experience?—The whole management under me of these recreation rooms is by a committee formed of the officers and cadets under the superintendent of studies. The arrangement which the cadets came to amongst themselves, which I did not interfere with, as I saw no reason to do so, was that the recruits (by which I mean the first term cadets) should not play on the tables, as there was not accommodation for them, and their turn would come when they were no longer first term cadets. As to the question of the first term cadets now going to play upon the tables in the neighbourhood, I have no doubt they do so, but I have never heard that in days gone by the first term cadets did not play billiards; but, in fact, I have known that they did so, because I have had particular cases to look after of first term cadets. I know that the old cadets used to have clubs in different places where there were billiard tables.

3428. And would they have excluded the first term cadets from playing at those tables?—Where they had clubs, I have no doubt of it.

3429. But still you think that it would not be correct to say that the first term cadets did not play formerly in the town, whereas they do now?—I should say not. I can quite understand those first term cadets going to play in the neighbourhood; but I know that when there were no billiard tables in the college the first term cadets did so.

3430. There has been a bar established?—Yes, for the cadets to have the means of getting beer during certain hours.

3431. Do you think that that has worked well?—Yes.

3432. You do not think that it has led to any habits of boozing, or things of that kind?—No, I think not.

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

When we have had cases of drunkenness, it has had nothing to do with the recreation room. I had two cadets not very long ago brought before me for being drunk, and I at once asked them where they had been. I told them that if they answered the question it would not increase their crime, and it was the old story that they had been at public houses, and had drunk spirits.

3433. I gather from your evidence that you would decidedly regret to see these billiard tables and other arrangements, which you have just described, abolished?—I should regret it very much indeed, because I know what the result would be.

3434. What do you think would be the result?—That the publicans outside would be delighted.

3435. Do you believe that the publicans have regretted the establishment of the billiard tables at the college?—Yes, I know that they have expressed themselves strongly about it. I know that the tradespeople in Yorktown have expressed themselves strongly about the arrangement for keeping the cadets in more than they used to be kept in, and have said, "It is very hard upon us; because, where we used to "take sovereigns we only take shillings."

3436. I believe that you have recently made some improvements in the arrangements regarding the library, will you be good enough to explain them?—We have now given us by the Government a complete block for the purposes of the recreation rooms, known as the D block, of two stories. On the lower story there are three billiard rooms holding four tables; there are smoking rooms; there is a refreshment room, which a contractor manages; there is a room for beer. Upstairs the libraries of the three companies have been associated and brought together under a serjeant librarian, so that the cadets can get books every day, excepting once a week. Here are also sitting rooms established, one for each company, and one for the under-officers, and they are made as comfortable as possible. There is a room for writing, provided with letter-paper, and that is used a good deal. As our funds will allow us to furnish our rooms, we propose to have one room for chess and draughts, and things of that kind. We have a room ready for two billiard tables, and we have another room, composed of two rooms thrown together, for a piano, and for the cadets to amuse themselves in that way, which they are very fond of doing. In the yard outside we have put an item in the estimates for lathes, as I was very anxious to fit up workshops. That is the scheme of the recreation rooms, as they are called.

3437. How is the library supplied with books?—There are a certain number of books which have been some time in the library, and the committee get boxes of books from Mudie.

3438. The committee being presided over by Colonel Addison?—Colonel Addison is the president of the committee.

3439. You mentioned that there was a refreshment room, are the cadets allowed to take beer into that refreshment room?—There is a refreshment room, and there is a room opposite, which is fitted with tables and chairs. On one side of the corridor there is a counter like a pastrycook's shop; on the other side of the corridor there is a room with tables and chairs, where the cadets can have anything cooked for them, and there they are allowed to have beer, but beer is only allowed during certain hours.

3440. What are those hours?—After dinner and studies, and not after tattoo.

3441. Is beer allowed to be taken into the smoking room?—Not now.

3442. Is there any regulation as to the time at which the cadets are allowed to be supplied with dinner or cooked food?—At any time during the hours of recreation.

3443. You said that it was proposed to establish workshops, do you attach much importance to that?—I do; there are always a certain number of cadets who will be sure to avail themselves of workshops, at least judging from Woolwich where so much of that sort of thing is done, and my idea is to devise as many different kinds of amusement as possible, so as to give the cadets something to occupy them as much as possible during the hours of recreation.

3444. You have, I think, a racket court?—We have two racket courts.

3445. Are they covered courts?—Yes.

3446. Have you a fives court?—We have a fives court; I have watched it and I have found that in some terms it has been used a good deal, but lately it has not been very much used.

3447. Is the racket court used a good deal?—Yes, it is constantly in use.

3448. Are the cadets forbidden to go into public houses?—Certainly.

3449. Has that always been the case?—Always; there is now a very heavy punishment attached to their going into a public house, which is rustication.

3450. Has the punishment for that particular offence been frequently applied? — There has been one case of rustication for that offence since the order came out.

3451. How long ago was that increase of punishment allotted to that offence?—At the beginning of last term.

3452. Will you explain to the Commission the mode of appointment of the under-officers and corporals? —The under-officers and corporals are appointed by myself; the captains of companies send in a return of the cadets whom they recommend for the rank. I go through those returns with the captains of companies and the major and superintendent of studies.

3453. Do you select those whom you think best qualified for the appointment?—I take great pains in it, because it is to my advantage, to say nothing of the advantage to the college, that I should get the best men for those appointments.

3454. In making the selection do you pay any attention to the position in study of the cadets?—Not chiefly; if a cadet was recommended for promotion who was proverbially idle in study and set a bad example, I should not appoint him. In fact, there are men whom I wished to have made under-officers or corporals whom I have passed over for that very reason because I want men who will set a good example. I do not care so much about their being high up in their educational work as about their being fitted in other ways for command and setting a good example.

3455. I believe that at Woolwich the under-officers have a certain power of arrest; that is not the case, I think, at Sandhurst?—The under-officers have the power of placing in arrest, but it is only of placing in arrest pending the decision of a superior authority; they cannot award arrest as a punishment.

3456. Do you think that they should have that power?—If I did not give them the power of awarding arrest I should give them the power of awarding drills.

3457. But they have not that power now?—Latterly the under-officers have marked cadets for drill for inattention at parade, and I consider that it has had a very good effect, but according to a recent order they have not the power of actually awarding that drill. At the same time the system upon which I have gone, and upon which I intend to go, is that if cadets were recommended by the under-officers and corporals for drill for inattention, I would confirm it at once, that is to say, that I would strengthen the hands of the under-officers and corporals as much as I could.

3458. You would, as a rule, act upon their recommendation in that respect?—Yes, I should go out of my way to act upon their recommendation.

3459. Do you find that the under-officers and corporals give you valuable assistance in the maintenance of the discipline of the college, or not?—That depends very much upon the circumstances in which they are placed. If the under-officers and corporals are actually placed on duty, I find that they do their duty very strictly; for instance, on patrol, or anything of that sort; but as far as their position with the cadets during

the hours of recreation and in the dormitories is concerned my experience is that the under-officers and the corporals put themselves very much on the same level as the rest of the cadets. The fact is that they are all very much of the same standing, and the difference between the periods of their residence at the college is very slight. I always try as much as possible to make my under-officers and corporals from the third term cadets. I do not go to the second term cadets unless it is absolutely necessary.

3460. Do you think that any further encouragement could be given to them to discharge their duties with zeal than is now given?—Yes, I think that it would be a very good thing if there was an arrangement that cadets who had shown great zeal and had worked hard and had done good service as under-officers should have the chance of getting a commission for it, although their names were not in the "A" list.

3461. At present have they not the priority of appointment, if they are on the "A" list?—Yes, that I believe is an understood-thing.

3462. But that is all?—Yes.

3463. And you would recommend that a certain number should have a commission without purchase, whatever was their position on the final list?—Yes, I think that a certain number of commissions should be given to cadets who had gone out of their way to work hard, and to support the officers, and to carry out the discipline of the battalion.

3464. With respect to the discipline of the college generally, are you satisfied with its present state?—My opinion of the discipline of the college, taking all things into consideration, is that it is a good deal better than I could possibly expect. I think that the cadets actually behave much better than I expected before I came to the college. I did not expect to find that the conduct of the cadets would be so good as it is, considering their age, and the short time that they are there, and the places of education from which many of them have come. I think that they behave wonderfully well, and when anything goes wrong it is more to be attributed to a few loose and thoughtless characters than to any anything else; and of course there are likely to be more of those who are inclined to be loose than of those who are inclined to be steady. I think that that is human nature amongst young fellows.

3465. Then you would not suggest any alterations in the present system of discipline?—Not beyond what I mentioned at the beginning of my evidence with regard to the powers vested in the head of the college.

3466. There is a system at Sandhurst by which a cadet has an option as to whether he will be placed in arrest on parole or not, will you explain how that system works?—About two years ago I had a conversation with the officers; and learning that at Woolwich a system existed by which arrests were all kept on honour, and that they were strictly kept, I was very anxious to introduce the same system at Sandhurst; but feeling that I could not force the cadets to take an arrest on their honour, I with the sanction of the governor, gave them the option, and the result has not been satisfactory, that is to say, that cadets very seldom do take an arrest on honour. I have never had a case of a cadet breaking his arrest when he had taken it on honour, and I do not believe that such a thing would happen, but I think that the impression is that they would rather take their chance as to breaking their arrest and being found out than they would bind themselves by giving their word. Of course if a cadet broke his word after having taken it on honour it would considerably augment the crime.

3467. How long has this system of option as to arrest on honour been in operation?—I should think that I have been trying it for a year and a half to two years.

3468. Do you think that more cadets take their arrest on parole now than did at first?—I should say that the proportion is less.

3469. Do you think that there is no objection to giving a cadet that sort of option as to whether he will be on his parole or not?—It has its objections, but I do not think that you can force a parole on a man.

3470. But you think that the option is preferable to not having any system of parole at all?—I have latterly thought it over, and have sometimes been inclined to have the parole system done away with altogether so as not to have the option. At the same time I have lived in hopes of a different feeling springing up on the subject. I should very much like to see the arrests kept on parole as strictly as I understand they are kept at Woolwich.

3471. The evidence before the Commission, so far as we have inquired into the matter, is that at Woolwich the arrest is strictly kept, and that it is thoroughly supported by the feeling of the cadets?—So I have always understood.

3472. Do you see any reason why there should not be the same feeling upon that point at Sandhurst as there is at Woolwich?—I do not. It is, I suppose, a tradition at Woolwich; it has been handed down from year to year.

3473. And there is no such tradition at Sandhurst, the system being only of recent introduction?—Yes.

3474. You have certain non-commissioned officers at Sandhurst?—Yes, they are called staff serjeants; they are men from the regiments of the line and the guards.

3475. Have they anything to do with the discipline?—Nothing whatever.

3476. There is no system of surveillance over the cadets by them?—Not in the slightest degree.

3477. Do you employ upon any occasion pickets to visit the town?—At the beginning of the last term we introduced a system of pickets upon Sunday evenings.

3478. Are those pickets composed of cadets themselves under arms?—Yes, they are composed chiefly of the third term cadets; there are certainly no first term cadets among them. They have been under the command of under-officers, the whole of the pickets being under the command of the captain and subaltern of the day.

3479. Have you found that system work satisfactorily?—Yes, I consider that it has worked satisfactorily.

3480. Do you believe that the pickets have done their duty?—Yes, I know that they have done their duty; they have made prisoners.

3481. There have been certain somewhat notorious breaches of discipline in the college upon one or two occasions, especially, I think, one which occurred in Sir Harry Jones's time at Blackwater fair, and another, I think, which occurred last year, and which was much noticed in the newspapers. Will you be good enough in both cases to give to the Commission your account of the matter and your views?—The first occasion was in the autumn of 1864, at the time of what is called Blackwater fair, which has always been a time of excitement; in fact, I am told that at one time the college was broken up, and the cadets sent home just before the fair commenced, in order to put a stop to the constant rows which took place at the fair. However, in 1864, the vans and the people who were going to attend the fair arrived, as the case is generally, upon the Saturday and the Sunday, the fair, I think, opening upon the Tuesday. The cadets go down to these places, and these photographic vans which go about from fair to fair are nothing more nor less than gambling places. On this occasion a lot of the cadets went on the Sunday afternoon and they got into these vans, and some of them were fleeced of their money; they were perfectly certain that they had been cheated, and they began to retaliate. It ended in their turning one van over the bridge into the river—that began the excitement. The following day, I think, nothing took place; but on the Tuesday, the fair day, the cadets went down in considerable numbers, and there was a certain amount of damage done; they let some of the cattle loose out of the

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

fields in the neighbourhood where they were confined, and it ended in some of the people coming up to the college the following day or two in order to identify the cadets by whom they had been maltreated.

3482. Upon the occasion when the persons to whom you allude came up to identify the cadets, were not their operations upon parade prohibited?—They were. I omitted to say that some disturbance took place after these people came up to identify the cadets. I was ill at the time. Sir Harry Jones came and conversed with me upon the matter, and I was very anxious that if these people were to come up to identify the cadets the companies should be kept separate on their private parades, and the people taken to those companies to identify the cadets, that is to say, that the battalion should not all be brought together for the purpose of being inspected by these people, who were a terrible ragamuffin lot, fearing that if all the cadets were together some excitement might result. It was, however, decided that the whole battalion was to be put together; the cadets were formed in line, and the people went down the line, and in almost every case of their identification they were wrong. There was a great deal of excitement at the time, and I was told that the whole line was very unsteady. Sir Harry spoke to the cadets and pointed out to them what the results would be if they committed themselves and if this sort of thing went on. The damage done by the cadets was charged throughout the battalion; it amounted, I think, to about 10*s.* a head. After that at the next fair we introduced a system of pickets, which completely put a stop to any sort of irregularity, in fact they were hardly to be called pickets, because every officer, including myself, was on duty each evening at the fair, and all the under-officers and all the corporals were there, so that there could not possibly be anything wrong.

3483. Has there been no disturbance at Blackwater fair since?—Not the slightest.

3484. Will you state what occurred last year on the other occasion to which I have alluded?—Last year, towards the end of October, a complaint was made that seven cadets had gone into the house of a Jew, at York Town, and maltreated him. The man came before me to make his complaint; the numbers of the cadets were given, and they also appeared before me. The man's story was that the cadets came into his shop in the evening, and that something transpired which led to a discussion which ended in a row; that the cadets smashed some of his property and that they maltreated him and beat him so violently that he was not able to lie down the whole night, and that his wife had to sit up with him; that he was very nearly killed. I asked him whether he had been to a doctor and he said "No." I asked him whether he had any marks upon his body, and he said "No." I wanted him to see our own doctor, and he said that he did not wish to do so. The story of the cadets, which I had no reason to disbelieve, was that they had been to this man, who is nothing more nor less than a money lender, and also a pawnbroker without licence, but he manages that part of the business so that the police cannot touch him. The cadets said that they had had transactions with him, and, in fact, that one of them had received a consideration for a watch which had been left in his hands, and I was told that there was a question whether the watch had not been tampered with while it had been in his hands. The cadets positively denied that they had ever touched him, but they said that he had rushed at them with a chair in his hands, and that all they had done was to ward off the chair. Sir George Wetherall went into the shop to see what the damage was, but the only damage was that a cadet had put his foot through a picture frame and they offered to pay for it, but the man would not accept any paymant. It was just before the 5th of November, when fireworks are let off. About four days after this affair some civilians were letting off fireworks, and cadets were doing so too, when some of them went up to this man and threw some squibs into his shop, and I think that there was a disposition to make an attack on the shop, but that it was prevented by an officer who was there. At all events in consequence of all this the governor confined the cadets to the college grounds and threw out strong cadet pickets. It was on a Sunday evening. The pickets performed their duty very strictly indeed; in fact they were rather severe in one or two instances, not over severe, but they showed a very strong spirit in carrying out their duty. The mass of the cadets who were kept inside the college grounds were shouting occasionally and trying to make fun of the pickets, in fact, they were trying to get from the grounds across into the road where the pickets were. The following day they were still confined to the college grounds; that is to say, they were allowed to go into the country for walks, or anything of that sort, but they were forbidden to go into the villages of York Town, Blackwater, and Cambridge Town. There was an old skittle alley, a dilapidated place, more an old shed than anything else, and some of the cadets, not those who were engaged in the work outside, set it on fire and it was burnt. It was intended as a sort of demonstration, but it was very much condemned by the battalion generally, and the cadets were very much concerned about its having been done. The day after that the restrictions were taken off and nothing more happened. Blackwater fair came off afterwards, and all the cadets walked down to Blackwater fair, and there was not the slightest attempt at anything like disorder. I may perhaps mention one thing in continuation of my evidence, namely, that the whole of the accounts of the matter which were published were exaggerated in the greatest possible degree, as was borne out by the most respectable of the inhabitants of York Town before two officers who investigated the matter, I being one, and the other being Colonel Egerton, the deputy adjutant-general.

3485. That inquiry was instituted by order of the Duke of Cambridge?—Yes.

3486. Were any of the cadets punished for what took place on that occasion?—They were.

3487. What was the nature of the punishment?—One cadet was rusticated, which was tantamount to sending him away altogether from the college, because he was in his third term, and consequently could not come back; he was an under-officer, and was one of the smartest young fellows I ever saw. He went away. There were three or four cadets sent off summarily, and two of that number I think came back.

Punish idlenes

3488. We have been told that there is, practically, no punishment for idleness, as such, at Sandhurst. Do you think that that is a good system?—No; strictly speaking, there is no punishment for idleness, but cadets have been brought up for what is the same thing, namely, such gross inattention that it has had a bad effect upon the others in the studies, and has interfered with their studies, and those cadets have been punished for it. If a cadet chooses to be idle, as long as he does not do anything in his idleness which interferes with the working of the studies of the rest of the class, there is no punishment; the punishment is on his own head in not qualifying for a commission when the time comes.

3489. Do you think that there should be no punishment for idleness?—I think that for some reasons it would have a good effect if there were a punishment. Then again, taking the ages of the cadets, I am not quite clear about it. The question is, what sort of punishment it should be. I should be very sorry to see introduced at Sandhurst the system of scholastic punishments, if I may so call them; that is to say, anything like tasks; consequently, the only punishment would be drills and arrests.

3490. But the college is supported at a large expense to the public, and one principal reason for it I conclude to be the desire to supply a certain number of professionally educated officers to the army. Is it not, therefore, right that the authorities should have the power to enforce study upon the young men to such an extent as would ensure to the public that, as

far as was consistent with the nature of their studies, young men should profit by them?—By the regulations of the college, if a cadet gets a certain number of marks, he is considered to be qualified for a commission; and if it is said to him, "You ought to work "harder, and you ought to be punished for not "working harder," his answer will be, "The regula- "tions require me to get a certain number of marks, "and I can get a certain number of marks, and the "regulations do not require me to stand third, fourth, "or fifth in the B list."

3491. Am I to understand you to mean that you think that if a professor were to report that a cadet was excessively idle at his studies, there should be no punishment awarded for it?—So long as the idleness does not interfere with the rest of the class, I think that there would be a great deal of difficulty in laying down a system of punishment for it.

3492. Some objection has been taken to the practice which exists of allowing cadets who can pass an examination to leave after their second term, do you feel any objection to that system?—I see no objection to it, in fact very few are affected by it.

3493. You have a chaplain at Sandhurst?—We have.

3494. What is the nature of his duties?—His strict duties with regard to the cadets are reading prayers and preaching to them, we have no such thing as anything like religious instruction at Sandhurst.

3495. Does the chaplain take an interest in the moral state of the cadets?—Yes, a very great interest.

3496. If any cadets were to apply to him for advice, would he feel it to be his duty to give it to him?—Most certainly he would, and he would be most ready to give it; in fact, I know that the cadets have a very great regard for the chaplain, and that they look up to him with very great respect. I know that as a matter of certainty.

3497. Do you think that he exercises a moral influence over them?—I have no doubt about it.

3498. He is an army chaplain?—Yes.

3499. And therefore liable to be removed?—He is.

3500. Do you think that an objection or not?—I do not.

3501. (*Lord E. Cecil.*) Can you state to the Commission what are the precise duties of the Commissioners at Sandhurst?—I am not a commissioner myself. The only information which I can give upon that subject is from my own experience, when I have been ordered to attend meetings of the Commissioners. I have been ordered to attend meetings of the Commissioners at the Horse Guards on two occasions. On the first occasion a question was discussed with regard to the second and third terms, and on the second occasion the question was discussed as to whether more could be done with the lands belonging to the Royal Military College than is now got out of them. I attended those two meetings of the Commissioners, but beyond that, I do not think that I could answer the question exactly as to what the duties of the Commissioners are, because it is beyond me altogether.

3502. As far as you know, do any questions of education or discipline ever come before them?—I have reason to believe that they do. I know that the governor has gone up to attend meetings of the Commissioners, when those questions have been brought before them.

3503. Are they subordinate to the Council of Military Education, or do they decide these questions in common with the Council of Military Education?—The Commissioners are completely independent of the Council of Military Education.

3504. Do they exercise any powers of examination or inspection?—Some of the Commissioners come down with the Commander-in-Chief, when he comes down upon what is called a Board day. That was a day, in fact, upon which in times gone by a public examination took place before the Commissioners; that, however, does not now exist, but the Commissioners come down with the Commander-in-Chief, who is the president of the Board of Commissioners.

3505. What do they do, do they simply inspect the college?—Yes, they go about with the Duke.

3506. Then if I understand you rightly, you cannot positively say that the Commissioners have any duties at all?—I can only speak positively to my having attended two meetings of the Commissioners, where a great deal was discussed before them, on one occasion upon matters connected with the duration of the course, and on the other occasion about the lands. I believe that every thing connected with the college estate goes through the Commissioners. When the governor wants money to spend on the estate there is a meeting of the Commissioners, and he gets the authority of the Commissioners.

3507. Are you in favour of this *imperium in imperio*, if I may use the term, in the government of the college?—That appears to be a matter upon which I can hardly offer an opinion, because I have nothing whatever to do with the Commissioners.

3508. Then you do not think that they in any way interfere unnecessarily with either the Council of Military Education or the Horse Guards?—No, I do not think that it is possible for them to interfere for harm.

3509. Or for good?—If they interfere for either I should say that it was for good. The Commissioners are generally composed of general officers, and looking at the list, they are men whom I should think very highly qualified to give an opinion upon all matters connected with the college.

Cost of the maintenance and education of a cadet.

3510. Something was just now said with regard to the cost of Sandhurst, can you specify what the cost of a cadet is as regards his provision and maintenance and his education, taking them separately?—I have here a paper which the secretary asked me to have drawn up for your lordship.

3511. What is the total cost of a cadet according to your calculation, and how would you divide it?—What I understood that you wished to arrive at was the proportion of expense for matters of education, and for matters of discipline. This is a statement showing the yearly expenditure at the Royal Military College for 300 cadets, and also the cost of one cadet. Under the head of "Military branch (discipline)" the pay of the governor, chaplain, paymaster, quartermaster, surgeon, assistant-surgeon, and riding master, is all charged to the Cadet College, but they also perform the duties of the Staff College. The total amount under that head is 6,397*l.* Now if the numbers were up to 300, and whether the cadet was a Queen's cadet or an Indian cadet or not, the cost of one cadet for one year under that head would be 21*l.* 6*s.* 5½*d.* Then comes the "Educational branch "(professors, &c.)" The pay of the professors of chemistry and geology is all charged to the Cadet College, but they are also professors of the Staff College. The total amount under that head is 9,923*l.*, being a cost for one cadet of 33*l.* 1*s.* 6*d.*, supposing the numbers to be 300. We then come to "Non-commissioned "officers and men, for drill, instruction, &c., band, "riding troop, sappers for field works, gymnastic in- "struction, and lithographer;" the total amount is 2,991*l.*, being a charge for one cadet of 9*l.* 19*s.* 4½*d.* We then come to "Civilians, clerks, linen department, "hospital nurses, cook, servants, lamplighter, turn- "cock, engine driver, organist, labourers, porters, &c.," 4,436*l.*, being for an individual cadet 14*l.* 15*s.* 8½*d.* I am now speaking of the establishment number of 300 cadets.

3512. (*Lord de Ross.*) Does that include the purchase of horses?—No, because we have nothing to do with the purchase of horses; we cast horses, and then they are replaced from the regiments to which the cast horses belong.

The next head is "Provision," 300 cadets for 270 days at 2*s.* = 8,100*l.*; "washing" ditto, ditto, at 3*d.* = 1,012*l.*, making a total of 9,112*l.*, which is for a cadet

Col. Hallewell.
24 July 1868.
Royal Military College, Sandhurst.

30*l.* 7*s.* 6*d.* The messing and the washing are massed together, so that we give and take upon the two items. The total cost for a single cadet, who is not a Queen's or an Indian cadet, is 118*l.* 2*s.* 9½*d.*; and if he is a Queen's or an Indian cadet it is 168*l.* 2*s.* 9½*d.* Taking the last term at the reduced number of cadets the cost of a private cadet would be 132*l.* 8*s.* 7*d.*, and of a Queen's or Indian cadet, 182*l.* 8*s.* 7*d.*

3513. (*Lord E. Cecil.*) If I understand you rightly, the cost of the provision and maintenance of a cadet amounts to one-fourth of the whole, and the cost of the education and discipline is about three-fourths of the whole sum?—Yes, that is supposing that the full establishment of 300 cadets is there, because the cost is increased upon a smaller number.

3514. That is exclusive of what the cost of the building of the college and the grounds may have been originally and of the annual repairs?—Completely so. The dilapidations which would be called "barrack damages" would be paid by the cadets. (I should like to state that there is the rent of land not used by us, but which is used by Aldershot, 408*l.*) Fuel and light, 1,100*l.*; purchase and repair of furniture and stores, 587*l.*; and purchase of chemicals and geological specimens, 50*l.*, set down in the estimate.

The witness delivered in the following paper.

STATEMENT showing the yearly Expenditure at the Royal Military College for 300 Cadets; also the Cost of one Cadet.

Heads of Expenditure.	Totals.	Cost of one Cadet for one Year.			
		If the Numbers were up to the Establishment, 300.		Last Half-year, when the Number were only 258.	
		Not Queen's or Indian.	Queen's or Indian.	Not Queen's or Indian.	Queen's or Indian.
	£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Military branch (discipline) - - - -	6,397	21 6 5½	21 6 5½	24 15 10½	24 15 10½
The pay of the governor, chaplain, paymaster, quartermaster, surgeon, assistant-surgeon, and riding master is all charged to the Cadet College, but they also perform the duties of the Staff College.					
Educational branch (professors, &c.) - - -	9,923	33 1 6	33 1 6	38 9 2½	38 9 2½
The pay of the professors of chemistry and geology is all charged to the Cadet College, but they are also professors of the Staff College.					
Non-commissioned officers and men, for drill instruction, &c., band, riding troop, sappers for field works, gymnastic instruction, lithographer - - - -	2,991	9 19 4½	9 19 4½	11 11 10	11 11 10
This sum includes 300*l.* for the riding troop, one-third of which should be charged to the Staff College, and 983*l.* for sappers for field work instruction, half of which should be charged to the Staff College.					
Civilians, clerks, linen department, hospital nurses, cook, servants, lamplighter, turncock, engine-driver, organist, labourers, porters, &c.:	4,436	14 15 8½	14 15 8½	17 3 10½	17 3 10½
£					
Pay, &c. - - - - - - 3,734					
Provision and clothing, serjeants and servants 702					
Provision, 300 cadets, 270 days, at 2*s.* - - 8,100	9,112	30 7 6	30 7 6	30 7 6	30 7 6
Washing, do. do. at 3*d.* - - 1,012					
Clothing of 40 Queen's and Indian cadets, 15*l.* the first half-year and 5*l.* each half-year afterwards - - -	800	—	20 0 0	—	20 0 0
*Clothing for the Queen's and Indian cadets only is charged to the public. The parents or guardians of other cadets pay for this besides the annual contributions.					
Books, instruments, pocket money, travelling expenses, repairs, and share to amusement fund, and other contingencies for 40 Queen's and Indian cadets, at 15*l.* each half-year - - - - - - - -	1,200	—	30 0 0	—	30 0 0
*Contingencies, 15*l.* half-yearly, for the Queen's and Indian cadets only are charged to the public. The parents or guardians of other cadets lodge 15*l.* with the paymaster to cover the above expenses, and what is not expended goes to the next half-year. The amount of this expended depends on (principally) the rate of his pocket money and the distance he has to go home, and whether he goes on leave after requiring travelling money.					
£					
†Rent of land, 366*l.*, rates and taxes, 42*l.* - - 408	2,584	8 12 3	8 12 3	10 0 3½	10 0 3½

Prizes for gentlemen cadets - - - 77					
Contingencies for educational purposes - - 70					
Travelling expenses of staff - - - 30					
Sweeping chimneys, emptying cesspools, straw for beds, blacking, soap, legal expenses, and postage - 120					
Total - - - - -	37,443	118 2 9½	168 2 9½	132 8 7	182 8 7

* On a cadet joining the college for the first time he pays 10*s.* for library, and if he has not brought with him the instruments and books required by the regulations they are also paid for, the total amount of which is 5*l.* 4*s.*; this is in addition to 15*l.* for clothing and 15*l.* on contingent account, as shown above, for the Queen's and Indian cadets.

† 366*l.* rent of land is for the ground hired by War Department for the troops of the camp.

3515. Does not it appear to you that the cost of the maintenance and education of a cadet at Sandhurst is unnecessarily high?—I should say that it was necessarily high, taking the course of education; I mean that it is absolutely necessary, under the existing circumstances of the course of education that there should be a very large staff of professors. We have a larger staff of professors in proportion than I suppose they have at civil educational establishments.

3516. In comparison with our public schools (with the exception of Eton and Harrow), and other civil seminaries, does not it strike you as being high?—Yes, it is high. In giving that answer I was alluding more to the people employed than to the pounds, shillings, and pence. I was rather speaking of the large staff.

3517. Do you think that it is necessary to keep up so large a staff of executive officers?—Certainly; I know of no executive officers who could be struck off without an unfavourable result; and with regard to the professional branch I do not see how that can be reduced under the present course.

3518. But you think that they might be reduced by a combination of the two?—Yes, that would cause a practical reduction.

3519. What are the duties of the captains and subalterns; you stated broadly that their duties were to look after the interior economy of the cadets; can you state more in detail the actual amount of time which they give to the business of the college every day, and what are the special duties which they have to fulfil?—I will take them first of all when on orderly duty. The following is the report of the captain of the day: He attends the morning prayers; and is in command of the parade; he inspects the provisions accompanied by an under-officer and corporal; he is present at the dinners; he is present at the commanding officer's parade; he visits the hospitals; he visits any prisoners in confinement; he visits the schools; he visits the recreation rooms; and he is to be present within call during the whole time that he is the captain on duty.

3520. How much of his time per diem is taken up?—The whole of it; he is required to be present. Supposing that the captain is not on duty, the first time that he is required to be present is at the commanding officer's parade.

3521. At what hour?—It varies, but it is in the forenoon. It is at half-past nine in summer, and at half-past ten in winter. He inspects his company; he inspects their rooms; he receives all reports, and inquires into them when the cases are brought before him, and are disposed of by him; he attends the parade, and after it, during the whole forenoon, at least for some time, he is attending to duties with the company. The captains are generally in the rooms occupied by the cadets the whole of the forenoon. The captain attends to duties connected with the interior economy; there are the servants attached to the company, and there are the serjeants attached to the company.

3522. Will you specify the duties of the subalterns in detail. How often does the orderly duty fall on each captain and subaltern?—Every third day the captain and subaltern are on duty together.

3523. What are they doing on the other two days?—They are looking after their companies, but they are absolutely on duty the same as in a regiment of the line. The man who is not the captain of the day has a certain amount of duty with regard to his company, and there is a good deal of interior economy. The captains and subalterns of the infantry have more time to themselves than the captains and subalterns at the college. I will read the subaltern's report when on duty: He attends the first morning parade; he inspects the riding classes and the cadets on the sick list; he attends morning prayers; he is present at breakfast; he attends all parades; he collects the reports from the professors at the commencement of each study; he visits the cadets in close arrest during the hours of recreation; he visits the dormitories at the first roll call in the dormitories; besides his duty as a subaltern of his own company, he visits all. At "lights out" he receives the responsible under-officer's report and the report of the serjeant-major as to the fires and lights being extinguished, unless there are special orders for their being kept in; he visits the schools (the schools are the regimental schools), and he visits the recreation rooms; he also twice a week at specified times visits the companies after tattoo. The captain also visits after the cadets are shut up.

3524. However necessary it may be in a regiment, do you think that that system of visiting the cadets in their dormitories and at their dinners is positively necessary?—I should be very sorry to see it changed; it is the custom of the service, and I should think that it is a good one.

3525. What are the duties of the adjutant?—The adjutant's duties are more especially as to the drill; the drill is more especially under him, exactly in the same way as in a regiment, and the adjutant has his morning drill every morning before the breakfasts, and before the studies, and at the commanding officer's parade. Afterwards, during the first part of the term, the squad drill is going on, when all the officers of companies are looking after their companies, and the major and the adjutant and myself are also upon the ground, and we push the cadets on as fast as we can. Then when the cadets are thrown together and are in battalion I generally, at the commanding officer's parade, take the drill myself.

3526. Do you not think that the duties of an adjutant might be done just as well by one of the captains, would he not be equally competent to drill the cadets?—I think not, for this reason, that the same duties, namely, the duties of the adjutant of a regiment, are never so well done by the orderly officer when the adjutant has gone away; the instruction must be necessarily done better when done by one officer.

3527. You think it necessary then that the drill should always be placed under the charge of one officer appointed for that purpose?—Certainly, as in a regiment.

3528. You do not think that that uniform system of drill might be conducted by the major and superintendent of studies, or by the commandant?—If you turn the commandant into an adjutant, well and good; but I am of opinion that there ought to be an adjutant to do the adjutant's duties, just the same as in a regiment. I think that if an adjutant is not required at the Royal Military College, upon the same reasoning he is not required for a regiment, and we know that he is required there.

3529. Then you look upon the cadets as persons who are to be treated as soldiers?—Yes, in every possible way, always recollecting that they are gentlemen and not private soldiers.

3530. What are the duties of the paymaster and the quartermaster?—The duties of the paymaster are all the finance work of the establishment, the payments connected with the staff college are also made by him. The paymaster belongs to both colleges, and the same is the case with the quartermaster. The quartermaster's duties are very varied, and the quartermaster has more to do than any man, for he is constantly on duty from morning to night; he is also the acting barrackmaster.

3531. Who attends to the provisioning of the cadets?—The provisioning of the cadets is completely in the hands of the commandant assisted by the quartermaster.

3532. Who pays the cadets their weekly money?—The captains draw it from the paymaster, and it is handed to the cadets; they are paid by the serjeants.

3533. Do you not think that the duties of paymaster and quartermaster might be combined?—No.

3534. Are you aware that under the old system there were no subalterns, and that the captain did the work of an adjutant, and that the paymaster and quartermaster were combined in one person?—I am aware of that.

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

Instruction in drill, regimental duties, and practical exercises.

3535. Do you think that unreasonable and impracticable?—With regard to the drill, the answer to that is that in those days the cadets learnt no drill at all except the manual and platoon drill, and the marching past. I am speaking of what took place before 1858. I only speak from what I have been told. The cadets on an inspection are now supposed to drill and manœuvre as steadily as any battalion of the line.

3536. With regard to the perfection of the cadets in drill, I think that you have said that many commanding officers find fault with cadets on first joining, as not being so perfect in drill as they might be?—Yes, I have heard complaints. It must be recollected that a cadet may be very smart under arms and may drill uncommonly well, but that is a totally different thing to commanding; the under-officers and corporals are the only ones who have the chance of learning commanding.

3537. Do you periodically examine the cadets in drill?—They are not examined by me further than that they are always under examination by me on parade. I hold no private examination drill; in fact, there is no time for it.

3538. Do you never exact any examination of the private gentlemen cadets before they are promoted to be corporals and under-officers?—No.

3539. Do you think that that would be advisable?—I do not see what would be gained by it.

3540. Have the cadets any acquaintance with regimental duties of any sort?—The only approach to it is that there is an under-officer on duty, and there is a corporal on duty, and they inspect the rations and inspect the sick at the hospital.

3541. Do the cadets understand anything about picket duties, or bivouacking, or the duties of a subaltern in camp, garrison, or quarters?—No; instruction is not given upon that point, it comes under the head of instruction which I should be so very glad to see introduced at Sandhurst, namely, practical instruction.

3542. Sandhurst, as I understand, is intended for the education of the officers of both cavalry and infantry; are the cadets instructed in cavalry drill?—They are instructed in the riding-school drill.

3543. Do they understand anything about cavalry manœuvres?—No, they are not instructed in cavalry manœuvres.

3544. Are they periodically examined before the Board of Commissioners in riding?—Yes; when the duke comes down there is a ride of cadets ready for him.

3545. Before they leave the college, or get their commissions, are they obliged to have a certificate that they can ride properly?—No certificate is given, with regard to their riding, to cadets who are going to compete for commissions; a certificate is given that they have gone through the military exercises required at the college.

3546. Are they instructed in artillery drill?—Yes.

3547. Are they thoroughly instructed in it?—Yes; they are sufficiently instructed to man guns and to fire salutes, and at my drill cadets occasionally take out light Armstrong guns.

3548. Are they taught musketry instruction?—Yes.

3549. Do they pass an examination in it?—No; but there is a record of their shooting.

3550. Do they pass an examination in artillery drill?—Yes, each company, for instance, has a squad at artillery drill. As soon as the serjeant instructor of artillery reports that those squads know their drill, and are fit to be dismissed, I ask Captain Cardew, one of the professors of fortification, whether he will be so good as to inspect the squads, and say whether he thinks that they are fit to be dismissed, which he always is very ready to do, although it is beyond his duty. Sometimes he thinks that two squads may be dismissed, and that the other squad should be kept on, and then the other squad is kept on.

3551. As to gymnastic exercises, there is, I believe, a gymnasium?—Yes.

3552. What are the cadets taught there?—They are taught to fence, and they are taught single-stick and broadsword and bayonet exercise, and the usual course of gymnastic instruction. With regard to gymnastics, they are inspected by the Commander-in-Chief at the end of the half year. Of course there are some who are much stronger at that sort of thing than others could possibly be, and there is a system of prizes, likewise, to encourage it as much as possible.

3553. Are the cadets taught to swim?—There is no swimming master there. On one or two occasions I have called for reports as to those cadets who could not swim, and I found that almost everybody in the battalion could swim. They all of them learn to swim before they come to the college, with a few exceptions, namely of those who never would swim at all.

3554. I think that you have said that the education of a cadet is too superficial, and not sufficiently practical. Do not you think that that applies also to his instruction in drill?—I should like to have more time for the drill. My wish was when we came to three terms instead of two, to get the cadets out on the ground upon which they have been employed in surveying, and to explain to them how to throw out pickets and patrols, and so on; but I found it perfectly impossible. I never can get the cadets beyond a certain time, as we then interfere with the studies, a thing which I am very jealous about. Soon after I went to the college I was reported for making the cadets fire blank cartridges, and making their hands shake so that they could not properly attend to their studies.

3555. We have had it stated in evidence that only those cadets really obtained any great advantage from the college who get their commissions without purchase, and that they are about 35 or 37 per cent. of the whole?—Yes.

3556. You have said that the instruction in drill is not quite that which you would wish. If such a very small number of cadets get a real advantage from their studies, and if the practical education of the college is not as it should be in matters of drill, of what advantage is Sandhurst to the army at all?—I think that the best answer to that question is what I have said before in my evidence, namely, that I would make it a practical course, and would oblige everybody to go through it, or would do away with Sandhurst altogether.

3557. Then you think that as it is at present it is in a most unsatisfactory state, and is almost useless for purposes of military education?—I consider this the Royal Military College in its present state is not at all what it ought to be with a view to the way in which our army is officered. I do not think that as Sandhurst is at present constituted the most is got out of it for the benefit of the service.

3558. In 10 years 1,189 cadets entered the army from Sandhurst, and 4,475 entered by direct examination. The proportion, therefore, of Sandhurst cadets to those who entered from other establishments, would be, say, 1 to 4. If what I have already stated is correct, and if you think that only a very small per-centage obtain any advantage from their military studies at Sandhurst, and that the drill does not go far enough, is it not your opinion that the benefit which Sandhurst is to the army is very small?—I think so. I think that the amount of the military education taken away from Sandhurst by the cadets who are low down upon the B or second lists is such that the service is not much benefited by it, if it is at all. Return p. cxlv

3559. Will you explain to the Commission what the A and B lists are?—The A list is a list of the cadets who get commissions without purchase; the B list is a list of the cadets who qualify, and are therefore eligible for commissions by purchase.

3560. What is the punishment for what are generally called moral, as apart from military crimes; that Moral

is to say, for swearing, for falsehood, and for indecent conduct?—In cases of falsehood which have occurred, the cadets have been put into isolated close arrest.

3561. Is swearing at all punished?—Bad language is punished.

3562. Obscene language, and bad language, and swearing?—Yes.

3563. It is not, I suppose, severely punished?—It depends upon the degree of the offence.

3564. Is ungentlemanlike conduct looked upon generally as being to the prejudice of good order and discipline, and would it be severely visited whenever it took place?—Certainly.

3565. Do you think that the tone of the cadets in their dormitories, in the matter of propriety and decency, is what it should be?—Yes; I have no reason to suppose that there is anything contrary to the rules of decency with regard to the cadets in the dormitories.

3566. Do you not think that the associated dormitories in taking away from the privacy of the cadets, have a bad effect upon them?—I know that there are different opinions upon that subject, but I myself have never thought so.

3567. What are the numbers generally associated in the dormitories?—In two of the companies, namely, A and B, the cadets are put up on the old system; there are four in a room; and in C company, which is a new building, the cadets have each a separate bunk; they have what is called a tea room for every 14; a bunk is not exactly a separate room, but the bunks are small things more like ships' cabins than anything else; and they run up not to the ceiling, but to a certain height of woodwork.

3568. You have said something about the cadets being allowed to study privately at night in separate rooms set apart for the purpose?—Yes.

3569. Are those rooms tenanted by more than one cadet at a time for the purposes of study?—Yes. There is not a room for each cadet who wishes to study; there is one room for them altogether, unless from the numbers it would be necessary to take another room; we, in fact, took what is called the reading room.

3570. Do you not think that there are many subjects of study as to which it is positively necessary, as far as possible, that a student should study them alone in privacy. I allude to mathematics, for instance?—I do not myself see a necessity for everybody having a private room.

3571. But you would not be opposed to it?—No, I should not be opposed to it, but I do not see the necessity for it.

3572. Are not the rooms very uncomfortable as they are at present, and much more like soldiers' barrack rooms than anything else?—No, I do not think so at all.

3573. Of what does the furniture of the rooms consist?—It consists, first of all, of a bed with its belongings; each cadet has a little sort of cupboard, and now each room has a chest of drawers put into it, so that a cadet has always a drawer of his own, the object being to introduce their having their clean linen kept up in their room, so that they can change things without any difficulty.

3574. Do you mean that there is one chest of drawers for the four cadets in the room, or one chest of drawers for each cadet?—No, there is one chest of drawers for the four cadets in the room, and they have a table and chairs, and they have washhand stands in their rooms.

3575. I suppose that there is no such thing as carpets, or anything of that sort?—The under-officers have carpets in their rooms.

3576. But the private cadets have no carpets?—No, generally speaking not.

3577. The cupboards are mere boxes?—Yes.

3578. There is no bookcase in the room?—No. I have seen many officers' rooms no better furnished than the cadets' rooms are.

3579. Are wall decorations, such as prints and pictures, or any thing of that sort allowed?—Yes, by permission.

3580. Is that permission generally accorded?—Yes.

3581. And is it made use of?—Yes, in many of the rooms, but principally in the under-officers' rooms and the reading rooms.

3582. As to change of linen and clothes, are the cadets constantly supplied with fresh linen when they want it?—Yes.

3583. Is it served out to them?—Yes, but there is no difficulty in their getting any changes which they may require. In order to facilitate it still more, we have had chests of drawers put into the rooms so that they might go and change their linen without sending down to the housekeeper's department.

3584. In the matter of ablution, can the cadets get a good bath when they require it?—Yes.

3585. In their own rooms?—Not in their own rooms.

3586. Do you find that drinking ever goes on in the dormitories?—Very seldom indeed. Of course there have been cases where liquor has been taken in. In days gone by there used to be a great deal of irregularity in the way of liquor being taken in on the last day of the term, but we have broken the neck of it now by having a late dinner for the cadets in the dining halls, and allowing them to have a certain amount of wine. This practice was instituted after a disturbance took place in one of the companies about four years ago, and the officers dine at the same time in the waiting room, so that, in fact, the whole of the cadets and the officers are close together on that occasion. That has completely broken the neck of liquor being taken into the dormitories on that occasion, and it is very seldom indeed that liquor is taken into the dormitories. I know that it is sometimes taken in.

Messing.

3587. As regards food, will you tell us what the cadets have for breakfast, and what they have for dinner, and what they have for tea?—The first thing which the cadets have before they go out to their morning drill is a cup of coffee, and then the morning drill takes place and they come in to breakfast at half-past seven, and they have coffee for breakfast, but if any cadet objected to coffee there would be no difficulty in his having tea; they have bread and they have butter, and they either have cold beef, or cold ham, or sausages, or fish, or eggs.

3588. Is that all at the college expense or at their own?—It is completely at the college expense.

3589. What are the dinners?—Then comes study. After study they go out for the commanding officers' parade, and they then come in and have a piece of bread and cheese all round and a glass of table beer; that is at about half-past eleven. They then come in for studies, which are for three hours, and then comes dinner; that would bring dinner to about half-past two. At dinner they have meat, roast or boiled, usually roast, and a joint of meat is generally for 10 cadets; our joints are as nearly as possible 10 lbs., 1 lb. of meat being the regulation quantity for a cadet. The meat consists of legs or shoulders of mutton or ribs or sirloins of beef. We always have two or three joints over in case they should be required; there is no stinting, they have as much as they like. Then we have pudding every day, and salads when salads are in season, and we have cheese.

3590. (*Chairman.*) What do they drink?—Table beer at 1*s.* a gallon. Then there is tea at tattoo; at present that would be at 9 o'clock. The tea consists of tea and bread and butter, and until lately, when we got the messing into our own hands, and the laundry into our own hands, no addition was made to the tea, and what the cadets had in addition to the tea they paid for themselves; but by an arrangement for getting the laundry out of the hands of the contractor and working it ourselves we are enabled to add meat or something of the sort to the tea meal perhaps twice a week, and sometimes oftener, as the case may be. Every month there is a mess meeting, composed of myself as president, the major and superintendent of studies, the three captains, the paymaster,

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

the quartermaster, the three responsible under-officers, and three gentlemen cadets, corporals or private gentlemen cadets, and not first term cadets. Everything is explained to them, and they are made to understand it as part of their duty; if any suggestions are made the meeting takes them into consideration, and we make as much out of the money as we possibly can.

Refreshment rooms.

3591. (*Lord E. Cecil.*) With regard to the practice of getting cooked meals and cooked meat at different times from the canteen, how did it originate?—There has always been an arrangement, as I have understood, years before I came to the college, of the cadets when wishing to give a supper to each other, or anything of that kind, being in the habit of getting things cooked and sent in, but they are now able to do anything of that kind at the refreshment rooms; also the man in charge of the refreshment rooms occasionally furnishes a supper in the dormitories for any cadet who may wish to give a party.

3592. Is the necessary furniture, such as table cloths, and knives, supplied from the refreshment rooms?—Things which are required are supplied from the refreshment rooms; we are always ready to give any assistance from the college.

3593. Are wine and spirits allowed to be supplied at the refreshment rooms?—No.

3594. Who sends out the wine which the cadets drink?—They are allowed to have wine at the dinner at the end of the term, and on the Queen's birth-day they have wine; so much is allowed for each table; the wine which is consumed upon the Queen's birth-day and the last days of the terms in the dining halls is paid for out of the messing.

3595. Who pays for the cost of all the eating and drinking which is procured from the refreshment rooms?—Those who consume the articles pay for them.

3596. Who looks ofter the bills which are run up?—When I came to Sandhurst there was an old institution called the "tuck-barrow," which used to appear on the parade. I thought that it was a most objectionable thing, and Sir Harry Jones allowed me to put the man inside a room. As we advanced he did not keep pace with us, and I put out tenders to get a contractor to manage it for us, and got a man from London who took the thing in hand and who does it uncommonly well. There was a clear understanding with him that I would not be responsible for any bills of the cadets. It has been found to be an utter impossibility to have a ready money transaction, because there is such a rush between parade and study that he would require so large a staff that he could not make it pay. I do not hold myself responsible for the bills of the cadets, but still at the same time I keep an eye on the matter and am always ready to give assistance, and if I find that cadets are running up bills to an extent which they should not, I send for them.

3597. Do you find as a rule that cadets run into debt?—Not more than in other places where they have extraordinary temptations; not more than at public schools.

Miscellaneous regulations.

3598. What are the rates of pocket money allowed to the cadets?—The present rate is 2*s.* a week upon a cadet joining without a good conduct decoration; each good conduct decoration takes 6*d.* with it, and they can get as many as three. Then the corporals at present, I think, get 2*s.* 6*d.*; there is an increase for the corporals, and an increase for the under-officers, and an increase for the responsible under-officers, besides the increase of 6*d.* upon every good conduct decoration.

3599. I believe that it used to be the old rule that the cadets were not to have any extra pocket money, but I suppose that that is obsolete?—Yes. I know that some of the cadets have a very handsome allowance from home. There used to be an order to the effect that they should not have beyond a certain sum, but that does not exist now.

3600. Do they ever give supper parties outside the college?—Yes, sometimes.

3601. Does that lead at all to disorder?—No, it very seldom occurs, and then, of course, it is within the hours of recreation. I should never give leave to them after tattoo for anything of the kind, unless they went to dine with friends.

3602. Are these supper parties allowed outside by the authorities?—No; those supper parties to which I alluded in my evidence just now had reference to inside the college; the supper parties outside are matters during the hours of recreation. I should not dream of giving permission to cadets to be out after tattoo at supper parties, except they were receiving the invitations of friends who came to see them.

3603. (*Rev. W. C. Lake.*)—But before tattoo they are permitted?—They would not be permitted in a public house; but if the cadets went into an eating house it would not be objected to.

3604. (*Lord E. Cecil.*) I suppose that there is no such thing as bullying at Sandhurst?—No; I may say that it does not exist, in consequence of all the cadets being so very much of the same age.

3605. Is it the case that a pack of beagles is kept for the use of the cadets?—Yes.

3606. How often do they hunt?—Twice a week.

3607. Where do they hunt?—Partly on the college grounds, and we get permission from people to go over their ground.

3608. Is there any other hunting? If there was a pack of hounds in the neighbourhood, would the cadets be allowed to go to the meet?—No; because it would interfere with the studies. We never allow of interference with the studies. The cadets are allowed to go away from Saturday to Monday, but they must go after study on Saturday and they must come back before study commences on Monday.

3609. What is the regulation with respect to plain clothes or uniform?—The regulation is, that the cadets are always in uniform except when they go away on pass, and then they are allowed to wear plain clothes if they are going any distance; but Aldershot is an exception, and there they must be dressed in red coats with waist belts.

3610. Are they allowed to dine at messes at Aldershot?—Not without the permission of their friends.

3611. Are there any bounds at the college?—The bounds within the last few years have not been acted up to; in fact, they are much more appropriate to boys than to young men. There are certain places which the cadets are forbidden to go to, and which are put out of bounds.

3612. What are the duties of the staff serjeants?—They are all employed at the beginning of every term in the squad drill, which lasts about half the term. Then they have the military duties connected with the college; for instance, there is always a serjeant upon duty at the guard-room, and there is always a serjeant in waiting. If there is any cadet in isolated close arrest there is a serjeant upon duty, with whom a communication exists by way of a bell from every cadet in confinement in case he should want anything.

3613. Are the serjeants set to watch the cadets in that particular?—They do not watch the cadets; the cadets are actually locked up in these rooms, and a serjeant is within reach in case a cadet falls ill, or requires anything, in which case he rings the bell, and the serjeant comes to him, and if it is necessary he sends for the officer on duty, or for the doctor.

3614. If a cadet broke out from his isolated confinement, would he not be stopped?—Of course; he is a prisoner.

3615. If a cadet was doing anything wrong in the college grounds, would he not be reported by the serjeant?—It would depend upon what the cadet was doing. If a serjeant saw a cadet disobeying the orders by going into a public house, or leaving it, he would not report that cadet; it would not be his duty to do it. If a serjeant saw a cadet drunk in the streets or engaged in a row, or if he saw cadets in the street, after tattoo, thereby knowing that those cadets had broken out of barracks, he would report that circumstance. I have known that to happen, but I have

never brought the serjeant face to face with the cadet.

3616. Does the serjeant give evidence before you against the cadet?—A serjeant has never given evidence before me against a cadet. I would never call upon him unless it was a very bad case indeed, so that it called for it, but I have never had to do so yet, and it is contrary to my ideas.

3617. You have mentioned two disturbances which have taken place within the last four years, are those the only disturbances which have taken place since 1860 or 1859?—I can only speak to my time at the college.

3618. In the row which took place last year, was there any injury done to any of the passengers or wayfarers?—I heard that a woman was slightly injured, but quite accidentally, and in fact no report or complaint at all was made about it; whether it is true or not, I do not know.

3619. Do you think that the accounts of the whole disturbance were very much exaggerated?—There is no doubt about it.

3620. With respect to the salaries of the professors, do you think that it would be a good thing to equalize their salaries? I understand that now some of the military professors receive more than the civilian professors receive?—That is a subject to which I have never given any consideration, and I am not prepared to speak upon it. I know that the question has been mooted with regard to the language masters being very badly paid.

3621. Have you any reason to suppose that the scale of pay is too low to induce good men to offer themselves as professors?—I am not in possession of such information as would lead me to give a decided opinion upon that point. The only question of lowness of pay, I think, has been with respect to the language masters. I think that they are paid lower than anybody else.

3622. Are you aware that the college was self-supporting some 10 or 12 years ago, or more?—I have understood that formerly it was self-supporting.

3623. And that it was not only self-supporting, but on one occasion paid a certain sum into the Treasury?—I cannot say that I am aware of that. I have always understood that the college used to be self-supporting, and that Parliament gave no assistance to it.

3624. (*Lord Northbrook.*) Do you send up the estimates for Sandhurst to the War Office?—The estimates for the cadet college are prepared, and I go into them before they go to the governor. The estimates are sent by the governor to the War Office.

3625. The estimate for this year, I see, is 36,731*l.*, do you believe that to be accurate?—I believe so. I cannot speak from memory.

3626. Besides that, some of the officers at Sandhurst have emoluments from other sources, such as half-pay, and so on?—Yes.

3627. On looking to the estimates, I find that the governor has 1,000*l.* a year from the college, and that he has also the half-pay of a general officer, amounting to very nearly 1,000*l.* a year, which is not included in the 36,731*l.*?—As regards the governor's pay and my own, the only thing chargeable for the governor's pay, under the item of "college pay," is 1,000*l.*, in the same way that mine is 500*l.*

3628. There are certain items of half-pay?—The captain's pay is all lumped in the college pay, the lieutenant's is all lumped, and it is the same with the adjutant's pay.

3629. The commandant, the surgeon, the major, and two professors, receive half-pay, besides what is upon the estimates, do they not?—Yes.

3630. Roughly speaking, at what should you put the deduction which ought to be made from the expense of the cadet college, in consequence of certain duties which some of the professors and others perform at the staff college; should you put it at 1,000*l.* a year?—There are not only professors, but there is the riding troop, and there is a detachment of Royal Engineers.

3631. Could you dispense with any of these officers at the Military College, supposing that there was no staff college?—No, we require them for the cadet college. *Col. Hallewell.* 24 July 1868. Royal Military College, Sandhurst.

3632. I find from these estimates, that in the year 1866–67 there was about 16,000*l.* received from the parents and relatives of the cadets?—Yes.

3633. Do you apprehend that the receipts for this year will be more than that, or about the same amount?—For the ensuing term they will be less, because our strength has gone down, and there is something else which alters the amount; supposing that a very large proportion of the cadets who come in one term are the sons of the junior officers of the service, their contributions are very much less than the contributions of private individuals.

3634. You think that this year the receipts will not come to more than that—16,000*l.*?—I should think not.

3635. Taking the figures, and taking the amount of the estimate, which in round numbers is 36,700*l.*, and the receipts from parents at 16,000*l.*, or thereabouts, the expenditure by the Government upon the education of the cadets at Sandhurst is 20,000*l.*, without including the half-pay, and so on, which I have mentioned, is it not?—Yes.

3636. I think that I collected just now that a Queen's cadet cost 180*l.* a year?—The Queen's cadets cost more than the other cadets, and that is explained in this way; the difference is caused by this, that the parents provide the uniforms, books, and instruments for the private cadets, and the Government provide the uniforms, books, and instruments for the Queen's and Indian cadets; they also provide the pocket money, and everything else. There are also the travelling expenses.

3637. How many Queen's and Indian cadets are there at the present moment at Sandhurst?—I think that there are about 20.

3638. Then the expenses of their education would come to 3,600*l.* a year, at 180*l.* a piece?—Yes, I can only speak from recollection to that point.

3639. Then there would remain out of the whole charge to the country 16,000*l.* a year, or a little more, for the education of the rest of the cadets at Sandhurst?—Yes.

3640. The result of it, so far as I can make out from the statistics of the last four years, is that an average of about 190 cadets go off into the army?—Yes, if we were kept at our establishment of 300, 100 cadets would so go out every half-year, making 200 a year, but the number is under that, because our strength is below the establishment.

3641. Out of those 200 I think that you have said that you do not think that the education received by the Queen's cadets is worth much, in respect of their being certain of a commission?—I ought not to say so with regard to the Queen's cadets, but I say so with regard to those cadets who are in the second or B list. Since I have been there we have had one case of a Queen's cadet who qualified in two terms, and he came back in the third term to get into the "A" list.

3642. In four years, according to the return which we have, there have been six who have been in the A list?—Yes. Returns, p. cxlix.

3643. Taking the B list, what should you say were the average numbers of those cadets who passed out for commissions by purchase, whose education was really valueless?—I should certainly say half of the B list.

3644. About how many cadets in the year would that represent, about 60?—Yes, I suppose about that number. I believe that I am quite within the mark in saying that I think that there is that proportion getting an education which is not of much value.

3645. Then the expense to the country being about 100*l.* for each cadet who passes out of the college, the expense of the education of these 60 cadets would be money thrown away?—I do not think that the value is got for the money.

3646. You have made a suggestion that some money premium should be given to those cadets who come

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

next to those who gain the commissions without purchase. Do you think that supposing that this 6,000*l.*, or a sum of that sort, was to be spent in that way, so as to give at the examinations to the 20 cadets who should be high upon the list 200*l.* each, and to 10 more 100*l.* each, it would be more conducive to the efficiency of the college than maintaining a system under which the whole of these cadets cost the country 100*l.* a piece upon leaving the college?—I think that there can be very little doubt that it would conduce to more industry on the part of the cadets low down upon the list.

3647. Do you think that such a plan would produce more work from the cadets in the year and a half, as a rule?—I should think that there would be no doubt about it; it is, in fact, putting the rewards within the reach of many more individuals.

3648. Then in that case you would make every cadet pay the cost of his education; and his reward, or the inducement given to the parent, would be dependant upon his qualification at passing out?—Yes.

3649. Do you think that the discipline of the college might be improved by a cadet being of a positive military rank, which he would forfeit altogether by his misbehaviour, rather than by his being a civilian on passing out? I am presuming that a cadet at Sandhurst should have a military grade which he would forfeit for misbehaviour during the course at Sandhurst. Would you, as commandant, prefer that the cadets should be officers in the army in a superior grade to their present position?—I should naturally prefer anything which increased my power over them.

3650. And do you think that that would increase your power?—Yes; when I say that it would increase my power, I ought to say that it would increase the governor's power, because I should not have the power of depriving them of the grade. It is not a question to which I have ever given attention, and I am rather answering at random. I have not considered the subject, and I think that it is a matter which requires some consideration.

3651. (*Lt.-Col. Chesney.*) If you had your 300 cadets, each paying 100*l.* a year, instead of the varied scale, and each paying for his equipment, would not it nearly cover the total annual expense of the college, which is estimated at about 36,000*l.*?—It would be a large item to set off against the charge to the public.

3652. It would be, in fact, at least five-sixths at once of the whole amount charged. The great excess against the public arises then mainly from the low payment, or no payments made?—The low payments. A great many officers' sons come to Sandhurst; for instance, take the sons of captains and commanders in the navy, and even of field officers in the army, they only pay 50*l.*; and when you come to the captains of the army it descends to 40*l.*

3653. Then, in fact, the apparent loss to the State on Sandhurst arises principally from the fact that officers' sons are educated there cheaply?—Certainly; a great charge falls on the public from the education at Sandhurst of officers' sons.

3653*a*. The greater part of the charge?—Yes.

3654. In your opinion if there were no military colleges would the sons of quartermasters and paymasters, and such other regimental officers, have an opportunity of entering the army with the same education as the sons of private gentlemen? I speak of those who now go through Sandhurst?—I presume that they would not have had a public school education, but they would have had education or they could not come into Sandhurst; they would have a sufficient amount of education to go through the direct commission examination.

3655. But at present does not Sandhurst practically put them for the time on an equal footing with the sons of men who are better off?—They are certainly on an equal footing at Sandhurst.

3656. Would not officers of the army lose that advantage by the abolition of the military college, an advantage which is such that for a certain time their sons are under the same training asthe sons of men who are better off?—Yes, but they are not under a previous public school training.

3657. Would not they lose that advantage, such as it is, if the college at Sandhurst were done away with?—They would lose that advantage, such as it is.

3658. It appears from the returns that in the last four years rather more than one-third of the officers of the army have entered the army from Sandhurst; if half of that one-third, namely one-sixth of the whole, leave Sandhurst with some general military knowledge, in your opinion is not that of some advantage to the service?—Certainly it is.

Retur p. cxl

3659. Under any circumstances, with a place situated as Sandhurst is, with scattered villages about the country, would it be possible wholly to prevent cadets going into public houses by any system of repression?—No, I should say that it would be totally impossible, taking the scattered villages and places round.

Disci moral &c.

3660. But if you were to use something of the proctorial method with officers on duty, as is the case at a university, could not you do something more towards it?—You would do very little towards it, unless you had every single officer constantly on duty throughout the country, and that would not do it.

3661. Have you not recently had a great additional power of enforcing your discipline by the practical addition of the professors to your staff out of study?—Certainly.

3662. (*Rev. Dr. Butler.*) You would say that the system of administration at Sandhurst is essentially military?—Yes.

3663. Have you ever considered whether it would suffer, or otherwise, if it was more civilian?—Yes, I have considered that point; as a military school my feeling has always been very strong that it should be made as much as possible, in all its branches, military.

3664. In what way do you think that it gains by that system?—It is part of the occupation in life which these young men are going to follow.

3665. Would the discipline exercised by a civilian be less likely to fit the cadets for their profession afterwards?—The discipline exercised by civilians is not so severe as the discipline which we exercise at Sandhurst.

3666. Is a young man more likely to be less amenable to control when he enters the army if the system of discipline to which he has been subjected in early years has been less severe?—No; for instance, we have the cases of cadets who go in by direct commissions, and who go straight from the public schools, and no men are more amenable to discipline than they are; and I find the same thing with the cadets who come to us from the public schools. I would rather have young men from the public schools than I would have young men from a "crammer's;" there is no discipline there. The effect in the case of those who come from public schools shows itself when they come to us.

3667. Is it easy to reconcile the rigidity of military discipline with the sympathy in government which is requisite in the case of young men?—As a soldier, I think so.

3668. What opportunities has the commandant of seeing the young men privately?—Merely by asking them to his house, or in case of casual conversation. The commandant has no evening meetings of the cadets or anything of that kind.

3669. Would he only see them socially, when he was kind enough to ask them to dine with him, or anything of that sort?—Yes, or when he entered into conversation with them at odd times.

3670. Would a cadet ever think of applying to the commandant for advice upon any matter touching his personal interests?—Cadets have frequently come to me. I have had notes from cadets whom I did not know privately, asking whether I would be kind enough to see them in order to give them advice with regard to their future prospects, and so on. There is

.ot a half-year which passes without my having adets coming to see me in the orderly room, and in my wn house, for that purpose. No cadets who have got nto a scrape have ever asked me to advise them how to get out of it, but they have frequently come to consult e upon their prospects; there are always cadets very term who do so. I mean particularly cadets who are not private friends of mine, and who are not ntroduced to me, but who are strangers to me.

3671. Would there be generally any portion of the adets with whose character as a whole the commandant would feel himself to be familiar?—As to a arge portion of the cadets the commandant cannot possibly be familiar with their character.

3672. Is there any officer connected with the ollege who would have that familiar acquaintance with the character of the cadets?—I know that the aptains of companies see a great deal of the cadets.

3673. In each company there are from 90 to 100 adets?—100 is the establishment, and there are now bout 80.

3674. Who appoints the captains?—The Commander-in Chief.

3675. Can you say upon what principle they are selected to take that very responsible post?—I am not able to answer that question.

3676. Would you not hold that it was important that officers selected for so responsible a post should be chosen with special reference to their knowledge of character and power of influencing young men?—Most certainly; it would be a great advantage, and in the cases which we have had I can say that I am perfectly satisfied with the interest which the captains take in their cadets, and the way in which they work.

3677. Independently of the conduct of the captains, and the way in which they actually discharge their duties, do you think that that post is regarded as an educational or as a military post?—I regard it as a military post.

3678. Is it regarded as some test of military distinction?—It so happens that the three captains who are doing duty at the college are all officers who have distinguished themselves in the field. That may or may not have had a certain weight with regard to their being chosen for the appointment. But setting that on one side I think that they are men who are very well fitted for the peculiar positions in which they are placed, and I know (as is very natural) that young men who are going to be soldiers look with great respect upon their officers.

3679. Would it chiefly rest with the captains to judge of the complexion of any offences committed by the cadets?—All offences must first be examined into by the captains, and the captains must know all about the cases. If a cadet of one company was ordered into arrest by another captain, or by the major, with a view to bringing him before me, the captain would not inquire into the case, but I should inquire into it, the captain of the company being present; but ordinarily speaking the captain would inquire into all reports made against cadets.

3680. Do you feel satisfied that the early training of the captains would in general specially qualify them to judge of the complexion of moral offences committed by the cadets?—I think so. I think that they would be as qualified as any other men.

3681. Do you think that the early training of the captains would generally be such as to give them a peculiar fitness for that post?—I should say so. I do not see any reason against it.

3682. Can you give the Commission any notion how certain offences would be dealt with. For example, drunkenness. What would be the kind of punishment inflicted in that case?—If a cadet was reported to me for drunkenness I should immediately put him into isolated close arrest, and report the circumstance to the governor; and the probability is that the cadet, according to his character and his antecedents, would be for a week in solitary confinement, followed by a certain amount of arrest afterwards.

3683. If the offence happened again what do you think would be likely to follow?—I should think that he would probably be rusticated.

3684. Are you aware that in the public schools such an offence could scarcely happen twice, if once, without being followed by expulsion?—I am quite aware of that. It was so when I was at Rugby.

3685. But I gathered from what you said before that military discipline was more severe than the discipline exercised by civilians?—I mean taking the whole of the discipline together. For instance, we have offences which would not be offences in public schools at all. There are many offences for which we punish cadets which could not happen in a public school.

3686. Not offences against morals, but against minor matters of discipline? — Offences against orders.

3687. If a cadet was detected in a public-house and drinking, would it be likely to ensure his ultimate dismissal?—Yes, certainly, under the orders which are read out to the cadets; and they know that that has been put in force.

3688. Has it been put in force so frequently as to come to a cadet like a law of nature?—With regard to its having been enforced so frequently, this stringent law is only a recent one. I believe that if a cadet wished now to go into a public house, and saw the land clear, he would go in. I have not the slightest doubt about it if he was bent upon doing so.

3689. Would he feel that if he became intoxicated, and was detected, he would be likely to be dismissed for ever from Sandhurst?—No; a cadet could not have a personal knowledge that if he became intoxicated he would be dismissed altogether from Sandhurst, because the chances are that he might not be dismissed, he might be rusticated. Very much would depend upon his antecedents and his character.

3690. As to cases of direct immorality, would a case of that sort be dealt with?—We know that those things do take place, because we have the results of them in hospital, but we do not punish for them.

3691. Can you tell the Commission whether those cases are frequent?—The effects are more frequently seen I think after Easter, and when the cadets go away in bodies. Anything like cadets being seen in the company of loose women, if it was reported, would be punished. There is a very positive order with regard to that very case. But at the same time the results of looseness in that respect, and the proofs that it has been so, are not punished. The only thing approaching to it was that not very long ago an order was given that recruits on joining who were sick, were to be sent back to their friends until they were well.

3692. On what principle is it that an offence of that kind is not punished?—The only answer which I can give to that question is that the ages of the cadets must be viewed.

3693. And the special influence of the temptation?—I do not know that the temptation is greater there than elsewhere. It must be recollected that the cadets are of the same age as that at which we used to go into the service in time gone by.

3694. The majority of the cadets at Sandhurst are 17 or 18, are they not?—Sixteen is the youngest age at which they can come in; the average, I think, is over 18.

3695. Is not that a younger age than the majority of the upper boys at a public school?—I am not able to answer that question.

3696. May it not be the case that an offence, which is not strictly a military offence, is nevertheless most injurious if tolerated at a place of education?—It must be more or less injurious, there is no doubt about it.

3697. Is there not a danger in regarding such offences from the point of view of military discipline alone?—It must be injurious, but it is injurious to the cadets themselves.

3698. It is also injurious to the moral tone of the

Col. Hallewell.

24 July 1868.

Royal Military College, Sandhurst.

whole body?—I suppose that it is so in every class of the community.

3699. Is it impossible to lessen it by punishment as well as by precaution?—I think that it is perfectly impossible to lessen it in any way, particularly as it is away from the neighbourhood chiefly that the cadets get into scrapes. If there were anything like a cadet being seen walking about with a loose woman he would be put into arrest directly for being seen in bad company, and for walking about with a woman of that sort, but if a cadet goes into hospital and he is ill it is a different thing.

3700. Is it felt that there is any person whose business it is to look after the moral behaviour of the young men, as distinguished from their offences against military discipline?—No, there is certainly no person whose particular duty it is to look after their moral character, viewing that particular branch. To give you an idea of how the case stands, in answer to the question which you have put to me, I may state that Sandhurst is included under the recent Contagious Diseases Act. The moment that I see the sick report, which I do every morning, and I see a cadet returned as suffering from venereal disease, I send the adjutant to him at once to know where he got it, not of course with a view to punish him, but with a view to prevent others from contracting the same disease.

3701. Would any person connected with the college feel it his duty to report such a case privately to the cadet's parent for the parent's guidance?—No; I should certainly not think of doing so unless the cadet was very ill indeed, and under those circumstances the parent ought to know it.

3702. I meant as guiding the parent to his son's character. Would the chaplain feel it to be his business to speak to the young men on such topics, either from the pulpit or privately?—It would be quite a private thing on his part; I mean to say that it is not a part of his duty, further than alluding to it from the pulpit.

3703. Is it not the fact that some years ago the chaplain gave to the cadets some religious instruction which has been since discontinued?—Yes.

3704. Why was it discontinued?—Because the cadets came at a younger age, and the reason given was that it was necessary that there should be religious instruction to prepare them for confirmation, but they are now supposed all to be confirmed before they come.

3705. Would there be any public opinion among the young men themselves against drinking, or the reverse? If a cadet was known to be intoxicated, would he be thought worse of by his associates?—By some he would, but not by many.

3706. He would not be felt at all to be disgraced in the eyes of the college?—Not by a very large number.

3707. I have understood you to say that if a professor complained of one of the students, he would be present before the commandant when the case was investigated?—He would.

3708. Do you see any objection to that custom?—I see very grave objections to its not being so.

3709. Do you think that the professor might feel that he was placed in a situation somewhat derogatory to his position?—I cannot see how he could feel so, when the major and superintendent of studies himself cannot report a cadet to the commandant without being present.

3710. If the offence was more of a military character, and less of the character of an offence against education, would the same difficulty apply?—I have a very strong opinion that people under such circumstances should be face to face.

3711. In point of fact, have you reason to think that professors do object to being obliged to be present on such occasions?—It was in consequence of the professors or some of the professors objecting to it that the order was given. They complained of having to attend at the office of the major and superintendent of studies to give evidence against a cadet, that is to say, that they considered that their report ought to be taken without any question.

3712. That remonstrance was considered and the decision was given against them?—It was considered, and a decision was given in their favour as far as the major and superintendent of studies was concerned. According to the order, the major and superintendent of studies cannot oblige a professor to attend at his office and state the case against the cadet.

3713. Then when is it that the professor is obliged to be present?—In case the cadet objects to the report made against him, or qualifies it, or denies it, the major and superintendent of studies is to take no further step in the matter, but is to bring the case before me, and then that power is to be exercised.

3714. And that power would be exercised?—Yes, I should be very careful in exercising that power. I think that every person who is accused should have his accuser face to face, that is the rule of the service.

3715. Is it felt that the position of the civilian professors independently of salary, is on a level with that of the military professors?—In my eyes all professors and officers are on the same level. I mean both military professors, and civil professors, and the executive officers of the battalion, and I have always, ever since I have been there, said that I consider them all in the same light.

3716. Do you think that it would be so felt by the cadets, or would they feel that any superiority was practically accorded to the military professors?—I know that the cadets have a feeling upon that subject, which I have mentioned before in my evidence. The cadets prefer to have military professors over them, although in many cases the military professors are the most strict, but they wish to be under military officers.

3717. Are you aware that an objection was raised a short time since by the authorities at the War Office to the punishment of rustication?—I am.

3718. Do you know on what grounds it was raised?—That it punished the parents more than it did the cadets.

3719. At what time was that objection raised?—It was raised, I think, towards the end of November or the beginning of December last. I think that it was after the disturbance which took place last October or November.

3720. Is it understood that the punishment of rustication is one which now exists, or which does not?—It exists.

3721. Is there any music at the college?—There is a band of music.

3722. Do any of the cadets learn music scientifically?—Yes, it varies. Occasionally there are cadets who take lessons in music, and then perhaps there may be a term in which there are none who do so. There are frequently pianos in the rooms of the cadets, which they hire, and as I have already mentioned I have a room on purpose as a music room.

3723. Do they ever give concerts of their own?—Yes, we have a musical and dramatic society.

3724. I apprehend that there is no debating society?—Most certainly not.

3725. There is no private society for the cultivation of any branch of natural science?—No.

3726. I think that you have stated that the offence of idleness is not punished as such?—No, not under the head of idleness, but supposing that the idleness interfered with the progress of the class in which it took place, the cadet would be liable to be punished. That question with regard to the punishment of idleness has been raised a good deal, and I do not see my way in it. We have had two or three cases of that sort. One was the case of the son of a general officer, whose friends were written to and recommended to remove him, as there was no chance of his qualifying for a commission, and as he was only doing harm to everybody else. He was removed, not by rustication or expulsion, but he and the others were removed by their friends, as doing no good.

3727. (*Brigadier-Gen. Lefroy.*)—I think that you have expressed an inclination towards an establishment at Sandhurst on a sufficient scale to provide

officers for the entire army: would not all the difficulties of discipline be very much augmented by increasing the establishment to that scale?—No, I do not think so. I do not think that the difficulties of discipline are greater with large bodies of men than with small.

3728. It would require 1,000 cadets, would it not?—It would, I think, require 700 or 800, or whatever the number might be. Of course it would require an augmentation of the staff.

3729. You would not add to the existing college a number of colleges each self-contained and entire, but would merely expand the present college in its capability?—Exactly so.

3730. You have expressed a decided opinion against what are called voluntary studies; would your objection be at all removed if the list of voluntary studies, so called, was very much extended, so as to include such subjects as natural history, music, photography, and mechanical arts, and if those subjects were then made compulsory, with the right of choice, but so that every individual should give the same amount of time in what are now looked upon as his idle hours to some accomplishment or other?—I would rather have a certain course carried out and let those subjects be extra.

3731. Do you not think that a great system of education, considered as somewhat distinct from mere preparation for the army, is incomplete if it includes nothing in the nature of accomplishments?—So long as the public have to bear a part of the expense I do not see that the public ought to pay for the accomplishments of young men going into the service. I think that the public ought only to be required to pay for what I suppose would be called their technical or professional education.

3732. Are not the accomplished officers those who for the most part are the most rational, dutiful, and valuable officers in the service; those whose time in quarters is not given to dissipation and idleness, but who have rational pursuits of their own?—There is no doubt that an officer who has the resources of different branches of study and rational amusements must necessarily be a more useful member of the military society than a man who idles and does nothing but lie about in an arm chair with a cigar in his mouth.

3733. Would there be any difficulty in introducing the system of arrest on honour (of which a great many witnesses have expressed an appreciation) in the course of three terms? If it was made a condition with those cadets who are now about to come in, it would in three terms be a condition with all the cadets?—The only answer which I can give to that question is what I have given before. I cannot myself see my way to enforcing on a person a sense of honour.

3734. But if a cadet signed an agreement or passed his word on joining that as an officer and a gentleman he would be governed by that code, which is perfectly intelligible, and is well understood by everybody, would it not be sufficient?—It seems to me to resolve itself into this, that you say to a man, "If "you do not give me your word of honour I will "punish you."

3735. (*Sir D. Cameron.*) With regard to the power of rustication possessed by the governor, is he not obliged to make an immediate report to the Commander-in-Chief, when he has recourse to a measure of that sort?—He is.

3736. Then a cadet who has been sentenced by the governor to rustication may be sent back to the college?—He may.

3737. So that the power possessed by the governor is merely that of removing a cadet temporarily from the college until the case has been inquired into and decided by the Commander-in-Chief?—Precisely so.

3738. Was the system of independent study introduced by the Council of Military Education?—I believe so.

3739. Have the disadvantages of the system been represented to the Council of Military Education?—Yes, I think that it has frequently formed the subject of discussion, but I cannot positively answer that question.

Col. Hallewell.
24 July 1868.
Royal Military College, Sandhurst.

3740. Why should not the commandant dispose of all cases of misconduct, whether committed in study or out of study; would it not be better that one officer should have the disposal of all cases of misconduct?—I see no reason why it should not be so. It has been the custom (and that is all that I am able to say with regard to it) that everything connected with the studies and the professors should be disposed of by the major and superintendent of studies, unless it was absolutely necessary to bring the case to me. I may mention that all the punishments awarded by the major and superintendent of studies are immediately sent in to me, and I initial them. According to recent orders which have been issued, the construction which may be put upon them would appear to be, that the major and superintendent of studies could be to a certain degree independent of the commandant, and that consequently it might lead to clashing. It would be a perfect impossibility for that to happen at present, as the two offices are now filled, because the commandant and the major and superintendent of studies are perfectly *d'accord* on the whole system, and the sending of that report of punishments shows that the major and superintendent of studies is in no way independent of the commandant. Whatever the orders may be with regard to the major and superintendent of studies punishing without saying anything to the commandant, nothing can prevent the commandant, like any other commanding officer, ordering the major and superintendent of studies to carry out the punishment which he awards; it would be perfectly impossible to make the major independent of his superior officer. At the same time under certain circumstances it might lead to some little clashing, but that may happen and does happen in other positions.

3741. I suppose that it is understood that the commandant is directly responsible to the governor for the conduct of the cadets in study, as well as out of study?—Yes, the commandant is responsible to the governor for everything connected with the cadets.

3742. By whom were the powers of the different officers, namely, the commandant, the superintendent of studies, and the captains of companies, laid down; were they laid down by the Board of Commissioners, or by the Commander-in-Chief?—That was before I came to the college, and I am unable to answer that question. All I know is that they were approved by the Commander-in-Chief.

3743. I think that you attribute the idleness of the cadets to the small number of marks required to qualify them for a commission with purchase; would you raise the qualification?—I would rather raise the prizes.

3744. Has the nuisance of the Blackwater fair been represented to the magistrates of the county?—Communications have taken place between the magistrates of the county and the governor on the subject of Blackwater fair. After the row at Blackwater fair in 1864, when the Blackwater fair time of 1865 was approaching, the bench of magistrates made a representation to the governor, couched in rather cool language, to beg that he would take steps to look after the cadets, and the answer was to recommend the magistrates to take steps to look after the photographic vans.

3745. How many days does the fair last?—The actual days, if I recollect rightly, are only two, but then there are the preparation days, when great wickedness goes on in these booths for two or three days before.

3746. At the two rows which have taken place since you have been at the college, did the cadets show any disrespect to the officers of the college?—Not the last time; but in 1864 there was a sort of demonstration of disrespect on the part of some few cadets in the corridor of the college, which led to some cadets,

Col. Hallewell.
24 July 1868.
Royal Military College, Sandhurst.

as it was reported to me, going down to Colonel Lacy, and begging to apologize, and to express regret that some few had behaved in such a way. Anything like disrespect to an officer is a thing almost unknown at the college.

3747. On ordinary days, that is to say, when there is no half-holiday, at what o'clock does the last study terminate?—In the summer time it terminates at 5 o'clock.

3748. Between that hour and tattoo is there any check upon the cadets in the way of a roll call?—None whatever.

3749. So that they have from that hour to tattoo for recreation?—Yes; there is no check roll.

3750. Not even at tattoo?—Yes, at tattoo; that is to say, the rolls are called at tattoo by the under-officers in the companies, and a subaltern goes round. But on Sunday evening the cadets fall in, and are regularly paraded in the dining halls, and the reason for that is, that Sunday is their loosest day of discipline, because the cadets have more time on their hands on that day than on any other day.

3751. It has been stated that the cadets appear in different kinds of dresses in York Town, some of the cadets being dressed in one way and some in another; is that allowed?—The cadets have two dresses, a blue patrol jacket and a red tunic; if the blue jacket goes to be repaired, which is frequently the case, they are obliged to appear in red, and on Sunday they always appear in red.

Punishments.

3752. (*Lord de Ros.*) You have referred very judiciously to your practice of dealing with the cadets as gentlemen. Do you consider marching order drill a suitable punishment, bearing in mind that it is a public exposure, and that the offender may in a few months become an officer himself?—After I had been at the college a certain time (I cannot say how long, but perhaps two years) I got the punishment drill done away with, and before I got it done away with I removed it from the front of the college to a position which was out of sight, and it has only recently been introduced again. At that time it was much more of an instruction drill, but there was always a great deal of looseness about it, although an officer was present to superintend the drill; but now it is a complete marching order drill up and down. I have an objection to punishment drill in every way in the service.

3753. Would it not be more reasonable and more improving to impose some mental task, such as a translation into French or German, upon a young gentleman, and thus to deal with him intellectually, as at Oxford, rather than to deal with him merely as a private soldier?—I should object very strongly to the introduction of anything like tasks. I call them impositions.

3754. What is the objection to giving impositions in writing as at a college; would it not be a gain in time instead of a loss?—It is a measure which I regard as being opposed to the requirements of the service, because I regard the cadets as young soldiers in their first step before they become officers.

3755. Would you not prefer to regard the cadets as young officers, rather than as young private soldiers, in your treatment of them?—I frequently tell them that I regard them as young officers. I have frequently told them so on parade. I use the word "soldiers" as applying to all military men.

Practical instruction.

3756. It has been stated that the cadets take much interest in out-of-door surveys, field works, &c.; might not more of that work be substituted for theoretical study?—Yes; I have already given an answer, I think, to that effect, namely, that I should like to see a more practical system of education.

3757. It is a known opinion of the best cavalry riding masters, that three months' daily riding will form a better horseman than twice that period of riding on alternate days; could not that be carried out at Sandhurst?—I do not think that it could without interfering with the system of studies.

3758. Upon occasions of drill is much attention bestowed on instructing the cadets in giving words of command with proper confidence, calling them out from the ranks and making them give words of command in a clear and distinct voice, as they will be afterwards required to do in the performance of their regimental duties?—We frequently place two or three cadets in one part of the grounds, and take an under-officer away for a considerable distance to drill them, so that he is obliged to throw as much power as possible into his voice in order to learn commanding drill.

3759. You have said that from your personal acquaintance with colonels of regiments you are aware that many of them prefer an Eton or Harrow boy to a cadet manufactured at Sandhurst; may not this arise partly from the cadets having been treated and trained too much as soldiers rather than as officers?—I have no reason to suppose so. I cannot say that I have heard that reason given.

3760. You have used the term "duty officers," meaning, I presume, men whom the soldiers readily obey, who set an example to the young ones, who maintain the propriety of the mess, and who on commencing a campaign might be safely trusted for patrol and outpost duty. Is it not very desirable that our regiments should contain a large proportion of such officers?—In using the term "duty officer," I allude to an officer who is most conscientious and particular in the performance of his duties, and who looks after his men; and, in fact, is always ready for work and for anything which is required, and who is an officer to be depended upon. Of course the greater the amount of scientific education which he has added to that, the better officer he must be.

3761. As the object is to train the cadets as officers, might not a larger proportion, so far as drill is concerned, be trained rather to the command of the drill than to the mere executive duties of it?—They all begin at the beginning; even the portion who are taught the commanding drill have all been through the ranks, and have begun there.

3762. Do you think that there is a considerable proportion of the cadets when they leave the college who might, with a few weeks training, be put in the command of a small detachment?—I can give you a very close idea of that. I should say that at the end of each term there are 35 cadets who would be competent (the under-officers particularly so) not only to command companies on parade, but five or six of whom would be competent to manœuvre a battalion.

Discipli

3763. When you speak of public house life, do you mean that cadets ever mix with the low customers of such places, or that they go there in parties of friends, as any officers might go and dine together at a tavern at Richmond?—I have no reason to believe that they go and mix with the common people, but their going into what I call public house life is going to a public house in the neighbourhood and sitting down to smoke and drink anything. I regard it as a very different thing if cadets go away for a long walk in the country and stop at a public house and have a glass of beer and a little bread and cheese; I do not call that public house life.

3764. Might not the hours of smoking be limited within certain hours of the day, cutting off the morning?—I do not see what advantage would be gained by it.

3765. Are there any "daily states" or "reports," by reference to which and to the defaulters' book you can ascertain whether the offence of intoxication prevails or diminishes from one term to another?—Every case of intoxication detected is certainly recorded, and I believe that it never passes. I have every reason to believe in my own mind that there is not anything like the amount of intoxication which the world at large supposes to exist at Sandhurst. A cadet may be reported for being drunk; he may be seen, and in the opinion of the person who sees him he is drunk, and if that cadet is examined not long afterwards, and has an idea of what is going on, it is frequently the case that he may baffle the person who charges him with being drunk. I know that, because

that very thing has happened to me in a curious way very lately on two occasions. Two cadets were supposed to be drunk in York Town, and to have interferred with two ladies; this was in the evening, close on tattoo. An officer came to the subaltern on duty and they went together to the college. They went first to the first company, and saw every cadet there all correct; they went to the next company and saw every cadet there all correct; and they went to the third company and saw every man correct except two cadets, whom they thought to be drunk. They reported the matter immediately to me, and I ordered that the cadets should be put into isolated close arrest. Having done that I sent to the surgeon; the surgeon was out, and the assistant surgeon, by my order, went down to visit these cadets and to see whether they were in a proper state to be left alone. He misunderstood the instructions, and he came back and reported that he had inspected carefully the two cadets and that they were both perfectly sober. The other question which arose was that a cadet got into a scrape. He was seen by a serjeant, and the serjeant said that he was drunk. I immediately sent for the adjutant, and said, "Go up "to Mr. So-and-so, take one of the under-officers with "you, and report whether he is drunk or is not." The cadet had got into his bed, and they made him get out and stand at "attention" in his night shirt, and questioned him, and they reported him perfectly sober.

3766. Is it not desirable that the under-officers and cadets should live in perfect fellowship, except on actual duty, so that the under-officers may never be regarded as spies, but only as acting from a sense of duty?—Off duty the under-officers and corporals are completely associated with the cadets in that way, and I think to too great an extent.

3767. Is the defaulter book kept with the same rigidity as is necessary in a regiment; for instance, are cases of lateness for roll call treated in the same way as with private soldiers, or would a reasonable excuse and consideration of character sometimes prevent an entry against the cadet?—A cadet would not be entered in the regimental defaulter book for an offence of that sort unless it was a thing constantly taking place.

3768. Would you not approve of the staff serjeants being sworn constables as a control on the people of the villages and scamps who haunt all schools?—I do not see that any advantage would result from it.

3769. Might not the commandant be a magistrate of the county, and assist in the same direction, such as in case of any disposition to riot or confusion in the villages or neighbourhood?—I doubt it very much; I think that the two offices had better not be combined.

3770. With respect to a question which has been put to you by Dr. Butler, do you not consider that the early training of a good regimental officer specially fits him for the study of character and for the management of young men?—I should say so.

3771. (*Rev. W. C. Lake.*) You have apparently a very good opinion of the young men who go into the army from the better public schools?—Yes, from the regular public schools.

3772. That being the case do you think that it would be a bad plan to assimilate Sandhurst to a public school, eliminating the military element?—If you eliminated the military element I should say that you had better do away with Sandhurst altogether and stick to public schools; I conceive that the object of Sandhurst in a great measure is to introduce a military tone and feeling.

3773. Why do you think that the only alternative is either to pass all young men who are going into the army through Sandhurst, or to abolish Sandhurst altogether; you mentioned that as the alternative?—If it is necessary to have a military school I certainly think that it ought to be a military school; if it is necessary for one it ought to be necessary for all.

3774. I still do not see why your alternative is to abolish Sandhurst unless you extend it to the whole army, because you think very highly of the present state of things at Sandhurst?—Yes, as I have already said, there are certain things at Sandhurst which I think are not what they ought to be at a military school, but at the same time there is a great deal at Sandhurst which I approve of.

3775. You have said that you think the conduct of the cadets on the whole wonderfully good?—Yes, regarding young men altogether and what I know of young men.

3776. We heard the other day of an occasion when the cadets wrote up a number of rather obscene expressions in their halls of study and one of their lecture rooms. You have been at Rugby?—Yes.

3777. Have you ever known such a thing as that done in a lecture room at Rugby?—No, I cannot say that I have.

3778. Do you not think that it would have astonished the school very much indeed, and would have manifested a very low tone, if such a thing as that had happened on one of the walls at Rugby?—I certainly cannot call to mind that I ever saw such a thing as that at Rugby.

3779. Does not it rather indicate that a low tone existed at that time amongst the cadets?—I do not think that it must be regarded as a common occurrence at the military college, and that this is always going on. I know that such a thing has happened, but I do not consider it at all the tone of the college.

3780. I did not speak of it as always having gone on, but I asked you whether the existence of such a thing would not very much have astonished you at the public school at which you were?—Yes, I certainly should have been astonished to see it at Rugby; in fact I never saw anything of the kind at Rugby.

3781. You mentioned to us a very extensive establishment of recreation rooms. That is very unlike what you remember at public schools, is it not?—Yes, I consider that it could not possibly be carried out at a public school; but I regard the system which must obtain at Sandhurst to be totally different. At a public school, where you commence with boys at a young age, you must have a system of a kind which is a proper one for boys. If at Sandhurst it was decided to lower the age, and to bring back boys to Sandhurst, I should be the very first person to propose to abolish certain portions of the present system of recreation rooms. But we have no boys at all. We go upon the system that they are young men. I went into the service at a younger age than that at which most persons enter Sandhurst.

3782. Do not they enter Sandhurst at 16 or 17?—Very few enter under 17—a great many are about 18; that brings them on to 19 or 20, when they go away.

3783. You provide them now, I think, with four billiard tables?—Yes.

3784. And you spoke of two more?—Yes, which would be two billiard tables for each company. It would be two billiard tables among some 80 cadets, or 100 cadets if they were up to the establishment.

3785. Do you not think that that is open to this objection, that it is rather a system of petting young men, which may possibly lead to considerable defiance of discipline?—My opinion is, that it would have exactly the contrary effect.

3786. We have heard that it has been sometimes said at the camp or at the staff college, "If you want to get "some more beer, you only have to have another *émeute*."—I do not understand that; because *émeutes* have nothing to do with beer. I know that there are very strong opinions on the part of some people with respect to so much being done for the cadets (I mean amongst officers), and that they think that it ought not to be so; but I consider that it ought to be so, and in my heart of hearts I think that it is conducive to good, and not to harm.

3787. (*Lord E. Cecil*). Are the cadets subject to the Mutiny Act and the Articles of War?—They are

Col. Hallewell.
24 July 1868.

not really under the Mutiny Act and the Articles of War.

3788. Are they nominally or legally so?—They sign a declaration to the effect that they will be amenable to the orders of the college, and to the rules and regulations of the service, but there is no power of enforcing it.

3789. They are not legally so?—They are not.

The witness withdrew.

Adjourned.

Tuesday, 2nd March 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	MAJOR-GEN. EARDLEY WILMOT.
GENERAL LORD DE ROS.	MAJOR-GEN. HAYTHORNE.
LORD NORTHBROOK.	C. S. PARKER, ESQ., M.P.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.	REV. W. C. LAKE.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.	LIEUT.-COL. CHESNEY.

BREVET-COLONEL J. E. ADDISON examined.

Colonel J. E. Addison.
2 March 1869.
Royal Military College, Sandhurst.

3790. (*Chairman.*) I believe that you are major and superintendent of studies at the Cadet College at Sandhurst?—Yes.

3791. The Commission is pretty well in possession of the facts connected with the establishment at Sandhurst, and therefore perhaps the most convenient course to pursue would be that I should call upon you to make any observations which you may wish to submit to the Commission in regard to the present condition of that establishment, and also as to any improvements which you may desire to suggest.—As regards the studies, I think that the actual studies at the college have been already laid before the Royal Commission. They are nine in number; three are military subjects, namely, fortification, surveying, and military history; and the civil subjects are mathematics, French, German, geology, physics (called chemistry, but really physics), and landscape drawing. The time employed on the military studies is about equal to the time employed on the civil studies; 31 hours a week are given in all to the studies. It will be seen at once that the number of subjects taken up by the cadets is very great. A cadet cannot indeed study all the nine subjects in Hall; he can only study one of the two modern languages, although he may take up both at the examinations; that therefore leaves eight subjects which he can study in Hall. Therefore the number of hours which can be given to any particular subject is small. Fortification and surveying occupy 6 hours a week each, military history 3 hours, mathematics 5 hours, one language 5 hours, chemistry 2 hours, geology 2 hours, and landscape drawing 2 hours. The great number of subjects of instruction of which a cadet can take advantage, has been often complained of; but within the last two months I have brought it forward semi-officially, and the way in which I proposed to rectify it was to make the two military subjects of fortification and surveying alone obligatory on all cadets, and as regards the rest of the subjects to allow them to take up a limited number. That question went to the governor semi-officially, and I think that it has been under the private consideration of the Council of Military Education; but that is the position it stands in at this moment. It appears to me that there is an improvement wanted as regards the best cadets, namely, more concentration of study. I proposed to remedy the defect by allowing them to take up any three of the other subjects for which they might have an aptitude, in addition to the obligatory ones of fortification and surveying, thus making the possible range of subjects five instead of nine. That I think is the great fault of the instruction as regards the best cadets, but it does not affect the worst ones, for they only take up five subjects, namely, those which are obligatory. The obligatory subjects are the three military ones, in which the cadets are obliged to get a certain proportion of marks, and two others, namely, the obligatory section of mathematics, which is very elementary, and one modern language, either French or German. That is the obligatory course, and the cadets who do not go in for honours, that is to say, for commissions without purchase, usually take up that course. Therefore the great number of subjects which a cadet is permitted to take up scarcely affects the worst cadets, but what does affect them is the low minimum standard of marks. Out of 5,400 marks in the three military subjects they can qualify if they get 1,200, which is less than one-fourth; and as regards those three subjects, together with mathematics, and one language, making in all 7,800 marks, they can qualify if they obtain 1,950 marks, that is to say, one-fourth. Now it is difficult to estimate what that one-fourth is, but it is a point of very great importance. It would be taking too favourable a view of it to say that if a cadet answered one question in four he would pass; it is far more lenient than that in the way in which marks are given. If there are 12 questions upon the paper, and if the cadet answers eight or nine of those 12 questions imperfectly, but answers them somehow or other, I think that the chances are that he will get his one-fourth of the marks. Viewing it in that way, practically, I know the actual status of those cadets who only get one-fourth of the marks to be very low. The cadets who are at the top of the list do very well, but they are rather oppressed with the number of subjects, and therefore cannot go deeply enough into any one; the cadets at the bottom of the list do very ill on account of the minimum standard being too low. That is my general view of the state of the education. It of course follows from this, that among the lower cadets there is a good deal of idleness, because they can qualify without much work; but I do not believe that the idleness is greater than it is at other places of education in England; it is certainly not so great as at the Universities; but it is still far too great. At a military college, partly supported by the State, undoubtedly every one ought to be compelled to work, but we have not the means of compulsion by reason of the low qualifications which are required.

Course of study.

3792. Are you disposed to think that an improvement in the educational system would entail an improvement in the discipline of the establishment?—It would entail an improvement in the discipline, in the way of the cadets' minds being more occupied with their work, and there being less idleness in study; but otherwise I do not know that the general discipline of the college is very seriously affected by it. I do not think that it is.

3793. Have you any observations to make with

regard to the discipline of the college?—I do not know that I have. I think that the discipline on the whole, taking the entire question into consideration, is very good. We must remember whom we have to train, and that a great number of the cadets coming to Sandhurst have been under many disadvantages. More than half of them are sons of officers, and have had a desultory sort of life before they came to Sandhurst; for instance, in going about from station to station and from school to school, being often sons of poor officers. When they have been sent home from India they have perhaps not seen their parents for years and have been under no real authority, but have been entrusted to a guardian, who often is perhaps merely the business agent of their parent, and has no particular interest in looking after them. When you take all these circumstances into consideration, and when you look to the places from which the cadets have immediately come, in a very large number of instances, namely, the crammers, I think it will be seen that they are under every disadvantage; and in my opinion a state of things which on the whole is good and on the whole shows a good tone is rather to be wondered at on that side than on the other. I have here some papers which I have had prepared showing the places of education and the tutors of the gentlemen cadets who have been admitted during the last two years. The names of the cadets are omitted; they are designated in each case by index numbers. The second column contains the previous place of education for the two years before their admission; and it will be observed in several instances at how many places they have been; in fact to different "crammers," having been taken from one crammer to another. Again, it will be seen how few come from the great public schools of the country. From the nine public schools mentioned in the report of the Royal Commission on Public Schools we have only had 16 entries during the last two years out of 320. Wellington college sends more, and Cheltenham college more; Wellington college has sent 24, and Cheltenham college 33, and Marlborough 1. With the exception of Wellington college and Cheltenham college, it may be said that almost the whole of our cadets come from private tuition or private schools.

p. clii.

3794. (*Lord E. Cecil.*) What in your opinion was the primary object of the foundation of Sandhurst; was it founded as a preparatory school for officers' sons alone?—I think that it was mainly that.

3795. Do you think it can be looked upon in any sense as a school for the whole army?—Not at the present day. It is no doubt, however, a very great boon to officers who can thus obtain a year and a half of their sons' education at a comparatively cheap rate.

3796. What is your opinion of the course of study at Sandhurst, do you think that it admits of any improvement?—I think that it admits of considerable improvement (supposing that the present number of subjects remain as it is), in giving it a much greater concentration. I would not permit any cadet to study more than four, or at the very most five, subjects at a time instead of eight as at present.

3797. Do you think that the course as prescribed at the college adds much to the military usefulness of officers afterwards, that is to say, of cadets obtaining commissions?—I think that it does. In my opinion it adds to their usefulness through their service. It is very hard to find in it any direct usefulness to an officer immediately on joining, or perhaps for some years afterwards; but I cannot but think that the principles of military reasoning and the principles of fortification, and of surveying, which a cadet gets, will on the whole be valuable to him, and very valuable to him if he ever comes into a position of responsibility.

3798. Do you mean valuable to him as a regimental officer, or as a staff officer?—Valuable to him as a regimental officer if he comes into a position of responsibility on service, but not very valuable to him as a regimental officer in the common routine duty, that is to say, in barrack or camp duty.

3799. Do you think that if the education at the college was more practical than it is at present, it would be of more use to a regimental officer?—Undoubtedly, but at the same time I would not have it less theoretical.

3800. According to returns furnished to the Commission it appears that the total number of officers who have passed through the Staff College in the last 10 years has been 131, and that 38 out of that number have been Sandhurst cadets. Can you explain how it is that if Sandhurst adds so much to the military knowledge of the army, so small a proportion as one in three of the officers admitted to the Staff College should be Sandhurst cadets?—The question is new to me, but there is perhaps one reason, namely, that until 1862 the numbers at Sandhurst were not great.

Royal Military College, Sandhurst. Returns, p. cxlix.

3801. I am taking the number within the last 10 years?—It is only since 1863 that the numbers going out of Sandhurst every year have been at all considerable.

3802. Then you think that the calculation should be made within the last five years rather than within the last 10 years?—I am rather speaking now at random, and from recollection, but I should say that the numbers going out directly from Sandhurst before 1862 would not have amounted to one-seventh or one-eighth part of the whole number of officers who entered the army. I should state that they cannot enter the Staff College until they have had five years service, and that the chances are that they will not enter the Staff College until they have had seven or eight years service, so that those who have entered the Staff College up to the present date are those who left Sandhurst before the college supplied anything like considerable numbers to the army. If you say that Sandhurst before 1862 supplied one-sixth of the officers to the army, even then 38 out of 131 would be very much in excess of that proportion,

3803. You say that every officer before he can be admitted into the Staff College must have been five years in the service; therefore it follows that no officer within the last 10 years could have been admitted before 1863; and between 1863 and 1868 a large majority of those cadets who were admitted into the Staff College were those who were educated at the college as cadets?—Yes, previously to the time when Sandhurst added a large number to the army. Even now I do not suppose that Sandhurst supplies more than one-third of the officers per annum, if so much as that,—but previously to 1863 the supply of officers from Sandhurst to the army was very much less,—the establishment was not so large, and the cadets remained for a longer time, and therefore the annual supply was less. The present system began in 1862. An officer to come to the Staff College now cannot have left the cadet college later than 1863, and that would be the time when Sandhurst supplied a very small number to the army—38 out of 131, which is about one-third or one-fourth, is a very large proportion, because the numbers which Sandhurst then supplied to the army were scarcely one-sixth or one-seventh of the whole number of first appointments to commissions.

3804. Do you think that the term of residence of 18 months is sufficient?—I should certainly prefer to have it two years, embracing another term.

Length of the course.

3805. In a report which you sent to the Horse Guards, dated the 26th July 1867, you say that the excess of masters is mainly due to the great number of subjects of study?—Yes.

Appendix, p. xlii.

3806. Do you think that it is possible to acquire a great number of subjects in the short time which you have named of 18 months?—Not satisfactorily.

3807. Then you would either lengthen the time, or diminish the number of subjects of study?—I should lengthen the time, but I am averse to diminishing the number of subjects of study at the College. I should like to keep every study which we have, but I would not allow an inidvidual cadet to take up more than a certain number of subjects, which he should really go into and master. To give an instance, we have only two hours in a week for physics, and two hours in a week for geology—that is far too little to do any good in either of those subjects. I would rather curtail the choice of

Colonel W. E. Addison.

March 1869.

Royal Military College, Sandhurst.

Private tuition by the professors.

subjects and allow a cadet to take up either one or the other, but not both, and instead of two hours a week I would make it six hours.

3808. We have had it stated in evidence that the professors are in the habit of giving private tuition; do you approve of that system?—Yes; in fact, I approve of any system which will give an impulse to cadets working out of study. I cannot see any great objection to it. It is done under authority; it is done with the consent of the parents, and it is a private arrangement between the professor and the parents. There is a usual charge; it is 5*s.* a lesson, if I remember rightly. The only objection at all valid which I know against it is, that the professors examine at our minor college examinations, but even then the thing is carefully guarded, for the names of the cadets are not on their papers; they are distinguished by index numbers. It is of course possible that a professor should recognise a handwriting, but I think far too highly of the professors to suppose that there would be any advantage to the cadet on that account. I should rather conclude just the reverse. I have often heard professsors say that if they do recognise a handwriting it pains them, and that if anything it would be to the disadvantage of the cadet in the over precaution which they take against favouring. I therefore myself see no evil at all in private tuition; it does not take a cadet from his studies, and it does not take a master from his instruction.

3809. Then you think it quite right to the public that a professor who is paid a salary out of public money should devote a certain amount of his time to private tuition?—Yes, if the public does not require his whole time. If we could take our maximum amount of attendance, namely, 24 hours a week, and could work our professors up to it, it might perhaps be thought excessive for them to do other work, but still I do not suppose that it would be, and I do not see any injury which it does to the public.

3810. Is the system approved of by the authorities, that is to say, by the Council of Military Education?—I think that it has not been approved of by them, but it has never been settled.

3811. (*Sir D. A. Cameron.*) It is in consequence of this Commission sitting that they have not given an opinion upon the subject; that was stated in the last letter which we got upon the matter; they did not decide the matter at all?—I was not aware of that.

Idleness.

3812. (*Lord E. Cecil.*) I think that it has been stated in evidence that from one-third to two-thirds of the cadets (notably the Queen's cadets and those low down in the B. list) are very idle and profit the service very little; is that your opinion?—Yes.

3813. In short, there is a very large number, almost amounting to two-thirds, of the cadets at Sandhurst, who are extremely idle?—I believe that there is always a considerable number who are idle in any public institution. I have looked a good deal into the statistics of failures. Take the case of entrances to the Universities. The Royal Commission on Public Schools reported that the matriculation examination for Christchurch (which college of course contains most of the élite in rank and station of the country) was in a passage of Virgil and a passage of Homer, both of which the candidates had read before, a bit of Latin prose, and some arithmetic. One can hardly conceive an examination more puerile than that; and yet out of 218 candidates one-third are stated to have failed; and out of those 218 candidates 150 were from the public schools, and in the case of Eton a large number of them were from the fifth form. There is no doubt that the sixth form boys at a public school would pass with great credit; but they are comparatively the few. Look where you will, I believe you will find that about one-third may be taken to represent the amount of idleness, or doing nothing.

3814. Then how do you account for it that nearly two-thirds are idle at Sandhurst?—I do not say that they are; I say that one-third are idle. I mean that about one-third do not profit by the institution.

3815. Then your argument, as I understand it, is that Sandhurst is neither better nor worse than public schools generally?—Yes, so far as one can judge from the published results; but, of course, I have no means of ascertaining what public schools are. Here is a list of marks which have been obtained at the last exami- Returns,
nation. I have also here a list of the questions asked, that is to say, the examination papers. Now taking these papers and the marks, and if necessary I have no doubt the actual work of the cadets could also be seen (for it is in the possession of the Council of Military Education), these three things together will show the exact state of the education better than any words can describe it. In any particular case the paper of a man who has gained high marks, and of one who has gained medium marks, and of another who gained very low marks, could be seen without difficulty.

Discipline

3816. Do you think that the state of the discipline at Sandhurst is neither better nor worse than at other establishments where young men of the same age are educated?—I can hardly say that; I can judge of it at Sandhurst, but I cannot judge of it at any public schools.

3817. What is your opinion of the discipline at Sandhurst?—My opinion is that it is good, but that we have what may be called a long tail; we possess far too long a tail; but the great majority are well toned, and the general discipline is good.

3818. (*Lt.-Col. Chesney.*) By a "long tail" you mean a bad set?—Yes, a bad set in regard to tone; there is a large number of those cadets; but I conceive that it results from their antecedents, and I do not see how it can well be avoided.

3819. (*Lord E. Cecil.*) There is a return here which has been published for the benefit of the Commission, by which it appears that in the last 11 years from 1856–57 to 1867–68 one cadet in seven at Sandhurst has been guilty of insubordination?—I Returns,
cannot conceive how that can be. Perhaps you will allow me to see the return. It is possible that the whole of the cadets may have been included in it in one year. For instance there was a mutiny in 1862; it is very possible that a very large number were put down to that year alone. In my time there has certainly not been anything of the sort. I cannot admit that statement as regards the present state of the case. A conclusion of this kind must very much depend upon the way in which the return is made up. If the meaning of that return be that one cadet in seven is at this moment, or has been during the last four years, guilty of insubordination, I cannot believe that anything of the sort is possible. I can imagine that at the time of the mutiny in 1862 the whole of the cadets, or nearly the whole of them, being in mutiny, would be returned as in a state of insubordination. If the whole of those cadets have been included, it is perfectly clear how the return has been made up.

3820. (*Maj.-Gen. Haythorne.*) That would raise the average absurdly?—Yes.

3821. (*Maj.-Gen. Wilmot.*) Would not the fact of the same cadet being often insubordinate also raise the average?—Yes.

3822. (*Lord E. Cecil.*) What is your opinion as to the discipline at the college now, and during the last few years?—I have only been four years at the college. My opinion is that the general discipline is good, but that there are a number of individuals who ought to be weeded from the college, and who have no right there; and there is no way which I know of in a public institution by which they can be weeded unless they grossly commit themselves. I believe that Dr. Arnold used to have no hesitation in sending a boy to his friends if he was at all injurious to the school. We have by our printed regulations a power of that kind, but I suppose that there is great difficulty in acting upon it. If such a power could be enforced we should no doubt gain very much. If you look at the return you will find that there were no less than 82 in the year 1862 who misconducted themselves, and that is accounted for at once, as I have mentioned; that makes an enormous difference

in the conclusions to be deduced from that return. Perhaps if I looked more closely into it I might find other things which, taken by themselves, would lead altogether to an erroneous conclusion. I should also observe that many offences which we term insubordinate would not be so termed elsewhere. Any kind of disrespect to a professor, for instance, would be liable to be entered in our records under that designation.

3823. You admit that the number of convictions for insubordination may have been as many as one in seven?—Yes, but I account for it by one year being very greatly in excess. For instance, in a later year, 1867, there were 10, and that looks to me something like the average; but in one particular year there were 82.

3824. (*Lord de Ros.*) That was when they stormed Jones' Fort?—Yes.

3825. (*Lord E. Cecil.*) I suppose that you do not speak at all with regard to the Staff College?—No.

ıntages of itary or- ıation.

3826. (*Lord Northbrook.*) Do you think that what I may call the military system of the college is a good one? I mean taking a large public school and calling it a battalion, and putting the cadets into uniform, and putting them into companies, and dividing the discipline from the instruction, and punishing them as if they were soldiers?—For the special purpose of training young men to be officers I think that it is a good system to place them under officers. As to their being punished as private soldiers, or being under the same discipline as private soldiers, I cannot regard it at all in that view. The discipline of each set of cadets belongs immediately to the captains, very much in the same way I conceive as at a public school that of the boys belongs to the Master of the house. Then, again, our interior discipline is by means of under-officers, and the interior discipline of a public school is by means of prefects. You can carry on the comparison as far as you will. I can see no difference, except in name (because we use military terms), between the discipline of Sandhurst and the discipline of a school.

3827. Do you mean that calling it a battalion imports nothing?—Yes; but it increases the *esprit de corps* of the cadets, and it leads them to look upon themselves as young officers. But then I think that it need not be called a battalion, and the under-officers might be called prefects, and so forth.

3828. Then you approve generally of putting the cadets into uniform and calling them a battalion?—Yes.

3829. And of separating the discipline from the instruction?—No, I do not think that that is necessary. There are 15 military officers who are instructors, and I think that selections might be made from them for the discipline; I mean for the companies.

3830. Then you think that the discipline and the instruction should be united?—I think that it would be better in some respects to have them united. I do not know that there is any harm in their being separated, but if they were united I think that the officers would know more of the cadets. There are, however, objections to it. If the scheme which I consider a proper one for Sandhurst were carried out, the officer instructors would have a great deal to do, much more than they have now. Whether they could then devote sufficient time to the interior economy of the company and look after the cadets I can hardly say.

3831. What do you call the interior economy of the company?—The general arrangements, the clothing, the cleanliness, the management of the servants, and of the serjeants, and the supervision of the cadets themselves, in fact everything which respects the internal arrangements of the company, which I suppose must be very much the same as at any master's house at a public school.

3832. There are no serjeants there?—No, but there are servants.

3833. Will you point out more clearly and precisely what is the advantage to the young men of the military organization, and the drilling, and so on?—It is of advantage for the production of that military spirit which I think is of very great importance, in our army especially, in which a large number of officers notoriously have not very much of it; they are rather gentlemen than officers in many cases until the time for action arrives, and then of course they are everything which can be desired. I think that at Sandhurst the encouragement of that military spirit, both at the college and in the subsequent career of the cadets, is of great use.

Colonel J. E. Addi

2 March 18

Royal Military College Sandhurst.

3834. Then your opinion would be that an officer joining the army from Sandhurst would be generally recognized in the army as having a better military tone than an officer joining the army without going through Sandhurst?—I cannot say that, but I think it would tell upon him in life, in the way of military tone, more than if he had not had that training.

3835. The argument, as it appears to me, would depend upon whether in the general opinion of officers of the army, as, for example, in regiments to which young men go, either from Sandhurst or from anywhere else, the Sandhurst cadets were very superior as a body in tone and in military discipline to others?—I cannot view it in that way.

3836. If the Sandhurst cadets are not supposed to be superior, but only equal or not inferior to others, the result of carrying out a military system in the college would appear to break down?—Yes; if it should be so. But even then there are other things to be taken into consideration, such as the question what would these young men be if they had not been to Sandhurst. They have had in many cases very bad antecedents, and what would these very young men have been if they had gone straight off to the army from the inferior schools at which they have been and from crammers, and had not previously gone to a military college? I therefore think that the comparison is not a fair one; it is comparing a class of youths who have come from public schools and who have had every advantage in life, and a good education, with a class who in many cases have had every disadvantage.

3837. Then speaking generally, you would say that the class of men who go to Sandhurst acquire much stricter discipline than the discipline at a public school?—The discipline is not stricter; it is substantially the same.

3838. Then what is the advantage of the military discipline?—The cadets would not go to a public school under any circumstances; large numbers of them could not afford it. But the advantage of the military system I think is the military spirit which a man gets at Sandhurst and which will last him through life. Whether the colonels of regiments and other people view it in the same way I of course cannot say.

Instruction.

3839. With regard to the instruction, you stated that you thought that the military part of the instruction should be more practical; how would you carry that out?—I referred there to the studies of fortification and surveying. Our time only allows us to do those subjects, more especially fortification, theoretically, with too little practice. I should like to do the same amount of study theoretically, but with a great deal more practice; and I should like to have time to combine the surveying and fortification together in the field by making cadets sketch a position, and then having it explained to them how that position could be fortified, requiring also from them projects of defence.

3840. You did not allude to drill or the interior economy of a company of infantry?—No.

3841. Do you imagine that the cadets acquire knowledge on these matters?—Not as regards the interior economy of a regiment.

3842. Are the cadets taught to drill troops?—To a certain extent, but very little. They mostly require to be drilled themselves. The under-officers are selected and are brought out, and they are taught to drill—not to instruct in drill, but to drill the cadets when pretty tolerably advanced in instruction.

3843. You have stated that great difficulty is found

Colonel E. Addison.

March 1869.

ral Mili- College, dhurst.

at Sandhurst in sending home to their friends those cadets whose presence is really injurious to the rest of the college?—Yes.

3844. Why should you not have that liberty?—I do not know; but it is probably almost inherent in any public institution of that sort, where we have not the autocracy which other places have. We are more immediately under the Government.

3845. It would appear at first sight to be more easy, because in the case of Sandhurst the public pay a part of the cost of the education, and therefore such a cadet should be sooner got rid of?—I have only two cases within my memory in which cadets have been obliged to withdraw, — not being rusticated, but obliged to withdraw; and it was for determined idleness, making it perfectly hopeless that they would ever pass for their commissions; and it was on my recommendation in those two cases that the cadets were withdrawn; but it is not so for bad conduct, unless there is some clear breach of propriety or regulation.

3846. I understand you to recommend that the present qualification at Sandhurst for a commission by purchase should be raised?—Yes.

3847. Can you tell us what proportion the knowledge which is now required to obtain a commission by purchase at Sandhurst bears to the knowledge required at the direct commission examinations at Chelsea?—So far as I know, the standard for admission to Sandhurst in the general subjects of examination, classics and mathematics and languages, is very much the same as that required for direct commissions. When the cadets come to Sandhurst they give up their classics, and they have three military subjects, fortification, surveying, and military history, which they have not previously studied at all; the others are still subjects of general education. To pass an examination at Chelsea for direct commissions, if they get one-sixth of the marks in any subject, they count. If they pass their examination for commissions from Sandhurst they require to get one fourth of the marks in any subject to enable them to count; but in my experience one-fourth is not nearly sufficient.

3848. Then at present the qualification at Sandhurst is higher than the qualification at Chelsea?—Yes, but it is still not nearly sufficient.

vers of the rernor.

3849. (*Lt.-Col. Chesney.*) With regard to the want of autocratic powers which you speak of, is not it notoriously a want at Sandhurst that the Governor has not absolutely the power of removing a cadet without appeal?—I do not know whether it is notorious; that is my own personal opinion.

3850. You may, for instance, have a cadet enter the college whose whole manner and bearing is notably offensive; would it not be desirable that the Governor should have the power of removing him?—Yes. I think that such a power is given in the Regulations, but it has never been exercised; and my impression is that it is almost incapable of being exercised, or that it would have been done.

3851. (*Sir D. A. Cameron.*) In that case the Governor could only recommend the removal of a cadet?—He could only recommend it. With regard to the removal of a cadet, the 34th regulation is as follows:—"Every gentleman cadet will be liable to be "removed from the college at any time should his "conduct be such as to render it obvious that his re- "maining longer would be either hurtful to the insti- "tution or unprofitable to himself." The next regulation is:—"Any gentleman cadet whose conduct "may be deemed to merit such punishment will be "rusticated or removed from the college by the Go- "vernor, and a full report of the circumstance will "immediately be made by the Governor to the Com- "mander-in-Chief."

3852. (*Sir D. A. Cameron.*) If the words "general conduct" had been used, it would have been better?—Yes. It has always appeared to me, however, that Article No. 34 would give that power which I think ought to be enforced at the college.

ects of the lege.

3853. (*Lt.-Col. Chesney.*) Am I to understand your view of the college, as represented to the Commission, to be, not that it is to finish the education of public school boys and to turn them into officers, but that it is to supply a cheap education, so as to make officers out of those who cannot afford to go to public schools: I am speaking of the main object of the college?—I should say that the main object of the college now is to supply military education, but that the original object of the college was to provide a cheaper education for sons of officers. The college also does as a matter of fact provide a cheaper education for the sons of officers. Therefore I presume that the object of the college is mixed between those two things, namely, to provide a military education and at the same time to benefit the sons of officers.

Combination instructional and disciplin duties.

3854. (*Lt.-Col. Chesney.*) With regard to the combination of the discipline staff and the instruction staff, is there any real objection beyond what you have stated to military instructors acting as officers of companies?—I know of none. At the same time I am unable to say whether if the amount of military instruction was such as it, in my opinion, ought to be, they would have time enough for their additional duties as company officers.

3855. Have you heard of a project by the late Sir George Wetherall of combining the two and increasing the number of companies, so as to put fewer cadets under one captain?—That project, I believe, was originally my own. At the end of 1865 I privately submitted it to Colonel Hallewell, and when Sir George Wetherall came to the college I think that he took it up to a small extent, but I do not know how far he approved of it. I think that it was shown privately and semi-officially to the authorities at the Horse Guards and the Council of Military Education; but I am unable to say what was the general opinion with regard to the matter. Some of the Council I know agreed with me, but I do not know what the opinions of the authorities were. Sir George Wetherall appeared to me to see difficulties in it, and I am not at all sure that there are not serious difficulties in it.

3856. You have sometimes had over 90 cadets in a company?—90, I think, has been about the maximum.

3857. Is it possible for one captain in charge of a company of 90 cadets really to know anything about their personal habits and dispositions?—I certainly think that 90 are too many.

3858. Is it not likely that an officer going out as an instructor, for instance in surveying on the ground, for some hours with a moderate class of cadets, will know a great deal more about their character than the captain of a company?—I think so, and that was the basis of my proposition.

3859. And if you combined the two, there is no doubt that he would know more than the captain at present does?—Yes; but at the same time I do not think that it would be possible to give him all his own company to teach. I do not think that any time-table could be made which would do it, because in his company there would be the most advanced and also probably the most backward, and it would not be judicious to unite them in the same class.

3860. In the present selection of corporals and under-officers are the professors consulted?—No; the recommendations are first made by the captains and brought to the commandant, and then I am consulted. It is usually indeed done in a less formal manner than that, and we are all present together. My practice is to look over the work and conduct in study of the cadets recommended for promotion before giving my opinion to the commandant.

3861. If the captain and professor were united in one person, would there not be a probability of the recommendation being more effective?—Yes; but unless the captain had the sole educational training of the whole of the cadets in his company (which could not be given to him under any circumstances) there would still be a number of cadets with whom the captain could not be brought into further contact than at present.

3862. Would not that difficulty be got over if they were consulted in council, and if their recommendation was taken as a body ?—I suppose that it would, but I do not know whether that would be a judicious way of appointing under-officers and corporals. I do not know whether you would always get the best men by having a multitude of councillors.

3863. I have taken that only as an example ; but in truth is not the one great want at Sandhurst a link between the cadet and the person representing the tutor of a college, or of a boys' school, who looks after his interest and in some degree watches over his moral conduct ?—I think that if that scheme could be carried out that missing link would be filled up.

3864. (*Sir C. Russell.*) It appears, if I understand your evidence aright, that your recommendations as superintendent of studies remain in abeyance ?—No, I should not say that. Of course I cannot expect any recommendations of mine to be immediately acted upon, but I know that they have been to a certain extent considered, and my impression is that the Council of Military Education have deferred the matter in this case on account of this Commission sitting.

3865. Am I to understand that you would give a power to the military professors of controlling the cadets in study as well as out of study, which you would deny to the civilian instructors of the college ?—No, that was not what I meant. What I referred to was the officering of the companies, and I proposed some years ago that it should be done by selections from the military instructors ; that, however, the change should be gradual, and as vacancies of captains occurred. I suggested that if there were 300 cadets, instead of their being divided into three companies as they are now, they should be divided into six, giving an average of 50 each, and that each company should then be under one of the military instructors. Supposing that that were the case these military instructors would have the discipline of their classes, and also the general discipline of their companies when not in study. The civilian instructors and all the other military instructors (because only six out of 15 would be so selected) would have the discipline of their classes only, as they have at present.

3866. From your experience of the military instructors who have been under you at Sandhurst, do you think that it would be possible to obtain from the class of officers who are instructors, sufficiently educated military men to undertake the entire education of the college ?—I think so ; the only difficulty would be as regards languages. Nor am I sure about the sciences.

3867. I mean to include the sciences ?—I should doubt it. I have no doubt that there are men in the army who could teach both languages and mathematics, and, in fact, everything which we have at Sandhurst—but the question is, whether you could get them ? I think that there are men in the army who could do it, and that it would be very desirable if they would do so, but I have great doubt whether you would get an officer of high stamp to teach languages—there is a prejudice in this country against that kind of office. I do not think that officers would like to be called French masters and so on.

3868. Are you aware that at the public schools some of the instructors do teach the foreign languages ?—Yes, I have heard that ; but I think that the case there is very different from that of officers in the army. In fact, I know that our officers now feel their position to be rather delicate even as instructors in surveying, and fortification, and military history, which are decidedly military subjects. There is a sort of prejudice of that kind in the army, and my own belief is that it would be very difficult in the face of that feeling to get officers of high stamp to teach the foreign languages, and I am not sure even about mathematics. I certainly think as regards the foreign languages, that it would be difficult to find an officer who would be willing to make himself an instructor in French ; still if it could be done I think that it would be highly desirable.

Colonel J. E. Addison.

2 March 1869.

3869. I believe that you have the same control over the practical as over the theoretical part of the studies ?—Yes.

Royal Military College, Sandhurst.

3870. Does that include riding, and the gymnasium, and swimming ?—Yes, with the exception of swimming. All those studies are under me, subject, of course, to the commandant. For instance, if the riding master wishes to turn a cadet from a certain ride in which he is not sufficiently advanced, he sends that request to me, and I order it as a matter of course. The gymnasium in the same way is immediately under me. But the whole is under the commandant.

Physical training.

3871. Do you not think that swimming ought to be taught to the boys, as you have the facilities of doing so at Sandhurst ?—Yes, it was taught last autumn, but it was found that nearly all the cadets could swim ; there was a very small number who had to receive lessons.

3872. Do you think that if a few marks were allowed in the examination for riding, and perfection in the gymnasium, it would be an inducement to the cadets to perfect themselves in those branches ?—Yes, I should certainly wish that they should have marks in those cases for perfecting themselves, though they scarcely require the incentive for riding, as they are naturally ambitious to be able to ride well ; but I think that the final examination should represent the whole man, if I may so say, not only his intellectual progress, but also his physical powers, which are of very great importance in an officer, that is to say, his activity and energy, and that therefore for physical exercises there ought also to be marks allotted. I should include under this head the cadet's infantry and artillery drill, gymnastics, and riding.

3873. A portion of the studies is optional with the cadets ; does that apply to the practical as well as to the theoretical subjects ?—No, it only applies to physics, geology, and landscape drawing.

Advantages of the College to the service.

3874. (*Maj.-Gen. Wilmot.*) Do any officers possessing a military education besides those educated at Sandhurst enter the army ?—Not that I am aware of, excepting of course the Artillery and the Engineers.

3875. Considering only the advantage of the service, what proportion of officers educated more or less in a military manner do you think it would be of advantage to the service to enter the army ?—It is very difficult to say, but I should say that in every regiment I think there ought to be out of 30 officers, certainly six or seven well educated militarily. I should think that there should certainly be one officer well educated out of four or five.

3876. What do you consider should be the true object of a military college for the education of young men ?—I should put it down as military education, military spirit, and military bearing. I should consider these the most important points.

Discipline and moral supervision.

3877. What advantage do you consider is obtained by receiving cadets who have been educated at public schools ?—I think that they are usually a very good and well toned class, but we get so few of them that I am hardly able to say ; as I mentioned before we have only had 16 in the last two years from the old public schools ; though we have had more than that number from Wellington college and Cheltenham.

3878. Was the discipline of the cadets from those two places, namely, Wellington college and Cheltenham, good ?—I cannot say that I have ever observed much in that way as to the boys from the Wellington college, but I have from Cheltenham. The returns which I have made here show the place from which every cadet has come and his place in the college, and whether or not he left as an under-officer, and with good conduct decorations.

Returns, p. clii.

3879. I was thinking more of his mental discipline and conduct than of his education ?—I undoubtedly see more of tone in those who come from the public schools.

3880. Do you think that the influence of masters at the public schools improves the tone, or that it results from the traditions of the school ?—I think that the

Colonel J. E. Addison.

2 March 1869.

Royal Military College, Sandhurst.

traditions of the school have a great deal to do with it, but also the influence of the master, and especially the influence of the head-master through the sixth form; that has enormous weight.

3881. Do you think it impossible to have in a military establishment the same kind of influence?—I do not see how that desirable form of influence is possible, inasmuch as we cannot by possibility have a sixth form or a head class in which a high classical master should influence the school.

3882. Is it necessary to have a classical master in order to give a tone to the school?—No; but when you come to mathematics the subject fails you in that respect. One subject, namely, military history, is valuable in teaching the young mind to think. Fortification, like military history, educates the judgment, by means of the balance of advantages and disadvantages that has constantly to be struck. Even in surveying there is a great deal more than what is merely mechanical; and all these subjects are under officers of approved character and ability.

3883. Do you consider that when a cadet is entrusted to the care of the college authorities they become answerable for his moral as well as for his intellectual character?—They are answerable to the degree which is possible.

3884. That is to say, the sons are entrusted by the parents to the college, and the parents naturally look to the college for their intellectual and their moral training?—Yes.

3885. Are the buildings at Sandhurst suitably arranged so that the officers may be near their work and mix among the cadets easily?—To a certain extent they are, but not at all to the extent which they ought to be. For instance, one captain and three subalterns are three-quarters of a mile off, though their residences are on the college property.

3886. Do you not consider that a very serious objection?—I do.

3887. (*Sir D. A. Cameron.*) And all the professors are away?—All the professors are away, and that is a very serious objection, particularly in regard to their health. For evening studies they have to come past a very cold lake, and they suffer in consequence; there is a great deal of ill health in winter among the professors for that reason.

3888. (*Maj.-Gen. Wilmot.*) Do you consider that the military officers in charge of cadets look on the cadets as intrusted to their care?—Certainly.

3889. If any misconduct or idleness on the part of a cadet rendered it desirable to remove him, would the officer or the instructor consider that any portion of the responsibility for such consequence ought to be laid upon him?—It would fall to my duty as superintendent of studies to bring the case forward.

3890. To which of those two officers would the cadet consider that he was responsible in study time?—It would be the duty of the instructor to report any misconduct to me, and if he did so he would fulfil his own responsibility.

3891. We know that discipline in a great measure consists in the connexion between the person holding the discipline and the person being disciplined?—Yes.

3892. Is the condition of things at Sandhurst such that an officer or instructor would consider, in all cases where a cadet was to blame, that it must be due to a certain extent to some want of care on his own part?—No, because it might be due to recklessness on the part of the cadet.

3893. Do not we know that misconduct can be very much prevented by those in authority?—Certainly, and therefore if the whole class were in such a state as that, I should think that that would be a proof to the instructor that there was something wrong on his own part; but if it is only an individual or two who are reckless or ill-conditioned, he cannot be responsible for that.

3894. I am not speaking of a minor offence, but of one of so serious a character as would require the removal of the cadet from the college?—Then the instructor would report it in all its details, and it would be brought before me, and I should bring it before the Commandant, and the Governor would consider it, and the cadet, if necessary, would be removed.

3895. In the case of such a cadet, would the officer or instructor consider it to be his duty to exert himself to save his prospects, or would he leave him to himself?—It would very much depend upon the instructor. If the instructor were kind as well as conscientious, as I have no doubt that the great majority of the instructors are, he would warn the cadet and speak to him quietly.

3896. Is there not enough work for any officer both mentally and physically in devoting himself to the care of the cadet without his having the instruction also?—I consider that at present he could do both, because I have only work for the military professors to the extent of 18 hours a week, but if their work were a good deal increased it would then be very doubtful.

3897. Except in the field a military instructor would not have very good opportunities of judging of the character of a cadet, would he? he would not be able to judge of the character of a cadet who was sitting in a classroom, for instance, under supervision?—I think that sitting in a classroom under his own supervision he has good opportunities of judging, but of course nothing like out of doors; he still can judge from the manner of the cadet to himself and to others. I have no doubt that he will get an idea of the character of the cadet better than anyone else.

3898. But the manner of the cadet to others in the classroom would amount to nothing would it, because he should take no notice of others?—You cannot have it so strict as that; for instance, one cadet can explain a think to another without any disorder.

3899. How much time do you consider that an officer having the care of cadets should devote to their care?—That is to say, an officer in the charge of a company?

3900 Yes; do you consider that the whole of his time should be given?—Yes.

3901. Do you think that in that case a man could do both those things satisfactorily?—Yes, at present. I do not think that the average of three hours a day in giving instruction would be very material.

3902. Do you see any advantage in having more than one company at Sandhurst?—Yes, I should rather make a great many more; I should rather divide the cadets into fifties.

3903. Would you not then have so many systems of discipline?—I think not, because at present with three companies we have only one system of discipline. Of course there is a difference in the personal character of captains.

3904. Would not one captain, with a due proportion of lieutenants, bring the thing into a much more systematic and uniform shape?—I think not. I think that there is a great advantage in having officers of experience over the cadets as captains, and that the captain should have a limited number of cadets under him, so that he should know the individual character of every cadet, and be known to him. I do not think that that would be the case if you had only one captain and the rest of the officers were subalterns.

3905. Could not a thoroughly military position be accorded to the instructors in every sense of the word without their also taking charge of the discipline? Could not they be placed in such a position as that they should be regarded by the cadets as officers and be treated as officers?—They have that now, with the exception of the power of punishment. Until lately indeed the captains of companies had not the power of punishment, so that they were then identically in the same position; they could only put a cadet in arrest.

3906. Is there any advantage in being able to state the exact amount of punishment which can be given to a cadet?—I do not know that there is. I do not think that it would answer to have many independent masters. If either I or the Commandant were bound to

follow their recommendations, I think that there would be such a diversity of punishment that it would not answer.

3907. Do you not think that any officer who felt the importance of his duty and his great responsibility would soon make himself acquainted with the character of the cadets?—Yes, if it were in his power, and so they do as far as they can; but they are under disadvantages in not seeing so much of the cadets as they would if they instructed them. Still they do that. I do not know that there is anything very faulty in the present system, but I am inclined to think that if the officer instructors could be made captains of companies it would be better.

3908. In the case of a corporal or an under-officer, is he selected according to his position in study, or only according to his seniority?—He is selected according to the captain's judgment of his fitness.

3909. From any part of the college?—No, at present only from the third term. It was tried in one half year to take the under-officers from the final term and a few corporals, and to take the rest of the corporals from the second term; but then it was found that a second term corporal had really less influence than many third term privates, and the practice is now that both under-officers and corporals are taken out of the third term.

3910. Then according to the present system a cadet is not made a corporal or an under-officer, in order to instruct him to preserve discipline?—The main object is discipline.

3911. The object is not to instruct him?—No; the primary object is discipline.

3912. Those cadets are selected from the higher ranks in order that they may go out with a certain knowledge of their duties, and get a certain amount of command, and so forth?—That no doubt is a part of the idea of the thing.

3913. If a cadet was high up, but not of good character, would he be made a corporal?—No.

3914. Then he would not know his duty?—Just so.

3915. Is not that a great pity?—I do not know how that could be avoided. I think that so far it is a pity.

3916. Is it not a great advantage to a young man going from a military establishment when he comes to his regiment to be able at once to take command of the men?—I think that it would be, if it were possible.

3917. (*Mr. Parker.*) As regards moral discipline, by whom is any correspondence with the parents conducted?—By the Governor.

3918. The Governor only?—The Governor only.

3919. Would there be any objection to the captain of a company writing privately to the parents, if he felt sufficiently interested to do so?—He could not write officially, but he could do so privately, if he knew the parent. I should, however, doubt whether he would take upon himself to do it if he did not know the parent.

3920. (*Sir D. A. Cameron.*) The Commandant very often writes?—Yes; but if it is a serious case the Governor writes.

3921. (*Mr. Parker.*) In case of unsatisfactory conduct short of what would require removal from the college, would it be at all usual to communicate to the parent?—If it was found that a cadet was altogether on the wrong path, and that a very little more might require his removal, then either the Commandant or the Governor would doubtless write, and I know that the Commandant has very often written.

3922. Do you know the Eton system, by which each master acts in two capacities, namely, as the tutor of a boy and also as the master in school?—Yes, I have heard of it.

3923. Do you think that anything analogous to that might be worked at Sandhurst; namely, to have the same person acting as captain of a company, and also responsible for his class in his special branch of study?—I think that it might be so to a certain extent if the captains of companies were selected from military instructors, but to that extent only.

3924. There are certain subjects of instruction which have more effect upon the cadets than others. You would probably think that the professors conducting the instruction in those subjects were more suited to be captains of companies, such as military history for instance?—I do not know that that would follow. If the selection were to be made from the officer instructors, I should rather look to the man than to the subject which he teaches. I think that that would be a much more important consideration.

3925. Supposing, for instance, that he were an instructor in mathematics, or in foreign languages, do you think it desirable to combine that with being the captain of a company?—If he were an officer I should not see any great difficulty in it, the only question is as to his time. At the same time I am not quite positive as to the effect which it would have upon cadets.

3926. Do you not think that his influence as a captain of a company would depend much upon the amount of time which he spent in instructing them, for instance, if he had but a few hours in the week with them, as in matters of geology and so forth, he would have less influence?—He would be proportionately at a disadvantage. I think that the principal advantage is the amount of time spent by the instructors among the cadets. At present any instructor in fortification or surveying is for 18 hours a week among the cadets, and although he would not have in every case the same cadets in his class and in his company, still he would have a general knowledge of the cadets, especially of those who would be both in his class and in his company, which I think would be very valuable to him. I am not quite sure, however, that the thing is practicable.

3927. What subjects are in the hands of officer instructors at present; you have mentioned fortification?—Military surveying and military history. There are 15 officers altogether.

3928. Are you aware that in the matter of foreign languages there has been a recent change in some of the public schools in the direction of improving the position of foreign language masters?—No, I have not heard that. Our masters are in general very good men, but they are very indifferently paid.

3929. The pay would in some degree be a criterion of the social position?—Yes.

3930. Are you aware that at Rugby the classical masters teach both French and German?—Yes.

3931. And that at Eton French is taught by some of the classical masters?—I have not heard that.

3932. In mathematics there is no officer instructor?—No, there are civilians. The professor is a gentleman who was second or third wrangler, and there are four masters, most of whom were wranglers at Cambridge, but they are all civilians. The professor of mathematics and one master are clergymen, the others are not.

3933. You would not expect a mathematical instructor to have so much opportunity of being useful in discipline as an instructor in more military subjects would be?—I do not say that that would be the case, supposing that they were officers in each instance. There is an immense difference in the influence over cadets intended for the army, between the prestige of an officer and that of a civilian. But supposing that they were both officers and professors of mathematics, and that there was a choice as to whether one of them or a professor of military history should be captain of a company, it would rather depend on who was the best man, than on what was his subject.

Course of study.

3934. You wish to keep all the present subjects of instruction in the college?—Yes.

3935. But you wish to give more option to the students?—Yes.

3936. The result would be that each would individually learn fewer subjects but would learn them deeper?—Yes.

Entrance examination.

3937. With regard to the admission examination, would you recommend any change of the same kind,

Colonel J. E. Addison.

2 March 1869.

Royal Military College, Sandhurst.

namely, to have fewer subjects?—They are allowed to take up five subjects. I should be disposed to limit it to four and landscape drawing, if they chose to take up landscape drawing. But the fault of the admission examination is the low aggregate of marks required for qualification. When the admission examination for Sandhurst, and also for direct commissions, was first arranged, 2,400 marks were stated as the obligatory minimum which a candidate should obtain in order to qualify; but that number got reduced by degrees, as there was a pressure for candidates, and for officers, from 2,400 to 1,500. Now, from all the statistics which I have made at different times, I have always been under my original impression that 2,400 marks was the right standard. That would give us cadets not altogether so backward in their intellectual development as they are at present; they would be quite sufficiently intelligent for their military studies. At present I think that it cannot be denied that about one-third of the cadets are not sufficiently intelligent for their military studies.

3938. Would raising the standard be likely very considerably and permanently to limit the numbers who came forward for admission?—Where there are 100 it would reduce them to something between 70 and 80; it would take off one-fourth or one-third.

3939. That would be the immediate effect?—Yes; I may mention what would have been the effect at the last examination. The sixty-first man was 2,433, and there were seven Indian cadets who were also over 2,400; that would have given us 68 this last time instead of 85.

3940. Do you think that if the standard were so raised you would after a few years get as many cadets at the higher standard?—I have very little doubt of it. I think that any reasonable standard can be worked up to.

3941. So that probably you would have about the same per-centage of failures whether the standard were a little higher or lower?—Yes; ultimately, but of course not quite the same. I have no doubt that there are some candidates who could never work up to 2,400 marks at the entrance examination, but they must be the exceptional ones.

3942. In the case of those who were so exceptionally incapable, would you wish that they should be altogether excluded from the college?—They may still enter the army by direct commissions, and become good regimental officers, but I do not see the advantage of having any at Sandhurst who are not sufficiently intelligent for their military education.

3943. Then you would have them in the army but not at Sandhurst?—Just so.

Moral supervision.

3944. (*Sir D. A. Cameron.*) You stated in reply to a question put to you by one of the members of the Commission that the officers and professors of the college considered themselves responsible for the moral discipline of the cadets?—The officers, that is to say, the Commandant and the officers under him.

3945. That is so far as they come in contact with the cadets?—Certainly.

3946. Do you not think that the advanced age at which the cadets enter the college, and the short time for which they remain there, very much take from the responsibility of the officers and professors for the moral conduct of the cadets?—Undoubtedly, inasmuch as it makes it so much the less possible for them to exercise a thorough moral control.

Results of Sandhurst education.

3947. (*Lord de Ros.*) Do not you consider it the first object of the college to prepare a young officer to be of immediate use as a subaltern on the very first occasion when he can be made use of on joining his regiment?—I scarcely look upon it in that light. I think that the object is not so much for him to be immediately useful as to be useful through his whole career. For instance, to make him immediately useful you ought to teach him a variety of things, such as the Mutiny Act, the Articles of War, the Queen's Regulations, and a great many things which I think will be better learnt when he joins his regiment. Our object is to lay the basis of a sound military education.

3948. As to direct practical advantage, might not an officer on service who had even lately joined be of great service as an interpreter in a foreign country?—Yes, he could undoubtedly be of use, in Germany, for instance, if he was a first-rate German scholar.

3949. Supposing him to be on a picket, he could construct an abattis or stockade, or a temporary entrenchment; would not that be a very great practical advantage?—A very great practical advantage.

3950. Could geology or chemistry be of the smallest service to a regimental company officer, and would not the abandonment of them give you more time for the practical outdoor work which you properly desire?—I do not consider that either geology or chemistry could be of much immediate value to any officer, except as filling up a most important part of his general education. I think, however, that they may be of great value if pursued deeply enough. When we consider the extent to which modern science now pervades all our knowledge, I think that it would be a great pity if it were altogether neglected at Sandhurst.

3951. Some knowledge of surveying might be of very great utility immediately to an officer, and might it not in service in the field be very likely to be the means of bringing him on the Quartermaster-General's staff?—I perfectly agree with that. My former answer, that the education could not be of immediate use, has regard rather to the ordinary regimental duty in barracks; but I would go so far as to say that on the outbreak of a war, if it should be necessary to add 100 or 150 officers at once to the army, nothing better in my opinion could be done than to take the first half of cadets from Sandhurst who would be ready; and with a six weeks' or two months' training I think that they would be ready for it.

3952. Even on home service do you not recollect that when employed under Lord Hardinge in Ireland several Sandhurst cadets were found very useful in assisting the Engineers, who were very small in number, in loop-holing and strengthening the barracks when there was a question of their fortification?—I do not remember that; but one thing I might mention. After leaving the Senior Department,—the Staff College of that day,—I was in Ireland with my regiment, and shortly after 1848, when there were the barricades in Paris, there was a question as to what arrangements should be made in case of barricades being erected in Cork, and I then drew out a plan which I showed to the colonel of my regiment, who took it to the Commanding Royal Engineer, and to the general in command; and my plan was almost entirely adopted. Of course nothing of the sort ever happened; but if it had happened, that would have been so far an instance of the utility of the college instruction.

3953. As regards punishment at Sandhurst, might Disc
it not be made more intellectual; and as to offences, you are aware that in all military courts the charge frequently consists of conduct unbecoming an officer or a gentleman, a term which is never used or known of in foreign armies. Does not this especially apply to the cadet at Sandhurst?—Certainly.

3954. I mean that instead of treating him as a private soldier you should give him an intellectual punishment?—I myself object to impositions for young men of that age. An imposition must be of one of two kinds: you must give either a certain part of a book to be written out or a certain number of lines, say of Virgil, to be learnt; it occupies the man's time but does him no good in the world. If it is an extra task for him, I cannot see any more likely way of ensuring his hating the study.

3955. Then you blame the plan at Oxford and Cambridge?—Yes.

3956. Do you not think it desirable that the Governor of Sandhurst should have as much power as the lieutenant-colonel of a regiment, both as to indulgences and punishments, even amounting to dismissal from

the college?—I think that the Governor should have an absolute power.

3957. You have spoken of our officers rather as gentlemen than as officers; are you aware that all foreign officers who have been on service as allies with our troops entertain the very highest opinion of the zeal and spirit, and knowledge of their duty, shown by the captains and subalterns, especially when under hardship and difficulty?—I have no doubt that they do.

3958. You have spoken of the officers going out for field instruction as not being able to take their own entire company; but as the whole corps only consists of 300, would not the captains taking out detachments weekly very soon know the characters, not only of their own companies, but also of others?—They would know the characters of their own class as perfectly as they could be known; and as a good many of the cadets would be also in their company they would of course know those particular cadets better than others, and with regard to all others in their company, although they had not them in their own class, they would be in their brother instructors' classes, and they would know them by that means.

3959. You have said that very few officers enter the army with military acquirements except those coming from Sandhurst; are you aware that a great many officers obtain those acquirements abroad and even at home, at the several establishments; for instance, Captain Lendy, at Sunbury, has had the instruction of a good many officers?—Yes, but his instruction is in no military subject, except what he teaches to candidates for the Staff College. I do not know whether he teaches the boys in his establishment fortification, if he does, it is a superogatory work, for it is not required at the examinations at Chelsea.

3960. Would you not think it a good practice for cadets to make out all the states and returns of the orderly room, and to be partially prepared to assist in the correspondence of a regimental orderly room; do you see any objection to that?—I do not see any objection to it, but I do not think that any great benefit would be gained by it. I think that it would take up their time unnecessarily, and we want all their time.

3961. Could you employ the time better than in teaching an officer to become an acting adjutant?—No, the only objection which I have is as to the time taken from studies.

3962. As the period in college is so short, is not it one reason for selecting the under-officers from the third term, the fact of these cadets having been longer used to the customs and discipline of the place than the others?—Certainly.

3963. You have spoken of some young gentlemen as not being sufficiently intelligent for the college; are you not aware that many of the invaluable class of good troop and company officers are by no means highly intelligent, but more than compensate by attentive conduct, spirit, and influence over their men?—I am well aware of that fact, and therefore I think that I said in answer to a question which was put to me, that those non-intelligent cadets might make good ordinary regimental officers; but I was then speaking of military education.

3964. I am separating it from the immediate object of the college.—But that is the great military object.

3965. You have mentioned some subjects which might be given up; Captain Walker added the abandonment of permanent fortification, do you agree to that?—No. Permanent fortification is a very troublesome subject as regards details, but I would not give it up.

3966. And as regards the time?—If we had the time which I wish to take it would be ample to do it in. I should not like to pass a cadet out of the college who was to go to Portsmouth, for example, and who knew nothing of permanent works.

3967. (*Rev. W. C. Lake.*) You have been asked some questions with regard to what some of our witnesses have called the double government of the college; you think that it might be carried on without a double government?—Yes.

3968. And that is your opinion both as regards the captains of companies and the instructors, provided that the work of instruction is not too great to take up the whole time of the captains?—Yes.

3969. How many military professors have you?—We should have 15; one of them has retired from the army, and is now a civilian; our proper number is 15.

3970. How many civilian professors have you?—14.

3971. Do you think that if the work was fairly divided amongst them there could be any such difficulty as you have just alluded to?—I do not think that it would be practicable to divide the work amongst them. I proposed to select from amongst them some for those duties in addition to their own instruction; but I do not think that it would be practicable to divide the work of supervision of conduct among so many people.

3972. With regard to supervision of conduct, would you be disposed to place it in the hands chiefly or solely of the military professors, or to make all the professors, civil and military, responsible?—For actual supervision I should be disposed to put it under the military professors, or, rather, a selected number of them; but even now, every professor is responsible for what happens under his own eye; for instance, if a professor saw a cadet committing himself in any way, either in study or out of study, it would be his duty to report him, and if necessary to place him in arrest on the spot.

3973. How would you obviate the difficulty in that case with respect to the civil professors, supposing that they have not that control, and have not their due influence?—I think that they have their due influence. It would never do to give the cadets too many masters. Our whole experience at Sandhurst is that the officers, whether instructors or company officers, have a prestige over the cadets which no civilian can possibly obtain.

3974. Have the professors any necessary connexion with individual cadets?—No, except with the cadets of their own classes, where there is necessarily an immediate connection in the way of their having a control of conduct in study.

3975. But there is nothing which answers to the control which the master of a boarding-house at a public school has over his boys?—No.

3976. There is no such connection as that?—There is no such connexion at present between the instructing officers and the cadets as in the case of a tutor, excepting during study. The officers who have the direct supervision of conduct, and who have to look after the tone of the cadets, are the captains of companies.

3977. Is there any one person, and if so who is he, who you would say stands at Sandhurst in the position of the head master at a public school?—The Commandant I should say would be immediately in that position. One can, however, hardly say that, because the Commandant has not the power of rustication which the head master of a public school has, but the position is generally the same.

3978. Would you say that the position might be stated to be divided between the Governor, the Commandant, and the superintendent of studies?—No. I should say that the Commandant has the command over the cadets. Of course the superintendent of studies has his duties also in the same direction; but the influence of the Governor is a general influence, and he goes into the cases which may be sent to him.

3979. Is there any one who lives in the college like the master at a public school?—The Commandant.

3980. Is he interested in the supervision of the domestic arrangements?—Yes; the captains of companies work under him.

3981. Do any of the captains of companies live in the college?—Not exactly in the college, but two live just at the back of the college. The third is some

Colonel J. E. Addison.

2 March 1869.

Royal Military College, Sandhurst.

distance off, and all the three subalterns live at some distance. That is from the want of accommodation.

3982. Supposing that the discipline were intrusted to the professors, and not as at present a good deal of it is to the captains of companies, how would you remedy the want of captains of companies in the college itself?—That is precisely the difficulty which would exist if the officer instructors had much more duty than they have at present. At present they have only about 18 hours a week of direct instruction, and I think that the other duty would be quite compatible with that amount of instruction work; but if it was very considerably exceeded I have my doubts whether it would be possible.

3983. Supposing that such a change was made as you have spoken of as possible, would there be any difficulty in one or two of the professors having residences either in the college, as is the case in most public schools, or close to the college?—No; there is no difficulty, except that those residences would have to be built. At present the Commandant lives in the college; in the square behind the college the principal members of the staff live, such as the quartermaster, whose duties go on all day. There ought to be also there the three captains of companies; at present there are only two. Then there are the adjutant, the paymaster, the riding master, the chaplain, and myself, and that comprises all the officers occupying the college buildings. The assistant surgeon also lives in the college. I am decidedly of opinion that there ought to be accommodation for all company officers close to the college.

3984. Supposing that that accommodation was not necessary for the company officers, would you say that it might be devoted to the professors?—Yes.

Results of the education.

3985. (*Lord E. Cecil.*) With regard to the education, if the professional education at Sandhurst is in your opinion good, will you explain how it is that out of 65 candidates educated at Sandhurst, we find that for the Staff College between 1858 and 1867 so large a number as 27 failed to come up to the standard necessary for admission?—I can hardly answer that question perfectly without knowing what the cases were, and how those cadets passed out from Sandhurst. I consider it perfectly possible that with our present low standard, cadets who went out low on the list, and afterwards competed for the Staff College, should fail. The only inference is that they ought not to have passed from our own college. But I cannot conceive any large number of cadets who obtained their commissions without purchase, and who were high in the list, not succeeding in getting their entrance to the Staff College.

3986. As a rule, do you think that cadets who get their commissions without purchase afterwards try for the Staff College or not?—I cannot say. I have not looked into the statistics of that question. A great number of old cadets are at the Staff College, but whether there is the due proportion or not I cannot say.

Discipline.

3987. With regard to the discipline, admitting that within the last four years the discipline at Sandhurst has improved, do you think that an average of 46 convictions for insubordination, and not for illegal combination, according to the printed returns, in the preceding five years when the numbers of the college would be 200, points to the fact that the discipline of the college was more rigorously carried out then than now?—I should not put it down to that, in those five years one of them is a year in which there was a mutiny. I have very little doubt that the 82 for insubordination belong to the same category.

Returns, p. cl.

3988. There is a special distinction made between insubordination and illegal combination?—Yes, it depends upon the mode in which this return has been made up.

3989. Then I understand you that you cannot quite explain that circumstance?—I cannot quite explain it, because I do not not know what the college was at that time. I was not there myself. I can only answer for the last four years, and it is I think impossible for me to answer that question.

3990. Do you think that intoxication is rife at the college, or that it has been so during the time that you have been in the position in which you are?—I should not say that it was rife; there have undoubtedly been cases of intoxication, but I do not think that it can be said to be rife. I do not think that it is anything like a general habit of the cadets or of any number of cadets to become intoxicated.

3991. You will observe that there are a considerable number of cadets who have been convicted of intoxication within the last ten years in proportion to other crimes.—It appears by the return that in 1859 there were eight cases, in 1860 there were eight, in 1861 there were nine, in 1862 there were eight, in 1863 there were nine, and in 1864 there were nine.

3992. In comparison with other crimes, intoxication and insubordination stand out out rather prominently?—Yes, but still I should not say that it is by any means the habit of the cadets to become intoxicated. Of course there are isolated cases. And with respect to insubordination, that term includes with us a great deal more than what is usually understood by the word, and the return cannot be read fairly without bearing this fact in mind.

3993. And you are still prepared to adhere to your former statement that the discipline is good?—I consider that the discipline is good.

3994. (*Rev. W. C. Lake.*) There was one point which was brought before us in evidence upon which I should like to ask your opinion. It was stated that about two-thirds of the cadets who come to Sandhurst do not seem to care about playing at cricket or any thing of that kind, but prefer lolling and smoking about the grounds. Do you think that is correct?—I do not think that that describes the cadets. There are not large numbers who play at cricket, but among young men of that age I do not think that you will find those take to cricket who do not excel in it.

3995. Is a very great amount of smoking practised?—They cannot be smoking all day long. That some of them smoke a great deal too much there is no doubt, but I do not think that that is confined to the young men of Sandhurst.

3996. (*Lord de Ros.*) Could you limit the smoking to certain hours, say after four o'clock?—It would be a very good thing if it could be done, but I do not see how it is practicable; if you do that you must put spies at all kinds of places, which could never be done.

3997. (*Chairman.*) I think that you stated in reply to a member of the Commission that you thought that if a military officer were to become a professor, we will say of languages, or of any subordinate subject which might be unconnected with purely military studies, he would not receive at the hands of students the consideration which, under other circumstances, he might expect?—I think that I said that I was rather doubtful about it; but my principal doubt on that subject was whether you would get military officers of note or standing to take that position at all. I cannot say whether if they taught mathematics or French they would have the same prestige as those who teach military subjects; much would depend upon the man.

3998. (*Rev. W. C. Lake.*) Do you not think that very much of that feeling would be got over by having a large income?—Not among officers. I think that position is the point which an officer looks to more than anything. I am only talking of the prejudice which exists.

3999. (*Sir D. A. Cameron.*) What is your opinion as regards the instruction given in languages at Sandhurst?—I think that there is a fair amount of progress. In order to ascertain what amount of pro-

gress is made in French, I compared the marks gained at four admission and four final examinations, two of each by M. Esquiros and two by M. Savoye. I also requested M. de Charente, the professor, to compare the work done by the batch of cadets who left last term with that done by the same cadets 12 months before. The following are the results:—

I.—Marks per cent. of gentlemen cadets in French at four admission and four final examinations.

Marks.	No. per cent. at Admission Examination.		No. per cent. at Final Examination.	
Above $\frac{3}{4}$th of maximum	5·25	24·5	6·50	30
„ $\frac{1}{2}$ to $\frac{3}{4}$ „ -	19·25		23·50	
„ $\frac{1}{4}$ to $\frac{1}{2}$ „ -	48·00		51·25	
„ $\frac{1}{6}$ to $\frac{1}{4}$ „ -	19·50	27·5	13·00	18·75
Below $\frac{1}{6}$ „ -	8·00		5·75	
	100·00		100·00	

There is a general advance at the top of the list and a descent of numbers at the lower part of it, which show some degree of progress.

II.—Analysis of a comparative estimate of work in French at the minor examinations of August, December, 1867, and of that of the same cadets in the minor examinations of August, December, 1868.

Per-centage of papers showing great progress - - - -	7·07
Ditto satisfactory - - -	32·94
Ditto moderate - - -	43·52
Ditto stationary - - -	16·47
	100·00

Colonel J. E. Addison.

2 March 1869.

Royal Military College, Sandhurst.

So that the "great progress" and "satisfactory" together come to about 40 per cent. I have every reason to consider that that is an accurate estimate as respects the progress in languages.

4000. (*Lord E. Cecil.*) Am I to understand that the "unsatisfactory" are 60 per cent.?—The "stationary" would be 16 per cent., the "moderate" are 43 per cent., and the "satisfactory" are 32 per cent., and the "great progress" 7 per cent. These tables cannot be compared together as the one represents attainments and the other progress independent of attainment, but they each point to a certain degree of progress, though not so great as might be wished. I hand in the syllabus of instruction in the different subjects. The military history for the present term, for the third term cadets, is the campaign of 1814, a copy of the lectures on which I also hand in, as showing the nature of the instruction in that subject; the plans are drawn by the cadets.

4001. (*Mr. Parker.*) Have you any similar statistics with regard to mathematics?—No, it is impossible to make them, as the entrance examination is so different from the final one—the papers are very different on going out from those on coming in.

4002. Supposing that upon much higher papers the cadets got the same per-centage of marks, it would be satisfactory?—No doubt.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 4th March 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
MAJOR-GENERAL EARDLEY WILMOT.
C. S. PARKER, ESQ., M.P.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

ENSIGN EDGAR DERING, 25th Regiment, examined.

Ensign E. Dering.

4 March 1869.

Royal Military College, Sandhurst.

4003. (*Chairman.*) You are an ensign in the 25th regiment?—Yes.

4004. And you obtained your commission, not by purchase, but after having passed the examination at Sandhurst?—Yes.

4005. Where were you placed in that examination?—Sixth on the list.

4006. When did you leave Sandhurst?—In December 1867.

4007. When did you join your regiment?—On the 1st of August 1868.

4008. Before going to Sandhurst where were you educated?—At the grammar school at Marlborough.

4009. Did you proceed at once from the grammar school to Sandhurst?—Direct.

4010. At what age did you enter Sandhurst?—At the age of 18.

4011. How long did you remain there?—For a year and a half.

4012. On joining your regiment did you find that the education which you had received at Sandhurst, more especially so much of that education as had been of a military character, was of advantage to you?—It assisted me in being dismissed my drill before I otherwise should have been dismissed; I found that I could learn my officer's duties with greater ease.

4013. With your experience in the matter, if you were given your choice, would you prefer to have gone to Sandhurst or to have entered the army at once?—I should prefer to have gone to Sandhurst.

4014. On the whole, do you think that Sandhurst is a good place of education?—On the whole, I think that it is.

4015. Do you think that if a lad goes there with a desire to study, and to make the most of the advantages of the place, he has every facility for doing so?—Yes, if he desires to study.

4016. If he desires to be idle, can he be so?—I think that if he desires to be idle he can be as idle as he likes in most of the classes. In some of the classes it is not so easy to be idle. It seemed to me that the classes in which there was the most idleness and the most insubordination were invariably kept by civilians.

4017. You think that the military professors exercised a greater influence over the cadets than the civilian professors?—Yes, by far.

4018. To what do you attribute that?—I think that it is attributable to a sort of military feeling on the part of the cadets—that they think that the military professors are officers, and are more entitled to be placed over them. When they get to Sandhurst they think they are to a certain extent soldiers.

4019. Do you think that the fact of a military character being given to the establishment is an advan-

Ensign E. Dering.

Royal Military College, Sandhurst.

tage, and makes it more agreeable to the cadets?—I think so; and it is partly I think on account of the novelty when they first go there.

4020. You went through the obligatory course—but there are other studies which are not obligatory, but optional?—Yes.

4021. Which of those optional studies did you take up?—I took up geology and chemistry, and I took up German instead of French; you can only learn one language, but you can be examined in both.

4022. Did you pass through an examination in geology and chemistry?—Yes.

4023. Was it a pretty stiff one?—The examination at the end of my career in those subjects at Sandhurst was rather stiff, and if it had depended on that alone, I do not think that I should have qualified. I am not very good at geology or chemistry; I knew nothing about them before I went to Sandhurst, but I was enabled to get my marks by working pretty steadily all the time that I was there, and getting a certain amount of marks at each weekly examination, and at the examination at the end of each half year.

4024. What induced you to take up chemistry and geology?—Because as you go up for your commission without purchase it is as well to take up every subject, inasmuch as when you are able to qualify in them it all adds to your marks. In fact I did not take up chemistry in my first term, but my fellow cadets advised me if I wanted my commission without purchase to take up chemistry, and so I took it up in my second term.

4025. Did you take up experimental chemistry?—There is a subject called experimental sciences, but you make no experiments yourself.

4026. Do you consider that you got more than a smattering of those sciences?—I do not; I consider that I have got a smattering of chemistry and geology.

4027. At the same time, the fact of your having acquired a certain amount of information in those two subjects you would perhaps consider an advantage to you, as it would enable you hereafter to take up either of them with greater facility, and with greater pleasure?—Yes, it would always form a beginning to the study which I pursued at Sandhurst.

4028. Field fortification and permanent fortification were two of the subjects, were they not?—Yes; fortification was a subject, and it was divided into field fortification and permanent fortification; and the permanent fortification was divided into an obligatory and a voluntary portion; and the voluntary portion, as a rule, was only taken up by those cadets who were going up for commissions without purchase; and you had to do it out of study hours.

4029. You know German?—Yes, to a certain extent.

4030. Did you learn that German at Sandhurst?—I learnt very little there.

4031. Have you acquired your knowledge of German subsequently?—I learnt enough before I went to Sandhurst to qualify. I just got the qualifying marks on going in.

4032. That was at Marlborough?—Yes.

4033. And then you continued to study German at Sandhurst?—I did.

4034. Did you improve much during the year and a half that you were there?—I think not. I did not lose anything, but I do not think that I improved at all. In German I was very lazy; I might have got on very well indeed if I had liked, but I did not work very hard at it.

4035. Since then you have been to Berlin?—Yes.

4036. And can you now speak German pretty fluently?—Pretty well.

Discipline, general tone, &c.

4037. With regard to the discipline of the place, there seems to be a question as to whether it might not be an improvement if more freedom of communication, and more constant communication, took place between the cadets and the executive officers; what is your opinion in that respect?—I think that it would be a great improvement if there was more freedom of access for the cadets to the executive officers. I consider that the communications between the executive officers and the cadets are too much like those existing between officers and private soldiers.

4038. A previous witness stated that there were a great number of idle cadets at Sandhurst, and that those who were idle showed as great an indifference to play as they did to study, that they did not care for cricket or for athletic sports, and that they passed their time in listlessness and smoking; is that your impression?—That is not invariable. I can myself individualize one cadet at any rate who was certainly the laziest fellow in study, but who was the foremost man at cricket, and in all athletic sports; therefore what you have stated is not at all invariable, but I think that it is very often the case.

4039. How do you account for that, inasmuch as athletic sports are considered rather to engage an undue proportion of the attention of our youth?—Because the cadets in question are too lazy for anything.

4040. Did the cadet you referred to in your previous answer obtain a commission without purchase?—No; he had to leave the college before the completion of his term.

4041. Were you a corporal at Sandhurst?—Yes, in my last six months.

4042. (*Lord E. Cecil.*) You have, I believe, stated that you were at Marlborough?—Yes, at the grammar school; it is not the college at Marlborough, it is a private school at Marlborough kept by the Rev. Frederick Bond.

4043. Do you think, as far as your experience goes, that the tone at Sandhurst amongst the cadets is as good as that which you experienced amongst the boys with whom you were before you went to Sandhurst?—It is quite different. To begin with, I think that you could hardly compare them, inasmuch as the relations at a school of that sort are so much more between big boys and little boys; little boys are kept in order by the big boys; but at Sandhurst all the cadets are more or less of the same age, and there is no one to exercise that control which is exercised by big boys at school who take the position of prefects.

4044. Were disgraceful offences at all common at Sandhurst during the time that you were there, such as drunkenness, theft, and lying?—I should say not; theft and lying certainly not; drunkenness was not very common, but it did occur occasionally.

4045. Were there any cases of indecent conduct during the time that you were there?—No, I cannot remember any.

4046. Did any gambling go on at all amongst the cadets?—Not in the college, not to my knowledge at least.

4047. But I suppose that there was a little high play sometimes, a little gambling in the billiard room?—Not in the college billiard room. I never saw money played for in the college billiard room; it was one of the strictest rules that no money should be played for in the college billiard room, and pool was not allowed.

4048. To your own knowledge that never took place?—It never took place to my knowledge.

4049. Did gambling take place in the billiard rooms in the town amongst the junior cadets?—I think that it took place as much amongst them as amongst the others, or if anything I think it took place more amongst the juniors, because the seniors were more towards their final examination, and they all were on their better behaviour, and a good many of them were corporals and under-officers, and had good conduct badges.

4050. But amongst those cadets who did visit the billiard rooms in the town I understand you that gambling was pretty general?—I do not know that I can say that. I do not think that gambling was general, at least not to my knowledge; they used to play at pool and at billiards, but it was always very low playing, I mean for low stakes.

4051. But they played for money?—Yes.

4052. Do you think that there was much swearing and obscene language?—There was a good deal of swearing.

4053. And was there obscene language in the dormitories and elsewhere, for example, in the halls of study?—I should say not in the halls of study, but I think that in the dormitories there was.

4054. Do you think that the association of four or five cadets in a dormitory, eating, and sleeping, and dressing in the room together had a bad moral effect upon the younger cadets?—I am hardly prepared to give an opinion upon that point, but I should think not. I was in a company in which that was not the rule, each one had a room to himself, and therefore I do not know much about that.

4055. Did you hear much about associated dormitories, and what went on there?—No; I did not hear very much about that, but I do not think that it exercised a bad influence.

4056. Do you think that there was much bullying in the associated dormitories?—I think not; there may have been individual cases of it, but I do not think that there was more than in the C. company, where each cadet had his own room.

4057. Do you think that any drinking went on at night of spirits, or wines, or liquors which were smuggled in?—In my company I think that I may safely say that there was none at all. I do not know anything about the other companies.

4058. Were there any cases of illegal combination or rebellion during the time that you were at Sandhurst?—Hardly illegal combination; there was a row in York Town one evening, but I do not think that there was much combination about it.

4059. Upon what occasion did that take place?—I think that the occasion which most of all brought it about was the presence of a Jew's shop, kept by a man named Broatman, who used to lend money on watches and jewellery, and other things belonging to the cadets. One of the cadets left a watch there in pledge, and when he went to re-demand it, I believe that the Jew affirmed that he had purchased the watch, and he would not allow that he had lent money on it. The cadet was, I believe, accompanied by two or three others, and they told the Jew that they would pay him out, or something like that. I do not know for certain the bearings of the case, as I only got it by hearsay. I understood that they went down on the next night, or some nights afterwards, and were joined by a number of others, and I believe that they holloaed out, "We are going to pay out Broatman," or something of that sort. They were joined by a number of others who were about the town at the time (it was something about half-past five), and they proceeded to run up and down the town in a large body; they got very excited, and they had some fireworks; and outside a grocer's shop there was a bundle of broom handles, and the cadets appropriated these broom handles, and made them into staves, and then made their way to Broatman's shop. Outside the shop there were two police constables standing with staves drawn, and a magistrate of the town, who was lodging next door to the shop. I believe that the intention of the cadets was to pull down the shop front, and to throw fire-works into the shop. I do not know that they intended to set fire to the house, but they intended, I believe, to do it as much for a lark as anything else. There was a steep embankment, and they were just going to rush up, when one of the executive officers, Mr. Anderson, came up, and spoke to the cadets. (I was not amongst the crowd. I was standing on the path by the policemen.) I do not recollect his exact words, and one of the cadets, whom I took to be the ringleader (I do not know who it was), rushed to the front, and said, "No rebellion against the "college authorities," and the cadets then all turned away, and went up to the college.

4060. You do not think that the *émeute*, such as it was, was at all premeditated?—Not at all.

4061. (*Lord de Ros.*) You rather think that they showed a proper feeling when an officer of the college appeared there?—Yes. I was rather astonished. I did not think that they would go back again. I expected that they would attack the policemen.

Ensign E. Dering.

4 March 1869

Royal Military College, Sandhurst.

4062. (*Lord E. Cecil.*) Did this occur at the time of the Blackwater Fair?—No; it was before the Blackwater Fair.

4063. There is a sort of traditional story that on the occasion of the Blackwater Fair the cadets generally have a lark, is there not?—There is a traditional story that they used to have a lark.

4064. But you are not aware that it is a constant occurrence?—From personal experience, I can say that it has not been a constant occurrence in the last three years.

4065. The disturbance which you have mentioned is the only disturbance that took place during the 18 months you were at the college?—Yes; the only disturbance of any magnitude.

4066. Is insubordination very common at the college?—No, I do not think that it is very common, but it, I think, occurs rather frequently against the civilian professors.

4067. It occurs more against them than against the military professors?—Much more against them than against the military professors,—it never occurs of course against the executive officers.

4068. Can you mention any breaches of discipline, or any insubordination, which to your knowledge took place in study; was there anything like the rising of a class against the professor?—Nothing that I recollect.

4069. What was the general bearing of the cadets to the civilian professors?—It was rather inattention; of course it was greater towards some than towards others,—in fact towards one or two the conduct was I may say quite insubordinate, on every occasion,—and now, on thinking of it, I know that there were several cases of classes not exactly rising against the professor, but when the professor rebuked them at all they holloaed, and made a noise, and stamped their feet, and did that sort of thing.

4070. Without mentioning names, of what particular study were those gentlemen professors?—One was a mathematical professor, and another was the German professor, but it was not so bad with him as with the mathematical professor.

4071. Did the cadets constantly play tricks upon the professor while in study?—I have seen that done, but not frequently.

4072. We had it stated in evidence that obscene language had been used in study once or twice, do you recollect anything of the sort taking place?—No, I do not recollect ever having noticed it in study.

Military system.

4073. You said that the executive officers treated the cadets too much like private soldiers?—Yes; I think that the relations between them were very much like those between private soldiers and officers.

4074. And you stated that, notwithstanding that, the cadets had more respect for them than they had for the professors?—Yes, they decidedly had more respect for them, because they thought that they were more rightly put above them.

4075. You do not think that that system of treating the cadets as private soldiers is a good one?—I do not.

4076. Speaking for yourself, I suppose that you would have been glad to have seen it altered?—Yes, speaking for myself; cadets, I think, should be treated more as junior officers.

Method of instruction.

4077. Have the professors of the various studies different methods of educating the cadets, or is it all done on one uniform system?—There are different systems,—for instance, geology and chemistry are taught by means of lectures to a whole company of cadets in the lecture hall; and then if the cadets wish to get marks in the examination there is a lecture each week, and there is an examination in the next week on that lecture. At the end of the lecture about two questions are given on the lecture of the week before, and if the cadets wish to get marks on the lecture they generally study the text book. There is a

Ensign E. Dering.

4 March 1869.

Royal Military College, Sandhurst.

text book for all those lectures, and they generally study the text book out of the hours of study, that is as regards chemistry and geology. Surveying of course is done out of doors, and all the other studies are, I believe, in classes.

4078. Did you find it difficult to pursue the more difficult studies, such as the mathematical studies, in a crowded hall?—I myself did not find it difficult because I was always in pretty quiet studies; but I am quite certain that in one of the mathematical studies at any rate, it would be almost impossible to work, because there is so much disturbance.

4079. Does that arise from the inattention of the cadets?—Yes; but the same class would probably not be so insubordinate with another professor.

4080. In short it very much depends upon the order which the professor keeps in his study whether some subjects can be advantageously studied, or not?—Yes.

4081. Is order better kept where the professor is a military man, than where he is a civilian?—Yes. Where the professor is a military man the studies are more quiet and better regulated.

4082. Do you think that the number of subjects taught at Sandhurst are too many?—I think that they are too many to be learnt thoroughly.

4083. Speaking from your own experience, do you think that you have obtained anything but a smattering of many of the subjects?—I have obtained more than a smattering of fortification, surveying, and military history. Of mathematics I did not learn anything. I did not forget them, but I just kept up my former knowledge. I did not, in fact, try to learn much of mathematics; I was rather lazy in mathematics and in German. In chemistry and geology, of course in 18 months, with only once a week, you could not learn more than a smattering, unless you worked hard. But those were not things that I cared for, and I did not pay much attention to them, and therefore I only got a smattering of them.

4084. Was any obstacle thrown in the way of private study in the dormitories?—Not at all in my company.

4085. Was it the case in others?—I cannot say.

4086. Were you allowed to study before the examinations?—Before the final examination. I think that only the cadets who were going to leave the college that term were allowed to sit up until 12 o'clock, and candles were provided for them. I think that that was the case for three weeks or a month before the final examination, in order that they might prepare themselves in the subjects which in that time they had to get up.

Idleness.

4087. What proportion do you suppose that the idle cadets bore to the industrious in the college?—I should think that about three-fifths were idle. I think that the other two-fifths were working with the intention of getting their commissions. But of course I do not mean to say that the whole of the three-fifths were very idle, but they did less hard work than the two-fifths, who thought that they had a chance of their commissions.

4088. Then you think that the reason why so large a number of cadets were idle was because they had not a sufficient inducement to work?—Yes, I think that most of them thought, "I have no chance of my "commission, I shall probably be able to qualify;" because of course unless they were very stupid they would be able to qualify without additional work at all; and they said, "I have no chance of my commis- "sion, and I do not see why I should work."

4089. Were the Queen's and Indian cadets generally amongst the worst idlers?—No, I think not. Some of the Queen's and Indian cadets pass out in the free commission list. I can remember a good many of the Queen's and Indian cadets who were idle, but I do not think that they were more idle than any one else who was not going in for his commission.

4090. We have heard a great deal with regard to independent study at Sandhurst. I suppose that the cadets amuse themselves with what they please during the time of independent study?—Yes, they generally amused themselves, but the cadets who were in for their commissions without purchase generally used to work at that time on some other subject.

4091. But only those who were in for their commissions without purchase?—Yes. I think that I may say that the others never worked.

4092. What did they do? Did they wander about the college grounds, or go off to the town and play at billiards?—I think that they used to go down to the gymnasium a good deal—I fancy so. I however really do not know what they did, because I never had any independent studies.

Course of instruction.

4093. Do you think that the course of study at Sandhurst was sufficiently practical? do you think that you were taught a sufficient amount of drill?—I learnt a private soldier's duties, and therefore had not to learn them so much when I was under the drill-master's hands after I joined my regiment. In fact, I knew my drill when I joined my regiment, and a fellow who came from Sandhurst was under an advantage in that respect in comparison with those who had a direct commission.

4094. Did you benefit in any way when you entered the army from your education at Sandhurst?—Decidedly; I benefited in my riding.

4095. But you were not taught any of the duties of a regimental officer?—No; the duties which I learnt there were those of a private.

4096. Do cadets at Sandhurst generally know how to swim?—About the same proportion as at public schools do.

4097. I suppose that there was a regular season for bathing?—Yes.

4098. But there was nothing approaching to a swimming master?—No, there was nothing of that sort.

4099. In the matter of food, how were the cadets treated?—I always thought it very good indeed.

4100. You had enough to eat, and the food was of good quality?—I had quite enough to eat, and the food was of good quality.

4101. (*Sir C. Russell.*) Do you think that in teaching at Sandhurst sufficient recognition is given to purely military subjects; I mean such as fortification, field sketching, the construction of field works, and castrametation; are they taught to the cadets practically?—I myself do not think they are sufficiently practically taught. I think that surveying is sufficiently practically taught, but I do not think that castrametation or the erection of field works is sufficiently taught.

4102. Is field sketching sufficiently taught?—Yes; I think that surveying is the thing best taught there. The theory of fortification is well taught, but I do not think that the practice of erecting field works is enough taught. I think that very few of the cadets who leave Sandhurst could without any assistance superintend and direct a party of lines-men in making a field work. They would probably be better able to do it than men who had never had any instruction, but they would be unable to do it thoroughly.

4103. Do you think that in awarding the marks at the examination sufficient recognition is given to the purely military part of the education?—I think that those marks bear a sufficiently large proportion to the other marks, because they bear a very large proportion.

4104. I understood you to say that the cadets had the notion that taking up everything was advantageous to them?—Yes, they had that notion when I was there.

4105. Do you think that that is because a sufficient number of marks is not given in the examination for those subjects which are thoroughly mastered?—It is so easy to qualify in the voluntary subjects, that every fellow will have a go-in at them, and I myself think that it is rather a waste of valuable time to go in, for instance, for geology and chemistry, if you know nothing about them before. Of course, when you are in for your commission you do not think of that, but

you simply think of getting your commission, and you think of what is the most valuable thing to do, and not of what is the most useful thing. Now I think that it would be far more useful if fellows would devote the time which they give to chemistry and geology to fortification or surveying.

4106. In fact, to some military subject?—Yes, to some practical military subject.

4107. I understood you to say that you took up German, because you could only learn one language. Am I to understand that if you desired, or if any cadet desired, to take up French as well as German, there would be any hindrance to his being taught it?—Yes, you can take up both languages, but you cannot learn both.

4108. I am confining my question to the teaching?—You cannot learn both languages from the Sandhurst professors, because I believe that they are not allowed to give private tuition; there are so many things that they have not time to give separate hours to French and German, and therefore they teach them both at the same time. The German professor is in one room teaching German, and the French professors are in their class-rooms teaching French at the same period, and therefore you cannot learn both languages at the same time, because you cannot attend both studies.

of cers, 4109. You were a corporal at Sandhurst; do you think that if some after advantages were given to cadets who qualified as non-commissioned officers it would improve the discipline generally at Sandhurst?—I think that it would, but I do not think that it would be fair that they should have more marks given to them for it.

4110. Then what reward, beyond a certain amount of pride which a cadet may feel at being appointed a corporal, do you conceive a cadet derives from being appointed a corporal; or I will take any under-officer?—I believe that the under-officers are supposed to be gazetted before the privates, but I do not know whether that is always carried out. I do not myself think that it is. I think that it is supposed to be one of the advantages of the under-officers, that whether they pass at the bottom of the list, or whether they pass at the top, they will be gazetted before the privates.

4111. But you think that a notion exists amongst the cadets that this is not acted upon?—The impression is not strong amongst the cadets that it is acted upon.

ion tional linary 4112. Have you observed much difference between the influence of the military professors and of the company officers, who are charged with the discipline?—When the company officers have anything to do with the cadets they have always influence enough, but the thing is that they are not often with the cadets; they are not on parade with them; they are with them on company parade, but they do not continue with them when the cadets are going, for instance, through their manœuvres; that is left entirely to the under-officers and the adjutant. But the military professors are with the cadets all the time of study, and of course see much more of them.

4113. Do you think that if the military professor and the company officer were combined in the same individual, you would get an improved efficiency in the way of discipline?—I should think it very likely, because the professor would be able to learn the character of the cadets more, and he would be able to act upon it as a company officer. When once a cadet is out of the professor's study, the professor has nothing to do with him until he comes into study again, unless he has behaved badly, and then of course he reports him and appears as evidence against him.

4114. Then you think that, generally speaking, it would be expedient to combine the two?—I think it would.

4115. You have stated that the cadets consider themselves *quasi* soldiers?—Yes.

tone. 4116. We have had it in evidence that cadets are given their option of being put upon parole, or of being confined within bounds. Do you think that if they were entirely placed upon their parole it would elevate the feeling among the cadets generally?—I do not think that I can answer that question; I hardly know.

4117. As far as you know, does there exist any feeling upon the matter; do they feel that it would be better that they should be put upon their parole instead of being given the option?—I really do not know.

4118. Do you think that when the cadets leave Sandhurst there exists amongst them that sort of *esprit de corps* which exists amongst the old members of public schools, such as Eton and Harrow?—Not so much, certainly, but I think that there is that feeling to a certain extent. Old Sandhurst fellows on your joining a regiment, if you have come from Sandhurst, will generally welcome you rather more than direct commission fellows will, especially if you are near their own time; but I do not think that there is nearly the same feeling as an old Harrovian or an old Etonian has, because the time being only 18 months is too short to create so strong a feeling.

4119. Do you attribute it to the want of time?—I do, and I think that at that age you do not feel so much for a place as you do when you have been at it for a longer period, from your boyhood until the age of 18 or 19, which is the period for which you stay at a public school, and you have many recollections connected with it.

4120. (*Lt.-Col. Chesney.*) Speaking of the under-officers, do you think that the under-officers and corporals at Sandhurst had the proper influence with the cadets which should have belonged to their rank?—I think that the under-officers had, but I do not quite think that the corporals had.

4121. Do the under-officers, as a rule, in your opinion, conscientiously perform their duty in keeping the cadets in order, and in watching over the cadets when no higher authority is present?—I think that they do to a certain extent; I do not mean to say that they perform their duty very strictly, but I think that they are moderately conscientious about it.

4122. You do not consider that the present moral tone of the college, or its moral tone as you knew it a year ago, was a high one?—I do not.

4123. Do not you think that a system of well selected under-officers a little longer in the place might be a means of improving that tone; that, for instanee, keeping the cadets at Sandhurst for a rather longer time, so as to give a better means of choosing the under-officers and corporals, would be likely to improve the tone?—Yes, I think that it might; but then if you kept them there longer I think that you ought to make the education such that when they joined their regiments they would have nothing more to learn.

Educational results. 4124. At present, on the whole, you consider the time, namely a year and a half, rather short for that kind of education?—Yes, for a perfectly practical one. I think it long enough if the only subjects were, for instance, surveying, fortification and military history, namely the military subjects, and if the other subjects were just kept up for final examination. I think that more time ought to be given to military subjects.

4125. We are told that practically there is no distinction between a cadet who takes, say, the fifth place in going out, and one who takes the twenty-fifth place?—Not the least.

4126. Do you not think that it would raise the educational condition of Sandhurst if there were some advantage for those who were at the top of the list?—Yes, if those at the top of the list were certain to be gazetted in the order of their passing out. Supposing that the first man on the list was gazetted first, even if you only made a day difference, it would be something. But, for instance, when I passed out, two of the responsible under-officers who passed out with me were gazetted for their good conduct in the December of the year before, and not for the way in

Ensign E. Dering.

4 March 1869.

Royal Military College, Sandhurst.

which they passed out, and they had nearly a month's seniority over any one else. On the 8th of January, when I was gazetted, I think that nearly the whole of the cadets who got commissions without purchase were also gazetted, so that the man who passed first had no advantage over the man who passed thirty-fifth.

4127. Was any credit attached by the cadets to their names being read out publicly at the top of the list?—Yes, I think so.

4128. Then it would be a loss if there was no public declaration?—I decidedly think so.

4129. And it would be an improvement if some advantage were given to those at the top of the list?—Yes, I think so; it would make a keener competition, and of course would make fellows work more; it would make a keener competition amongst the junior ones, and it would make the fellows who were almost certain of their commissions work harder to get higher on the list, and those who had not much chance would work harder for their commissions.

4130. In short it would raise the educational tone of the establishment?—Yes.

4131. Your company was the C. company, that with the separate sleeping rooms?—Yes.

4132. It was not remarkable for its steadiness in the year that you were there, was it?—It was not; but I attribute the fact of the C. company not being particularly good to the presence of perhaps three or four fellows in the company individually; and I might also attribute it to the fact that the officer commanding the company went more into the company and brought things more to the surface than they were brought in other companies.

Powers of professors.

4133. In your day the professors could not be said to have any military control over the cadets at all, could they?—No; they had, I think, no military control over the cadets at all.

4134. Then so far they were at a disadvantage as compared with the company officers?—Yes; they had no personal redress, no direct redress for themselves; their only way was to report the cadets; and so a cadet might very often commit a small crime which they would not like to report him for to the commanding officer, and which yet certainly deserved punishment, but unless they were strict men they had to let it go altogether.

4135. Out of study they had no power at all?—Just so.

4136. But notwithstanding that, did any of the professors take trouble with the cadets in raising their tastes and so on; I mean in the way of amusements?—Yes, in the way of private theatricals, and so on.

Results of cramming schools.

4137. With regard to what you said of the low moral state of Sandhurst, from your knowledge of the cadets do you attribute any of that low condition to the influence of what is called the cramming system, and their coming from crammers?—Yes, I decidedly do. I individually consider that crammers' establishments are the places where all the drinking and the smoking and all that sort of thing begins.

4138. You think that the presence of a large number of young men from these crammers is likely to give a low moral tone?—Decidedly so, especially as by far the majority come from crammers.

4139. You think that it gives a low tone to the college?—I think that it is calculated to do so.

4140. Did the great disturbance in York Town, of which you spoke, and in which fireworks were used, happen just before the 5th of November?—I think that it did; it happened somewhere about that time. I do not know whether it was just before or just after.

Discipline.

4141. (*Sir C. Russell.*) Did not the cadets follow up that row by burning a skittle alley in the college grounds?—Yes; there was a skittle alley burnt, but I do not think that it was just after that row.

4142. Did the skittle alley belong to the college?—Yes.

4143. (*Lt.-Col. Chesney.*) Did you hear anything of a story of the cadets attempting, in the row, to throw the guns belonging to the college into the lake?—No; I did not hear that; I do not remember it.

4144. Are you aware that in that same week there was what was called a town and gown row at Oxford, in which an undergraduate was reported to have been killed in the streets by kicking?—I heard that there was an undergraduate killed about that time, but I do not remember whether it was in the same week.

4145. You do not consider that the Sandhurst row was as serious as that one?—No, because there were no townsmen. I should like to add that I think that if at Sandhurst there had been anyone to fight with, there would have been a more serious row. The cadets were controllable, from the fact of the officer having stopped them so easily; that shows that they were to be stopped easily enough.

4146. Are you aware whether there was one of the under-officers taking a leading part in that disturbance?—Yes, I know that there was.

4147. (*Lord E. Cecil.*) Was the fact known to the officers of the company?—No.

4148. (*Maj.-Gen. Wilmot.*) Is there any permanent or public memorandum in the college by which every one can see whether a cadet has distinguished himself, either in study or in discipline?—There is nothing public that I know of. I do not remember anything at present. There are, of course, permanent records; there is the defaulter sheet.

4149. But there is not a visible exhibition of it?—No.

4150. Can you tell me what influence the corporals and under-officers exert on the cadets?—I think that they exert enough to keep them in order in the dormitories when no one else is present, more especially the under-officers.

4151. Do you think that they form an intermediate link between the officers and the junior cadets, so far as discipline and everything else connected with the service goes?—I think that the responsible under-officers do so. I do not think that the corporals do so.

4152. Supposing that the relations between the executive officers were such as, in your opinion, they ought to be, do you think that the corporals and under-officers might be the link to carry out the discipline of the whole establishment?—Yes.

4153. Do you think that the officers who have been commissioned from Sandhurst look back to the place itself with interest?—Speaking personally, I should say yes, but I can hardly answer for others. For instance, if they are quartered at Aldershot they often visit Sandhurst.

4154. And there is a sufficient feeling with regard to the establishment to induce them to do so?—Decidedly.

Organi

4155. Can you suggest anything either in the system or in the arrangements which would tend to promote such a feeling?—I cannot suggest anything.

4156. Do you think that it would be of any advantage to the discipline, and to the whole arrangement of such a system as you have spoken of, and which you desire to see, if the cadets were formed into one company under one officer assisted by subalterns, who should form intermediate links between him and the cadets, instead of having two companies with a separate discipline, or at all events with separate ideas of discipline?—I should think that it is an advantage to divide them into three companies.

4157. Having three captains?—Yes.

4158. Of what advantage do you think that is?—Because the captains take a particular interest in their own companies, and there is more connexion between them and the cadets of their own company than I think there would be if they had so many more under command. For instance, the cadets go to tea and dinner, and that sort of thing, with their captain.

4159. But one of the faults which I understand you to see is that there is not sufficient of that sort of thing?—No, there is not sufficient of that sort of

thing; and if they were all under one officer, I think that there would be less.

4160. It does not mean that one officer should do the whole duty, but there would be the assistance of the subalterns?—I should say that it would be better to divide the cadets into three companies.

4161. Has a corporal power in other companies as well as in his own?—If he is at all thrown with the cadets of the other companies he has; but that very seldom happens.

4162. In the case of any irregularity out of study, has he such a power?—Yes.

4163. Does the under-officer consider himself responsible for the general discipline at all times so as to interfere when he sees anything irregular in conduct both in study and out of study?—Yes.

4164. In the row which you have described was there no under-officer or corporal present?—There was an under-officer present leading the rioters, and there was also a corporal present.

4165. I gathered from what you said just now that you think that it would be an advantage to the service, without reference to the cadets' likings or dislikings, to prolong the period at Sandhurst, both for the sake of study and for the sake of discipline?—Yes, I think that it would; but I think that if the period was prolonged they should be fit to join their regiments at once, without any further instruction.

4166. Do you think that any system of punishment for idleness could be introduced?—If a cadet was incorrigibly idle, and made a point of never doing anything, and if the professor reported it, I rather fancy that the commandant would award a certain punishment.

4167. Do you think that there is any advantage in having an adjutant to perform such duties as you have described, independently of the captains of companies; are not those captains perfectly capable, from their position in the service, of carrying on all the executive duties without an adjutant?—Yes; I suppose that, if they knew their duty well enough, they ought to be able to perform the work of the adjutant.

4168. Do you see any advantage in having an adjutant separate from the captain of a company?—No.

4169. Do you not think that if the captains of companies performed the duties of the adjutant it would bring them into greater relation with cadets?—I do not think that it would.

4170. Do not the corporals and under-officers perform part of the drill?—Yes, in the supernumerary rank; but if the corporals see any talking or anything of the kind which is going on they check it at once, and if they choose they can report it; and I think that on parade they are generally very strict in their duty.

4171. Are there any other Sandhurst officers in your corps?—Yes.

4172. From what you have seen, do you think that the Sandhurst officers generally show more inclination to study and to improve themselves after they get into the service than others?—I think not, from what I have seen.

4173. (*Mr. Parker.*) Do you think that it would be an improvement to have a period of half a year longer at Sandhurst, if the cadets lost no seniority in the army by it?—Yes; if they lost no seniority in the army by it, I think so. I think that it is an advantage to be there as long as you can, because the longer you are there the more thoroughly you will earn what there is to be learnt there.

4174. You would learn more in that extra half year at Sandhurst, than you would in the first half year as a regimental officer?—I think so decidedly.

4175. Are the companies ever drilled as a battalion?—Yes; they are drilled every day as a battalion.

4176. How much drill had you learnt at the time of your leaving Sandhurst; could you move a company?—I could do any private soldier's part. I could drill as a private soldier in any manœuvres which took place; but I do not think that I could have drilled a company.

Ensign E. Dering.

4 March 1869.

Royal Military College, Sandhurst.

4177. Could you have done a covering serjeant's work?—I think that I could.

4178. Was there any sword drill?—It was not obligatory. I think that you could have learnt sword exercise if you had liked in the gymnasium and from the instructors.

4179. Was there any musketry drill?—You went through the musketry course as a soldier goes through it, but I do not think that it was of the least use in the world.

4180. Did it include ball practice?—Yes.

4181. Was the per-centage of merit good?—That I do not know. I do not think that it was of the least use.

4182. Did the cadets shoot through the same course as soldiers of the line do, up to 900 yards?—They were supposed to do so; but there were so many that I do not think that they were ever able to get up to 900 yards. I myself, I think, shot up to about 600, but they were not at all strict about the matter; it was under the command of the serjeant-major, the serjeant-major went out and superintended it, and I think it was the greatest farce there.

4183. You mean the musketry instruction?—Yes; it was not of the least good to me, when I came through my course on joining my regiment, that I had been through the course at Sandhurst; but then it was done in the recreation hours, and therefore it did not take any time from studies.

4184. Supposing the cadets had taken as much interest in it as the average of private soldiers do, it then would have served their purpose when they joined the army afterwards, would it not; it would have been nearly as good as going through it in their regiments?—I do not exactly understand what the object of going through the course is. I do not know whether it is to make you a good shot, or not. I hardly know how to answer that question.

4185. No marks were given towards a commission for doing well in the musketry instruction?—None.

Combination of instructional and disciplinary duties.

4186. Do you think that it would be possible that the same person should do the duties of military professor and company officer? Could the military professors take the duties of company officers in addition, so far as regards time?—Yes, I should think that they could.

4187. Do you think that it would be a popular thing with the cadets to have the military instructors as company officers, so as to see more of them?—I do not think that that ever occurred to the cadets. I do not know that it ever did.

4188. Which had more influence with the cadets in general, one of the military professors or a company officer? it would perhaps depend on the man?—Yes; I think that it would very much depend on the individual.

4189. Had the chaplain much to do with the cadets?—Not while I was there, and I do not think that he had any influence at all.

Discipline.

4190. Suppose a cadet were very fond of billiards, how much time could he get away from studies and from parades to play billiards; could he play for four or five hours a day?—He could not play all that time, because he could not get the tables, each cadet had the tables in turn.

4191. With the difficulty which there is in getting the tables, he perhaps would not get more than an hour or two in the day?—Certainly not, taking it on the average of every day.

4192. So that it would be impossible for him to spend more than an hour or two in a day on billiards?—Yes.

4193. Were cards forbidden?—Yes; very strictly forbidden.

4194. Even whist?—Yes; and I think that cards were very seldom or never used.

4195. Was there *espionage* of any kind? supposing that cards were played would it be reported by the under officers?—Yes; if the responsible under-

Ensign E. Dering.

4 March 1869.

Royal Military College, Sandhurst.

officer came to know that cards were played in his company he would report it, or he would probably say "I shall report it if you do not stop it immediately."

4196. Do you think that the cadets had much to do with money-lenders in a general way at Sandhurst?—I think that some of them had. I know that men used to go down from London, generally tailors, and if fellows would promise to give them their outfit, the tailors would say "If you promise me your outfit "I will lend you 10*l.* or 15*l.*" or whatever the sum might be; and I know of one instance of a cadet who was expelled from the college, who promised his outfit to I believe 20 tailors, and he got something like 10*l.* or 15*l.* from each of them.

4197. Are the advertising money-lenders in the habit of sending circulars to the cadets, offering them accommodation?—I do not remember getting one of those circulars when I was at Sandhurst. I do not think that the professional money-lenders drive a trade there.

4198. Do the tailors you mentioned come down to Sandhurst, or do the cadets see them in town?—There are not more than five or six at any rate who come down there. They come down and establish themselves at one of the inns in the place, and then on fellows going in to play at billiards, these men speak to them and say, "Will you allow me to "show you our new clothes," or whatever it may be, and it generally ends in their getting some young fellow to promise his outfit, and they then lend him money, saying that they will lend the money on that condition.

4199. It is not possible I suppose to run into debt to any one in the neighbourhood to any great extent?—No, I do not think that it is; of course they will credit you to a certain amount.

Accommodation.

4200. (*Lord de Ros.*) In your opinion what was the most disagreeable part of the interior arrangements at Sandhurst — I mean as to washing and taking care of the clothes of the cadets, and that sort of thing—we were told that there was only one chest of drawers among four young gentlemen of 20 years of age?—I do not know how that was arranged—it was difficult to get clean linen—you could get it, but you had to send a servant, and he had, I suppose, nearly a quarter of a mile to walk to get you a clean shirt if you wanted one (because the college is a large place), and in the C. company he had to go down the stairs to the further end of the college and back again. A quarter of a mile is rather an exaggeration, but I suppose that he had to walk 250 yards.

4201. Had you at hand a bureau, and a bookcase, and a chest of drawers to keep your clothes in comfortably, as a boy at Eton has?—No; even your portmanteau was taken away, and all your plain clothes were taken away.

4202. Did not that lead to discomfort and confusion, and slovenliness among the cadets?—I do not think so.

4203. As to the comfort and facility for private studies, supposing for instance that you wished to read up history, had you convenience for doing so? We were told that at one time the young men used to put their heads into a box with their candle in a basin—had you anything of that sort?—Of course if cadets wanted to work at night it was illegal, and so they had to hide the light.

4204. They had to hide the light in a basin?—Yes; I think that lights were put out at 10 o'clock.

4205. If a cadet asked leave, could he obtain permission to remain up until 11 o'clock to read?—He could have asked leave, but I do not think that he would have got it, except at the end of the term.

Discipline, general supervision.

4206. As regards the drinking habits, of which we have been told, in the public-houses, do you consider that the Sandhurst cadets were in the habit of going into public-houses where there was low company, such as bagmen, and mixing with them, or did they go to the public-houses among themselves?—Among themselves.

4207. It would never occur to them to mix with low company?—I do not think that it would.

4208. As to insubordination, suppose there was anything of the sort in the Borderers and there was a row in the men's rooms, your first order on coming round would be to fall in. Would that have the same effect among the cadets as in a regiment; would it bring them to sense of their folly at the moment? I am speaking of a commissioned officer?—Supposing that a commissioned officer did come in, and that there was a row going on, it might be so; but I do not think that that was the course which used to be pursued. I daresay that the cadets would hardly understand it.

4209. What would be the course pursued?—The officers would go down into the room, and the cadets would be there, and directly they saw him they would stop the row.

4210. There would be that feeling?—Decidedly.

4211. As to the treatment of cadets as officers or as soldiers, you mentioned that one officer had more influence, as he went more into the detail of his company than others?—I do not say that he had more influence, but that he went more into the detail of his company, and was oftener looking about, and therefore found things out more, and brought them to the attention of the commanding officer.

4212. Did he treat the cadets more as officers than as private soldiers?—I do not think that he did, at any rate not more than the other company officers.

4213. Do you not think it desirable that he should do so?—I think that it would be a very good thing. I did not mean to say that the cadets were treated precisely like private soldiers, but I think that they were treated too much so.

4214. Would you prefer that the company officer should treat the cadet much the same as a field-officer does a company officer in a regiment?—I think that he should treat him very much as he treats the last-joined ensign.

4215. Is it the custom at Sandhurst, as it is in the Borderers, to encourage the young officers to assist the adjutant at all?—I do not know that. Instru

4216. Do you see any objection to their doing so? For instance, to taking some of the senior cadets to assist the adjutant in making out returns, or writing letters in the orderly room? do you see any objection to employing the cadets for that purpose?—I do not see any objection to it.

4217. Would that be of assistance to a cadet in the regimental business if he afterwards became an adjutant?—I think that it would.

4218. With regard to the idleness, supposing that there was a quarterly return made of the progress of each cadet, would not that make it necessary that he should be obliged at the end of every quarter to produce a certain quantity of study?—Yes; there is that; not by a quarterly return, but it is done in another way; there are half-yearly examinations. At the end of the first half year, if you do not get a certain number of marks (I do not know the proportion, because it has been established since I left) out of what you can have got, you have to leave the college. That is the way in which that matter is managed; but it has been brought in since I left.

4219. Do you not think that that must check habitual idleness?—I think so; and I think that it is a first-rate thing.

4220. Supposing that marks were given upon the final examination for having been non-commissioned officers, and for having done that duty well, would not that encouragement produce a better regimental article? Would not the giving of those marks to a cadet for good conduct make a better non-commissioned officer of him, and fit him better for his future position as a subaltern; I mean giving him marks besides what he has gained for his studies; giving him marks for having done his duty; in short on the same principle as a good-conduct medal is given to a good serjeant?—It would be a great stimulus; but

in my view of it I cannot think that it would be fair to the private cadets.

4221. Would your idea of a longer period at Sandhurst be subject to the cadet being actually converted while at Sandhurst into a more than half formed subaltern?—Yes, decidedly; because I do not think that he has anything to learn as a subaltern which might not be learnt to a certain extent at Sandhurst, at any rate with very slight alterations.

4222. Would an experienced adjutant prefer, or not prefer, a half-trained cadet from Sandhurst to a totally untrained youth from a public school, to perform the duty of a subaltern?—I think that he would rather have a perfectly untrained youth from a public school; because they say that the cadets who come from Sandhurst think that they know so much when they join; that is the objection, I think.

4223. Is it not a disagreeable thing to the cadets to have any of the work put upon them in recreation time; for instance, musketry, is not that rather considered a hardship; and is the riding treated in the same way?—In the summer months there is an hour and a half out of the recreation time taken for riding; but the cadets do not mind that, they like the riding.

4224. They like the riding so much that they do not mind sacrificing their time to it?—Yes.

4225. But they do not feel the same as regards musketry?—No; but I cannot speak with certainty as to the musketry, because I am not quite sure whether it is obligatory or not.

4226. You said that it would be unfair to give marks for conduct. As riding is so absolutely necessary a qualification, do you not think that it would be advisable to give marks for riding well?—I hardly know how that would be, because it would be very unfair to men who had never ridden before they came there.

4227. The riding-master would distinguish that. I mean that marks should be given to those who had taken most pains in qualifying for military riding?—I think that would be a fair thing.

with ools. 4228. (*Rev. W. C. Lake.*) Before you were at Marlborough, were not you at Wellington College?—Yes.

4229. Had you at Wellington College a body of monitors?—Yes.

4230. The shortness of the Sandhurst course, I suppose, prevents anything like a body of monitors?—I think that it does.

4231. Do you think that a bad thing?—I do. I think that it could not be managed; it is the best sort of control for the boys, but I do not know whether it would do with fellows entirely of your own age. At a public school if all the fellows were of the same age, and any of them were stronger than monitors, it would not do, but as a rule the monitors are bigger boys.

4232. Do you think that the boys are not now long enough at Sandhurst to enable the senior boys to take the position of monitors?—I think not, because very often the cadets when they come are bigger and older than those who have been there 18 months.

4233. Can you see any way in which a body analogous to that of monitors at a public school could be formed?—I do not see any way of doing it.

4234. You do not think that the under-officers and corporals could be formed into such a body?—No; I cannot say I see any way of doing it. I think that the only way would be to make them nearer to the commissioned officer, that of course would do so to a certain extent.

4235. You think that the want of a body answering to that of monitors at a public school is a decided disadvantage?—I think so.

4236. You said that you thought it an advantage to have been at Sandhurst; will you mention, rather more in detail, the points in which an officer, who has been at Sandhurst, is in a better position than an officer who comes direct from a public school?—Speaking personally (and of course I must speak personally) the first thing which I look at is the surveying; another thing is the theoretical knowledge which one has of fortification, of course that is an advantage, although it is not practical enough.

Ensign E. Dering.

4 March 1869.

Royal Military College, Sandhurst.

4237. You do not see any way in which that could be got up after entering the army so well as it is got up at Sandhurst?—I decidedly do not.

4238. Would you say the same of military history, namely, that you think it a great advantage to have been taught it when at Sandhurst?—Yes; and I should also say that it was an advantage to have learnt riding there. I can hardly put it as an advantage, but it is agreeable to have learnt so much drill as one has at Sandhurst, because it gets you dismissed drill sooner when you come to your regiment.

Entrance examination.

4239. Do you think that a boy of fair position in a public school ought to pass the entrance examination without difficulty?—I do not know. I think that the education in English language at public schools is generally not enough, that is to say, English grammar and composition. I think that that is a thing in which they would probably fail.

4240. Can you specify any other points in which the fact of not having gone to a crammer would be a disadvantage to a young man at the entrance examination, if he had simply gone up from some public school?—I should think that he would be at a disadvantage in French, but I hardly know enough about public schools to say.

4241. Did you ever hear cadets themselves speak of the cramming schools as very bad places?—No; the cadets who have been to crammers generally like them; they say "It is an awfully jolly place, we "used to do just as we liked;" but I myself think that it is the very worst place which could ever be invented, and I think that those are the places from which all the evil of fellows who come to Sandhurst comes, or most of it at any rate.

Moral supervision.

4242. Masters at all schools generally take an interest in the whole character of the pupils. Did you find any one at Sandhurst who would take an interest in your whole character in the same way as a master of a public school does?—Yes.

4243. Was that accident, or was it done officially?—I know one case at any rate where it was done officially, and I know of others where it was from an individual interest in the cadet.

4244. Would you say that it is a rule that a cadet at Sandhurst would find certain persons who would officially take an interest in him?—Yes, if he chose to find them himself. If you choose to work yourself the professors will almost invariably take an interest in you.

4245. I am not speaking merely of work; but suppose that a young man was going on badly, would he find any one at Sandhurst who would think it his duty to give him a word of advice?—The captain of his company; if a cadet is going on very badly, so badly as to be brought up before the commanding officer, he must come under the observation of the captain of his company.

4246. Under ordinary circumstances would the captain of the company be likely to give any advice, or to take any interest in the character of the young men in the company?—I think not, unless a cadet, as I said before, was of very bad character, and always in fact getting into rows.

4247. Then he would only take an interest in the men of bad character?—Those would be the only men who would come under his notice, because all the complaints, &c., of the professors go through the captain of the company.

Discipline.

4248. (*Lord E. Cecil.*) With respect to *espionage*, is there anything of the kind at Sandhurst amongst the serjeants?—I believe not now; there was formerly.

4249. Would a serjeant's word be believed before that of a cadet, supposing that he was brought up before the commanding officer for any offence?—I think not; I do not myself remember having seen a serjeant brought up in evidence against a cadet; at

Ensign E. Daring.

4 March 1869.

Royal Military College, Sandhurst.

General tone.

the present moment I cannot remember any such instance.

4250. (*Sir C. Russell.*) With regard to the evidence which was given as to the cadets lounging about, and not even caring to play at cricket and other games, do you think that if they were encouraged to enter into competition with other public schools, as is the case between Eton and Harrow, and Winchester, in games of cricket and athletic sports generally, it would be a stimulus?—No, I fancy that the performers in the matches would still remain the same fellows as they would have been before; I do not think that it would make much difference to those extremely idle and listless fellows who do not care one way or the other, and who spend their whole time in smoking, and in fact who have not any *esprit de corps*.

4251. (*Rev. W. C. Lake.*) Do you think that they form a large proportion of the cadets?—Decidedly not a very large proportion, and you can see that by the way in which football is played there; they do not play with such large sides as at public schools; they play 20 on a side, and the rest are looking on, who take great interest in it, especially in a match between the companies, and therefore the idle and listless cadets do not form any large proportion.

4252. (*Sir C. Russell.*) When you were at Sandhurst were there any workshops open to the cadets if they wished to learn turning and joinery?—There were not any.

4253. Do you think that if there were such workshops the cadets would avail themselves of them to any extent?—I do not much fancy that they would; the reason for my saying so is that I think that the cadets who would otherwise probably be that way inclined are most likely those who are going in for their commissions, and who very often work out of study, and occupy themselves in that way.

The witness withdrew.

The Rev. George Frost, M.A., examined.

Rev. G. Frost.

4 March 1869.

Preparatory schools for the military examinations.

4254. (*Chairman.*) You live at Kensington?—Yes; Kensington square.

4255. You prepare young gentlemen for their examinations at Sandhurst and other similar establishments?—Yes; chiefly for Woolwich.

4256. At what age do they come to you?—About 15½ or 16.

4257. How long do they remain with you?—Until 19, if they are not passed before.

4258. Before coming to you, where have they received their previous education?—Generally at different schools, public schools and private.

Chief subjects of instruction.

4259. Do you find that the education which they have received at the public schools still leaves room for your assistance, and enables them to receive benefit from it?—Yes; they are generally very deficient in mathematics.

4260. Are there any other special subjects in which they are more or less deficient?—They do not generally know much of English as a subject, and they do not know much of the sciences.

4261. Do they live in your house?—Yes, all of them, as a rule.

4262. Will you favour the Commission with an account of your establishment, and the mode which you adopt for maintaining discipline?—I have about 25 pupils, and sometimes about 30, and of those I should think that about 25 are for Woolwich. We begin work in the morning at 9, and the only time which they have to themselves is from 2 to 4 in the afternoon; they are with me working at night till 9 or 10 o'clock, so that there is no going out, or much chance of getting wrong. I devote about six hours a day to mathematics, three hours in the morning, and three in the evening. For the rest of the subjects I have tutors who take the pupils at different hours as they can be spared from me.

4263. How many hours a day do the lads work?—The least would be 8, and some work for 10 or 12.

4264. Do you apply any test to the boys, in the shape of an examination, in order to entitle them to take advantage of your education?—Not at all; it would be of very little use, because some boys excel in classics, and some in mathematics, and some in other things; and I take the weak subjects first and of course work them the hardest.

4265. (*Lord. E. Cecil.*) Of what age are your boys?—From 16 to 19.

4266. You say that they are generally deficient in mathematics, do you ever find that they are deficient in classics?—Yes, but I consider that that is chiefly from the idleness or defect of the boy, and not necessarily from any fault of the school. In mathematics it is because they do not give any time to it.

4267. Is it your impression that the education at public schools is generally deficient in mathematics?—Yes; I was 20 years mathematical master in Kensington School up to last year, and judge from this experience what may be done.

4268. From what schools do your boys generally come?—From all of them.

4269. All the schools included in the inquiry by the Royal Commission, Winchester, Eton, Harrow, and so on?—Yes; and private schools.

Conduct of pupils.

4270. Have you observed any cases of disgraceful conduct among your boys?—No; in one or two cases I have declined to take them back after an examination.

4271. You have never found any of your pupils guilty of drunkenness?—No.

4272. Nor of gambling?—No.

4273. Of debauchery?—No; not so far as I know; I never heard of anything of the kind.

4274. Are any of your pupils ever guilty of theft?—Not that I know of.

4275. And you do not think that swearing or obscene language, as far as your experience is concerned, is common amongst them?—No; I have never heard it myself. I have heard that they do swear occasionally, if they get excited when playing at football, or anything of that kind.

4276. Do they work regularly eight hours a day during the week?—Yes; that is the least.

4277. What time have they for recreation?—From 2 to 4, or from 3 to 5.

4278. Have they any time at night?—No.

4279. Do you ever allow them to go out?—No.

4280. And have you reason to believe that your pupils are as well conducted as any pupils in any college or educational establishment?—Yes, I think so.

4281. Breaches of discipline are almost unknown?—Yes.

Control exercised over pupils.

4282. (*Sir C. Russell.*) What is the longest period during which your pupils are out of your immediate observation?—Not more than two or three hours in the day in the afternoon.

4283. Is there any restriction attempted to be imposed upon them as to their going to any places of public entertainment?—Yes; they would not be allowed to go anywhere unless they had a written invitation from some of their friends, and I knew that it was right.

4284. (*Lt.-Col. Chesney.*) You make no objection to their going out in the evening upon a written invitation being shown to you?—No, within certain limits. It would be an invitation from some family friend asking the pupil to dine with him, or go to the theatre, and then I should not object.

4285. Is there any restriction as to the number of times?—I should not allow the same boy to go more than two or three times in six months. I should write to his friends and object to it if it were more.

4286. Do you pursue any difference of system between the lads who are preparing for Woolwich

and those who are preparing for test examinations?—Yes; those preparing for Woolwich must read much higher, much harder, and for a much longer time.

4287. Is it within your knowledge that there are certain establishments for preparing for the army where there is no attempt at discipline?—Yes; I have an impression of that kind.

4288. You have heard of them?—Yes, and I have had boys who have come to me from such establishments.

4289. Do you consider that with proper management it would be easy in London to prevent young men from being out in the evening?—Yes, very easy indeed, because I do it without any trouble. I do not think that there is any difficulty at all. All my boys are in my house, or are living close to me, and I know from the landlord the time that they come in and go out. There are only two pupils of that description.

4290. Do you take army pupils who are not resident in your house?—Not as a rule. I have two out at present.

4291. In lodgings?—Yes, only until I have room myself; that may be a matter of three or four weeks.

4292. Do you not find it rather difficult to watch over them?—No, because they come to me from their lodgings at 9 in the morning, and remain with me till 10 at night, and they have merely to go home and sleep, and they are with people in the same square whom I know.

4293. Can you give us any information with regard to the excessive smoking which is complained of in the case of cadets who come from private schools?—It is always a difficulty to get it stopped. I do not allow it in my house, and repress it as much as I can. Of course they can smoke if they go out to take a walk, and I cannot prevent it.

4294. (*Maj.-Gen. Wilmot.*) During the two hours that you say that they are at liberty to go out, I suppose they can go anywhere that they please?—Yes.

4295. And the principal control which you exert over them is by keeping them actually at work?—Yes.

4296. (*Mr. Parker.*) Do you find among the pupils who come to you any who show great incapacity to come up to the standard say of the Woolwich examination?—Yes, a few; perhaps about one-third of the number who come.

4297. There would be some whom you could not bring up to the standard of the Woolwich examination?—Yes; I send up my boys every time to the examination, and I judge from the progress which they have made whether or not it is worth their going on, and I write to their friends accordingly.

4298. Do you find any who cannot be brought up to the standard at Sandhurst?—No; with common industry.

4299. Most of them if they went up to the examination would fail before they came through your hands?—Yes generally; I should not like to say so in every case.

4300. Does that seem to you to proceed generally from neglect of their previous education?—It arises from a different sort of education. In the public schools they give no time to mathematics, perhaps only an hour and a half in a week, and when the boys come to me they have six and sometimes nine hours a day in that branch alone.

4301. Do you notice any great difference between one public school and another as regards mathematics?—Yes; there is a great deal of difference. A school like Marlborough is very good, or Haileybury, Wellington College, or Rossall; both Harrow and Eton are weak in mathematics.

4302. Mathematics are the chief point in which you desire to work them up?—Yes; and it being my own subject I take more interest in it.

4303. But they generally take up some stray subjects besides, in order to get marks in them, do they not?—Yes.

4304. Should you say that it was a good system by which a few marks can be got in so many miscellaneous subjects? Do you think that there is any real value in such studies?—I think so. My own impression is that the marks for classics are too high for Woolwich, and that the subject is too well rewarded in comparison with other languages and with mathematics.

4305. Do any of your pupils study a language, French or German?—Yes; they must take one, many of them take both.

4306. And they learn it in your establishment?—Yes; I can tell you exactly what they are all learning.

4307. (*Lord de Ros.*) Is the education which you give, such as you would yourself think best, or is it entirely shaped with a view to the special examination for entrance into the military colleges?—It is a good deal shaped for entrance into the military colleges, if they went to the university I should rather alter it.

4308. You have spoken of eight hours at mathematics, do you think that young men of that age are able to bear that long strain without injury to health?—I have never heard of any ill result from it.

4309. Do you look much to being well acquainted with previous examination papers, and do you teach somewhat specially from observation of particular examiners' lines of questions?—No; I teach all through the text books, as if they were going to college.

4310. Do you adopt any variety of line of study according to the apparent turn of mind of the pupil, or are you obliged to work in a groove, to meet the requirements of each college? Do you give him less mathematics if he has a turn for mathematics, or do you adapt your education to his turn of mind?—No; I should give him the same mathematics, but of course extra in other things.

4311. Is writing from dictation your chief means of instruction in spelling and English grammar?—They have dictation, but that is not the only means.

4312. Have you foreign ushers for French and German?—Yes.

4313. (*Rev. W. C. Lake.*) Do you prepare both for Sandhurst and for Woolwich?—Yes, but chiefly for Woolwich. I have at present only two pupils who are going to Sandhurst.

4314. What is your present total number of pupils?—Thirty.

4315. Have you any means of comparing the general qualifications, both intellectual and moral, of the young men who go to Sandhurst and of those who go to Woolwich?—Yes; I see that the work of those who go to Woolwich is very much superior to the work of those who go to Sandhurst.

4316. Is that so in general conduct as well as intellectually?—I have no reason to complain of the Sandhurst youths in that respect; but the Woolwich youths work harder, because there is more competition.

4317. You have not any reason to complain either of the Sandhurst or of the Woolwich youths?—No.

4318. At a public school, if you had 30 boys at a boarding-house, there would hardly be any opportunity of knowing them?—I have no complaint to make as to anything immoral; the only complaint is that they make too much noise at times.

4319. You have never heard of any cases with your pupils of their being out at late hours?—No; now and then there is an attempt on the part of the boys to get a little more into their own hands; but, of course, I repress it at once, and if it goes beyond a certain point I deal with it at once by writing to their friends; that very seldom happens, never, perhaps, more than once a year. Last term a boy stayed out till half-past 12, and I wrote to his father about it.

4320. What are your regulations with regard to hours, how much liberty are the pupils allowed?—They have two hours in the afternoon before 5 o'clock,

Rev. G. Frost.
4 March 1869.

and at 5 they come in to their tea, and at 6 we work mathematics until 9, at 9 we have supper, and at 10 they go to their own rooms, and can work if they like.

Preparatory schools for the military examinations. Method of instruction.

4321. They are not out at all in the evening?—Not at all, and that is a great safeguard.

4322. How long do you estimate that the course of preparation for a youth, going either to Sandhurst or to Woolwich, ought to last?—That, of course, would depend upon what he knew when he came, from six months to eighteen.

4323. Taking the medium time, namely, about 12 months, what would generally be your course of instruction?—Supposing that a boy came to me, I should first ask what he had learnt; he would tell me what he proposed to take up, and then I should examine him in these branches, and decide whether he should take the five subjects or not; if he did, we should work as hard as we could in the six months, and then he would go and be examined.

4324. When you say that you would work as hard as you could, how many boys do you put in the same class?—In mathematics they are always together, but each works on his own account. I take boys on as quickly as I can.

4325. I want to get a distinct idea how you would get over a good deal of work in a short time?—By a great amount of explanation and personal attention in mathematics: in French and German they go one by one for an hour each to the French or German master. The drawing is in a class; it is in two divisions, there being about 12 or 13 in each division.

4326. In mathematics, do you have them all in a class, and then individually?—No, I have them all in the same room, but one is not kept back by another. They are at mathematics in the morning from 9 to 12, unless they are doing French, or German, or drawing.

4327. Do you go through the questions which have been asked of previous candidates for Woolwich?—Yes, of course I read them over.

4328. Is it your practice to go through them with the boys?—No; I only look at them when they come out as a matter of curiosity.

4329. You do not work them up with the boys?—No; I work from the Cambridge text book proper for the subject, not going beyond the syllabus which is placed at the commencement of the Woolwich report; I take that as a guide.

4330. Do you find that the majority of your pupils stay with you for a year, or for about what time do they stay?—I should think that the majority stay for a year; perhaps one-third are concluded in the first six months.

4331. Do you find that they come generally ignorant from the public schools?—No; the chief thing in which they fail is mathematics. I think that a public school boy has more power of learning than a private school boy; he has been used to it, and sticks to it, and does more in a given time.

Inspecti prepara schools.

4332. (*Chairman.*) Would you think it an advantage if establishments like your own were included within a system of registration, and were under some kind of inspection on the part of the Government?—No, I do not think so.

4333. Would you object to it?—No; but I do not see that it would do any good. I do not see in my case where it would make any difference; they would always find my pupils at work, except during the two or three hours in the afternoon.

4334. (*Lord E. Cecil.*) Do you think that establishments like your own are generally so well conducted that they would not require such an inspection?—I do not say that. I do not wish to praise my own establishment.

4335. (*Rev. W. C. Lake.*) Would it not be an advantage, with regard to the worst conducted establishments, that they should be struck off the list of schools approved by Government, or induced to submit to inspection?—Yes; and I do not see why they should object to inspection at all, unless there was something wrong; in fact for my own part I should be rather glad of it; I should not have the slightest objection.

4336. (*Sir C. Russell.*) From your experience in preparing boys for these examinations, do you think that if they were subjected to a *vivâ voce* examination, as well as to that by mere papers, a better opinion as to their real capacity would be obtained by that course being adopted?—No, I do not think so.

The witness withdrew.

Ensign C. A. Mott.
4 March 1869.

ENSIGN C. A. MOTT, 2nd Regiment, examined.

Royal Military College, Sandhurst.

4337. (*Chairman.*) You are in the army?—Yes.

4338. In what regiment?—The Second Queen's.

4339. In what rank?—Ensign.

4340. You were educated at Sandhurst?—I was.

4341. When did you leave Sandhurst?—In June 1865.

4342. When did you join the army?—About two months afterwards; in August.

4343. Did you obtain your commission by purchase?—Yes.

Preparation for the entrance examination.

4344. Where were you educated before you went to Sandhurst?—I was first at a private school and at Eton, and then I was at a tutor's.

4345. Was he what is called a crammer?—A sort of crammer.

4346. Where did he reside?—At Clapham. There was a regular school there, and there was an extra class for those designed for the army.

4347. Did you live in the house?—Yes.

4348. What sort of place was it; were you kept in good order, or were you allowed to do pretty much as you chose?—We were not kept in very strict order, but I fancy more so than, from all accounts, is the case at most of the cramming schools.

4349. (*Lt.-Col. Chesney.*) Was that the private establishment of Mr. Wrigley called the Clapham Grammar School?—Yes.

4350. (*Chairman.*) Do you think that the time which you spent there was of advantage to you?—No, I do not think that it was.

4351. Did you forget what you had learnt at Eton?—I could not keep up my classics. I learnt some mathematics.

4352. It was mathematics to which you paid attention?—Yes; mathematics and history for the examination.

4353. Then you went up to Sandhurst, and you had to pass the preliminary examination to get in?—Yes.

4354. Did you pass it with ease?—Yes, I passed 38th out of about 150. It was chiefly through my classics.

4355. Do you think that you would have been able to pass that examination if you had gone straight from Eton?—I think that I should have passed higher, because I should have made so many more marks in classics, I think, if I had kept them up.

4356. Of course it was a matter of importance with you to have obtained your commission free if you had been able to do so?—Yes.

Educ Sandh

4357. When you entered Sandhurst did you expect that you would be able to pass the necessary examination for that purpose?—I had rather an idea that I might get a commission without purchase, but I was not certain, because of my knowing so little about mathematics.

4358. How long were you at Mr. Wrigley's establishment?—I was there for about a year and nine months.

4359. During the time that you were at Sandhurst do you think that you can attribute your having failed in obtaining the number of marks necessary

to secure a commission without purchase to any defect in the educational system, or in the discipline of the place?—No, I think not. The only reason, I think, of my coming out lower than I went in, was through my not being able to fall back upon my classics.

4360. On entering the army did you find it an advantage that you had been educated at Sandhurst?—I think not; I had just the same preliminary course of drill, and everything else, as if I had not been there.

4361. Looking back upon the past, if you had the choice, would you still have gone to Sandhurst, or would you have chosen some other method of entering the army?—I think that I should have gone to Sandhurst.

one. 4362. Do you think, comparing Sandhurst with Eton, that the general tone at Sandhurst, the moral tone, and the gentlemanly feeling and bearing among the cadets, is as high as it is amongst the boys at Eton?—No, certainly not.

4363. Do you think that a greater proportion of the cadets are idle at Sandhurst than of the boys at Eton?—I should think that they were, because they are not obliged to work so much at Sandhurst.

4364. Were you left pretty much to yourself at Sandhurst? If a lad chooses to do nothing, there is not much that he is compelled to do?—No, he is not compelled; I believe that he might do nothing at all if he liked.

4365. Do you attribute the difference in the moral tone of the cadets at Sandhurst, and their inferiority in that respect to the boys at Eton, to any particular circumstance, to the place, or to the cadets' own antecedents?—We generally used to say that it was from the cramming places.

4366. That in fact before they came up to Sandhurst they had acquired a good deal of what is disadvantageous at these cramming places?—Yes.

4367. (*Lord E. Cecil.*) Did you like Sandhurst during the time that you were there?—Yes.

4268. You look back with pleasure to the short time that you passed there?—I do.

4369. Do you think that there was as much *esprit de corps* amongst Sandhurst cadets as there was amongst Eton boys?—No, certainly not.

4370. Did they care as much for games?—No; when I was at Sandhurst very little cricket or football went on.

4371. How did the cadets chiefly amuse themselves?—Chiefly in playing billiards, and things of that sort.

4372. Were there any billiard tables down the town during your time?—Yes, there was one table, and there was another before I left.

4373. Used the cadets to play there?—Yes.

4374. And did playing for money go on there?—Yes.

4375. Was there any gambling?—No, I hardly recollect any gambling.

4376. You say that you think that the general tone of the place was lower than at Eton?—Yes.

4377. In your time were there many disgraceful offences, intoxication, and theft?—There was no theft.

4378. Was there a good deal of falsehood?—No; I do not recollect any cases.

4379. Was there intoxication?—Yes; there were several cases of intoxication.

4380. Was there any bullying?—No, I do not think that there was.

4381. Did no bullying go on in the associated dormitories with four or five cadets together?—I think not; I was in a company where we were separate, we had partitions; we had what were called bunks.

4382. You are not aware that there were many cases of indecent conduct, or anything of that sort?—No.

4383. No cadets were sent away for that crime during the time that you were there?—No, not that I am aware of.

4384. You left the college in 1865?—Yes.

4385. Do you recollect the disturbance which took place at Blackwater in 1864?—Yes.

4386. Will you give the Commission some account of what happened then?—It seemed to be the usual thing to have a row of some sort or another at Blackwater fair, which took place every year, and in that year the first thing which happened was on the Sunday. I think that the fair began on the Tuesday or Wednesday. On the Sunday before, there were some few booths in the village where they had roulette, and one cadet, I believe, thought he had been cheated (this is merely hearsay), and they pulled down the man's booth, and threw the cart into the river. This acted as a sort of firebrand, and as soon as the fair was established, directly that the lamps were lighted in all the booths, the cadets ran down the street and put out all the lights, and then they pulled down a tent and kicked up a row; the next day they were all formed up on parade for the inspection of the people who had had injuries done to them, that is to say, the proprietors of the booths, and that enraged the cadets more than anything; they very nearly broke the ranks, but not quite. For this they were all placed under arrest. When the under-officers and corporals are under arrest, they are not allowed to fall in on parade, and therefore there was no one to order the cadets to fall in, or to order them to fall in in the classes going to study, and they would not fall in by themselves; the under-officers and corporals had to be taken off arrest again, and then the row ended, except that they sent away three or four of the ringleaders.

4387. Do you think that the state of discipline at Sandhurst in your time was good?—It was not very good.

4388. Where did the principal breaches of discipline take place, in study or out of study?—In study, certainly; on parade the discipline was very good.

4389. Did those breaches of discipline take place in the halls of the military professors, or of the civilian professors?—Of the civilian professors, decidedly.

4390. Do you think that the military professors had more power of keeping order than the civilian professors?—Yes; the cadets showed more respect to the military professors.

4391. And generally speaking they never played tricks in their halls?—No.

4392. Do you think that obscene language and swearing used to go on behind the backs of the professors in the halls?—I suppose that it did.

4393. Were there caricatures on the slates, and that sort of thing?—Yes, in some of the rooms.

Results of the College instruction.

4394. What is your opinion with regard to the drill at Sandhurst? Do you think that it is sufficiently practical?—Yes, I believe that the cadets are drilled very well there; when I joined my regiment I was just as well drilled as I was after I had gone through a certain preliminary course, which every one has to go through on joining a regiment; but I had to go through it as a matter of form.

4395. Do you think that that was from any prejudice in the case of the Sandhurst cadet?—No, but they did not seem to recognize the previous drill at all.

4396. Did you find any other portion of the practical course at Sandhurst of use to you, the riding, for instance?—No, I did not find the riding of much use to me.

4397. Did you find that you were able to perform your regimental duties as an officer better from having been at Sandhurst?—I cannot say; I do not know what I should have been if I had not been there. Of course you get nothing at Sandhurst as far as the interior economy of a regiment, keeping accounts, or anything of that sort.

4398. I suppose that you were instructed in both permanent and field fortification, were you not?—Yes; there was a short course of permanent fortification.

4399. Do you think that the instruction in permanent fortification has been of any use to you?—It

Ensign C. A. Mott.

4 March 1869.

Royal Military College, Sandhurst.

was so very short that I remember very little of what I learnt there.

4400. Is it your opinion that too many studies were taught in the short time that you were at Sandhurst to obtain a really good acquaintance with them?—Yes; I was only there for a year, and in that period I certainly do not think that you have sufficient time to get through the study of fortification with all the other things.

4401. Do you think that the course of study, as far as French and German and languages are concerned, is adapted to make cadets good linguists, or do you think that they know just as much French and German when they enter the college as when they leave?—I learnt French there, and I think that I knew more of it when I left than when I went there. Some cadets would hardly learn anything at all in the way of languages.

4402. Are you speaking of your colloquial and *vivâ voce* acquaintance with the French language, or simply of your grammar knowledge of the language?—I am speaking of a colloquial acquintance with it.

4403. (*Lord de Ros.*) So that you could make your way if travelling abroad?—Yes.

4404. (*Lord E. Cecil.*) You think that you could speak more of French when you left Sandhurst than when you entered it?—Yes; it just rubbed up what I knew before. I did not learn French at Eton, but I learnt it at a private school before I went to Eton, and I think that it improved what I knew.

4405. Would you be in favour of confining the system of education more to pure military instruction, such as surveying and fortification?—Yes, I think so. As the course there is so short I think that it would be better.

4406. As far as your impression goes is it not almost impossible for the cadets to learn all the subjects which are put before them in so short a time?—I think so.

Sandhurst compared with Eton.

4407. (*Sir C. Russell.*) As you were at Eton, and afterwards at Sandhurst, can you form any sort of idea how it is that at Sandhurst so many of the boys do not care to join in cricket, and boating, and athletic sports, and in fact the ordinary amusements of boys?—I think that they get these ideas at the cramming establishments, namely, smoking and drinking and playing at billiards, and when they come to Sandhurst they do not care about any active exercise.

4408. Had you anything at Sandhurst analogous to the system of money allowances to boys which exists at Eton?—Yes, we used to get weekly allowances. The cadets used to get 2*s.* 6*d.* a week. The corporals and under-officers got a higher rate; the corporals got about 3*s.* or 3*s.* 6*d.*, and the under-officers 4*s.*, or something of that sort. I was never a corporal or under-officer, but I used to get 2*s.* 6*d.* a week.

4409. Was there any facility at Sandhurst for obtaining money from money-lenders, or anything analogous to that?—Yes, some men used to come down there occasionally, tailors and those sort of men, and men selling cigars. I fancy that they used to lend money.

4410. Did you consider the responsible officer of your company as being very much in the same position as the captain of a house at Eton?—Yes.

4411. Would he, for instance, take upon himself to caution a boy, and if necessary give him a licking as the captain of a house at Eton would do, without saying anything to the senior authorities at the college?—No, he would not do that.

4412. From your practical experience of both Eton and Sandhurst, do you not think that the system of the captain of a house at Eton is applicable to Sandhurst?—Certainly not.

4413. Is there any fagging at Sandhurst?—No.

4414. There is nothing analogous to it?—No.

4415. (*Lt.-Col. Chesney.*) Do you think that the under-officers and corporals might have a good or a bad influence over the rest of the cadets under certain conditions? Is it possible from their age there that the under-officers or corporals should have much influence over the others?—I think that they have a certain amount of influence; they are looked up to in a certain way.

4416. Do you consider that there is any objection to the method of bathing so publicly as the cadets are said to do before each other?—I do not think so.

4417. Do you know if there is much money-lending carried on by London people sending agents down to Sandhurst?—I know that it used to go on to a certain extent. I do not know whether there was very much of it, but I fancy that it is chiefly through the tailors, that the cadets promise them their outfits, and that they get money out of them in that way.

4418. (*Sir C. Russell.*) Is there anything at Sandhurst approaching to the system of passing in swimming which is pursued at Eton?—There was not when I was there.

4419. Is anything approaching to the facilities which are given at Eton given at Sandhurst to induce cadets to learn swimming?—I think not. At Eton they pass so as to be able to go out in a boat, whereas at Sandhurst they do not seem particularly to care about boating.

4420. May you go in a boat at Sandhurst if you have not passed?—Yes; because there is no passing at Sandhurst.

4421. Therefore there is no inducement at Sandhurst for a boy to learn swimming, such as there is at Eton?—There is not.

Under-o

4422. (*Maj.-Gen. Wilmot.*) Are there many cadets at Sandhurst who pass through Sandhurst without being corporals or under-officers?—Yes, a great many. They have four under-officers and, I think, 10 corporals to each company.

4423. Then a great many pass out of Sandhurst into the army without ever actually themselves commanding others?—Exactly so. The number who did so in my time were decidedly a minority; they were under 50 in the whole college, out of about 250.

4424. Should you not think it rather an important part of a military education that a young man should be fit to command others?—Yes.

General disciplin moral su vision.

4425. When you were at Sandhurst would a cadet have considered it disgraceful to reply to an officer or to an instructor evasively or by direct falsehood?—Yes.

4426. The tone of which you speak was such that it would not have tolerated falsehood?—I do not think that it would have been taken very much notice of, but in some cases I think that it might have been, if it was something very flagrant.

4427. Considering that at the time of which you speak, in your opinion the majority of the cadets came to the institution with the low tone which I understand you to say prevailed, do you think that there was any attempt on the part of the authorities to raise that tone?—No, I do not think so. After I left they instituted several things, for instance, sitting-rooms and billiard-rooms, in order to keep the cadets more out of the way of the public-houses, and they tried to improve the tone in that way.

4428. Were appeals ever made to the soldierly or gentlemanly spirit of the cadets, so far as regarded conduct?—Yes; I have heard them read by the commandant.

4429. But not by the captains of companies?—I do not recollect it.

4430. Do you suppose that the commandant or the captain of the company was more intimately acquainted with the cadets?—The captain of the company was more intimately acquainted with them.

4431. During the study hours was there any corporal or under-officer in charge of the class?—There was always a corporal or an under-officer in charge of the class.

4432. Was he simply to assist the professor, or was he to carry out discipline independently of the professor; that is to say, was he responsible that order was kept?—He was.

4433. Then how do you suppose it was that the

discipline in study varied so much?—Through the corporals or under-officers not doing their duty.

4434. But they did it with some professors and not with others?—In the study hours with the military professors the under-officer or corporal had not much to do, because the cadets used to work well, and never thought of making a row or of playing any tricks as they did with the civilian professors. A corporal or under-officer is present in the classes of those cadets who have been there over one term, in fact, it is the senior cadet, whoever he may be, who is supposed to keep order.

4435. (*Mr. Parker.*) You have mentioned billiards as one of the chief amusements in your time, for how many hours a day would it have been possible for a cadet to play billiards?—Billiard tables were not then in the college; they were down at the public-houses, and therefore the cadets used to take their chance.

4436. Practically could any one cadet get more than an hour or two hours in a day to play at billiards?—If many cadets were down at the room, there was generally pool, and of course a cadet could play as long as he liked.

4437. Pool is not allowed at the tables in the college is it?—I do not know; the tables were put up just as I left.

4438. Was there much money changing hands at pool?—Not very much; they used to play very low.

4439. Were cards played?—No; I do not know that I ever recollect seeing cards played. I may have done so now and then, but very seldom.

4440. Had the chaplain anything to do with the moral discipline?—We never used to see him, except in chapel or in hospital.

4441. You had no personal relations with him?—No.

4442. (*Lord de Ros.*) The drill which you have had in the Queen's has been conducted by the adjutant and serjeant-major?—Yes.

4443. Supposing that there were a very good adjutant and serjeant-major at Sandhurst, might not a cadet be so prepared there as to require very little drill on joining, if the time were given to it?—I think so. I think that most Sandhurst cadets would be able to get on without any of the preliminary drill which a young officer has who has not been sent from Sandhurst, and that there is a great deal of unnecessary drill.

4444. One of the first difficulties on joining is the habit of giving words of command with confidence. Do you think that that might be practised with advantage at Sandhurst, with skeleton drills, under the direction of the serjeant-major?—Yes; I think that that is the great fault generally of young officers on joining their regiment.

4445. Supposing that the cadets themselves were to be taught to make abattis and light field works as a study and not in recreation time, and to have marks for skill exhibited, do you think that the cadets would take to that as they do to the riding?—They do make gabions and such things.

4446. Is not that taken out of their recreation time?—No, it is taken out of their study time.

4447. Do they get any credit for it; do they get any marks for it?—No.

4448. Do you think that it would be an advantage if they did?—I think so. A great deal of interest, as it was, used to be displayed in that sort of thing, going out and going through fortifications and field-works.

4449. It gave them the idea that they were rather officers than soldiers?—Yes.

4450. Did not most of the cadets take a pleasure in riding?—Yes.

4451. But was not that taken out of recreation time?—I am not sure of that.

4452. You were in the riding class?—Yes.

4453. How many lessons in a week did you have, was it daily or twice a week?—I think that it was about three times a week.

4454. Do you think that if marks were given for riding and swimming, and athletic exercises, it would rather tend to encourage the cadets in those pursuits?—Yes, I should think so.

Ensign C. A. Mott.

Royal Military College, Sandhurst.

Results of cramming schools.

4455. (*Rev. W. C. Lake.*) We have heard a different account of a cramming school lately from what you have given of them; what makes you think so badly of them?—That used to be the impression.

4456. The establishment which you were at was rather strict than otherwise?—Yes.

4457. What sort of things used the men to say about the cramming schools, that there was a low style of fellows there, or not?—It was the general impression that it was at these places that they used to learn to go to public-houses so much, and to drink and smoke all day long.

4458. In your opinion did it affect their language; can you say that there was a lower style of talk at Sandhurst than you remember at Eton?—Certainly.

4459. You think that many things were said at Sandhurst, which public opinion would be very much against at Eton?—Yes; I attribute that to their going so much to public-houses, and of course associating more or less with low characters.

4460. Comparing Sandhurst with Eton, were you struck when you went there first with it being a good deal lower in point of tone than Eton?—I have no doubt that I should have been very much struck with it, if I had gone straight there.

4461. You mean that even the establishment at which you were, although you think it very much better than the ordinary run, was still a great drop?—It was. I felt it tremendously when I first went there.

4462. You said that you liked having been at Sandhurst; do you think that you have gained anything as an officer from having been there?—Not at present certainly, but I used to take an interest in some of the subjects, such as fortification and surveying and military history.

4463. What place did you take on coming out of Sandhurst?—I think that it was 72nd.

4464. (*Chairman.*) Will you mention to the Commission any circumstances which occur to you as to the general tone of Sandhurst, and the nature of the place; anything which illustrates the life at Sandhurst?—I think that we generally used to feel that all the officers and professors over us held themselves too much aloof. They seemed to think that we were more like private soldiers than anything else. We always used to appreciate any kindness from any of the military officers or people above us.

4465. (*Lord de Ros.*) You think that they might have been on the same footing with you as the major of a regiment is with a subaltern?—Yes; because you feel the difference directly that you join the regiment where you are on an equality with them more or less.

4466. (*Rev. W. C. Lake.*) Did you at Sandhurst ever find any one who in case you got into a scrape would give you advice?—No.

4467. You were never on any such relations with any of the professors?—No.

4468. (*Lord de Ros.*) Not in the same way as a subaltern would be with a captain, if he knew him in private life?—No.

4469. (*Lord E. Cecil.*) Your impression is that there is much too great a distance between the cadets and the professors?—Yes.

4470. I suppose that there must have been a good deal going on amongst the cadets which the professors or the authorities were not up to?—Yes, I suppose that there was.

4471. There was a good deal which would have been breach of discipline had it been found out?—Yes.

4472. (*Lt.-Col. Chesney.*) It has been said that lately the cadets have introduced amongst themselves a system of ducking any who have acted in a disgraceful way. From what you know of the college do you think that that is likely to be true?—Yes.

4473. (*Lord E. Cecil.*) You have stated that there

Ensign C. A. Mott.
4 March 1869.
Royal Military College, Sandhurst.

was a good deal of illicit drinking, how did the cadets get spirits?—They got them from the public-houses.

4474. Then a sort of connexion between the public-houses and the cadets was constantly kept up?—Yes.

4475. (*Chairman.*) Do you think that if any cadet showed a predisposition to study, the general tone of his companions would discourage him, and would be inimical to his following his inclination?—I think not. A certain number used to work hard at Sandhurst, and I do not think that it would have any effect on him.

4476. And you were happy there?—Yes.

4477. Did you like Sandhurst better than Eton?—No; I got into a certain set, however, of nice companions, and therefore liked the place very well.

4478. (*Lord E. Cecil.*) Was it not the case that in your time a great number of the young men who came up to Sandhurst from cramming establishments were suffering from venereal disease?—Yes, and that there were certain cadets there who were diseased during most of the time that they were there, and had to go to hospital. They used to be in hospital sometimes for a month together.

Results of the College instruction.

4479. (*Chairman.*) I suppose that although you did not feel the benefit of the military element in your education immediately on entering the army, yet you feel conscious that it is likely to be of benefit to you?—Yes; I feel that it might do me good.

4480. And that hereafter as you get higher up in rank, an education of the description which you received at Sandhurst may turn into some kind of use?—Yes.

4481. (*Lord de Ros.*) You chiefly allude to fortification and surveying, do you not?—Yes; there are two officers in my regiment now who were at Sandhurst who compose the voluntary surveying class at Aldershot.

4482. (*Lord E. Cecil.*) Do you think that unless you were to keep up surveying you acquired sufficient knowledge of the study to be permanently useful to you?—Yes; if I remember it as well as I do now, I could always survey a rough piece of ground.

4483. (*Lord de Ros.*) Supposing that you were sent along a road which passed through a rough country for six or seven miles, should you feel yourself competent to describe the road where artillery could pass, and where cavalry could pass, and where there would be the means of forming a post?—I think so; but the cadets are not exactly taught that at Sandhurst.

4484. But they might be very easily taught it, might they not?—Yes.

4485. (*Chairman.*) What you learnt of it at Sandhurst gave you a taste for it?—Yes.

4486. (*Sir C. Russell.*) From what you were taught at Sandhurst, could you to-morrow take a party of privates out of your company and teach them how to construct gabions and facines?—Yes. If I was going to do such a thing I should look through my books first, just to remind me, and to make certain.

4487. (*Lord E. Cecil.*) But you would understand the practical portion of it?—Yes.

4488. (*Sir C. Russell.*) You could do it with your own hand?—Yes.

4489. (*Chairman.*) Did they ever teach you at Sandhurst to write a report, and to describe a piece of country, as a subaltern officer making a report to a superior officer during a supposed campaign?—No, we never had to do that; but we went to sketch the ground. We never wrote any report.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 9th March 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

G. W. DASENT, Esq., D.C.L., examined.

G. W. Dasent, Esq.
9 March 1869.
Examinations for direct commissions.

4490. (*Chairman.*) I believe that you are one of the examiners at the examinations for direct commissions?—Yes.

4491. Since when have you been examiner?—For I think the last 12 years.

4492. Almost from the commencement?—Yes, very nearly from the beginning; ever since the examinations have been under the Council of Military Education, and a little time before. They were formerly under the Horse Guards.

4493. When you entered upon your duties did you find a test standard already established?—No, certainly not.

4494. You had to discover it for yourself?—Yes; I think that I can state the matter in a very few words. There was a minimum of 200 marks which candidates were expected to get, and I remember that when the Archbishop of Dublin and I examined 150 candidates, we only found 15 who came up to the minimum, that is to say, who qualified at all; in fact there was the greatest possible ignorance; there was no such thing as a standard, and any answers which we got were perfectly accidental.

4495. Did most of the candidates appear to come from the great public schools of England?—That for an examiner is a very difficult thing to say; he knows them by number; he has to find that out afterwards by looking at the report. But I should say that not very many came from public schools at any time, and I do not think that very many come now.

4496. Since the occasion to which you refer when the preparation of the candidates seems to have been so unsatisfactory, have you observed any improvement?—Yes; there is an immense improvement; in fact, it is the difference between zero and summer heat in efficiency. We now get 60 out of 100; it is the difference, I should think, between 0 and 60.

4497. Your standard of qualification has risen proportionately to the apparent improvement in those who presented themselves for examination?—Yes, decidedly. I find that I give, in an examination of 100 candidates, a much larger proportion of good marks than was the case formerly, and an enormous proportion—the proportion is 15 out of 20 instead of 15 out of 150, which was the case 10 or 12 years ago,—and which represented an

amount of ignorance which was something astounding, I mean in English and English history. I find that I can now give a very satisfactory amount of marks—out of 100 candidates there will not be more than seven or eight who will fail to qualify. In English they must get 200 marks to qualify.

4498. Is your examination a harder one now than it used to be?—No, decidedly not; but more candidates answer the questions. I do not think that for a direct commission you are bound to make the examination particularly hard; in fact, I think that all questions in all examinations ought to be easy. I think that a good man shows himself just as much in answering an easy question as in answering a hard one. I think that you ought not to put puerile questions, but I think that they ought to be fair questions over the subject of examination, and easy ones, and not at all catch questions. There is not the least doubt that the candidates are better able to answer hard questions now than they were at the time of which I speak.

4499. So that the improvement is discernible in the fewer number of candidates who fail?—Yes, and also in my giving a much greater proportion of good marks. In one particular examination I have to give 1,200 marks, and I have very often given 700 or 800, and occasionally I have given the maximum of 1,200 marks. I think that the maximum ought to be reserved for excessively good candidates. It is a remarkable thing that in the examination for direct commissions the three or four head candidates almost always answer better than in any other examination. In the subjects of English and of English history they will answer better than two or three of the head ones at Woolwich.

4500. Then you think that the system of examinations has had a tendency to improve the preliminary education of lads who have contemplated trying to obtain a direct commission?—Decidedly so, and, as it seems, for the very simple reason that this sort of education was never provided. At a public school I do not know how they learnt English or English history; and that is the experience of most people who have been to a public school at my age. And again, not only did no public schools afford that information, but no school afforded that information. I suppose that all educational institutions, except perhaps public schools (though I am not at all an enemy of public schools), are conducted on the principle of profit or on remunerative principles, and they teach their pupils what they think will best bring pupils to them. They have sent out pupils who were an honour to them, and we find that teachers begin to teach themselves. Candidates were very bad because no education in English or English history was provided for them, but now such education is widely introduced, and I believe that even at Eton it is beginning, and the consequence is that the candidates come up better prepared. It is not that candidates were more stupid formerly, but it was simply that they were not taught the subjects in which they were to be examined.

4501. (*Lord E. Cecil.*) I understand you to say, that you think that education is more improved now than it was 12 years ago. What were the faults of the candidates in English composition 12 years ago?—Simply in giving no answers at all. I think that I can show you some of the old papers.

4502. You have none of them with you now?—No; but I can show them to you. They simply did not answer anything at all. The only marks which you could then give them in English were for a very slight smattering of literature. As to the English language, they simply knew nothing at all about it; they I suppose sucked it in with their mother's milk, but they certainly had no knowledge of the English language.

4503. Were there any faults in spelling?—Yes, a great many.

4504. Do you find now that the candidates coming up are better grounded in that matter, or, for example, in composition?—Yes, there are decidedly fewer faults in spelling. Bad spelling of course is a very great fault, but there are many people who in dictation will make faults in spelling, but who, if you set them a letter to write, will not make a single fault.

G. W. Dasent, Esq.

9 March 1869.

Examinations for direct commissions.

4505. Do you think that the candidates whom you pass would, as a rule, be capable of writing a good military report?—That I do not know, because I am not a military man; but they very often write a very good letter, and I think that a man who could write a very good letter would probably write a good military report.

4506. I am speaking of a military report as a piece of English composition?—Yes, some of the letters which I have had written have been very good ones.

4507. I suppose that unless a candidate is able to write a good letter, or to construct a good piece of English composition, you do not pass him?—I do not say that at all; he passes if he gets his 200 marks, and he gets 100 marks if he does his dictation well, so that out of the whole exercise he has only to get 100 marks. Those who just pass in the examination for a direct commission ought to be sure of doing so if they have had an education of any sort.

4508. Do you judge of a candidate's work principally from the faults in composition or from the faults in spelling?—Certainly not from the faults in spelling; if he makes many faults in dictation he gets very few marks for dictation; but he has eight or nine other questions, out of which to get his remaining 100 marks, or 150 marks, or whatever he may want to make up the minimum of 200. The marks are added up, and so many marks are allotted to each question, and if a candidate gets 200 marks I return him as having passed. I know nothing certainly about what I am going to state, because I do not know the other parts of the examination, but I believe that a candidate who only gets 200 marks generally fails from not getting the proper average of 1,200, which he is bound to get in the whole examination.

4509. Have you always examined during the last 12 years?—Yes.

4510. And you have made your own standard; there has been no variation from it?—No; of course the standard of examination depends upon the candidates who are under examination; you get one very good man, who perhaps will obtain 1,200 marks; that puts up that particular examination, and it makes the maximum for it; but I am bound not to pass any one who cannot get 200 marks, which is a minimum that is never varied.

4511. If you alter the standard do you from time to time report the fact to the Council of Military Education?—I have not altered the standard; the standard has not been altered.

4512. You examine in English history, do you not?—Yes.

4513. Do you also examine in modern history?—There are a few questions in modern foreign history, but the examination is generally in English history. At that examination there are questions in the whole of English history, and there are a few questions in ancient history not English, and in modern history not English, which are added at the end; the bulk of that paper is English history.

4514. In which do you find the candidates best prepared, in ancient or in modern history?—In modern history.

4515. I think that you said that you had no means of judging from what institutions or schools candidates came?—No, but I think that I can pick out a public school man from his answers.

4516. Why do you say that?—I think that the public school men answer their questions generally in a freer and better way. I think that a good man from a public school answers better than any other candidate; but you sometimes get very bad ones.

4517. Do you find that the Irish and Scotch candidates are better prepared than the English?—I

G. W. Dasent, Esq.

9 March 1869.

Examinations for direct commissions.

only know them by numbers. I perhaps might tell an Irish candidate by "would" or "should;" I think that I should tell him by his tenses and his moods. I could tell him by putting into the examination what I occasionally do, namely, the life of O'Connell, or some Irish question.

4518. We have had it stated in evidence that the Irish especially are very well prepared in classics?—I do not examine in classics.

4519. Have you found any pre-eminence of that sort in English composition?—I should think it very likely that a man who did his classics well would do his English and his English history well.

4520. (*Lord Northbrook.*) Do you examine in any way under the Civil Service Commissioners?—Yes, for India.

4521. Do you see any reason why the examinations for direct commissions should not be under the same body? Is there anything peculiar in the examinations for direct commissions?—No, except that I should think that the Civil Service Commissioners had quite work enough.

4522. (*Sir C. Russell.*) I understood you to say that you had noticed a very marked improvement since these examinations were established, in the facility with which the examination papers were answered?—Yes, in the amount of information which I can get on a paper of questions; it represents such an amount that it is very remarkable; it is the difference between nothing and something, and very often a very good something.

4523. Do you think that some of that is owing to the system of cramming, by which boys are specially prepared for an examination which to a great extent they know that they are to undergo?—It depends upon what you mean by "cramming." If you mean by "cramming" forcing an amount of undigested information into a boy which he brings out anyhow, I think that then it is the duty of the examiner to find that out, and not to give him any marks for it. But if by "cramming" you mean a special course of training, as long as the great public schools, or other schools, do not teach English and English history, it is natural that candidates should go where that is to be got. I think that it is a great evil that alterations are not made in our public school education; but they are being made. At Rugby they have an excellent course of history and English incorporated in the school studies, which I believe is working very well.

4524. Then you do not think that the system of cramming is practised injuriously in preparing boys for the examination?—I beg your pardon; I say that I think that it is very often injuriously practised on boys at these institutions. It seems to me that you send a boy there to read up in a very short time what he ought to have learnt in five or six years at a public school. It is like giving a man all the food to eat in six months which he ought to have eaten in six years; he does not digest it. But even at one of these places you cannot cram a boy who has not some memory. By "cramming" I mean a boy learning by rote characters out of manuals and throwing them at your head. I have 100 boys who come up, and when I find that 10 or 12 of those boys throw at my head the character of Richard the Third, for instance, out of one manual in history, and that they sometimes make very bad mistakes in it, I know whence it has come. The first answer produces an effect, but when I find 10 doing it, the source is too evident. An examiner ought to know these manuals, and when a candidate is throwing this undigested information at him he ought to say, "Well this is cramming." It is better than that a candidate should know nothing at all, but I should give him a very moderate amount of marks for it. But any man who has read sufficiently in a natural manner will treat the subject in a different way, and Richard the Third will take a very different appearance with him. Therefore I think that it is a very great pity that in all schools these subjects are not taught—they are being gradually taught—because the moral effect of these training colleges is even worse than their educational faults; boys are sent there to be trained for a short time without any moral supervision, they are made to work very hard, and are very often thrown upon the town or the neighbourhood by themselves. It is most detrimental.

4525. Then you think that there should be no practical difficulty in the public schools sending boys up direct for examination without passing through any intermediate education?—I should certainly say so, for direct commissions.

4526. (*Lt.-Col. Chesney.*) Are you aware that we have had it in evidence that the public school boys now generally go to one of these crammers before they consider themselves ready to be examined for a direct commission?—I only know the candidates by number. If I look to the report after it has come out, when one has ceased to take much interest in the examination, I can there see whether the candidates have belonged to a public school, or have been finished at a training college; but I cannot say that I know in every case where they have been, and I do not know it at all during the examination.

4527. Would it not be possible slightly to adjust the present examination so that a public school boy should be at no disadvantage if he knew what he had learnt at his public school as a pupil, compared with those boys who had been at a training school?—I do not see how it is possible, English is English, and history is history; the boys come up to be examined and you only know them by number. I do not say that public school boys do not do it; but I do not see how the present examination is to be adjusted as you suggest.

4528. I mean with the same subjects; supposing that a greater proportion of weight was given to classics and to mathematics, do you see any objection to such an arrangement?—Certainly; because I think that the best thing for a child to know is the history of his own country, and his own language. I am very fond of the classics, but I think that I am rather fonder of English. A very small amount of work in the week at public schools would teach these boys all that is requisite, because you do not want Solons for direct commissions; you want a man who is likely to make a good officer, and who knows something of the history of his country, and who can write a tolerable letter without making a mistake.

4529. As regards the Indian examinations, with which you are connected, can you state whether the proportion of those candidates who voluntarily take up English literature as a subject has increased since you began?—English is divided into composition, English literature, and English history. The marks for English are very heavy (about 1,500 I think), of which the candidates get 500 for composition; so that in fact they are made to go in; it is a direct inducement for them to take up English, and they do so.

4530. Is it the case that the proportion of those who choose that subject is increasing?—The number of candidates altogether is increasing; at first 100 used to come up, and now I think there are 350.

4531. Is the proportion of those who choose English increasing?—Yes, I should say so.

4532. Have you ever heard any complaint that English history or modern history is a subject especially liable to be what is called "crammed," in the sense of taking in knowledge without digesting it?—I do not think so; I think that it is the examiner's fault if he is taken in by cramming. If I ask a candidate questions in history, and he throws at my head a string of dates, which I know that he has got up by some *memoria technica*, I do not give him much credit for it; but if he answers his questions fairly, I do not care where he gets his information from, so long as he satisfies me.

4533. (*Rev. Dr. Butler.*) Would you gather from the answers to questions in English literature that the candidates generally read the English authors, or read criticisms upon the English authors?—Out of 300 candidates they will have got their information in all sorts of ways, but 40 or 50 in that examination

will have obtained it very well. I have taken 40 or 50 passages out of authors, and those rather out of the way, and I have found that perhaps 30 of the candidates would know them. I have tried it by taking 10 or 12 lines of poetry, and then asking, "State the context in which this occurs, and what it "refers to," and if this question is satisfactorily answered, it shows that they must have read a considerable portion on both sides of the quotation. I have found that that kind of question is often very well answered.

4534. You mentioned that you often detected traces of the same manual which had been consulted by a considerable number of students?—Yes.

4535. Do you also detect traces of the same teachers (the same "crammers," to use a simple word), as well as of the same manual?—No, because I think that the "crammer" is very much in the background. I think that the crammer has very little of his own; he says, "Get this book up and learn "that particular question;" Henry the Eighth's wives, for instance; the crammers are sure to set that. We are now getting rather cunning, and we never set Henry the Eighth's wives.

4536. (*Sir D. A. Cameron.*) Do you examine the candidates for admission to Sandhurst as well as those for direct commissions?—Yes, once in the year I do; there are two examinations for Sandhurst, and I examine at one, and my colleague examines at the other.

4537. Do you think that the Sandhurst candidates, as a rule, come up as well prepared as those for direct commissions?—Yes, I think that it is precisely the same examination.

4538. And do they pass as good an examination?—I think that they do; I believe that they are a little younger.

4539. They are a year younger. We find that a good many of them spell very badly; in fact a remark was made about it by one of the examiners at the last final examination; that is the case even with the old cadets going out?—We never pass them if they make serious mistakes in spelling. The best men may make a mistake. One of the best men that I ever examined was asked why the English in the time of Stephen objected to the Empress Maude, and he said that it was because they objected to be under the yoke of a woman, which was a very fair answer, but he spelt "yoke," "yolk." He however did very well in other respects, and I think that he got good marks for his history. No one would be hard upon a slip of that sort; but when you find 10 or 12 faults in a dictation, and still more so when you find them in a letter, I think that you are not bound to pass that candidate. It is, however, certain that some of the most distinguished men are very incapable of spelling. One of the best writers that I know, and a grown man, is utterly incapable of spelling; he will spell "gulph" "gulp" and when his work has to be printed the readers have to correct his spelling. It is I suppose a fault of the eye.

4540. (*Mr. Parker.*) Do you find an improvement in composition, as well as in knowledge of history and literature?—Yes; I think that in these examinations, and particularly for direct commissions, you ought to consider that some of the candidates, necessarily a large per-centage out of 100, have not very clever intellects, and if you can get them to pass it is about as much as you can expect. No system of education would ever make everybody pass.

4541. Do you conduct any competitive examination for Woolwich or Sandhurst?—Not after the candidates have gone to the institution, but the Woolwich examination itself is a competitive examination.

4542. Have you occasion to repeat exactly the same questions in examination again and again?—I try not to repeat them, but I have no doubt that I have done so. Perhaps it occurs to one that in 12 years he has exhausted almost all the questions which can be given. It is like a man's sermons in 12 years; he is bound to preach them over again.

4543. In the competitive examinations have subjects like composition a decided advantage in marks over subjects which can be crammed, in the bad sense of cramming?—I do not know that theoretically they have, but practically they have. I have always resisted the rigid apportionment of a certain number of marks to each question. I think that if a candidate writes a very good letter or essay, and devotes a great deal of time to it, he ought to get a great many marks for it, and certainly I have given very high marks for composition, exactly as you, I suppose, would infer. I think that the very best test of any man's ability in composition is to say, "sit down and write a letter," giving him a subject, or perhaps giving him no subject.

4544. You make no use of *vivâ voce* examination, do you?—In the Indian civil service I have sometimes done so; there is none in the military examinations, at least I believe not.

4545. Do you think it at all desirable to introduce it in the lower examinations?—No. I should be rather against it.

4546. (*Lord de Ros.*) Do you think that a system of written examination by questions, without any *vivâ voce* examination, can properly elicit the education of a candidate?—Decidedly the education.

4547. And the qualifications?—I think that if you wanted to see what kind of fellow a candidate was, you might in a *vivâ voce* examination elicit whether he possessed those qualities of which you can judge by the eye, but I have known many a man pass a very good *vivâ voce* examination with adroitness, and deceive examiners when he has done excessively bad paper work. A *vivâ voce* examination may be of use as a help, but I do not think that it would much alter the estimate of a man from his paper work.

4548. Is it not a great advantage of a *vivâ voce* examination that the examiner can more fully and clearly convey and explain his own questions?—No, I think not; it may be so, but I have known examiners who were perfectly incapable of conducting a *vivâ voce* examination. There is an amount of flurry, both on the part of the examiner and on the part of the candidate, which very often comes out very unpleasantly in a *vivâ voce* examination. I do not object to it myself. I have examined *vivâ voce*, and I rather like it, but I should be very sorry to see it the sole test.

4549. You are aware that in all our universities there is a mixed examination of *vivâ voce* and paper work?—Yes; it is five day's paper work, and about half an hour *vivâ voce* examination, which is about the proper proportion.

4550. Might not a person under examination so misunderstand a question without actual ignorance, as not to give himself a fair chance in his reply?—Then the examiner who set that question ought never to have the opportunity of setting another, because the examiner ought to set his questions so clearly as to make it quite impossible to mistake them.

4551. With regard to examination papers sent out to officers in the colonies, do you think that their answers, without any chance of *vivâ voce* examination, are likely to do them full justice?—They have exactly the same justice as is meted out to those at home; there is no *vivâ voce* examination at home, and it is as easy to answer questions in the colonies as at home, except perhaps where the weather is very hot.

4552. Are you prepared to state that some of the questions which have been put by the examiner, however clear they seemed to be, have not been very much misunderstood by the candidates?—That then is the fault of the candidate; but I say that an examiner who puts questions which are apt to be misunderstood ought never to have an opportunity of putting them again. Of course it is difficult to prove a universal affirmative.

4553. Are you not aware that the thing has very often occurred?—No.

4554. (*Rev. W. C. Lake*). You have examined for about 15 years; you and I began at about the

G. W. Dasent, Esq.

9 March 1869.

Military examinations generally.

same time?—I had not the least notion that it was 15 years. I said 12 years.

4555. You have spoken of there being an immense improvement since the beginning?—Yes, in English it is quite remarkable. This could be shown from some of the earliest papers, which have not been destroyed.

4556. Have you any reason to suppose that the improvement has been much more in English than in anything else?—I should think so; and for this reason, because those subjects have not been taught.

4557. The classical examiner seems to think that the improvement has been slight, and that to a certain extent the number of persons who are absolutely ignorant is not so large as it used to be?—That proves my case. I say that they have never been taught English systematically in any way at all, whereas we all know that we have been taught classics, which I do not at all depreciate.

4558. Take English history, and take 100 boys, what proportion of those boys would you say send you a tolerable paper?—I should say that 25 out of 100 would do it very well indeed, and probably more.

4559. Two-thirds, more or less, fail?—They do not fail; two-thirds are precisely in the same position as any persons are when competing for anything. You cannot expect that out of 100, 80 should be of precisely the same standard.

4560. Do you think that there is any special difference in teaching, or on the part of the boys learning English history, compared with teaching or learning Roman and Greek history?—I think not; but I say that they were not taught, and when they were taught they were taught in a special way by a private master, and not as a part of the school system.

4561. We have it in evidence that the Greek and Roman history questions have been almost entirely given up by the classical examiner, because the boys always showed such evidence of cram?—I set three or four questions in ancient history. The direct commission examination consists of about 24 questions, which take in English history, a few questions in ancient history, and a few questions in modern history other than English. A boy who has 24 questions before him cannot answer 24 questions in the time, and he very often does not get to the later questions.

4562. The following statement has been made to the Commission:—"There is no history, it was given "up about four years ago; and I conceive that the "reason was that it was entirely got up by cram- "ming; men did not even read manuals, they got it "up orally, and they transferred the subjects from "Greek to Roman history, and *vice versâ*." If that is the case in Greek and Roman history, do you not think that a vast majority of the questions in English history are got up in the same style?—I have already said that the training institutions do cram them to a certain extent, and they must get them up by manuals; but that does not at all touch the evidence which I have already given, that there is an improvement.

4563. But the question is to what extent?—Not to any appreciable extent; it is not increasing at all in the same proportion as the intelligence and information increase.

4564. You would not estimate that more than 25 out of 100 are good?—No, but that is an enormous per-centage. 25 per cent. of good work is immense.

4565. What do you mean by "good?"—I have told you, that except on very rare occasions, I keep the maximum for something extraordinary, but I have given the maximum in one or two cases. I think that if 1,000 marks are to be given, and a candidate comes up to 750 marks, and you do not detect him in cramming, that is very good work.

4566. A great deal of evidence was given before the late Schools Commission that it is very difficult to teach in English, much more difficult than in Latin, perhaps you remember that?—Yes.

4567. Supposing, as I do, that this is the case, does not it rather lead to the conclusion that there is probably a very large amount of cramming in the English department?—I think that the difficulty of teaching arises from what I started with, namely, that there were no teachers to teach these boys. The teachers have now taught themselves, but have not taught themselves nearly so much as is taught in the classics, and therefore the education is still very imperfect. It is like the Ægean Sea, it is a very wide place.

4568. You spoke of the institutions having been led to improve themselves by the necessities of the case within the last few years. Very few boys come to you direct from any schools, except the cramming schools, do they?—A good many come from Cheltenham direct.

4569. Cheltenham and Marlborough are the two exceptions amongst the public schools, are they not?—On one or two occasions I have noted very good exercises indeed for direct commissions, and it has happened that those very good exceptions came three of them from Harrow I think, one from Rugby, and one from Eton. I therefore say that a clever boy may be taught at a public school just as well as by cramming, and if I were the parent I would never allow my boy to go to one of these training places.

4570. I want to get at the fact whether almost 90 per cent. do not come from the cramming schools?—I only know the boys by number, but I am satisfied that a good many of them do come from cramming schools, for the very reason that they are the places where this sort of education is afforded them.

4571. Are you right in saying that some of the public schools have really begun a class of English?—At Rugby I believe that it is so. My reason for saying that is, that about a year ago I had a correspondence with Dr. Temple, who was good enough to ask my advice as to how the teaching of English could be incorporated in the system. I find it is working, and working satisfactorily.

Examin for adm to Wool

4572. (*Lt.-Col. Chesney.*) With regard to the Woolwich examination, did I rightly understand you that you consider that a few hours a week would be enough for preparing the amount of English which is necessary?—Yes, if you take a boy early, and carry him through. I think that in their own language they have a great advantage over a person who has been taught Latin and Greek; they have been born with it, and have been taught it to a great extent. It is certainly possible in the course of a few hours a week to give them a very sufficient knowledge of English history.

4573. As to the marks given in English history and English composition for the entrance examination for Woolwich, a candidate may gain 2,000 marks, and for the whole of his classics he can only gain 3,000. Is not that a total disproportion to the amount of time usually expended upon a boy's education in those subjects?—Yes; if I was asked my opinion I should like to see the 3,000 marks put to the English, and the 2,000 marks to the classics. I think that the first duty of a boy is to know the history of his own country, and his own language. I do not in the least run down Latin and Greek; I think that their study is the greatest pleasure, but I think that you are before all things bound to teach a boy his own language.

4574. (*Rev. W. C. Lake.*) It is not simply whether a person is bound to be taught his own language, but whether his own language is the best instrument for his education?—Latin is perhaps the best instrument for his education.

4575. (*Lt.-Col. Chesney.*) Do you find that the proportion of those who choose these subjects in the Woolwich examination is increasing?—They increase very much in history; there used to be history and geography in one paper, and English in another; they now divide them into three subjects, and make one of history, one of geography, and one of English, and I find that the numbers increase in geography and

history, but do not increase so much in English. I think that that is accounted for because English, as English, is very dry, and that is why I should like to see some literature put into it, because it would then give the boys more interest. A dry English grammatical paper is not very interesting to boys, but geography and history to a certain extent are.

4576. May not the increase of the number who take up these subjects be due rather to the prospect of getting a good amount of marks than to any real change in education? Is not it rather a moving cause of the increasing number of cadets who take up those subjects that they are supposed to get a greater number of marks in them than in other subjects?—I do not think so at all. A candidate is very often driven in by his father. I once examined a candidate for Woolwich, and I asked him something which he was capable of writing upon, namely, "Describe the course of education which you have "had for this examination." The answer which this candidate gave was the following: He said, "I have been at five places of education for this "examination in three years. My father has re- "moved me from all of them because he is not "satisfied with 'my teachers.' It is not the fault "of my teachers it is the fault of my father. I am "utterly incapable of learning mathematics, and ever "shall be. I have failed three times for this exami- "nation, and I shall fail this time, and thank God this "will be the last, because I shall be over age." He did his English uncommonly well.

G. W. Dasent, Esq.
9 March 1869.
Examinations for admission to Woolwich.

4577. (*Maj.-Gen. Wilmot.*) Did he succeed in failing?—He succeeded in failing. A father lays down an arbitrary rule that his son shall be in the artillery or in the engineers, and he drives him in, whether he is fitted for mathematics or not, and insists upon his passing; and you may imagine the feeling with which a boy of that kind goes to one of these places to be taught. That candidate would have passed very well for a direct commission.

The witness withdrew.

ENSIGN J. E. H. PRIOR, 80th Regiment, examined.

Ensign J. E. H. Prior.
Royal Military College, Sandhurst.

4578. (*Chairman.*) You are in the 80th regiment?—Yes.

4579. You were educated at Sandhurst?—Yes.

4580. Did you obtain a free commission?—No, I purchased it.

4581. Where were you educated before you went to Sandhurst?—I was at a college in Bath, Sidney College. I was at a crammer's just before I went to Sandhurst.

4582. How long were you at your crammer's?—About three months.

4583. What kind of place was it?—It was a very nice place.

4584. Was any sort of discipline maintained?—Yes; it was Captain Lendy's; he had been in the French army.

4585. Were you kept in pretty good order?—Yes.

4586. And that did not make it unpleasant to you?—No.

4587. Where was it?—At Sunbury.

4588. How many lads were there with you?—About seven or eight. A great many of the officers in the Staff College were there at the same time.

4589. Do you think that going to Captain Lendy's was of considerable advantage to you?—Yes.

4590. You then passed your preliminary examination?—Yes.

4591. Did you take a good place?—I passed out forty-ninth.

4592. Out of how many?—I think 120.

4593. Do you think that you could have taken as good a place if you had proceeded to Sandhurst straight from the college at Bath?—I think not.

4594. In what subjects were you especially coached up at your crammer's?—Natural philosophy, chemistry, geology, mathematics, French, and English.

4595. Were you crammed in any particular subjects at the crammer's to which your attention had not been directed when you were at your college?—Yes, in natural philosophy, chemistry, and geology.

4596. Was it in consequence of those special studies that you think you obtained the forty-ninth place?—Yes, I got a great number of marks in geology and those things.

4597. Had you any particular taste, do you think, for natural philsophy?—No, I never had much.

4598. How long were you at Sandhurst?—A year and a half.

4599. Did you go in for an examination when you left?—Yes, but I had to go home in the middle of my second term, and I missed a part of the examination work.

4600. Had you to go home on account of illness?—No; my father died.

4601. Did you take as good a place in your second examination as you did in your first?—No, I was lower down.

4602. Do you attribute that to the fact of your having had to go home?—I think that it had a good deal to do with it.

4603. With your present experience, if you were given the choice, would you have preferred going to Sandhurst, or would you have liked better to have obtained a direct commission?—I would sooner have gone in for a direct commission.

4604. Then you think that your education at Sandhurst was not of any advantage?—It was of no advantage to me certainly; of course it was to others who got their commissions without purchase.

4605. Do you attribute your failure entirely to the fact of your having had to go home, and thereby your course of study having been interrupted?—No, but I attach a good deal to it. I think that I had not much chance.

4606. Do you think that the system of instruction at Sandhurst is suited to its purpose?—I think so.

4607. You do not attribute your failure at all to the method in which instruction was communicated to you?—No, I do not think so. If you want to work you can work there pretty well.

4608. And there is nothing in the atmosphere of the place which is inimical to study?—No, I do not think so.

4609. You do not find that the public opinion which prevails amongst the cadets discourages industry?—No, I do not think so. If a fellow wants to work he can always work as much as he likes.

4610. He is never denounced as a "sap?"—No.

Discipline.

4611. What did you think of the discipline at Sandhurst?—I thought that it was very good.

4612. Looking back upon your life there, do you consider that the discipline assisted you in keeping straight, and living an honourable and proper kind of life?—I do not think that it had much to do with it.

4613. You do not think that the discipline as established at Sandhurst has much influence one way or the other?—It keeps you in your drill a good deal. When you join your regiment you know a good deal about drill, and all that.

4614. Have you any suggestion to make with regard either to the plan of education or to the method of conducting the discipline at Sandhurst; for instance, do you think that it would be a good thing if there was more freedom of communication between the cadets and those placed in authority over them?—I do not know.

4615. On joining the army, did you find it an advantage to have had the military initiation which you received at Sandhurst?—I found a good deal of advantage in drill, and all that. I got through my drill pretty quickly. It helped in drill, but it did not

Ensign J. E. H. Prior.

9 March 1869.

Royal Military College, Sandhurst.

Preparatory schools.

help in any other way, I think. Of course I had to pay the money all the time that I was at Sandhurst, and I had to buy my commission afterwards.

4616. (*Lord E. Cecil.*) You were three months at Captain Lendy's, were you not?—I was.

4617. Was there much smoking, drinking, or gambling going on at the time?—No; there was smoking.

4618. Can you give us any idea of the course of a day's work there; how many hours were you at work?—In summer we generally began work about seven o'clock, and worked till eight, when we had breakfast, and then we had three hours before lunch, and we had about two hours work after lunch before dinner. I think that we worked about seven hours a day there. Of course you could work longer if you liked.

4619. What time had you for recreation?—All the time after dinner. We had dinner at about five o'clock, I think.

4620. After five o'clock your time was your own?—Yes, as far as I remember.

4621. Were you allowed to go up to town and amuse yourself if you pleased?—If you had an invite from any one up in town you might go, or if you had leave from your parents you might go.

4622. Were you allowed to stay out the whole night?—Yes, if you had leave.

4623. I suppose that the fact of the pupils going up to town was rather a constant occurrence?—No; they went up now and then, not very often. Captain Lendy did not like it much.

4624. Were there any punishments there?—No.

4625. Were there any cases of gross misconduct during the time that you were there?—No, none whatever.

4626. Did you mix much with the officers?—Yes, I knew a good many there, because my brother was there a part of the time; and when I went to Sandhurst I knew a good many who were at the Staff College.

4627. Was there anything like out-of-door games?—It was principally boating. The Thames ran just in front of the house, and it was always boating and fishing, nothing else.

4628. And when you went boating I suppose that you spent your time principally in smoking?—No, I never smoked myself.

4629. But I suppose it was the usual practice among the remainder, during that time?—Or work; most of the fellows used to work.

4630. Do you think that the gentleman-like feeling was good?—Yes.

4631. When did you leave Sandhurst?—At Christmas 1867.

Results of the instruction.

4632. What was your idea of the education at Sandhurst, in a regimental point of view; do you think that it was sufficiently practical?—Yes, quite.

4633. Do you think that you really benefited from the amount of drill and riding?—Yes, as far as regards the drill; I did not do much in riding.

4634. Were you excused drill on entering your regiment on account of having been at Sandhurst?—No, it was rather the other way.

4635. There was a prejudice against the Sandhurst cadet?—They generally said, "We must take that out "of you, and we must put something fresh in;" but I think that it benefited me.

Discipline, general tone, &c.

4636. Was there much drinking, smoking, gambling, playing at billiards, and bullying going on at Sandhurst in your time?—There was a great deal of smoking; there was no gambling, there was no drinking; there was a great deal of billiard playing; we had four billiard tables.

4637. Did you play for money?—No, it was not allowed.

4638. I suppose that you were allowed to go down the town, and play billiards?—Yes.

4639. There was nobody to watch you there?—No, I believe not; but it is altered now.

4640. Was there any bullying?—No.

4641. Were you in one of the associated companies, or not?—I was in the C. company, which had what were called bunks.

4642. Were there any cases of insubordination, or of illegal combination, during the time that you were at Sandhurst?—Yes, there were one or two.

4643. On what occasions?—I think that on one occasion it was with respect to a Jew.

4644. We have heard that story; were you one of the mutineers?—No.

4645. Were the cadets very much dissatisfied at the punishments which were given on that occasion?—Yes, they were with respect to an under-officer.

4646. There was a good deal of murmuring I suppose?—Yes.

4647. From what you have heard from your comrades at Sandhurst of what they thought of the discipline and education there, have you ever heard any statement adverse to the discipline or to the tone and gentleman-like feeling?—I asked that question of an old cadet the other day, who stated that it had done him no good whatever from having been there.

4648. Did he seem to think that that was due to Sandhurst, or to any cramming establishment, or to having gone to where he had been before?—He seemed to think that it was due to Sandhurst.

4649. Was it your impression that the tone and gentleman-like feeling was not quite as it should be?—I think that it was all right; there might be a few fellows there otherwise; but most fellows, I think, were all right there.

4650. Was a good deal of immorality going on there in your day?—No, I think not.

4651. I suppose that it occurred occasionally, did it not?—I do not know.

4652. There was no case of indecent conduct amongst the cadets themselves?—Not that I knew of.

4653. Who do you think of the cadets were amongst the idlest; were they the Queen's cadets or the cadets who came in the ordinary way?—There were some who had lots of money, and who only just wanted to qualify in order to get into the army, and of course they never did more work than they could help; and the Queen's cadets naturally did not do much either, because they only had to qualify.

4654. As a rule do you think that the Queen's cadets were idle?—Most decidedly.

4655. They knew perfectly well that they would get their commissions?—Yes, they only wanted to qualify.

4656. Which do you think had the most influence over the cadets, the civilian or the military professors?—The military professors.

4657. Had the civilian professors any influence over the cadets in the halls of study?—They had not nearly so much as the others, and one or two had none whatever.

4658. I suppose that in the halls of the French masters a great many tricks went on?—Yes

4659. Do you think that it would be a good thing to combine the civilian and military professors, and that the cadets would pay more attention if that was done?—The cadets paid much more attention to the military professors, and they liked them much better.

4660. Do you think that most of the cadets at Sandhurst liked the place, rather than not?—Yes, I certainly think so.

4661. To what in your opinion was the insubordination and bad conduct principally due; do you think that it was due to a small number of idle cadets?—Decidedly; there are always some there of that description.

4662. (*Sir C. Russell.*) Do you think that the cadets who were in the C. company, like yourself, and had a bunk to themselves, made any use of it, as a rule, for study?—Yes, lots of them.

4663. And do you think that those who were in the associated rooms were at a disadvantage if they

ished to retire to study, or to read a paper?—Yes, a certain way; but if a cadet wished to do so the hers would never interfere with him.

4664. If a cadet was in the room with others, ney would have allowed him to sit down without ıy inconvenience?—Yes, decidedly.

4665. In your bunk had you any conveniences, for eeping your clean linen, for instance?—No, they sed to put it in three times a week; all the clean linen as kept down stairs by the housekeeper, and the ervant used to put it in, I think, three times a week.

4666. When you were at Sandhurst were the bilard rooms and racket courts and the canteen kept pen for the use of the cadets on Sunday?—Yes, in ıy last term the racket courts were open; the canteen was always open.

4667. In your time at Sandhurst were there held vhat were called canteen inaugurations?—Yes, at he beginning of each term.

4668. Will you describe one of them?—The new ellows, who were called "Johns," always had to stand reat; they had to give the others beer.

4669. I have been told by a cadet that this is a lescription of it—if it is a correct one will you state o, and if it is incorrect will you correct it—I have been informed that it is the habit for the new boys, who you say are called "Johns," if they do not choose o go, to be marched by a body of what I believe are called "second termers" into the canteen, and to be there called upon to sing certain songs, and if they do not sing a song they are obliged to give so much to be expended in drink for those who can sing or will sing?—Yes, it is always so for about a week at the beginning of each term.

4670. If a cadet stands out against it he is set upon?—I never saw it; they either sang a song or paid their money.

4671. Were there any under-officers present on those occasions—for instance, the corporal of a company?—Yes; at least I have seen some of them there.

4672. At what time did you dine at Sandhurst?—At three o'clock.

4673. Was it not the custom that the interval from six to eight o'clock was free time to the cadets?—There are winter regulations and summer regulations, they are different; in the winter I think that their work is till seven; you have from two in the afternoon to six, I think, with nothing to do, and then you go into study.

4674. (*Sir D. A. Cameron.*)—The last study, I think, is from six to seven?—Yes, that is in the winter.

4675. That is only three or four times a week?—Yes.

4676. (*Sir C. Russell.*) Do you think that most of the drinking and smoking goes on after dark, or in the dusk?—The canteen is always closed in the evening, and you cannot get anything to drink at all.

4677. That is in the college, but I wish to ascertain the general custom of the place. Is there drinking and smoking to any extent outside the precincts of the college?—Yes, at least there used to be when I was there, in the different public houses; there are billiard tables there.

4678. Do you think that the bulk of that is carried on in the evening?—After tattoo of course nobody can be out.

4679. But that is late, is it not?—That is nine o'clock. It goes on in the evening principally, I think.

4680. Are spirits smuggled into the dormitories?—No, I never saw it done.

4681. You said that there was not much immorality going on at Sandhurst. Was not there a habit, if a boy was caught by the cadets committing an immoral offence, of what they called "toshing" him? I never knew of an immoral offence.

4682. Was there such a punishment as "toshing" among the cadets?—Yes.

4683. For what offences was "toshing" carried out?—Three or four fellows got "toshed," who had behaved in an ungentlemanly way.

Ensign J. E. H. Prior.

9 March 1869.

Royal Military College, Sandhurst.

4684. Was it for a disgraceful act?—Yes. I have seen a fellow taken out of his bed and pumped on. Everybody is supposed to "tosh" every morning there.

4685. (*Lord de Ros.*) It is a term for washing?—Yes, and some fellows do not do it; and if they get found out, then five or six fellows go and draw them out regularly in the morning and "tosh" them.

4686. (*Sir C. Russell.*) Is there such a punishment as "shovelling" at Sandhurst?—No.

4687. Is there to any extent whoring at Sandhurst?—Not much; there is some decidedly.

4688. But you do not think that it exists to a great extent?—No, there is hardly anybody there.

4689. (*Lt.-Col. Chesney.*) Will you be kind enough to state to the Commission one of the offences for which a cadet in your time was publicly ducked, or "toshed?"—They used to "tosh" a fellow if he would not wash.

4690. (*Lord de Ros.*) For a dirty habit?—Yes.

4691. (*Lt.-Col. Chesney.*) Can you state any other offence of any kind for which you can recollect a cadet being "toshed?" Have you, for instance, heard of a cadet being ducked for getting drunk at a professor's, where he was dining?—Yes, he behaved in a very ungentlemanly way at the professor's, and the cadets lined the passage, I believe, just before he went to bed, with towels, and they made him run the gauntlet; he was tried first of all.

4692. Can you state any other instance of a cadet being punished by the other cadets?—No.

4693. You have told us that young men sometimes went up from Captain Lendy's to town to stay; they were not always staying at their friends when so away, were they?—No, I do not suppose they were. I remember that one day an officer who was crammed there for the Staff College did not come home until 11 o'clock, and Captain Lendy would not allow him to come in.

4694. With respect to the language at Sandhurst, did not you consider the language used by the cadets to be rather bad?—Yes, it certainly was.

4695. Had you heard that language coming straight from your private school at Bath, would it not have struck you very forcibly?—Certainly.

4696. Do you attribute any of the prevalence of it to the number of cadets who come in to Sandhurst from crammers?—I do not know; none of it went on at Captain Lendy's.

4697. The use of such language gives, to a certain extent, a low tone to the place?—It does.

4698. Do you think that all the cadets become accustomed to it, and do not resist it in any way, as would be done, for instance, at a public school, and that they do not make any fight against it?—I do not think so at all.

4699. If a cadet gets into any private trouble whilst at Sandhurst (not a military offence at the college), is there any one there with whom he can communicate, and ask advice?—He generally went to one of the officers who was there from the army.

4700. One of the officers of the college or a military professor?—Yes.

4701. Is the practice of borrowing sums of money common at Sandhurst?—I do not think that it is common, but I have known cases of it.

4702. I mean borrowing money from money-lenders?—Yes.

4703. With regard to what you learnt at Sandhurst, if you were suddenly put with a party of soldiers upon field works, would you know something more about them now than if you had not been at Sandhurst at all?—Yes.

4704. (*Rev. Dr. Butler.*) What would you say was the chief advantage which you gained from Sandhurst?—Principally in drill; not much in anything else.

4705. As to intellectual training, did the subjects which you had prepared at Captain Lendy's engross

Ensign J. E. H. Prior.

9 March 1869.

Royal Military College, Sandhurst.

much of your attention at Sandhurst?—Yes; they were of a good deal of use—natural philosophy and chemistry and geology, those were the principal subjects.

4706. Would you say that the tone of Sandhurst was studious?—No; I should not think that it was so altogether; but of course there are a certain number who work hard.

4707. Do you think that it was chiefly regarded as a place of study, or as a place for passing time pleasantly?—It was regarded more as a place of study I should think.

4708. As a rule who would be the most influential among the cadets, the more intellectual set or the less intellectual set?—Generally the under-officers; it all depended upon whether they were liked.

4709. And would they be taken any more from the one class than from the other?—They never made any one who was a bad fellow anything; they generally made a good big fellow, who had influence over the other fellows, an under-officer or corporal.

4710. Would you say that the more intellectual and the more studious young men on the whole ruled public opinion, or the reverse; who were the chief rulers?—It all depended upon circumstances. Lots of fellows who were studious were liked very much, but some were not liked.

4711. Was there any pride felt, as at the Universities or at the public schools, in the ability of the more studious young men?—Yes, I think so. There were generally four or five who tried to pass out first, or as high as they could.

4712. They would be looked up to in consequence?—I do not know exactly that they would be looked up to, but they would be thought very clever.

4713. I want to know whether, from your recollection, you would say that the intellectual element or the athletic element rather predominated in the place?—I do not know. I do not think that the fellows seemed to care much about athletics; of course there were some who did.

4714. So far as you know, do those who leave the college look back upon it as a place of work?—I do not exactly look back upon it as a place of work.

4715. Would you say that there is a strong *esprit de corps* connected with the place, so that old Sandhurst men are proud of it?—Yes, I think so; for instance, if there was a match going on against Woolwich, or anything of that sort, the fellows would always go.

4716. With regard to the discipline, was there much drinking when you were at Sandhurst?—There was only beer when I was there, and the cadets only drank that because there was nothing but beer in the canteen.

4717. Was intoxication at all common?—Yes.

4718. Were they frequently the more studious and intellectual men, or not?—No, they were generally the opposite.

4719. How far would public opinion among the young men themselves condemn drinking?—They never used to think much of it. Fellows when they first went there, who had heard a good deal about Sandhurst, thought it a fine thing to drink, and they thought that fellows would admire them for it; they think it, I believe, one of the principal things when they first get there. At the beginning of each term I fancy that most of the rows are with the new fellows.

4720. Is that because they gather that the tone of the college is in favour of fastness?—Yes, I believe so. When I was there the old fellows were pretty quiet. When I first went there I was pretty much the same. The new fellows, when they first came, always used to drink.

4721. Would you say that a young man lost caste at all if he was known to drink? Would he dread the public opinion of his own companions, as well as the authority of those set over him?—An under-officer, if he saw a fellow drunk, would perhaps not report him the first time, but he would say, "If I see you "drunk again I must report you."

4722. I am speaking, not of an under-officer, but of any chance cadet. Would the general opinion condemn a man under those circumstances, as it would at college?—No, I do not think that he would be thought any the worse of for it, and he would not be thought any the better of for it.

4723. Falsehood would be looked down upon?—Yes; if anything of that sort took place the cadet was always pitched into by the other cadets.

4724. With regard to offences with women, it was known, I suppose, that men from time to time had gone wrong in that way?—Yes.

4725. Would a man be thought worse of by his companions for it?—Certainly not.

4726. As to the apprehension of punishment, would a cadet apprehend any serious punishment for being intoxicated?—He would be sure, I should think, to be placed under arrest for a week.

4727. Would he think that he underwent any risk of being at once dismissed?—No, not for being drunk once or twice; but when I was there, if he kept doing it he would be sure to get dismissed.

4728. Short of habitual intoxication, he would not dread any very serious punishment?—No.

4729. Would he dread any serious punishment for irregularity of the other kind just alluded to?—I do not know. I am not aware that any case of that kind was ever found out.

4730. Was that offence, as well as intoxication, generally found among those cadets who were new at the college?—I think that they were all pretty much the same for that.

4731. Would you say that there was a large proportion who went wrong in that respect?—No, I should not think a large proportion, but a good many did.

4732. Can you give the Commission any idea of the proportion?—I do not know. I suppose that any fellow would do so if he had an opportunity.

4733. Are you aware that at the great public schools that offence is almost unknown?—I do not know; I was never at a large school.

4734. Can you give any reason why at Sandhurst the offence should be so frequent?—I do not know that it is so very frequent; there were always three or four bad characters knocking about there, I believe, and it was generally, I think, among the servant maids.

4735. I gather from you that a young man would not be thought worse of among his companions for going wrong in that particular?—No, I do not think that he would.

4736. To whom would the cadets feel themselves chiefly responsible if they had done anything wrong; to whom would they go?—They would have to come up to the orderly-room next day, and the colonel would punish them for it.

4737. Is there any one who would feel it his business to warn a young man if he saw him getting into bad ways short of a military offence?—Yes; the officer of his company.

4738. Is there any one who would give a young man any religious advice?—No, excepting the chaplain.

4739. Would the chaplain do so?—He very often did so in hospital.

4740. Would there be any one who would write to the parents, if he thought that the young men were not doing well?—Yes, the colonel would do so; I have known cases of his doing so.

4741. (*Sir D. A. Cameron.*) Do you think that a large majority of the cadets frequented public houses?—I think that a good many of them used to do so, as there were so many public houses about there.

4742. You had the public houses in York Town, and in Cambridge Town?—Yes.

4743. Do you think that the establishment of the canteen and refreshment room had any effect in putting a stop to the practice of going to public

houses?—It had something do with it, but I do not think that it had very much when I was there; fellows could not play pool at Sandhurst, and they used to go down to public houses and play pool.

4744. What did they usually drink at the public houses, spirits or beer?—I have seen some fellows drink spirits there, but I think that it was generally beer.

4745. Would you say that many cadets went to bed the worse for liquor at night?—Perhaps on an average two or three in a night would do so; I do not think that it was more.

7746. Were the cadets in your time inspected by an officer before they went to bed?—I think that they were on Sundays—always on Sundays; at least we always had to fall in when the roll was called.

4747. But not on other days?—On other days the officer used to come round at teatime to ask who was present.

4748. But you could go out after teatime, could not you?—No, the dormitories were all locked up.

4749. Do you consider that the cadets were well treated at the college by the officers and professors—that they were treated as gentlemen; did the officers and professors speak to them as gentlemen, and with kindness and consideration?—Yes, I think so; at least, all the military officers did so.

4750. Now that you know what a private soldier is, would you say that the cadets were treated like private soldiers?—I think that they were, in a certain degree.

4751. In what respect?—Of course as far as parade and all that went they were so treated.

4752. But they were not made to do anything which you consider degrading to a gentleman?—No, I do not think so.

4753. Had you marching order drill in your days as a punishment?—No, we used to have extra drill.

4754. That was for inattention in the ranks?—Yes, we had what was called extra drill.

4755. In your time had the cadets the option of taking their arrest on honour, if they chose it?—Yes; I think that that was just before I left.

4756. Can you say whether many accepted the arrest on honour?—I do not think that many of them did.

4757. As a rule, were the cadets orderly in their dormitories?—Yes, I think so.

4758. They were orderly at night?—Yes.

4759. There was no bolstering?—No, there was nothing of that, because the responsible under-officer would always report if there was any such thing.

4760. Then the under-officers were of use in maintaining order?—Decidedly. The officers always made an under-officer of a fellow who was generally liked by the other fellows, and a fellow who had authority over them.

4761. While you were at the college were many cadets removed for misconduct?—I think that there were two or three.

4762. Do you know for what offences?—There was one who was in isolated arrest; he was taken out by a corporal, and he got drunk; he was removed; and there was an under-officer who was in the row with the Jew, and he was removed.

4763. Was the canteen inauguration practised upon every cadet who went into Sandhurst?—I do not think so; I never did it.

4764. It was not the universal custom?—The cadets often used to go round the rooms to see whether there was anybody there, and if there was anybody there he would generally come, but if a fellow was out of doors they could not take him.

4765. When did this take place—was it on the day when the cadets joined or some days afterwards?—It was for about a week afterwards, on every day.

of the ion.

4766. (*Maj.-Gen. Haythorne.*) You say that you derived no knowledge from Sandhurst beyond a certain amount of drill?—Yes.

4767. Did you not learn a good deal of field fortification?—Yes, I have learned that. I know something about it now, but not very much, because it was a good time ago.

Ensign J. E. H. Prior.

9 March 1869.

Royal Military College, Sandhurst.

4768. Can you make a field sketch?—I used to be able to do so, but I do not know whether I could do so now. If I looked it up for a fortnight I dare say that I should be all right.

4769. Did you learn military history?—Yes.

4770. Were you in a surveying class?—Yes. I suppose that I did learn something of those subjects. I know surveying and military history pretty well.

4771. (*Mr. Parker.*) Was military history a popular subject?—Yes, the fellows liked military history very well indeed.

4772. And fortification?—And fortification.

4773. Was the drill liked or disliked?—I always liked it, and most of the fellows liked it. I did not like fortification much, but I liked military history very much.

4774. And surveying?—Yes, we used to like those things better than the remainder.

4775. When you joined a regiment the drill you learnt at Sandhurst was not accepted?—No.

4776. But I suppose that it was of some use?—It was of some use. When a fellow joined, he used to say "I know my drill," and the adjutant used to say, "We must knock that out of you, and teach you "something fresh."

4777. Were you kept as long at your drill when you joined as those who joined by direct commissions?—They have not done their drill yet, and therefore I do not know.

4778. You were kept the routine time?—Yes. Our colonel is very strict about drill. I have passed for my lieutenancy. I am not dismissed yet. The colonel waits until you know battalion drill.

4779. (*Sir C. Russell.*) You have not passed your drill?—No.

4780. When did you join?—Last June. I am senior ensign.

4781. (*Lord E. Cecil.*) How much leave have you had since then?—Two months, I think.

4782. Then you have been six months at drill?—I passed my drill at Preston.

4783. (*Lord de Ros.*) You have passed for your lieutenancy?—Yes, in company drill, but I am kept for battalion drill. I attend adjutant's parade, but I very seldom do any other drill except general parade.

4784. (*Mr. Parker.*) Did you learn light infantry drill at Sandhurst?—Yes.

4785. And musketry drill?—I only went through a course of shooting there; it was very little, I only fired about 20 rounds.

4786. (*Lord de Ros.*) Did Capt. Lendy lay much stress on teaching you French, so as to write and speak it?—No; we had a French professor there besides.

4787. Did Capt. Lendy teach you practical surveying, such as the reconnaissance of roads and country, or anything of that sort?—No.

4788. When you joined your regiment did you find most advantage from what you had been taught at Capt. Lendy's, or from what you had learnt at Sandhurst?—I think that I found most advantage from what I had learnt at Sandhurst, because I reviewed at Sandhurst all that I had done at Captain Lendy's.

4789. If when you joined your regiment you had been put on a picquet, and had been told to strengthen your post, should you have known how to set about it; for instance, if on the borders of a wood you had had to make an abattis or a stockade—if you had been on the edge of a wood with a little rivulet before you, and a bridge, should you have had any idea how to strengthen your post?—Yes, I think so.

4790. If you had been taught more of officer's than soldier's duty, such as words of command, and understanding returns, states, and reports, would it not have been more useful to you than the mere drill as a private soldier? If you had been taught more

Ensign J. E. H. Prior.
9 March 1869.
Royal Military College, Sandhurst.

of what your regimental adjutant teaches, such as giving words of command from a certain distance, and getting habituated to it, would it have been of more use to you than merely being drilled in the ranks?—I do not know.

4791. I mean to ask you whether Colonel Harrison's regimental drill is of more use to you as an officer, than the style of drill which you had at Sandhurst?—I think that what I went through at Sandhurst was of use.

Discipline, general tone, &c.

4792. With regard to the smoking at Sandhurst, do you think that there would be any difficulty or hardship in restricting it to the afternoon hours?—It would be no hardship at all, I think. The fellows, I think, would not like it; they always smoke in the morning. I never smoked myself.

4793. As to the punishments among the cadets themselves, which you have been asked about, namely, the "toshing," and so on, was there anything which you regarded as unsuitable to the habits and feelings of a gentleman?—No.

4794. Is not the drinking at Sandhurst generally a sort of swaggering on the part of the newcomers, and is it not the same with regard to the extreme smoking?—I think so.

4795. When you speak of going to the public houses, did the cadets mix with the low company whom they found there, or was it among themselves that they caroused or drank?—It was amongst themselves.

4796. Entirely?—Yes.

4797. (*Rev. W. C. Lake.*) Was there any playing for money in the public houses?—Yes, at pool, but they did not play high.

4798. Do you think that the institution of the rooms at the college at all prevented the men from playing at the public houses?—Yes; they always played in the college. Nearly everybody at Sandhurst played billiards, and there used always to be a tremendous rush to get your name down on the slate, and the fellows used to go and play a game there.

4799. With regard to the proceedings at the inauguration of what you call the "Johns," we have information that the songs were of an extremely coarse character, is that the case?—I believe that some of them were.

4800. All of them, perhaps?—I do not know about all of them, but some of them were.

4801. Do you say that the under-officers were present?—I cannot recollect that, but I think that I have seen them there.

4802. You would not be at all surprised at seeing them there?—Not at all.

4803. One must infer from that, that they did not consider it their duty to check the men in proceedings of rather an immoral tendency?—Of course they used to sing, but there is no harm in singing.

4804. There is no harm in singing, but it depends upon what it is. Were not the songs, in fact, what are commonly called very beastly songs?—I do not recollect any very beastly songs there; they may not have been very proper songs.

4805. I thought that you just now called them very coarse?—No, I did not say that they were all very coarse songs.

4806. (*Lord E. Cecil.*) Do you know anything with regard to a certain feast which used to take place every half-year, which was called the board dinner?—Yes.

4807. What used to go on there? was there any drunkenness or anything of that sort?—Yes.

4808. Was there a great deal of drunkenness?—Yes, it was the last night.

4809. Who used to dine; did the officers of the college?—No, they did not dine.

4810. Did the officers of the Staff College?—No, it was only the cadets, I think. Lots of old cadets who had been at Sandhurst used to come over; for instance, fellows from Aldershot in different regiments always used to come over.

4811. In fact there was a good deal of jollification?—Yes.

4812. And it was thought rather a proper thing than otherwise to go away drunk?—I do not know that; some fellows used to get drunk.

4813. There was no ungentleman-like conduct on those occasions?—No.

4814. Did the officers of the college dine near at hand in the next room?—Yes.

4815. I suppose that they could hear what was going on?—Yes, and the professors used to dine upstairs as well. The officers of the college must, I think, have heard what was going on, because they were close by.

4816. During the time that you were at the college, were a great number of cadets laid up with venereal disease?—Yes.

4817. And I suppose that that happened pretty constantly during the time that you were there?—There were, I think, generally about 10 laid up with it.

The witness withdrew.

Major-Gen. H. D. White, C.B.
9 March 1869.
Results of Sandhurst education.

MAJOR-GENERAL H. D. WHITE, C.B., examined.

4818. (*Chairman.*) I believe that you are in command of the cavalry brigade at Aldershot?—I am.

4819. Of course you have had an opportunity of forming an opinion as to the general character and qualifications of the young men who have joined the regiments under your command from Sandhurst direct?—Yes.

4820. We should be glad to hear whether you consider that the education which they have received at Sandhurst proves to be of advantage to them on joining their regiments?—As far as the cavalry is concerned, I consider that as a rule, the cadets and young officers who come from Sandhurst are not better than those who come from a good public school; a well-educated boy from a good public school is as good as a Sandhurst cadet in order to make a cavalry officer. In the cavalry we have not so many Sandhurst cadets as the infantry have, in proportion to those who come from public schools and other schools.

4821. (*Lord E. Cecil.*) Are commissions without purchase now given in the cavalry from Sandhurst?—Yes. A coruetcy used to be 840*l.*, but it is now the same as an infantry commission in point of price.

4822. (*Chairman.*) Would you go so far as to say that you prefer a well-educated lad from a public school, to an equally well-educated lad from Sandhurst?—In my experience the best cavalry officers that I have seen have been Eton boys or Harrow boys.

4823. Do you consider that the general tone of a lad from Eton is superior to that of a cadet from Sandhurst?—I was at Harrow for a short time myself, and afterwards at Sandhurst, and I must say that I thought that the moral tone of a Harrow boy was better than the moral tone of a Sandhurst cadet.

4824. Do you find that the fact of a Sandhurst cadet having received the rudiments of a military education makes him think that he knows more about it than he really does when he comes to be put through his drill?—In the matter of drill I think it far better that a boy should come quite fresh to it, because that very freshness carries him over the drudgery of it far better than one who has had a smattering of drill, and is rather *blasé* with it, and thinks that he knows more that he does. There is no very great art in learning drill, and it is far better that a boy should come fresh.

4825. The novelty and excitement of his introduction to his military discipline is, you think, rather

an advantage than otherwise?—Yes, that very freshness carries him over the worst of the drudgery.

4826. Do you think that his brother officers are inclined to make any difference in the reception which they give to a cadet from Sandhurst, as compared with a boy from a public school?—No. I think that a nice boy is equally well received in any regiment, wherever he comes from.

4827. There is no feeling that the lads from Sandhurst are less gentlemanlike?—No, I think not, but we have not so much experience in the cavalry of Sandhurst cadets.

4828. (*Lord E. Cecil.*) Do you think that the professional education which is given at Sandhurst is of great benefit to cavalry officers?—No, I think that a public school education is quite good enough, provided that they are taught modern languages and drawing, to which I believe public schools are now turning their attention more than they did.

4829. You do not think that the military subjects which are taught at Sandhurst, such as fortification, surveying, and drill, are sufficiently well taught to be of very great service to military officers?—I think that a knowledge of surveying is of the greatest service to an officer.

4830. But you have never known whether or not on service Sandhurst cadets, who have afterwards entered the army as regimental officers, have derived any very great advantage from their education?—Certainly not in the cavalry. I recollect many men who were Sandhurst cadets who have taken very high places, and have got on remarkably well in the army in the infantry.

4831. Those who have taken high places I suppose have gone to the Staff College after entering the army?—Not altogether. When I was a cadet at Sandhurst Sir William Mansfield was there, and General Haythorne, who is, I believe, a member of this Commission. Colonel Longden, who is now adjutant-general in India, and many more were there.

4832. Do you think, as a general rule, that those men would have done equally well whether they had come from Sandhurst or not?—Yes, I think so, provided they had been taught at a public school drawing and modern languages.

4833. Then, provided that those military subjects were taught at public schools generally, you do not think there would be any necessity for Sandhurst?—No, I think that it should be left open; and if a certain number of commissions were given without purchase to certain of the public schools, to be competed for by those who passed, I think it would be very advantageous. I think that it is a great advantage to a man in after life to have been brought up in general society rather than in an exclusively professional one.

4834. (*Sir C. Russell.*) I understand you to say that, from your experience, you would sooner take a public school boy as a model for an officer than the material supplied by Sandhurst?—Yes, as a rule. The best officers whom I have seen in the cavalry have been public school boys.

4835. Do you think that the class of officers now supplied for staff purposes from the Staff College is superior to the class who were formerly selected for that purpose?—Certainly not. As far as the cavalry are concerned we are not nearly so well served. Formerly an officer was made a brigade-major because he knew his duty and was intelligent, and was a thorough soldier, but now a man may pass through the Staff College perfectly well as far as book learning is concerned, but he may be entirely deficient in energy, and coolness, and quickness of decision, which is very necessary in a cavalry soldier. I have known instances in which infantry men have changed into the cavalry two or three months before they passed into the Staff College; they have passed the Staff College examination, and they have gone out as full blown cavalry brigade-majors, because they happened to be upon the Army List in the cavalry, but knowing nothing of cavalry duties.

4836. (*Lord de Ros.*) You have been adjutant-general of the cavalry?—Yes.

Major-Gen. H. D. White, C.B.

9 March 1869.

4837. (*Sir C. Russell.*) You distinctly feel that the old system provided you with a better class of cavalry staff officers than you are now supplied with?—Yes, because they were generally made brigade majors in consequence of their being known to be thoroughly good cavalry officers, whereas now it is otherwise.

Results of the Staff College.

4838. (*Lt.-Col. Chesney.*) I understand you that men may be appointed cavalry brigade-majors when they have only been two or three months in the cavalry before going to the Staff College?—Yes.

4839. Is not that rather a fault of administration, which might have been prevented by the authorities?—Perhaps it may be, but I only state that as one of the reasons why we are not so well served as we used to be.

4840. Have you known instances of genuine cavalry officers (like the present brigade-major of cavalry in Ireland) coming out of the Staff College, who have waited for a long time to get a cavalry appointment?—No, I think not. I think that the appointments have been generally filled up by men who have not been waiting for a very long time. We have only two brigade-majorships, one in England, and the other in Ireland.

4841. I understand you to attach a good deal of importance to a knowledge of surveying. A class, I believe, has been established at Aldershot to attempt to supply the notorious want of surveying power in the officers of the army?—Yes, they have a voluntary class.

4842. (*Rev. Dr. Butler.*) I gather that you rather deprecate military drill before a young man enters the army?—Decidedly.

Education at public schools and at military colleges.

4843. Would you go so far as to recommend the discontinuance of it at even a military college?—I do not know that it is necessary to discontinue it, but I do not see any good in it. I had much rather that a boy came quite fresh to drill, and without knowing anything at all about it.

4844. What would be the subjects which you would specially wish to have been studied by a young man before entering the army; you have mentioned some?—The ordinary education of an English boy at a public school, with a knowledge of modern languages, and drawing, military and otherwise, and with a certain knowledge of surveying so that he could make a good military sketch.

4845. Is there any other subject which you would think specially important?—Not so far as the cavalry is concerned. I forgot to mention military history.

4846. If the public schools could train boys in all the subjects which you have enumerated, you think that would perhaps be the best preparation for the army?—Yes, I think so.

4847. (*Sir D. A. Cameron.*) Does the Sandhurst college pretend to give a knowledge of cavalry drill to the cadets?—None whatever.

4848. Riding is rather neglected there, is it not? was not it so in your time?—No, we used to ride regularly twice a week.

4849. During the whole residence?—Yes, from the very first, when I was a cadet.

4850. Would you say that you derived no advantage from the military education which you received at Sandhurst?—Certainly not, because in those days the public schools utterly neglected foreign languages, drawing, and that sort of thing; and I believe that they now pay more attention to them.

4851. Do you think that it would be possible at a public school to teach practical field fortification and practical field artillery and surveying?—I think that it would be difficult; they might teach military history, and give a knowledge of modern languages.

4852. (*Mr. Parker.*) You think that if a boy could remain for another year and a half at a public school, with some attention to military subjects, it would fit him better for an officer than if he were a year and a

Major-Gen. H. D. White, C.B.

9 March 1869.

half at a military college?—I think so, for I consider that in after life it does a man more good to have been brought up in general subjects than in merely professional ones; in the same way that it is better for a clergyman to be brought up at an open University, such as Oxford or Cambridge, than at a purely theological college.

4853. (*Sir D. A. Cameron.*) Is it not an advantage to him to have been at both?—Yes; if the young men remained there for a short time so as to learn military surveying in a class, it would be an excellent thing.

4854. (*Mr. Parker.*) But you would prefer that a boy should not leave a public school so early as is now necessary for entrance to Sandhurst. You would say that the latter part of the time at a public school is valuable for forming the qualities which are useful to an officer in his after career?—Yes; I think it is a great advantage that a man should not be exclusively brought up in a military college. When I was there we went as boys from 13 to 15, but it is changed now.

4855. (*Sir D. A. Cameron.*) It is now a mere finishing process?—Yes.

Results of Sandhurst education.

4856. (*Lord de Ros.*) When in command of a regiment, you looked a great deal to the tone of your officers, their conduct at the mess, and amongst themselves; did you observe anything of a bad tone amongst those who came to you from Sandhurst?—No; I have seen very few from Sandhurst.

4857. Have you ever tried a cadet from Sandhurst at anything like patrolling a road, surveying a wood, &c.?—I am not aware whether I have done so, or not.

4858. On actual service is it not desirable that a lad should know a little before he comes out? have you not heard of "killed before drilled?"—I think that he ought to be taught something by his regimental drill.

4859. But you think that it is better for that to be taught at a depôt than at a college?—Yes.

4860. From your service with the allied armies, do you not regard French as especially useful to a cavalry officer, from his frequent employment in patrols and outposts?—Certainly, it is essential.

4861. The speaking of it even more than the writing of it?—Yes, it is most valuable.

4862. As to the riding, do not you think daily riding essential to proper instruction for a young officer (not having it twice a week but daily), and that he would learn it a great deal quicker?—Of course the more practice you have the better.

4863. But with the same number of hours either daily or on alternate days, would not a riding master prefer daily riding?—I should think that he would.

4864. Do you think that it would be possible at a college to teach any of the details of saddlery and the equipment of a horse; would that be of any use?—It does not take very long for a boy of intelligence to learn that. I think that he could pick it up in his regiment.

Staff College officers.

4865. Has it happened to you to have staff officers what is called *attached* to you, to learn cavalry drill?—Yes; occasionally officers are attached to the different regiments.

4866. What do you do with them when they come to the regiment, and are attached to you for the purpose of what is called learning cavalry drill? how do you teach them cavalry drill?—It is principally, I think, in the field that they learn.

4867. You do take them to the field?—Always.

4868. They are not put in the riding school to be taught the elements of riding?—No; I think that there is an order against that. They are supposed to have gone through a course of riding at the Staff College.

4869. Then you take them out and employ them in the field, as if they were actually *aides-de-camp*?—Yes, last year, when the brigade went out they made their sketches, with the other officers who were sketching.

4870. And they learnt their duty as *attached* staff officers?—Yes.

4871. Are there any of your brigade in the surveying class at Aldershot which was mentioned, only consisting, I think, of two officers from Sandhurst?—I am not sure; there were two put down, but I do not think that they went through with it.

4872. You would think it important that they should do so?—Certainly.

4873. (*Chairman.*) That class is not an obligatory class, it is purely voluntary?—It is voluntary.

Result Sandh educat

4874. I think that it is only the drill at Sandhurst to which you attach no very great importance. You consider that the opportunities which the cadets have had of obtaining a certain knowledge of field fortification, and of permanent fortification, are of very great advantage?—There is no doubt about it.

4875. Supposing that an officer has come straight from a public school, and has not been at Sandhurst, and that he does not enter the Staff College, I suppose that he is not very likely during his career in the army to acquire much knowledge of those subjects of fortification, or of any scientific military subject?—No.

4876. If he is a very intelligent officer he will perhaps teach himself?—Yes; but otherwise he is not likely to learn those subjects after he joins the army.

Alder Surve

4877. How came the class which is established at Aldershot to be established; was it at the instance of the authorities, or was it a voluntary organization on the part of the officers?—I think that it was instituted by the authorities; it is not a voluntary organization.

4878. (*Lord de Ros.*) I think that they called for volunteers, did they not?—Yes.

4879. (*Chairman.*) You would consider that the more an officer knows of the scientific subjects connected with his profession, the better?—Of course.

4880. But an officer in a subordinate position might be a very good officer as far as the duties attached to that position were concerned, without any very great knowledge on scientific subjects?—Yes.

Direct missic nation

4881. (*Sir C. Russell.*) Has it ever struck you as singular that in the examinations for direct commissions there should be no purely military subject examined upon?—That has not struck me before.

Sandh public

4882. (*Lt.-Col. Chesney.*) Returning for a moment to the comparison between Sandhurst and a public school, is not it obvious that Sandhurst gives an advantage towards going into the army to the sons of poor officers, which advantage possibly cannot be obtained by them at public schools?—Yes; but I should like that a certain number of commissions without purchase should be given to the public schools, in order to encourage them, and to leave the thing freer, if it could be done.

4883. Supposing that that were done, what would you do for the sons of those officers who are too poor to send their sons to public schools? Are you aware that there is a large class of officers in the army who are totally unable to send their sons to a public school?—I do not advocate the abolition of Sandhurst at all, but I was asked as to the general merits of officers who had been at public schools and at Sandhurst.

4884. Is it not the case that the public schools cannot possibly at present meet the wants of those officers who have not some considerable private means of their own?—Undoubtedly; they are very expensive.

4885. (*Lord E. Cecil.*) Is it the same at Cheltenham College with regard to expense?—I do not know.

4886. Is not the cost of education there less?—I suppose that it is.

The witness withdrew.

MAJOR-GENERAL G. J. CAREY, C.B., examined.

Major-Gen. G. J. Carey, C.B.

9 March 1869.

4887. (*Chairman.*) You are in command of an infantry brigade at Aldershot?—I am.

4888. You were for some time on the staff at the Cape, I think?—I was for four years Military Secretary to Sir James Jackson at the Cape of Good Hope.

4889. You never commanded a regiment?—Never; that is to say, I was never actually in command, but I was temporarily in command from time to time.

4890. But of course you will have had experience of officers who have joined the army from Sandhurst, and will be able to tell us what is your opinion of them. Do you consider that a lad who joins the army from Sandhurst is at all likely to prove a better officer than a lad who obtains a direct commission coming from a public school?—My experience has taught me that it depends on their age; if they come from Sandhurst at 18 or 20 years of age, they are almost too much formed; it all depends upon the age at which they join the regiment, whether from Sandhurst or from any public school; you get them from the public schools generally younger.

4891. Do you like having them younger or older?—Generally younger.

4892. Therefore, on that account you prefer to have them from public schools?—It depends upon the age at which they would come from Sandhurst, because if they have a military education at a younger age, they of course come prepared to undertake their duties at once.

4893. Does a cadet joining his regiment from Sandhurst get through his drill quicker?—He must, of course, do so, because he knows something of it when he joins.

4894. And it is not necessary to unteach him anything?—No, I have never known it.

4895. Do you think that a young lad from Sandhurst is generally considered by his brother officers, and by yourself, as possessing as gentlemanlike a tone as a lad who comes up from a public school?—That is rather a general question; there are exceptions to every rule.

4896. Do you consider it an advantage that a young officer should have had an opportunity of obtaining some instruction in fortification?—Of course it is, and in drill, and in the training of soldiers; which he learns at Sandhurst.

4897. A cadet from Sandhurst possesses all those advantages?—Of course he does, to a great extent.

4898. Have you any suggestion to make with regard to the general subject of military education?—I think that it would be better if the lads were sent to Sandhurst at an earlier age, and turned out of it earlier, before they feel themselves men there.

4899. At what age do you think that it would be advisable for them to leave Sandhurst?—At 16 or 17.

4900. How long do you consider that they ought to remain at Sandhurst?—It would greatly depend upon their previous education. A boy who had been properly brought up ought, I think, to do what he would learn there in 18 months or two years.

4901. (*Lord E. Cecil.*) You have never heard adjutants and commanding officers of regiments of the line express dissatisfaction with the way in which Sandhurst cadets know their drill?—No.

4902. You have never known any prejudice on the part of commanding officers against Sandhurst cadets on joining, as far as drill is concerned?—Never.

4903. That never came under your supervision during the short time that you were in temporary command?—No.

4904. (*Sir C. Russell.*) You have confined the remark as to the dissatisfaction expressed by adjutants or commanding officers as to drill, have you heard dissatisfaction expressed by adjutants and commanding officers upon other points connected with the Sandhurst education?—Not as far as education is concerned, but as far as habits are concerned.

4905. When you said that you preferred obtaining younger men in the army, who had not looked upon themselves as being their own masters, did you refer to the habits of intemperance or insubordination which cadets from Sandhurst have brought into their regiments?—Not so much insubordination and I do not say exactly intemperance, but being given to smoking and drinking to a certain extent, irregular habits which I do not think they would get if they entered Sandhurst younger. Results of Sandhurst education.

4906. In fact you attach to the age, rather than to the place of education, these habits of irregularity?—Yes.

4907. (*Lt.-Col. Chesney.*) Can you give us any information with regard to the present manner and bearing of the Sandhurst cadets, as you have observed it as a neighbour since you were quartered at Aldershot, you living within a few miles of them?—I think that they are greatly improved in that respect; they are not seen, as formerly, with short clay pipes. That is only from what I see outside; I do not know anything of the interior working. I think that they are better disciplined.

4908. Have any complaints been brought to your notice of their conduct in visiting Aldershot as visitors, they being very close to Aldershot?—No, none lately.

4909. (*Maj.-Gen. Wilmot.*) As a general rule do you find that officers study to improve themselves after they get their commissions?—Some do.

4910. Supposing that staff appointments were open, requiring examination, do you think that men would be found in the army who would study privately and become qualified for these appointments?—Plenty, certainly.

4911. Do you think that the qualification would be as good as that which is given now?—I know many instances of it with men who are on the staff now, viz.: Colonel Greaves, Sir Henry Havelock, and Colonel Hon. H. Clifford.

4912. Does that depend upon the education at Sandhurst, or is it obtained by other means?—I really do not know whether they were at Sandhurst R. M. College, or not.

4913. Then you cannot say whether those who study afterwards were brought up at Sandhurst or not?—I cannot.

4914. (*Rev. Dr. Butler.*) Do you think it important that young men should have received a military training before they enter the army?—Such is always a great help to them.

4915. It is a clear gain to them?—Yes. Perhaps young men who have not been at Sandhurst take six months at their drill, but the Sandhurst cadets hardly take any time, and are able to enter the ranks at once.

4916. It has been stated to us in evidence that young men have to unlearn in the army what they have learnt at Sandhurst?—In 24 years' experience that has never come before me.

4917. Are there any subjects which you think it peculiarly desirable that young men should have studied before they enter the army?—Living languages, and certainly a correct classical basis. Preparatory education for the army.

4918. I mean over and above the ordinary education of an English gentleman; are there any special studies which it is desirable for them to work at?—The modern languages, military drawing, and surveying.

4919. And would you include military history?—Of course military history.

4920. No other subject specially occurs to you as of paramount importance?—You include in the ordinary education of a gentleman, I suppose, mathematics.

4921. Mathematics and classics, and a certain amount of history?—Beyond the ordinary education of a gentleman I think that military history, surveying, and military drawing all help them.

Major-Gen. G. J. Carey, C.B.

9 March 1869.

Instruction of officers in the service.

4922. And modern languages?—You never know where modern languages may turn up useful to them, as the army is so dispersed.

4923. (*Sir D. A. Cameron.*) Do you think that it would be possible to give the military instruction which is given to cadets at Sandhurst to officers after joining their regiments by having officers' schools?—I should think not, because you would not have the same hold upon them; it would only be voluntary.

4924. Could you make it obligatory, or would it be advisable to make it obligatory?—I am not prepared to say.

4925. Would it not be an advantage if every officer knew something of the principles of field fortification and surveying?—Yes; I include that in military drawing and surveying.

4926. Would it not be advisable to give every officer that instruction after joining his regiment?—Decidedly, because he might be cast upon his own resources, and might have no engineer officer with him.

4927. You think that the examinations for promotion now are not sufficient?—No, because they merely include drill and military law (court-martial law).

4928. (*Maj.-Gen. Haythorne.*) Do you consider it necessary that every officer in the army should have a knowledge of these military subjects, and that it would be better that a more general knowledge should be diffused throughout the service; do you want every man, for instance, to know military surveying and fortification?—It is of very great use to him at any time. I know that I have felt the want of it myself.

4929. (*Lord de Ros.*) In your staff service at the Cape did you ever find any difficulty in executing your staff duties from the want of any deep mathematical knowledge?—Not at all. My duty as military secretary was all pounds, shillings, and pence work.

4930. Does not it often occur that officers take advantage of their leave to go abroad, and acquire languages and other military qualifications?—They do.

4931. And they come back able to make their way?—Yes, they are all the better for it.

4932. In your service have you ever observed that there was a want in the regiments of officers able and suited to fill the staff situations of the army?—Not at all in the field, as long as they could ride.

4933. Are there not some of your best quarter-master-general officers, men who have never been at any of the colleges, Colonel Clifford for instance?—Yes, he is a first-rate man, and so is Sir Henry Havelock.

4934. Might not a greater amount of surveying and field fortification be required at the promotion examination?—Certainly.

4935. Do not you consider that many of the regimental officers who examine would be perfectly competent to undertake that examination?—Some would.

Results of Sandhurst education.

4936. (*Rev. W. C. Lake.*) I understood you to say that the studies at Sandhurst, such as military history, surveying, and fortification, were useful to all officers?—Of course.

4937. The reason why I asked that question is, that it has been remarked that it is very well for a certain proportion of officers to know these things, but that for the great bulk of officers they are of no use; that is not your opinion?—I cannot agree with that, because should a young officer be left by himself, with a small party under adverse circumstances, in the field, he would be better able to fortify his position at any time, if necessary, being so educated.

4938. Any officer might very much profit by that knowledge?—Certainly.

4939. As to the drill which is learnt at Sandhurst, you think that it is of use to the officer himself?—Exactly so.

4940. But it is of no use to the service, because he would learn it under any circumstances in his regiment?—It is, because he is an efficient officer perhaps six months sooner than otherwise.

4941. It puts him on six months?—Yes.

4942. But he could learn it anywhere?—He might.

4943. Therefore you would not very much care if it was omitted at Sandhurst, and if Sandhurst was confined to studies. He would learn drill in the service afterwards, whether he had been at Sandhurst or not?—He would; but it would be all the better if he had learned it at Sandhurst before joining.

4944. Are you aware that there is something in the nature of a school for officers after joining in the Prussian army?—I am not.

4945. Do you think that it would be possible to have schools in which officers in the first year after their joining could learn the rudiments of the military studies?—Yes.

4946. You do not see any difficulty in that?—No.

4947. (*Lord de Ros.*) When an army is on active service in the field, do you not think that some of the instruction which the officers have learnt at the college is of use?—Certainly.

4948. There is no question about it?—Not the slightest.

Alder Survey

4949. (*Lt.-Col. Chesney.*) Can you tell us anything of the surveying class which has been established at Aldershot?—I cannot.

4950. You do not know whether many or few officers attend it?—I believe that it is pretty full.

4951. (*Chairman.*) Do you think that if such classes were established as Mr. Lake has alluded to there would be a disposition amongst officers to take advantage of them?—I think so.

4952. (*Lord de Ros.*) Does an engineer officer instruct the surveying class, or who instructs them?—An artillery officer. I think that it is Major Woolsey.

Sandh cadets

4952*a*. (*Chairman.*) Have you any further remarks to make in regard to your knowledge of the Sandhurst cadets?—When questioned as to the use of drill at Sandhurst, I omitted to mention that last year I had, attached to my brigade, during a divisional field day, under H.R.H. the Field Marshal Commanding-in-Chief, the battalion of cadets, which moved with great celerity and smartness, and gave me every satisfaction. The cadets had marched from Sandhurst that morning (about seven miles), and had to march back again. It was one of the hottest days last summer, with clouds of dust, and still the drill and appearance of the cadets was very steady and soldier-like.

The witness withdrew.

Adjourned to Thursday next, at 12 o'clock.

Thursday, 11th March 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.
LIEUT.-COL. CHESNEY.

MAJOR-GENERAL THE RIGHT HONOURABLE PERCY HERBERT, C.B., M.P., examined.

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

Royal Military College, Sandhurst.

Duties of the Commissioners.

4953. (*Chairman.*) I believe you were educated at Sandhurst?—I was, in the junior department.

4954. You obtained your commission without purchase?—Yes.

4955. Were you at Eton before you went to Sandhurst?—I was at Eton for three years before I went to Sandhurst. I went direct to Sandhurst from Eton, that is to say, with the interval of a few months, but without any interval of school.

4956. And you found that the education which you had received at Eton enabled you to pass the preliminary examination at Sandhurst without difficulty?—Yes.

4957. The examination was then much easier than it is at present?—Yes; it was of a very simple character; there was a certain amount of reading, writing, and arithmetic, and a little Latin and history I think, but it was of a trivial character, which anybody ought to be able to pass at the age of 14.

4958. Since that time you have seen considerable service?—I have seen some service in three quarters of the globe, Africa, India, and the Crimea.

4959. You were lieutenant-colonel of the 82nd regiment, and served under Lord Clyde?—Almost the whole of my regimental service was passed in the 43rd regiment, and I was appointed lieutenant-colonel of the 82nd during the Indian mutiny, with the object of obtaining service in India. I only served with it for about three weeks in the campaign in Rohilcund under Lord Clyde, and was appointed brigadier at Cawnpore. My regimental experience was in the 43rd regiment. I was for over two years depôt adjutant of the 43rd.

4960. And you were Assistant Quartermaster-General and Quartermaster-General?—I was Assistant Quartermaster-General of the 2nd division upon the formation of the army in the East, until I was appointed Quartermaster-General of the army in November 1855, and I remained there until the army was broken up.

4961. You are also a commissioner of the Royal Military College?—I was appointed a commissioner of the Royal Military College upon my appointment to the head-quarter staff in 1860, as Deputy Quartermaster-General to the Forces. It is usual to appoint the officers who hold that and similar positions at the Horse Guards commissioners of the Royal Military College at Sandhurst.

4962. When you were at Sandhurst did you find that the general tone of the institution was as gentlemanlike and as good as the tone of the boys at Eton?—Going direct from Eton to Sandhurst, I was very much struck with the very low moral tone of Sandhurst compared with Eton. I may say that that was so both in the conversation and in the personal conduct of the cadets, and there were practices brought to my knowledge in the first fortnight at Sandhurst of which I was entirely ignorant, I having passed three years at Eton.

4963. Are you in a position to know whether there has been any change for the better in those respects of late years at Sandhurst?—I should think that the moral tone is not in the least improved, from what I have ever heard. The young men are very much older, and therefore no doubt the practices to which I have alluded have altered.

4964. Has your position as a commissioner given you any peculiar opportunities for forming a very accurate opinion?—No, I do not think necessarily so as commissioner. The duties of a commissioner are very slight, and they are slighter now than they used formerly to be. Perhaps it would be convenient if I stated what duties fall to me as a commissioner. I may say that formerly, when I passed out of Sandhurst, the commissioners used to hold an examination, which, though to a certain degree formal, was not absolutely so; they examined, and frequently individual commissioners carried on the examination themselves to a considerable extent. But since the establishment of the Council of Military Education they have been relieved of that duty, and they go down to Sandhurst at the half-yearly meetings and still sign the certificates of merit, but that is purely a formal duty. Boards are convened from time to time, generally speaking at the Horse Guards, under the presidency of the General Commanding in Chief for the purpose of transacting business as commissioners. A part of that business refers to the property of the college which is vested in them; two or three commissioners sign cheques for the expenditure. When any property was to be purchased or to be disposed of, or or when there was any alteration of buildings, they gave their opinions upon the plans, and they were also called into action when reports came from the Governor of the college to request that certain cadets might be dismissed. I think that the case usually was that the Governor either had kept them under restraint until he could get the authority of the commissioners to dismiss them, or had taken upon himself to send them away, and required a confirmation of it on the part of the commissioners. We used to consider the circumstances of the report, and we used to dismiss those cadets if the case seemed to call for it, and we were sometimes called together afterwards for the purpose of reinstating them after representations were made by their friends and relations, and pity was evoked, and we sometimes cancelled our previous decision. I think that what I have stated pretty nearly comprises all all the duties which were imposed upon me as a commissioner.

Results of Sandhurst education.

4965. When you were a regimental officer of course you had opportunities of forming an opinion as to whether the cadets from Sandhurst, on entering the army, were regarded as more desirable recruits than young officers who obtained their commissions by the usual examination?—I do not think that they were so at all. I must qualify that statement; I think that the education which I and others received at Sandhurst was a practical one, and a very useful one to me, and I have to thank Sandhurst for the practical education connected with military matters, such as military drawing, surveying, and fortification, both permanent and field fortifications which I received. That was of a very simple character, and was exceedingly useful. In that respect I think that I had an advantage over those who had been educated at other schools, and who had not learnt those subjects; but I think that they might be learnt without going to Sandhurst, if there was a demand made for that sort of education; there is nothing essentially difficult in it so that it could not be taught elsewhere. If

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

in command of a regiment I should be anxious to get boys from the public schools rather than from Sandhurst.

4966. (*Lord E. Cecil.*) You say that as a regimental adjutant?—As having been a regimental adjutant, certainly. The advantage which I am speaking of, from having learned fortification and military drawing, comes out afterwards; they make a man very useful in the field, wherever acquired. But if you mean whether a man when he joined his regiment was fitted to take the ordinary duties of a regimental officer, either in consequence of the military discipline, or of the military drilling, which he had received at Sandhurst, I say that he was in no sense one jot more prepared than a boy who had come from Eton and had never seen a soldier.

Qualifications requisite for staff officers.

4967. (*Lord de Ros.*) You served as a regimental officer for several years before being on the staff?—Yes; I served in the Kaffir war; I was for two years aide-de-camp at Malta.

4968. Do you think that the service which you had as a regimental officer was of considerable use to you afterwards as a staff officer?—It was invaluable.

4969. You served on the Quartermaster-General's staff through the Russian war?—I did.

4970. You went out there at the first?—I went out there at the first, and came home at the end.

4971. Do you recollect being employed to survey a position about 20 miles north of Constantinople, and to report upon a proposed line of field entrenchments from the Sea of Marmora to the Black Sea?—Yes; I recollect being sent under your orders to report upon the position; I did not survey it, but I merely rode over it, and gave a report as to the general outline of the position, and the roads communicating with it upon the base of Constantinople.

4972. Are you aware that the report which you produced was shown to the French Chef d'Etat Major by Lord Raglan, and that he said that he had no officer who could have done it in the time in which the English officers had done it?—I was not aware of that. Colonel Hardinge drew up the report in conjunction with me, and I think that a good deal of the credit of the report is due to Colonel Hardinge.

4973. You have said that you found many uses for your knowledge of surveying, and that what you had acquired at Sandhurst in that way was of use. Do you consider that at any time you experienced any deficiency from the want of deep mathematical knowledge?—Certainly not.

4974. I presume that you do not consider that to be the case with an engineer? You consider that an engineer ought to know all those subjects?—No doubt.

4975. You do not think that a staff officer is at all required to possess the same high qualifications in those respects as an engineer?—Not in mathematics.

4976. Do you consider that one of the important things to teach a staff officer, and for him to know thoroughly, is the embarkation and disembarkation of troops?—Of course a practical knowledge of that is very important when you can gain it.

4977. The thing which I apprehend that you regard as most useful to a staff officer is the facility of readily surveying, and undertaking that sort of duty which you were commissioned to do as regards the general survey of a position, to be afterwards verified and improved upon by an engineer?—I think that an efficient staff officer ought to be able to judge of a position rapidly, and to see whether it was one in which he could place troops to advantage to fight. An engineer officer may survey it, and make a more accurate survey of it than many staff officers would, but he may not be a judge of what number of troops would be required for it, and which would be the best way of placing those troops when they were available. With regard to throwing up works, a certain knowledge of fortification is necessary for a staff officer, or any one else, to throw up even a very simple field work. I have had occasion to trace simple entrenchments, one on the field of Inkerman, under orders of Sir de Lacy Evans, for the defence of the position held by the 2nd division, the engineers being fully occupied with the siege. I believe that it was a good deal laughed at by some of the officers when it was traced, especially as it was with great difficulty that we could get it done, the men being already overworked in the trenches; but I saw a large number of men and officers rallied behind that entrenchment during the battle of Inkerman, and I believe that no one laughed at it after the battle of Inkerman. So I have been told by officers of the division. In the same way I wanted a bridge head defended in India. I had not at hand any officer who knew how to throw up even the simplest *tête-de-pont*, and I traced it myself with a rope and a few sticks, and gave them instructions how to make it; it was of a very simple character, and any officer ought to be instructed up to the point of being able to make such.

4978. And you attribute your knowledge of that sort of subject to what you acquired at Sandhurst?—Yes; I pursued it a little afterwards, but I was quite capable of it when I left Sandhurst. I read certain books upon the subject after I entered the army; but anything which I did I was certainly qualified to do when I left Sandhurst.

4979. You belong to that class of officers who were selected, and who were incorporated into the staff from the regiments?—Yes.

4980. Do you think that generally speaking those officers who were so incorporated as you were turned out as good and as useful officers for the staff as those who had received a more scientific education?—I think that some of those who had received the most scientific education were very indifferent staff officers, and that many of the very best officers were those who certainly could not have been called scientific officers.

4981. You recollect some regimental officers being incorporated into the Quartermaster-General's department at Varna, for the purpose of the survey of Bulgaria towards the Danube?—Yes, three or four.

4982. Was it not the general opinion that those officers did their work extremely well; and do you recollect, or have you any knowledge, of the great compliments which were paid to the staff by the French upon that subject, they saying that their officers had been unable to do it half as quickly, though they might do it more accurately?—I think that I recollect something of the sort being said. Of all the officers who were appointed to the staff, both of the Quartermaster-General's and of the Adjutant-General's department, after the war began, and after we had the means of testing individual officers, there were only two or three to whom I should at all take exception; I think that all the rest were exceedingly capable officers.

4983. Do you not think it an advantage to the staff to be able to take as it were on trial an officer from a regiment, and if he succeeds and does well to keep him, and if he does not do quite so well to be able to return him to his regiment without offence to him and without annoyance to anybody, and thus to obtain a selection by trial from the regiments?—I presume that you mean as opposed to a separate staff corps?

4984. Yes.—Unquestionably I prefer taking them on trial from regiments instead of having a staff corps. The other is the case in the French army, and our practice is, I think, infinitely better. I would repeat that I think that the system of selecting efficient regimental officers for the purpose of employing them on the staff is a better one than having officers in a separate staff corps.

4985. Do you not think that the system of selection to which you have alluded is a great encouragement to a young officer to improve himself? For instance, have you not observed that those officers who are put on the staff in that sort of way take a great deal of pains afterwards, and are very anxious to remain there and qualify themselves for it?—Yes, no doubt.

4986. Do not you think that the capability of speaking French is an absolute necessity for a staff

officer?—I think that it is quite right to insist upon it.

4987. Did you learn French at Sandhurst or abroad?—I learnt French very badly at Sandhurst, and if I had had to pass a very stiff examination in French I am afraid that I should never have been on the staff; but my French has improved by travelling and reading, and by taking pains; I cannot however say that I am a good linguist now.

4988. (*Lord E. Cecil.*) What were the relations between the Council of Military Education and the commissioners at Sandhurst?—The Council of Military Education took the examinations so entirely out of the hands of the commissioners that as commissioners we had very little to do with them.

4989. Do the Council of Military Education and commissioners interfere with one another in any way?—No, we meet them when we go down there to sign the certificates; they attend at the half-yearly meeting; but as to interfering with one another they certainly do not do so.

4990. You said that the commissioners were consulted on matters of discipline; is it so to your knowledge with regard to the Council of Military Education?—I think that the Council of Military Education have little or nothing to do with the discipline of the college.

4991. Do you think that the existence of the commissioners serves any good purpose?—I do not think that the system of Sandhurst is a good one. I should wish to see the system of Sandhurst entirely changed, and I certainly do not see any reason for keeping commissioners, unless it is as an honorary matter.

4992. Who manages the property of the college?—It is vested in the commissioners, and therefore any sale or any exchange of property has to be brought before them for their signature and approval (there is no great property), and the estimates for any proposals to be placed in the army estimates were also considered by the commissioners in the same way as the Commander-in-Chief and the Quartermaster-General consider any proposals for barrack estimates.

4993. I suppose that that duty could be as well done in the Quartermaster-General's office or at the War Office?—Yes. I understand that there has been a change made, and that it is now carried on in the Quartermaster-General's office. It was only done by the commissioners, inasmuch as the property was vested in them, and no one else could legally give a right to the land.

4994. If I understand you rightly the duties of the commissioners are purely honorary?—Very nearly so. I could not say purely honorary, because we dismiss boys.

4995. Does every case of dismissal come before you?—It was so up to the time when I was serving as Deputy Quartermaster-General at the Horse Guards.

4996. There are no commissioners at Woolwich, are there?—None. There is, I believe, some honorary board.

4997. Do you see any necessity for cramming schools between the time when the boys leave a public school and their entrance into the army, in order to enable them to acquire sufficient military knowledge?—I think that the necessity of a cramming school is this: From the system of examination by papers the crammers teach by question and answer a number of things which I believe boys are very apt to forget afterwards, but I do not think that there is any necessity for an intermediate school between the public school and the military service.

4998. You think that the military knowledge which is necessary might be acquired at a public school without any difficulty?—You would have to make arrangements for it. The boys might be at a private tutor's for a short time; they would very soon acquire the amount of knowledge which is necessary for a regimental officer.

4999. Do you think that officers joining from Sandhurst would be capable of drilling a battalion or a company thoroughly?—No. It is a delusion to think that any drill learnt at Sandhurst is of any use. A considerable number of recruits, both officers and men, have passed through my hands as adjutant, and the sort of drill which a boy would get at any school of that kind would be rather a drawback than not. He gets into tricks, into drill of a bad description, and you have a great deal more difficulty with him than with one who has not been drilled at all. As to any knowledge of the duties of a company's officer, in my opinion it is simply impossible that he can acquire any knowledge of them at Sandhurst.

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

Results of Sandhurst education.

5000. Do you think that officers from Sandhurst could have undertaken the charge of a party of soldiers in the trenches? Could they have taught them how to use pickaxes and shovels, and how to make gabions and fascines?—They might have taught them how to make gabions and fascines, because they are taught that.

5001. As far as you recollect, from your experience at Sandhurst, could you, on entering the army, have taught the practical work to a party of soldiers?—I think that at Sandhurst we had not quite enough of the practical class, but still we had enough to be very useful to us and to give us an idea.

5002. Could officers who had come from Sandhurst have traced out a field fortification?—Yes.

5003. Could they have fortified a house?—Yes, in theory.

5004. Do you think that you could have put it into practice, supposing that you had been given a house to fortify suddenly in the face of the enemy?—Yes; that is a very simple kind of instruction, and from books and so on you would very soon learn it. The tracing of fortifications on the ground, and the making of them to a small extent with the pick and shovel, was taught at Sandhurst.

5005. But you do not think that you would have been quite qualified to do it without referring to books?—Yes, I knew perfectly well how to do it without looking to any book whatever.

5006. On entering the army?—Yes; it is simple enough; I could have set a gang of men to work.

5007. Could you have made a good road sketch?—Yes, I could. The surveying then was not so good as I believe it is now; we learned the use of the plane table in surveying, and got on very well with it, but we did not learn sketching with the prismatic compass, and were not sufficiently proficient in eye sketching, but some of the cadets who made progress in that branch were very proficient indeed. I think that one great advantage to an officer of having a fair amount of education in fortification and surveying is this, that if he gets to a superior rank he is able to benefit by the report of engineer officers or staff officers, he is able to read a survey or sketch and to appreciate it, and to read rapidly on the ground the features and to fix them in his mind, such as the alternate gullies and undulations of the ground. With regard to fortifications, he is also able to find his way about a fortification. He knows the value of the different trenches, when a scheme is put before him, either of a proposed work or of a plan of trenches. If he has to lead a party, he will not lose his way in the dark in those trenches, but he will know his way about from his knowledge of the principles upon which they are constructed.

5008. Would not a very elementary amount of knowledge in those subjects enable him to do that?—Certainly; it is nothing approaching a science, but it will require a certain amount of application; they are very simple and entertaining subjects of study.

5009. You were not at the senior department?—No.

5010. From your staff experience, do you think that the officers who were educated at Sandhurst, and afterwards at the senior department, were better officers than others?—Some were better, and some were worse. What they learnt at Sandhurst with regard to surveying and so on was very useful, but they were

Qualifications of staff officers

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

none the better as staff officers for having gone deep into mathematics. I have known officers who were very deep in mathematics, with very high testimonials from Sandhurst, make very inefficient staff officers.

Qualifications of staff officers.

5011. Then you think that you would find as many good staff officers amongst the ordinary officers who have not received a professional education, as amongst those who have?—I think that if an officer has not received a professional education, he serves under great drawbacks, he may have great merits, and may be a very valuable staff officer, but it is a very great drawback if a staff officer has not received a fair amount of professional education, drawing a distinction between a man who has been fairly educated and one who has received a scientific education. Some of the most valuable officers were those who had never been near Sandhurst at all, but they would have been a great deal better for general service if they had had the professional education to which I have alluded.

System of education at Sandhurst.

5012. (*Lt.-Col. Chesney.*) You have stated that in your opinion it is impossible to teach the performance of regimental duties at Sandhurst; do you refer to Sandhurst especially or to military colleges generally?—I think that it is an entire delusion to attempt to do so at any military college. I of course judge principally from Sandhurst. As a regimental officer, I do not see how a knowledge of the duties, the learning of which in a zealous way constitutes a good regimental officer, is to be acquired at school.

5013. We have had it stated to us that the students are thoroughly taught at West Point, upon a system by which the whole company is officered from the elder cadets under the supervision of an officer, and that their longer residence there and regular practice enable the instructors to teach them thoroughly their regimental duties. Is there any reason why that plan could not be applied in this country?—I think that the whole system of Sandhurst is objectionable, and that the military discipline connected with boys before they enter the service is a bad one. I think that the public school system is the right one to follow in this country. I think that we want a gentleman with a cap and gown at the head of the school, whether it is for military education or for anything else. I think that officers of our rank and experience are not suited to be schoolmasters. When I was at Sandhurst there was no moral influence whatever; there was nothing to represent the tutorial system of Eton and Harrow, and I think that that was a great deficiency, it is to that that I attribute the low moral tone of Sandhurst; and I do not see how you can get over it, unless you carry on the schools for the education of the army upon the same principle as the public schools, which have been so successful in this country.

5014. Does not what you say rather apply to this country, because the West Point officers notoriously stand the highest in their profession in America, and as high as any professional men of any class in America?—I am now talking of the moral tone. The officers at the West Point College no doubt are the most distinguished officers in their class. A very good professional education is given at West Point, and I should be very glad to see as good a professional education given at Sandhurst and at Woolwich, and in fact I believe that a very good one is given; but I see no reason whatever why that education should not be given in a school carried on upon the principles and discipline of the public schools. I see no reason why you should not at a school teach fortification and surveying just as well as you teach Latin and Greek, and why you should not teach military history just as well as you teach modern history or ancient history. I see no reason why all that should not be carried on at a school where the students are living in the tutors' houses, just as well as in a barrack room where the students are treated as soldiers in barracks. You might teach throwing up field works just as well at Eton or at any other school as at Sandhurst. You could have a drill serjeant and a uniform for the boys, and give them all the drill required just as well at one school as at another. The system at Sandhurst was that the professors had nothing to do with you except during study. I think that the system of dormitories and passages, which the construction at Sandhurst almost inevitably leads to, is a bad one. I think that the system of tutors' houses is infinitely preferable; but I believe that there are other schools which are well carried on where tutors' houses do not exist, but where there is nevertheless a tutorial supervision.

Military education at public schools.

5015. With regard to what you said as to once throwing up a *tête-de-pont* which was of great service, did you state that there was no other officer but yourself capable of doing it?—There were only three or four officers at hand. I wanted it done; the bridge was never attacked, but I thought it desirable to be done. It was when I was commanding a large district between the Jumna and the Ganges.

5016. That kind of knowledge is, I believe, not common among English regimental officers?—I think that it is much more common now than it used to be. It used not to be common. I think it right to add that I was the only officer of the Queen's army present; the others belonged to the late East India Company's Service.

5017. You have not seen officers of the scientific corps, namely the artillery and the engineers, much employed upon the staff during your service, have you?—No, not largely. I should qualify that statement by saying that an engineer officer is generally looked upon as a staff officer, because a great many of them were not attached to the company of sappers, and were very often detached as staff officers to make surveys and so forth.

Appoi to the

5018. In foreign armies are not a good many of the duties which you have spoken of performed by engineers, and not by staff officers?—I hardly know.

5019. As to the choice of staff officers from regimental officers of which you have already spoken, is it easy to tell beforehand which regimental officer is likely to prove a good staff officer?—In ordinary times of peace of course it is somewhat more difficult to make the selections. You can only take the reports of officers under whom those regimental officers have served of their being intelligent and attentive to their duties; and they have, perhaps, distinguished themselves as adjutants, or as captains of companies. But on service in the field you very soon get to know the value of men serving in the same division with you. I may exemplify that by saying that in more than one appointment to the Quartermaster-General's department after we got on service in the Crimea, although it was in the hands of the Quartermaster-General or the Commander-in-Chief, it was deputed to the general of the division to select. He told me as his Assistant Quartermaster-General to recommend him some one, and in two cases I made a selection of officers whom I only knew as officers serving with their regiments, but I knew them as having been active adjutants and efficient officers. One was killed in front of Sebastopol, and the other is now in the service, and has been since serving on the staff in several appointments with great credit to himself.

5020. What you have said of the facilities of choice applies chiefly to where there is some service actually going on?—Yes; I wish to show that all those appointments were not made, as has been very often thought, by favouritism, but that when you are on service, there is an immense inducement to every officer to appoint the very best officers whom he can to such posts.

5021. Do you know of any *a priori* reason why engineer or artillery officers should make worse staff officers than others; is there in short any *a priori* reason why an officer from a scientific corps should make a bad staff officer?—Certainly not. The only qualification which I should put to that answer is that they should have had a knowledge of the command of men. If they have not been exclusively employed in duties of construction, in which of course engineer officers are sometimes employed, there is no reason at all why they should not make very valuable staff officers, and

I have known such. When I spoke about scientific officers, I said that officers with a high scientific education, but wanting in common sense and moral qualities, would not make good staff officers; but that applies to every branch of the service. I see no reason for excluding officers of engineers and artillery from the staff.

5022. If two officers were equally good at their regimental duties would you not prefer for the staff the one who had the best knowledge of the military profession generally?—Certainly, taking zeal and activity for granted.

5023. (*Maj.-Gen. Wilmot.*)—Since you have known the army have you seen much change in the acquirements of officers?—In the last few years I have not been thrown much with the regimental officers, as I have been engaged either in Parliament or on the head-quarter staff, but I have no doubt that there has been a very considerable change since the Crimean war, and that there is a great deal more professional knowledge dispersed throughout the army than there used to be.

5024. There is no other change in acquirements besides professional acquirements; you get the same class of men as far as the public school education goes?—Yes, I think that more attention has been paid to acquiring knowledge of professional subjects.

5025. I suppose that a knowledge of purely professional subjects is of great advantage to the army?—A great advantage.

5026. As a general rule, have you found a deficiency of military education and knowledge among officers?—During all my regimental service, I think that the knowledge of professional and technical subjects was decidedly insufficient; I do not think that a sufficient number of officers were fairly acquainted with the rudiments of fortification and the survey of ground, which are the two principal points.

5027. You have mentioned a case in which some ridicule was attached to something which you did?—So I was told afterwards.

5028. May not that be taken as rather an indication of a low standard of professional knowledge?—Yes. That is 15 years ago. I do not think that those who were well educated in the matter would have laughed so much.

5029. Supposing that there was a system of selecting the staff regularly from regiments, would it be important if you were particular in making the selection that the whole professional status of the army should be raised?—Yes, I am very desirous to see the general status of the army raised; I do not wish that the mass of officers should be pressed up to scientific acquirements, but I think it of very great importance that as large a proportion of officers as possible should acquire, and should be encouraged to acquire, the rudiments of fortification, surveying, and military history.

5030. Would you look upon the army as a profession of which a man ought to acquire something before he enters, or simply as a trade which he can acquire after he enters?—I am rather for free trade in this country; I should like to get both sorts of men, and I think that both ways are better than either.

5031. A man enters a trade to learn it, but a man enters a profession knowing something about it?—I should encourage both classes of officers; I want to see the officers of the army recruited from the broadest basis possible, from all the public schools of the country where a gentleman's education is given.

5032. Then, as I understand, you would like to see a sufficient military education given at public schools to enable a young man who came direct from a public school into the army to have sufficient professional knowledge for your purpose?—I should be very glad to see that done.

5033. Do you think that that would be comparable with the short term of military education now given at Sandhurst?—What I should wish to see is every encouragement given to public schools to educate boys for the army. I want to see as large a number of officers as possible derived from the public schools; that is a *sine quâ non* with me. I will get the best education that I can in them, but I most strongly object to the principle of forcing everybody through a military college like Sandhurst. I think that by so doing you would cause gentlemen of independent fortune to devote their sons to other professions rather than have them forced through a college of which they disapproved. I also think that the moral tone of Sandhurst, so long as it is conducted as a military school, will be an objection. I think that the consequence of obliging every one to go to Sandhurst would be that the public service would suffer from the loss of those persons very much more than they would suffer from not going into the army. I should wish to encourage the obtaining at public schools of the rudiments of those branches of military education to which I have alluded, and afterwards by private tutors, if you please. I should also give greater facilities than are now given for officers after they join the army to improve themselves in those purely military studies.

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

Military instruction at public schools.

5034. (*Rev. Dr. Butler.*) I think that you were at Eton before you went to Sandhurst?—Yes, for three years. I went straight to Sandhurst.

System of education at Sandhurst.

5035. At what age did you enter at Sandhurst?—At 14.

5036. Were there many of the students at Sandhurst as young as that?—Yes; the age of entry at that time I think was from 13 to 15, so that I was just about the average age.

5037. How were you struck on first entering Sandhurst with regard to the tone of the place generally?—I was struck with the very low tone of morality which existed; and as I have said before, I heard of more immorality of practice than I had heard of before, and of practices being in vogue at Sandhurst of which I had previously had no knowledge whatever during the three years that I was at Eton.

5038. Would you attribute that mainly to the antecedents of those who entered Sandhurst, or to defects in the administration?—To defects in the administration. I have no reason for imputing it to the antecedents of the boys coming at that age, namely, from 13 to 15. I must say that the class of boys who came to Sandhurst at that time were certainly not so high in social position as those with whom I had been in the habit of mixing at Eton, but in answer to your question I can decidedly say that in my opinion that which I have referred to was acquired at Sandhurst.

5039. What would you regard as the central defect of the then administration?—The entire absence of tutorial superintendence.

5040. That is to say, there was not sufficient influence brought to bear upon each cadet?—There was none; we lived in rooms, five in a room, and a serjeant slept in the passage to keep order, and the captain of the company came round every now and then at night with a lanthorne and walked round to see that all was quiet; of course everything was very quiet when he came round, but as to any superintendence beyond that, or any moral superintendence, there was none whatever. Nobody ever spoke to a boy as a master would speak to his boys at a private school, or as a tutor would speak to every boy who was under him either at Eton or at Harrow.

5041. Do you think that that deficiency is a necessary accompaniment of a military system, or might it be improved?—I think that it is a necessary accompaniment of a military system, speaking of a system as military discipline *versus* scholastic discipline; but I think that there is not the least necessity for it in an establishment which is intended to give a military education; I think that all which I learnt at Sandhurst might just as well have been taught to me at Eton, if an arrangement had been made for teaching it instead of teaching Latin and Greek.

5042. Do you think that the fact that most or many of the tutors at Sandhurst are military men confines the choice too much?—I think that there is no sort of objection to the professors being military

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

System of education at Sandhurst.

men, but that on the contrary there is a great advantage; of course they teach the subjects connected with their profession much better than a civilian. An officer will probably carry more respect in teaching fortification than a civilian who is known to be merely a theorist. But for personal superintendence I think that you want people of the same class as you have at the public schools, you want the moral superintendence; and I think that the teaching of the other subjects which are not strictly military ought to be carried on by tutors as it is at Eton.

5043. In selecting persons to influence the young men morally, and to look after their general welfare, including their moral welfare, must you not look for very special characteristics?—I should say so.

5044. As a matter of fact have you reason to suppose that those persons who did attend to the young men at Sandhurst were selected with reference to such characteristics, or purely with reference to military attainments?—I think that the military men were selected generally for their military attainments. I have certainly known appointments made where men were thought to be well educated men and judicious men, who would be judicious in the management of those under them; but I think that military men, as far as my experience goes, are simply unfitted for taking charge of youth as schoolmasters; that is really what they are placed as. I will exemplify it: I have spoken of the low moral tone at Sandhurst; I spoke some years ago to an officer of rank and standing and position at Woolwich, and said that I had heard that there was great ground for complaint regarding the superintendence of the moral conduct of the cadets, and that they were in the habit of associating in the public houses with women of loose character; that officer said to me "perhaps it might be worse if they did not do so." I need not explain to this Commission what that means. But I think that if a person in a responsible position in an establishment like that speaks with reference to the moral conduct of the young men in that way, it shows that he is not fitted to have charge of them. I am sure that there is no schoolmaster, either clerical or lay, throughout the country who would ever for one moment have entertained such an idea, let alone expressing it. I do not say that every officer would have done so, but I only give that as an instance.

5045. In short, you think that an officer familiar with the almost necessary laxity which prevails among young men in the army would be liable to take a too lax view of the temptations of boys and young men at a place of education?—I think so.

5046. Would you also be of opinion that the very essence of military discipline is to be strict, whereas the essence of success in teaching is that a man's system should be elastic and sympathetic rather than rigid?—I have no doubt that there is a great deal of force in what you suggest.

5047. We have it in evidence that the civilian professors, as a rule, are those who are least successful with the cadets at Sandhurst; can you account for that, assuming it to be true?—I think that it is very likely to be so. I do not think that it was the case with all when I was there. There were some who expressed their sympathy, and who were not so strict, and were more friendly with us, and I think that we got on a great deal better with them. There were some who used to force the thing, like the worst style of usher at a private school, and of course everybody had his back up and hated and detested them. There were a certain number who came under that description most thoroughly, especially some of the foreign masters. From my experience at Sandhurst I should say that some of the civilians were just as successful in their way as the military men.

5048. Do you think that at a military college a civilian professor need necessarily stand at such a disadvantage as that his authority should be completely depreciated?—No. I want to do away with military discipline at these colleges. I think that attempting a spurious military discipline is a mistake; it is a copy of foreign schools, and until that is altered at Sandhurst I do not think that the thing will be very much better. I want to see a man with a cap and gown at the head of it, and not a soldier. I want to see a man of academical distinction in charge of it, such a man as would obtain the charge of one of our public schools, and with the same powers of discipline entrusted to him.

5049. If the intellectual tone at Sandhurst could by any contrivance be greatly raised, would you anticipate that the moral improvement would also be marked?—If any special school is maintained to educate officers for the infantry and the cavalry I do not think that there ought to be any great difficulty in entrance. I do not want to see any stiff examination at entrance, and I do not at all attribute the low moral tone to the deficiency of intellectual education which the youths have received before entering.

Preliminary military education.

5050. Would you think it worth while that young men who are not of exceptional ability should be at all trained together in preparation for the army?—I am very doubtful about it. I think that without a special military college you ought to be able, to a great extent, to obtain for a large proportion of officers entering the army a sufficient elementary education in those branches which I have before designated as the most important, namely, fortification and surveying, to which I may add military history. I am not prepared to say that I would have no school for the purpose. I have hardly considered that matter sufficiently; it is a very large question; but I do not think that it is necessary.

5051. Supposing that a military college could be established where the intellectual average was distinctly high, with reference not to the scientific departments but to the cavalry and the line, would you anticipate any considerable advantage to the regiments from having a certain per-centage of officers from such an institution?—I am hardly prepared to say that. I think that the inducements to people to serve in the army in time of peace are so small that if you encourage very intellectually educated men to join, and hold out inducements to them to join, you will very likely find yourself very much disappointed. You must recollect that the routine of military life must be very tedious, and you had better take to anything else if you are going to be a peace soldier all your life; it is very unsatisfactory.

5052. Supposing that such able men could be induced to enter a military college, and through it the army, would you anticipate any considerable advantage to the regiments from having a fair per-centage of such men?—I think that if you have a per-centage of the men who are educated in military subjects, and have a good deal of proficiency in military education, it will no doubt be an advantage to the regiment to have such men serving; they would no doubt continue their reading, and other officers would pick up information and a taste for military reading from them, and it would tend to improve the tone of the service. The best regiments in our service, what were called crack regiments, when I entered, were those which were officered by officers upon an average of the highest social position, not necessarily aristocratic, but they were nearly all of them sons of gentlemen, perhaps of tolerably easy means, or of good connection; in those regiments there was an anxiety to do their duty in a strict way, which did not exist in regiments where the tone was less gentlemanlike, and which were officered in a less proportion from the public schools. I think that that class of officers, when they get together, always show more zeal for the drudgery of the service, and more determination to go through with the thing, than a lower class of men. A little thing may be an indication of what I mean. In my own regiment, the 43rd, we thought it to the credit of the regiment never to take off our clothes when we went on guard. I do not suppose that there were six regiments in the service which did that. I have often been on guard at Portsmouth, and never took off my

coat during the night, and visited the sentries at all hours of the night. That is an indication of what I mean.

5053. (*Sir D. A. Cameron.*) Entertaining the views which you do with regard to Sandhurst and Woolwich, would you not be in favour of abolishing Sandhurst altogether, rather than attempting to reform it?—Yes, if by reforming it you mean keeping up military discipline.

5054. I mean reforming it in any way you please?—I am not prepared to give a decided opinion on that point. I am decidedly in favour of abolishing it, unless it is carried on on the footing of the public schools. I am anxious to see tutors' houses for the boys, and the long passages with dormitories abolished.

5055. If you had an ecclesiastic or a civilian at the head of Sandhurst, you would at all events require a number of military tutors to teach the military subjects?—Yes.

5056. And therefore you would require a double staff of tutors?—I do not think that you would require a greater proportion than you have already had at Sandhurst; you have had a very large number for the per-centage of pupils. If you take a tutor to 35 or 40 boys, it would not, perhaps, be an excessive number. I should fancy that Dr. Butler would tell you that the number of tutors is as large as that at Harrow. If you took that proportion of tutors they would of course furnish a great proportion of the staff of instructors, and they might be readily supplemented by military men for the purposes of the special branches of military education.

5057. I believe that you are of opinion that every officer in the army ought to have a certain amount of professional knowledge over and above a knowledge of his regimental duties?—I think that it is highly desirable, but I do not think that it is a *sine quâ non*.

5058. Would you be in favour of officers' schools, or some place of that sort, to give that professional knowledge after they join the service?—Yes, I should be inclined to give every inducement and facility to officers for acquiring that sort of information. There is a difficulty at present, because we have had classes of that sort at Aldershot, and the officers have not been relieved from regimental duty; and in forming a class of that sort, and absolving them from military duty, you must guard against idlers getting in simply for the purpose of shirking the duty, but I think that it may be done.

5059. Do you think that it would be better than giving a professional instruction before entrance into the army?—I should like to give both; I want to facilitate everybody of a military taste coming into the army who likes, and to give the facilities both before and afterwards, offering it in each case and not making it compulsory, except that when you get a man into the army of course you may very readily make a certain amount of information of that kind compulsory, because you may refuse him his promotion as captain until he has acquired the rudiments of those things.

5060. (*Mr. Parker.*) Do you think that young officers would have time to attend classes of that sort; would their regimental duties leave them time for the purpose?—Arrangements might be made. There are, no doubt, difficulties in certain positions, but when they get to large stations I think that it might be arranged to a considerable extent.

5061. Apart from the professional value of such classes, do you think that the moral effect of them would be good for young officers?—It would of course give them an employment, and if you gave them an interest in their profession it would be an advantage. A pursuit is always of advantage to a young man.

5062. In comparing the moral tone of public schools with that of military colleges, you speak not only from your earlier knowledge, but from later?—Yes, from conversation with people, and asking them from time to time whether things were changed or not, and I have no reason to think that things have improved; they have altered in consequence of the age of the students being different.

5063. You also speak from what you have observed in comparing young officers from public schools with those from Sandhurst?—I have found officers in the army from Sandhurst, as well as from the public schools, very able soldiers and gentlemanlike men. I have often been surprised in after life to find a very great snob of a boy turn out a very gentlemanlike fellow when he has grown up; how he has contrived it has often been a puzzle to me.

5064. You would prefer that the boys at a public school intending to enter the army should not be taken away and sent to a military college intermediately?—If you mean compulsorily I am most decidedly opposed to it, inasmuch as I think that a great many persons would be thereby deterred from sending their sons into the army, and that you would lose the very class which it is desirable to get into the army.

Military instruction at public schools.

5065. And you see no difficulty in getting at a public school as much military education as would be necessary for an ordinary regimental officer before joining?—I would rather take officers from the public schools without a professional education at all than not get them; but I think that if you held out the inducement of getting commissions as you would scholarships, you would induce many of the public schools to turn their attention to that branch of education.

5066. Would you give commissions for competition separately to public schools? that is to say, so many to a particular public school?—That is a matter of detail which I have not considered; but I think that if commissions were given to public schools generally, a certain number of commissions without purchase being offered for competition, it would be an advantage.

5067. Have you thought how many hours a week it would be desirable to give up at a public school for professional education for boys going into the army?—No; but such education as I have spoken of in fortification and military drawing is easily acquired. It is not laborious or abstruse, and a fair amount of it would be acquired without giving up the other branches of general education.

5068. As regards mathematics would you be content with about the same standard for entrance into the army as is required for a liberal education?—I should be content with a very small amount. It is always desirable that a fair amount of mathematics, as far as the six books of Euclid, should be studied; but it is not essential to go deep into mathematics. The application of them to the principles of fortification is very simple, and I do not think that you need go deep into them.

5069. It would be easy to acquire a sufficient rudimentary knowledge of fortification at a public school?—I think very easy. It is a very simple thing, and a very attractive study to anybody who has a taste for military matters.

5070. Do you think that it would be possible to learn surveying (eye sketching for instance) at a public school?—I see no objection to it if time is given for it. All the early part of it would be taught in-doors in learning to draw, and when you come to the out-door work it does not take a great many lessons to teach a boy who has been previously educated for it. In the last three or four months that he had at school he might get a very fair proficiency.

5071. Do you think that it is sufficiently interesting work to be put into the play hours at a public school?—The out-door work certainly might be thrown partly into the play hours for any boy of 16 or 17, and who was anxious to enter the army.

5072. And the same with riding?—I think that they had better learn that at home.

5073. Should you recommend military history?—I should recommend military history as a most desirable head of instruction for officers of the army, because it gives them a taste for acquiring knowledge. If they learn to read, and understand books upon tactics and strategy, and acquire a taste for that kind of reading,

Maj.-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

Military instruction at public schools.

they very likely go deeper into the subject than they would at school.

5074. You see no reason why that subject should not be taught by a military instructor at a public school?—Certainly not. I think that if there was a military instructor upon those subjects at any public school it would be a very popular extra class.

5075. Supposing it to be possible to give time to teach these subjects at a public school, should you say that they would be popular?—I think so. I can only speak from my own experience. There was no branch of my education which I took to more willingly and more zealously than these subjects, without being a great glutton at learning.

5076. Then you think that facilities of this kind at a public school might attract lads into the army who otherwise would go to other professions?—It is not unlikely; or at any rate those who had a taste for the army would be very pleased to spend a part of their time in these things which would fit them for their future career, instead of studies which would not be of use to them.

Military colleges.

5077. On the other hand do you think that the present moral tone of Sandhurst and other military colleges would rather deter young men from entering there?—It would deter parents from sending them. Ever since I left Sandhurst I have always felt it against my conscience to recommend anybody to send his son there.

5078. You attach scarcely any importance to drill?—I attach no importance to drill before a man joins his regiment; you can teach him that in the first three or four months better than he will ever learn it before he comes there.

5079. You attach importance neither to the technical value of it, nor to any moral effect of it?—Of moral effect there is none; as to the technical value of it, a young man would be just as well drilled at the end of six months after joining his regiment as anyone who had been at Sandhurst for three years and joined the regiment at the same time as himself.

5080. You attach no importance to the moral effect of prompt obedience, moving at the word of command, and the smartness which is acquired by drill?—No, I think that the moral effect is all the other way, and that the scholastic discipline gives a better moral tone than the other.

5081. Do you think it desirable or undesirable that there should be a separation early in life between those who are intended to be civilians and those who are intended for the army?—I see nothing desirable in it at all; I may refer to a previous answer, namely, that I am most anxious that the officers of the army should be recruited as much as possible from every large school in the kingdom.

5082. And that they should not be placed early in life in a separate caste?—No.

5083. Do you see any reason why, before they enter the army, the moral tone of boys preparing for the army should be lower than the moral tone at public schools generally?—Certainly not as regards the boys; I attribute it entirely to the wrong principle upon which the military college is founded.

5084. And you see no reason why less attention should be paid to their religious training?—Certainly not; I think that it is a scandal to the country that more attention is not paid to that matter; the state in which the cadets were left, when I was at Sandhurst, upon that point was perfectly scandalous.

Sandhurst.

5085. In your own experience at Sandhurst was there any practical religious instruction?—None whatever; there were prayers gabbled through in the morning and in the evening by a cadet who was called out of the ranks, and we went to church on the Sunday; but nobody spoke to me on religious subjects from the day that I set foot in the college until the day that I came out.

5086. Neither the chaplain nor any other officer?—Neither the chaplain nor anybody else. The chaplain used to have a class of divinity, and if military drawing, or fortification, or anything else interfered with it, it was put on one side at once, and from my recollection and from what I heard of it I think that the cadets were quite right in preferring the military drawing to the amount of instruction which was obtained in the divinity class at that time.

5087. With regard to the arrangement of the dormitories at Sandhurst, were not they arranged on different principles for different companies?—No, but they are so now; a change has been made of late years. At that time there were five cadets in a room as a rule, and the doors of the rooms entering into the passages were locked at night with a key inside, enabling them to get out in case of illness; of course that key was made use of for circulation through the different rooms against rules.

5088. Do you prefer the system of giving a separate bunk to each cadet?—Yes I think that the system of every boy having his own room, as is the case at Eton, and as nearly as possible at Harrow, is the best system.

5089. You think that the privacy so secured is of importance?—Yes.

Direct comm exami

5090. (*Sir C. Russell.*) Has it ever struck you as being a singular thing that in the examination for direct commissions no one military subject should be examined upon?—I have not paid a great deal of attention to the papers, but I think that it is a great pity not to have an examination on military subjects; and I see no reason why, with due notice, those subjects should not be given, at any rate as optional subjects. If the effect were to exclude boys who have been brought up at the public schools in consequence of their not having that professional education, I should be very sorry to see it introduced, because, as I have said before (and I should like to repeat it), I think that the object is to get boys from all the best schools in the kingdom. Get them with what professional knowledge you can, but get them.

5091. Do you not think that if the examination combined these military subjects it would be a fair recompense to a boy who had acquired them, that they should count for something, and that it would be an encouragement to the boys at the public schools or elsewhere to fit themselves for that examination?—Certainly. I think that a boy who passed such an examination might be placed in a position for obtaining his commission earlier than otherwise.

5092. You think that some benefit should be given to him?—Yes; I think it very desirable, as an encouragement for having learnt those subjects. Of course he would have to show that he had had a "fair" education at school, and I think that in all these examinations preliminary to going into the army, certificates from the head masters of schools stating the time for which a boy had been in the school, the progress which he had made, and the position which he had held in his form or class, and what examinations he had passed, might be an integral part of the qualification for a direct commission. It would not do to say that the head master of a school should be able to qualify him without an examination, because that might lead to abuse, but what I suggest would be a very good thing as guiding the commissioners.

Sandh public

5093. (*Lt.-Col. Chesney.*) Are you not aware that in the army there is a large number of men who are the sons of poor officers?—Certainly.

5094. These poor officers cannot afford to send their sons to public schools, can they?—I should not say that; they may not send their sons to Eton or to Harrow, but I said public schools or large schools. I include Marlborough and Cheltenham, and any school of that kind, where there is a good system of public education. I would include a middle-class school if it is well carried on.

5095. Do you know of any school in actual existence which would give an education of the sort which you would think necessary to the son of a poor officer?—Not speaking of any particular school, I think that those boys who come from the public schools are the most desirable class to encourage to come into the army. I do not want to exclude any class, nor would the

public schools furnish sufficient officers for the army. I do not want to exclude others, I only want to encourage boys from public schools to come into it.

5096. Take, for example, the son of a quarter-master, have we any system existing at present by which he could get a commission in the line with any education, except by passing through Sandhurst?—I know of sons of quarter-masters getting commissions without going to Sandhurst. It is not a very great while ago that that was the case.

5097. Not within these eight years, I think?—It was certainly not eight years ago. I do not propose to do away with giving direct commissions by examination. I have no wish to hinder direct commissions without purchase being given in return for passing good examinations, let the boys come from public schools or from where they may.

5098. Would not a poor officer lose a distinct boon if he lost the opportunity of sending his son to a military school where he pays a nominal rate for his son's army education?—Clearly, if you did not give him an equivalent by paying his expenses at some other school; it would be so, unless you paid for his education elsewhere, which would of course be an equivalent.

Major-Gen. Right Hon. P. Herbert, M.P.

11 March 1869.

Sandhurst and public schools.

5099. (*Chairman.*) You have stated that you have a very strong preference in favour of these institutions being presided over by a man with a cap and gown rather than by a military authority. Is it not the case that the present chief authority at Sandhurst does not at all occupy an analogous position to that of the head master at a public school?—He certainly does not.

5100. He has not the same control, and he does not possess the same amount of liberty in regulating the system over which he presides?—Certainly not, either as regards the education or the discipline, or in the choice of masters, it is in no way analogous.

5101. (*Rev. Dr. Butler.*) When did you go to Sandhurst?—I went to Sandhurst at the end of 1836 and left in 1839.

The witness withdrew.

BREVET-COLONEL J. J. HORT, 44th Regiment, examined.

Colonel J. J. Hort.

11 March 1869.

5102. (*Chairman.*) You are Lieutenant-Colonel Commanding the 44th regiment of foot?—Yes.

5103. You were also I think in the 36th regiment?—Yes; I have been commanding the 44th regiment since December 1866. I was appointed to the 36th regiment as lieutenant-colonel commanding in May 1857.

5104. You obtained the brevet rank of lieutenant-colonel for distinguished service in the field?—It was the Sebastopol brevet.

5105. You served throughout the Eastern Expedition?—Yes, I served throughout the Eastern Expedition with the 4th King's Own regiment. We first went to Malta, and then to Turkey, and then to the Crimea.

5106. You have never been on staff employment?—Not regularly.

5107. But you have been commanding officer of a regiment for nearly 12 years?—Yes, and I have occasionally had command temporarily of brigades, which has given me a certain amount of experience in the staff.

5108. Were you educated at Sandhurst?—Yes; I obtained my commission on the 20th of November 1840, without purchase. I was at Sandhurst three years and a quarter.

5109. As it is some time since you were at Sandhurst I will not ask you as to what was the condition of Sandhurst at that time, but you must have had ample experience of the position which officers assume on entering the army from Sandhurst, and I should be glad to know what is your general opinion with regard to them. Do you consider that a cadet joining his regiment from Sandhurst is upon the whole a more desirable acquisition than a lad who joins his regiment from a public school, or from a crammer?—I think those that come from a crammer are the worst of all, I do not like them at all; but I am sorry to say with regard to Sandhurst, which is a place that I am very fond of, having been educated there and having naturally the recollections which a man who has been a long time in the service must have of the school at which he was educated, that of late years I would rather not have a Sandhurst cadet appointed to my regiment. Formerly it was different, but of late years as a general rule I do not think that they are such desirable subjects as those who are educated at public schools.

5110. Will you state why?—One very good reason for it, I think, is that the age is too great; they are too old when they go to Sandhurst, and the consequence is that they get a little too much learning of drill and things of that kind, which I think they would learn better in the regiment.

5111. When you say "too much learning," you apply that expression to drill?—Entirely.

5112. And not to the scientific knowledge?—On the contrary, I am quite in favour of a professional education. I think that it is a most desirable thing; and the army being a profession, and not a pastime, I think that candidates ought to be educated for it just the same as for any other profession; and of course the education should continue after they get their commissions.

Results of Sandhurst education.

5113. Independently of the lads from Sandhurst being rather too old, and being not perhaps quite so amenable to discipline as might be desired, do you think that there is any defect observable in them with regard to their moral tone and general bearing as gentlemen?—No, I do not think that I can say that. I should be very sorry to say it. I went to Sandhurst at the age of 13, and I left before I was 17, and I was there taught as a boy. When I got to the army, the amount of military education which I had was just sufficient to enable me to go through an ordinary field day, marching past, the manual and platoon exercise, and things of that sort, after a certain fashion; but of course it was not like a highly trained soldier. But I am told by those who come from Sandhurst that they are now taught rifle drill, and things of that kind, which I think they would better learn when they join their regiments.

5114. In a soldier, of course moral qualities are as important as intellectual qualities, but pre-supposing the existence of the necessary moral qualities, in which would be included capacity of managing men, quickness of decision, and qualities of that description, of course the better educated an officer is the more useful he will be likely to be?—Certainly

Defects in the education of young officers.

5114*a*. Is there any particular deficiency that you have noticed by the results, in the education of young officers previous to their being appointed to commissions?—Yes; one material defect appears to me to exist in the actual system of examinations, especially for direct commissions, viz., a want of sufficient attention to the handwriting of the candidates, which sometimes is so bad that were they soldiers in the ranks I should hesitate to promote them to be non-commissioned officers; and in connexion with the same subject I may observe that it often happens that young officers display great difficulty in expressing themselves correctly in writing. For these reasons I think that it would be greatly to the advantage of Her Majesty's service and of the candidates for commissions themselves in their future career if they were called upon to give more attention to their handwriting and to English composition, and at their examinations to write a letter from certain given heads. If they should fail in these particulars, I consider that they should be sent back to improve themselves with a view to a subsequent examination.

Colonel J. J. Hort.

11 March 1869.

Instruction of officers in the service.

5115. You are of opinion that it would be desirable, if possible, to continue an officer's education after he had joined his regiment?—Certainly.

5116. And you apply that more especially to the technical and scientific portion of his education?—Yes; I think, for example, that every officer ought to be able to throw up a fieldwork and to defend his outpost. If he is sent to occupy a house with his company, he ought to know how to put the house in a state of defence. He ought to know how to put on paper a reconnaissance of the country round his post or near where he may be employed. If he is sent out on this or similar duty, he ought always to be able to communicate his thoughts in good language to his superior, to write a good report, and to accompany it with a sketch. I do not mean to say that every officer should be a skilled engineer, but I think that all ought to have a certain amount of professional education in the way of field fortification, and surveying with the prismatic compass. If he understands permanent fortification so much the better, but I do not think that that is indispensable. I think that the next important matter after the purely military subjects is languages, or it is perhaps even more important; and every officer ought to know how to ride and take care of a horse.

5117. Have you any suggestion to make as to the way in which this information could be communicated after an officer joins his regiment?—I think that it would be a very good thing if every regiment had a captain instructor attached to it, and that officers should be provided with proper text books, and that they should be made to keep up their education. Of course it would not be necessary to have an officer constantly going to school, but I think that each officer ought to pass a more strict professional examination than now, as a condition of promotion up to the rank of captain. That of course would require competent persons to carry it out, such as the captains instructors above suggested. As regards equitation, such officers of infantry as required it might be instructed in the cavalry riding schools, as in the French army.

Preliminary military education.

5118. Making allowance for the adverse opinion which you have formed with regard to the disadvantages which seem to attach to a portion of the present system at Sandhurst, you would probably think that it would be desirable to give opportunities to those young lads who intend to enter the army to acquire during their youth a certain elementary knowledge of purely military subjects?—Not except at a military college. I should be sorry to see civilian candidates for the army called upon to pass an examination on military subjects before they joined; because, if so, you would only go back to the old system of cramming. I do not think that there can be the slightest doubt about it. Anything more ridiculous than the description of technical education of some of the young lads with whom I had to deal 10 or 12 years ago, when I first commanded a regiment, I never knew. For instance, in fortification, they had been taught by cram, and nothing could be more absurd; they forgot the whole thing; they joined the service, and did not trouble their heads about fortification, or anything else; they forgot what little they had learnt; their object was to cram through, and to have done with it.

Military instruction at public schools.

5119. Then you do not agree with General Herbert, who seems inclined to encourage the public schools to give to some of their students an opportunity of studying purely military subjects, such as fortification?—I am sorry to differ from General Herbert, but I say decidedly not; that is my humble opinion. I should like every young officer who does not pass through a military college to prove to the board of examiners before whom he has to pass that he has had the education of a young gentleman; and after joining his own regiment I would give him military instruction under a military instructor. If an officer had a military education except at a military college before he joined the army it would go back to the system of cramming. With regard to cramming I may mention a circumstance which happened about 12 years ago. I was then commanding the 36th regiment at Manchester, and I had a very clever fellow as my schoolmaster, and he did a great deal in the way of teaching out of hours, (which was then allowed,) that is to say, what is called coaching up people for their commissions. I have always been fond of fortification, which I think was extremely well taught at Sandhurst, and he produced me some very good fortification drawings, and told me that he was employed in instructing some young gentlemen who were candidates for commissions. I pointed out some little defects in those drawings, for which he was very much obliged to me. I asked him whether, if I were to give him a specification for a square bastion fort with a square redoubt in the middle of it, he could draw it. He said, certainly, if I gave him the specification. I did so, and he drew a plan from it, but he placed the redoubt in such a position that its angles were drawn right up to the curtains of the bastion fort, and therefore the defenders of the latter could not circulate about the work. This was a man who was instructing candidates for the service. From my experience I am afraid that we are subject to that sort of thing.

5120. (*Lord de Ros.*) He was a regimental schoolmaster?—He was one of the normal schoolmasters, and a very good man when he was kept in his place, but he flew too high and did not understand everything which he talked about, as is frequently the case with men of his class.

5121. (*Lord E. Cecil.*) Do you see any difficulty in boys acquiring a military education in public schools if military professors were appointed to those public schools?—Yes; I think that it would very much impede their more legitimate education. I think that at public schools they should be purely left to the ordinary education which they get there.

5122. You do not think that the military instruction would be badly given by the military instructors, but that the students ought to devote their time to other studies?—Whether such military instruction were good or bad would I presume mainly depend on the instructor, but I think that it would inevitably be found to clash with the rest of the boys' studies.

5123. If a modern military class was formed at public schools would you have any objection to it?—I think it a very good thing and a very necessary thing for the pupils to learn languages at a public school, but as far as regards fortification, or reconnaissance, or anything of that sort, I think that it had much better be left alone, as it interferes with their other studies.

5124. Would not that rather be a question for the parents to decide?—No, I should rather leave it to be decided by the State. I think that if you had military instructors at public schools the probabilities are that their instruction would clash with the other instruction. I have never heard the idea before; it seems to me *primâ facie* almost an infallible consequence.

5125. Then you think that military instruction can only go hand-in-hand with military discipline?—Certainly. I do not call teaching a man French or German military instruction, but I mean the technical part of the business. I think that it could be taught better at a military college than anywhere else.

5126. During the time that you were at Sandhurst Sandh
were you fully satisfied with the discipline of it?—Yes, generally. There were faults in the management of the place. The chief fault was that we had serjeants set to spy after us, which had a very bad effect; but with that exception I do not think that there was anything to find fault with in the way of discipline. There were of course one or two rows while I was there, but the people who committed themselves were punished.

5127. You never heard of immorality and insubordination and intoxication being more rife at Sandhurst than at other schools?—Certainly not. There

was no great row while I was there. There had been some time before, but that is a very long time ago.

5128. (*Sir C. Russell.*) Even without the facilities which such a captain instructor to a regiment as you have suggested would give, have you known officers in your experience who instructed themselves in military subjects after they had entered the army?—Yes, a great many.

5129. I understood you to say that though you had not been on the staff yourself, you had had experience of staff officers.—Yes; I have had a great deal of experience of staff officers.

5130. Do you think that the staff officers from the Staff College exhibit any marked superiority over those who were formerly taken by selection from the army?—Yes. I do not mean to say that everybody who comes out of the Staff College is a first-class staff officer, but I think that the establishment of preliminary professional examinations for the staff has been of great advantage to the army.

5131. In your experience has anything struck you which might be improved in the instruction at the Staff College, judging by the specimens of staff officers which you have seen turned out?—I am hardly prepared to give an opinion upon that subject. I have never been at the Staff College myself. I have heard it said that there is a great deal too much mathematics, and I can only suggest that more attention should be paid to modern languages and less to mathematics. In my humble opinion, even in my time there was too much mathematics both at the junior and senior departments at Sandhurst. It was the only reason that I did not go to the senior department myself.

5132. It has not struck you that with staff officers coming from the college there has been much deficiency in riding?—No. I think that the first qualification of a staff officer is to ride, and next to be able to write good English so as to put his ideas on paper intelligibly. I suppose that there are bad riders among the staff officers, but I do not know of any particular case having been brought to my notice.

5133. (*Lt.-Col. Chesney.*) Would there be any practical difficulty in making a high standard for riding, just as for any other subject, for an officer coming out of the Staff College?—I should think not; I have never been at the Staff College myself. There is plenty of opportunity of instruction in riding there, I believe, with a covered riding school and an open manege.

5134. (*Rev. Dr. Butler.*) You strongly disapprove of the old system which you call the cramming system?—Yes, certainly.

5135. Do you favourably contrast with that system the system of instruction given at Sandhurst?—There is no comparison.

5136. Do you find that a large proportion of the cadets who come from Sandhurst show signs of well-digested learning?—Yes; as a general rule I think that they are very well educated.

5137. (*Lord de Ros.*) Did you find any advantage from what you had learnt at Sandhurst in the course of your service abroad as to the question of judging of a country and reconnaissance?—Yes, I have found it of advantage throughout my life in everything. I think that the education which I got at Sandhurst was as good and as practical an education as a soldier could have.

5138. Supposing that the drill at Sandhurst was in all respects assimilated to that which a young officer receives on joining a regiment, for instance, the exercise of the voice, and instruction in giving command, and attendance occasionally at the orderly room, and learning how to write a common adjutant's letter, how to pack a knapsack, and a certain knowledge of soldiers' accounts, do you not think that that might be just as well taught at Sandhurst as in the regiment?—I do not think so. I think that those things should be decidedly left until the officer joins his regiment. Of course a certain amount of drill is indispensable to discipline, and if you have a cadet college with 300 or 400 cadets, you must teach them sufficient drill to put them through a moderate field day; but I think that nothing more is wanted.

5139. Would you not prefer that they should be drilled as officers rather than as private soldiers?—No; I would rather get them drilled at Sandhurst just sufficient for that moderate purpose. All the Sandhurst cadets get drilled over again when they join their regiments. Results of Sandhurst education.

5140. As it is necessary to be done over again, would it not be more simple to do as much of it as possible at Sandhurst, instead of having to reverse it all after leaving Sandhurst?—No, and for this reason, that if you set to work to teach your future young officer to be a perfectly drilled soldier, you take up much of his time which could otherwise be given for the purpose of his education. Except for making a mere soldier of him there is no use in turning out a cadet from Sandhurst as a fine drill; but you must teach him a certain amount, for the moderate purpose of which I have spoken. All the time that he is being turned into this good soldier, which will infallibly have to be done over again, is so much time taken away from his education.

5141. When you were on the arduous service before Sebastopol, the young officers, I imagine, were constantly sent to you very imperfectly trained?—Yes.

5142. Would it not have been an advantage if they had been more perfectly trained as officers?—It is hardly fair to put it in that way, because the army was so largely and suddenly augmented, and so many officers were killed and invalided, that young officers were unavoidably sent out to their corps who knew very little. If there had been time they would have been trained at the depôts. Upon rough work like a siege a young officer will very soon learn how to command.

5143. Do you think that the instruction at Sandhurst might be to a certain degree assimilated to the instruction given at the depôt?—I would rather not see that; I would rather see the military college as a place of military education.

5144. In the examination for promotion, say for a captain, would it not be possible to introduce a few questions on field fortification?—We do so now, but the great want is a qualified person as instructor, for the commanding officer of a regiment has too many other things to do to be able to give his time to such instruction, and very often, by reason of his never having studied military science, is incapable of teaching others. But what are wanted even more are proper text books for the use of officers, especially in military law and in fortification and reconnaisance, such books to be concise, practical, and without pedantry, and which every officer should be required to possess and to be thoroughly acquainted with—Macauley's Field Fortification and Pipon's Manual of Military Law are very good books of this class, but the possession of none of them is compulsory with officers; and though at paragraph 285 of the Queen's Regulations for the Army certain books are "recommended to the army as useful books of reference on "military subjects," it is with the reservation "so "far as they are not inconsistent with anything contained in these regulations." The result is that the selection of books being left to the individual he very frequently chooses none at all, that is my experience. Instruction of officers in the service.

5145. You would wish an officer to know enough about fortification when he went into a fortress to find his way about, and to know the names of the different parts of the fortress, would you not?—Of course an officer should know that, but that is a very small part of the subject.

5146. Do you think that French can be well taught in England?—I think that French grammar can be very well learnt in England; it must be learnt, because everybody cannot have an opportunity of going to France.

5147. Is it not of much more importance for an officer, that he should know enough of speaking French, even as a courier speaks it, to make his way in a

Colonel J. J. Hort.

11 March 1869.

Instruction of officers in the service.

foreign country, than that he should have any great grammatical knowledge?—Yes, but I have had experience of a few languages, and do not believe in any real knowledge of a language without grammar. Of course you may pick up a few expressions which will carry you through, but it will be excessively hard to acquire practically any language merely by learning a few phrases, and without understanding their construction.

5148. You have paid great attention to the tone of your mess, and to the tone of your officers; have you ever found that the officers from Sandhurst were more difficult to bring into your ways than other officers?—No.

The witness withdrew.

Colonel J. W. S. Smith, C.B.

Brevet-Colonel J. W. S. Smith, C.B. (Commanding 1st Depôt Battalion), examined.

Results of Sandhurst education.

5149. (*Chairman.*) Of what regiment were you colonel?—I was lieutenant colonel in the 38th regiment.

5150. You command a depôt battalion at Chatham?—Yes.

5151. How many years have you been in command of a battalion?—Since 1856.

5152. You were educated at Sandhurst?—Yes.

5153. And you obtained your commission at Sandhurst?—Yes, without purchase.

5154. You went through the whole of the campaign in Turkey?—Yes.

5155. What is your opinion with regard to the cadets who have joined the battalion under your command straight from Sandhurst as officers?—I have not noticed any difference at all which I could attribute to their joining straight from Sandhurst.

5156. Then you would not prefer a cadet from Sandhurst to a recruit who obtained a direct commission from a public school?—Not at all necessarily.

5157. You have not observed any difference in officers who have come from Sandhurst either in their tone or in any other respect?—No, I have not noticed any difference.

5158. Then you do not think that the military education which a man has received at Sandhurst is of any particular advantage to him?—Yes, I think that it is an advantage to a certain point; it makes him sooner useful and available for duty.

5159. Do you apply that observation to the drill or to the instruction?—To the drill.

5160. Of course you would consider that the scientific and professional instruction which a cadet had acquired at Sandhurst would eventually prove advantageous to him?—I think that what he wants, as an officer of the line, may be very easily learnt afterwards; he has ample time and opportunity for it. I consider that the time which has been occupied at Sandhurst in what is called scientific instruction might have been better employed in acquiring a good general education.

5161. Independently of that which is absolutely necessary to an officer of the line, I suppose that you think it desirable that a military man should know the subjects connected with his profession, even though not essential to the discharge of his immediate duties?—Undoubtedly so; always bearing in mind that the primary duty of a line officer is the efficient condition of the men under his command.

5162. I gather from your reply that you do not attach any very great importance to any preliminary professional education which may be acquired by an officer before joining his regiment?—Not in the case of a line officer, except to the extent I have named—and for the reasons regarding *general education* which I have stated.

5163. Sometimes, I suppose, an ordinary regimental officer may find himself—in India for instance—in an independent command, thrown very much upon his own resources, where, perhaps, he may be called upon to defend a position, and where any scientific instruction which he may have previously acquired will be of great advantage to him?—Undoubtedly; in a case of that kind if he has any such instruction it will be an advantage to him; but where it is wanted in the case of a line officer is an exceptional matter, and I believe an intelligent practical officer would be found equal to the occasion.

Instr
office
servi

5164. Would you be in favour of affording to officers after they had joined their regiments ampler means of perfecting themselves in the scientific portion of their duties than they at present enjoy?—I would.

5165. What would you consider to be the best means of effecting that object?—I think that it is almost impossible to be done efficiently as a matter of compulsion; if done at all it must be by means of some inducement.

5166. Would you be inclined to render the present examinations stricter?—That would have an advantage in the case of some. It might be a disadvantage in excluding from the line a certain number of officers of high social standing and private fortune who do not enter to make it a profession. But I attach very little importance to the present examinations. They are better than nothing; but I do not think they have a lasting effect; I believe they are rapidly got up, and most often rarely thought of afterwards.

5167. The class of officers you referred to would not face the examination?—They would not take the trouble, as they have not entered the army to make it a profession; and I think that in a large measure it would make our officers a different class of men, were that imposed upon them in any stringent form.

5168. Do you think that the officers who enter the Staff College, and go through the severer tests of Woolwich, are drawn from a lower class in the social scale?—Not at all; but I think that the officers who enter the Staff College have a natural aptitude for it, and regard the army as their profession, and are studious men and work it out. Those of the scientific corps are drawn on by the intellectual nature of their employment, and by the number of lucrative appointments open to them; the occupation and the prizes furnish just those inducements which the line has not.

5169. If it were not for that drawback, and if contrary to your expectations this very class of officers to whom you allude were not deterred by the examination, of course you would consider that the fact of their having been passed through such an examination would render them better officers even than they are at present?—Undoubtedly.

5170. I dare say that you think that an officer may be a first-rate officer, and show great genius for military affairs, and great aptitude for command, and be conspicuous in rapidity of decision, and in the possession of a military eye, who is not very distinguished for scientific acquirements?—Undoubtedly so. I attach more importance to his natural qualifications, as a line officer.

5171. If to those qualities which I have enumerated, the scientific acquirements should be added, it of course would be a nearer approach to perfection?—Certainly.

5172. From your observation you would not be inclined to think that officers who have shown a natural aptitude for the study of those intellectual subjects as a profession, are in any way less likely to be distinguished for the other less intellectual but more practical characteristics to which I have alluded?—Not less so.

5173. But not more so?—Not more so. I look upon the requisite qualifications of an officer, even of a staff officer in the highest ranks, as implying in the first instance natural qualities; and of course any amount of education or instruction improves these natural qualities. I allude to such qualities as have been shown in Dr. Livingstone and Sir Samuel Baker.

5174. All those qualities, of course, are of the same use as scientific knowledge? — Yes, they help to achieve the end of all strategy and tactics.

5175. And scientific knowledge might prove comparatively useless without them?—Yes. Not only useless but perilous, by placing a man without them in a responsible position.

5176. (*Lt.-Col. Chesney.*) I think you have stated that you have not observed any striking difference between young officers coming from Sandhurst and young officers not coming from Sandhurst?—I have not.

5177. We have it in evidence that of those who pass through Sandhurst now, more than half are the sons of officers having had a desultory life before they come to Sandhurst, going about from station to station, and from school to school. Is it not likely that if they had been to no such institution as Sandhurst they would have come into the army very inferior to other boys? —I cannot state what is likely, I can only state my experience.

5178. According to your experience there is no practical difference?—No.

5179. Would not the boys who are described as so half educated probably have entered the service in a very inferior condition but for the Government college?—One would naturally infer so, but I only speak from experience.

5180. Can you tell us as to whether the existence of Sandhurst is not considered generally in the army by military officers a boon; it being of course understood that their children are educated at a lower rate than elsewhere?—Yes.

5181. And the same with regard to Woolwich, where the sons of officers are admitted at a much lower rate than other cadets?—Yes.

5182. (*Maj.-Gen. Wilmot.*) You spoke of a certain class of officers in the army who you thought would object to a compulsory examination in the higher subjects?—Yes.

5183. I suppose you think that that would be a matter to be very much regretted, namely, that any officer should object to that examination. Do you think that if an examination for certain reasons was made compulsory, it would exclude from the army a certain class of men who now come in?—Yes, I think it is most likely that it would do so, were it stringent. If they were shown some inducement which they could rely upon, the case might be different.

5184. But do not you find that that very class of which you speak is one among which there is very great zeal and love for the service?—Often so; but they are exceptions in the line in peace time.

5185. Then is not it very likely that they would be among the most willing competitors?—No; I find that those of this class who, having large independent means, take an interest in their duties, are quite exceptions; most of them only join, as I state, for the purpose of passing a short portion of what I may call idle time.

5186. In a national point of view is that a good thing?—No, certainly not; I would much rather have all working men.

5187. Do you think that the possibility of excluding that class would be a sufficient ground for not making the examination compulsory?—You would exclude a number of that class of officers, and I think that that is regarded by the country as an objection. I do not think so. I would much rather have them all practical working men.

5188. You would rather see the army a regular profession?—Yes, as I fancy is the case in a large measure in the armies on the Continent.

5189. (*Rev. Dr. Butler.*) You have had occasion specially to notice the tone of officers coming from Sandhurst?—Yes, I think that I may say so.

5190. Has it struck you as having been satisfactory?—As much so as I have found it in others; some are steady excellent officers and pay attention, and others are otherwise.

5191. Have they struck you as having been intellectually well trained?—The work of a line officer is scarcely a matter of intellect; his duty is to bring his regiment or company—according to his rank—into the field in the highest state of efficiency, physically, morally, and intelligently; this requires care and assiduity, and a close adherence to orders, and is more practical than intellectual, but not the less important on that account.

Preliminary military education.

5192. Are there any subjects which you would think it highly desirable for every officer to have studied before entering the line?—I would say only a portion of his elementary out-door work, what is called squad drill, and company drill, and his setting up. I think that that is more easily learned at an earlier age, and that it prevents an officer being made a spectacle in front of the troops; and that he learns it faster and more easily at a younger age, just in the same way as he learns cricket, and racquets, and things of that sort.

5193. Are there any subjects of a more strictly intellectual character, such as field fortification, which you would think it highly desirable for an officer to learn before joining the army?—Not in the line. I would much rather have him join with a well grounded general education, and he will have ample time afterwards, and ample opportunity to learn all that is wanted, if he wishes it. There is already a disposition in line officers to regard the practical nature of their work as too unintellectual for them—they might take more interest in it were it more intellectual—but the study of intellectual subjects should never be recognised as a substitute for their more especial work, but as supplementary to it.

5194. Then I infer that you see but little occasion for a special military college to give such instruction for the line?—Very little, except as a boon to old officers in the education of their sons. Most young officers joining the line seem to be deficient in a desire for mental improvement. The examinations on entering and for promotion may be passed by cramming, and having fulfilled their end are often no more thought of. In all cases of line officers compulsory education ceases at an age when in others it is only usefully commencing, and in the absence of all reliable inducements to study, it is not wonderful if the majority use their freedom for other objects than those of study.

5195. Would you consider it a great gain, if in every regiment there was a fair per-centage of officers of a higher intellectual calibre?—Does that imply information or mental power?

5196. I would say more carefully trained intellectually?—In general education?

5197. In professional subjects.—Yes, I think that it would be a great advantage, although I do not consider the officers of the line to be deficient in intellectual calibre, or, generally, in training, having regard to their age on joining the army. The problem is, their further cultivation as a body, and that without any prospective benefit.

5198. You think that the general tone of a regiment would be likely to be raised by the presence of a proportion of officers such as I have referred to?—I think so.

Instruction of officers in the service.

5199. (*Sir D. A. Cameron.*) Do you think that it would be possible and advisable to devise some very simple practical course of instruction, which you might exact from every officer after joining the army? —Yes, I should think that it might be very easily done; but of course, as I have already stated, I think that it would exclude a certain number; that might be an advantage or a disadvantage according as people thought about it.

5200. (*Mr. Parker.*) Do you think that it would be possible to give any inducement in the way of promotion to young officers to study professional subjects, by giving them any advantage in promotion over those who make a mere pastime of the army?—I undoubtedly think so.

5201. It would not be felt to be an unfair or an

Colonel J. W. S. Smith, C.B.

11 March 1869.

Instruction of officers in the service.

unreasonable thing that those who devoted some time to professional study should have an advantage over those who made a mere pastime of the army?—Not if other things were equal; but it would be a great objection if any amount of professional study were to confer any advantage in promotion over a correct and intelligent performance of regimental duties; what is primarily and chiefly wanted in a line officer is a discharge of line duties. A colonel of a line regiment desires officers in whom he can confidently trust that their men will be turned out when wanted, either by day or night, in the utmost state of efficiency, and properly handled when turned out. He will value an officer in the field higher on account of these qualities than by the knowledge that he would be available as an acting engineer if required.

5202. If there were voluntary, examinations, the results of which were recorded, do you think from your experience that a fair number of young officers would enter for them?—Yes; I think that they would; especially if they saw reason to hope that this record would recommend them for positions of distinction or emolument.

5203. Do you think that it would be possible, using the records of such examinations without a very rigid system, to give some preference to officers who had distinguished themselves?—No; I think that it would very often lead to a wrong result. An officer might pass a good examination without necessarily being a better regimental officer than those who do not pass an examination. I hold strongly to the opinion that nothing should be so recommendatory to the line officer as line duties; the neglect of these is poorly compensated for by an acquaintance with other things.

5204. If in giving such promotion the person responsible for it looked to the natural qualities of the officer as well as to the records of acquirements, in that case would it not have a good practical effect?—Yes.

Results of Sandhurst education.

5205. (*Lord de Ros.*) Have you found the rudiments which you acquired at Sandhurst of use to you on service in the field?—Not at all of use. I was always employed regimentally. They gave me an intelligent interest in the siege works at Sebastopol.

5206. Not your knowledge of field fortification; has that never come into play?—No; not as a line officer; I do not think that it has ever done so with me.

5207. Do the officers from Sandhurst fall readily into good regimental habits, and make good company officers; do they study the character and habits of their men as much as you would wish?—It depends, I think, entirely upon a man's private character; sometimes they do, and sometimes they do not.

5208. You have said that there is time and opportunity for officers gaining instruction after joining the army. When on actual service were not many "killed before drilled?"—Yes; but they were very exceptional cases. When this occurred the only drill wanted by a young officer joining his corps in the field was the power of marching with a party to and from the trenches.

5209. Is there not a great difference between field service and home service, inasmuch as you are obliged to utilize the officer in the one case immediately that he comes out, whereas in the other case you have plenty of time to form him?—Yes; but what is mostly wanted in the case of a young subaltern in the field is energy and presence of mind and natural intelligence. He is very unlikely to be placed in an isolated position where much would be left to depend upon his own knowledge of field fortification. I, of course, speak of a line officer's duties.

5210. As regards the tone of the mess do you observe that our army much differs from foreign armies in requiring the combination of the officer and gentleman?—I do not know much about foreign armies, and I should say that I know nothing at all upon that point.

5211. You alluded to officers of high social standing as entering the army rather as a pastime; have you not found them quite as attentive to duty, and quite as zealous, and quite as good practical officers when on active service as others?—Quite so, certainly, when they have been in the field. But if an officer does not master the details of his duties before he goes into the field, he cannot at first do justice to himself, or to his men, or to his regiment.

The witness withdrew.

LIEUT.-GENERAL SIR DUNCAN A. CAMERON, K.C.B. (a Member of the Commission), examined.

Lieut.-Gen. Sir D. A. Cameron, K.C.B.

11 March 1869.

Royal Military College, Sandhurst.

5212. (*Chairman.*) You were appointed Governor of the Royal Military College at Sandhurst in June 1868?—I was.

5213. And you found a certain system established there?—Yes.

Powers of the governor.

5214. Though the title of Governor implies to an ordinary understanding considerable powers, your powers as Governor are in a great measure limited, and you by no means occupy the same position at Sandhurst as the head-master of an ordinary public school does?—Certainly not. I can make no regulations of my own authority. I can only suggest to the Commander-in-Chief what I think may be an improvement upon the established system, and I suppose that in nine cases out of ten it would be confirmed by the Commander-in-Chief.

5215. Have you anything to do with the appointment of the officers and instructors?—Nothing whatever.

5216. (*Lord E. Cecil.*) What is the number of cadets at present at Sandhurst?—214, including two who are rusticated.

Annual expense.

5217. The cost of Sandhurst, according to the army estimates, I see is 34,275*l.*, that would make the cost of a cadet about 159*l.* a year?—I have not myself gone into the calculation, but I have no doubt that you are right.

5218. The provision for washing, &c., of the cadets, is stated in the estimates as 9,798*l.*, that would be according to my calculation a little more than a quarter of the whole expense?—I suppose that it would.

5219. Therefore the simple education of a Sandhurst cadet amounts to something more than two-thirds of the whole?—I suppose that you are right; I have not gone into the calculation myself, and therefore I cannot very well say.

5220. Do you know what the cost of students at Wellington College is?—I do not.

5221. It was stated in evidence by Colonel Hallewell that the cost of a Queen's cadet was 182*l.* a year?—That appears to have been his statement.

5222. What is the price paid by the sons of gentlemen who are not officers in the army?—100*l.* a year.

5223. Then, if my calculations be correct, that does not pay the expense of their education?—Certainly not.

5224. In short, if cadets are now costing 159*l.*, a year, and if their fathers only pay 100*l.* a year, 59*l.* a year is at the cost of the country?—Exactly.

5225. And in addition to that there is the original expense to the country of the property at Sandhurst and of the buildings?—Yes.

5226. Is the property kept up out of the money paid by the cadets?—The estate pays itself; a certain quantity of timber is cut down every year, and is sold, and it pays itself in that way.

5227. I suppose that there are a certain number of labourers who are employed?—Yes, but they are paid out of the profits of the estate.

5228. Can you account for the fact of a Queen's cadet costing so much more than an ordinary cadet?

—The Queen's cadets are found in books and clothing and mathematical instruments.

5229. (*Maj.-Gen. E. Wilmot.*) Of the sum taken in the estimates, which has been mentioned as being upwards of 30,000*l.*, is not a certain proportion credited back to the public in the shape of payments from the cadets themselves?—A very considerable proportion; I believe that the expense to the country does not amount to more than about 17,000*l.*

5230. Then the 30,000*l.* is only an estimate of what the education will cost?—Yes, an estimate of the whole expense.

5231. At the end of the year, is there a balance returned to the public of that 30,000*l.* which is estimated?—Of course.

5232. Therefore it does not do to divide that 30,000*l.* by the number of cadets?—Not in order to ascertain the cost to the country; it shows the sum expended on each cadet by the State and by his parents.

5233. Is the whole of the 30,000*l.* expended?—Yes, either by the parents or by the State; a cadet costs that money partly to the State and partly to his own parents.

5234. (*Rev. Dr. Butler.*) In matters of discipline you are practically supreme, are you not?—I am, with this exception, that if I find it necessary to remove a cadet from the College, I am obliged to report the case immediately to the Commander-in-Chief, and he may confirm it or not sanction it, just as he thinks proper; but every case in which I have exercised my authority in that way, has been approved of by His Royal Highness.

5235. Are any cases, short of those extreme cases of removal, reported to His Royal Highness?—Not immediately; but all punishments awarded by the Governor are reported in monthly returns.

5236. In all other cases you act autocratically?—Exactly so; I get from the commandant every morning a return of all the offences which have been committed on the previous day, with the punishments which he has awarded for them, and I may of course call upon him for any explanation which I require.

5237. Are there any cases in which the punishment would come in the first instance from yourself, and not from the commandant?—Yes, very bad cases of misconduct the commandant does not dispose of, but he refers them to me.

5238. Can you classify those instances?—Cases of very gross insubordination, or irregularity of conduct.

5239. Intoxication, for example?—And intoxication, which of course would be gross misconduct.

5240. In how many cases have you found it necessary to expel a cadet?—I have not expelled a single cadet. I have not the power of expelling a cadet. No one but the Commander-in-Chief has the power of expelling a cadet.

5241. (*Lord de Ros.*) Have you ever recommended the expulsion of a cadet?—No.

5242. (*Rev. Dr. Butler.*) Have there been any cases of temporary removal since you took office?—Since I have been Governor of the College I have removed temporarily nine cadets.

5243. Can you give the Commission an intimation as to the nature of the offences which had been committed by those cadets?—Six of those cadets were removed for being drunk and making a disturbance at an hotel; another was removed for telling a falsehood; and the other two were removed for disrespectful conduct to a professor; the two last I brought back very shortly after I had removed them.

5244. What is practically the longest period for which removal is sentenced?—Six months. It is called rustication; so that if a cadet is rusticated in his last term it amounts to expulsion from the College, but at the same time it does not prevent his going into the army, which a sentence of expulsion would.

5245. Are hospital returns sent to the Governor?—Yes, a sick report is sent in every morning.

5246. Is any notice, penal or otherwise, taken of cases of disease due to immorality?—None whatever.

5247. Is it the custom to have meetings on stated occasions between the superior officers of the College, for example, the Governor, the commandant, the professors, and the company officers?—No, but I think that it would be a very good plan if there were meetings of that kind in matters of education.

5248. Do any of the professors see the Governor on any occasion otherwise than quite privately?—No, the Governor sees very little of the professors. If a professor has any report to make or any suggestion to make with regard to the studies he makes it through the superintendent of studies, and then the superintendent of studies takes it to the commandant, and the commandant brings it up to me.

5249. Are there any means of personal communication between the Governor and the cadets themselves?—If a cadet asked to see me I should be very happy to give him an interview; there is no regulation to prevent it. He would be obliged, according to the rules of military discipline, to tell the officer commanding his company that he wished to see me. He could not come up without having first told the captain of his company that he wished to see the Governor, and then the captain of the company would be obliged to get the consent of the commandant before the cadet could have an interview with me; but I have no doubt that no impediment would be thrown in his way.

5250. Practically would the Governor, in the course of the year, see any considerable number of the young men other than those who were brought up for serious misconduct?—No, unless he invited them to his own house, or met them in society.

5251. Is it the practice of the Governor to invite the cadets to his own house?—I occasionally invite them. I do not know what my predecessors did.

5252. What are the consequences involved in the punishment of rustication as to the cadet's standing in the College?—He is absent from the instruction given at the College and from all the examinations, and therefore he can gain no marks during the time that he is absent; in fact it throws him back so much that I look upon it that rustication is almost sure to destroy all a cadet's chance of getting a commission without purchase; it has not necessarily that effect, but in most cases it would have that effect.

5253. Would a second instance of rustication lead to final removal?—Not necessarily; but I have never had a case of the kind.

5254. Do you know whether it has been found that a young man returning from rustication has exercised a good or a bad influence upon the College?—I think that it has had a good effect. I think that an example of that kind must have a good effect.

5255. And you think that it has been found sufficient to check his bad propensities?—I can hardly say that, because I have been for so short a time at the College.

5256. (*Mr. Parker.*) Are there frequent cases of the immorality of the cadets being brought under the notice of the authorities from their being in hospital for disease?—I think that last term there were about 12 cases of that kind of disease.

5257. And no penal notice was taken of it?—None whatever.

5258. Was it observed to be prevalent among the junior cadets who had just joined?—There were cases among the cadets who had just joined.

5259. Then immorality of that sort is not treated as an offence against the rules of the place?—It is not.

5260. Is that from the fear of making the thing worse by punishing it?—No; I do not think that it is.

5261. Supposing that that condition entailed punishment, would there be any means of discovering its existence?—No; we make no medical inspections of the cadets.

5262. (*Rev. Dr. Butler.*) Are the parents informed

Lieut.-Gen. Sir D. A. Cameron, K.C.B.

11 March 1869.

Royal Military College, Sandhurst.

when an offence of that kind or an illness of that kind exists?—Never.

5263. (*Mr. Parker.*) I think that it is in evidence from one of the cadets that the occasion of their being in hospital was one of the few occasions on which they saw the chaplain. Would the chaplain remonstrate with them on offences of that kind?—I think that he would do so, and I have no doubt that he does so.

5264. The position of the Governor of Sandhurst differs from that of the head master of a public school, does it not, in this point, that he has no direct control over the course of study?—Yes, he has no direct control over the course of study; he cannot alter the system of instruction laid down by the Council of Military Education; but he may recommend an improvement, if he thinks proper, and submit it to the sanction of the Commander-in-Chief and the Council of Military Education, and he very frequently does so.

5265. Any practical experience of the professors leading them to recommend a change in the course of instruction would probably reach the Council of Education through the Governor, would it not?—Yes.

5266. (*Lord de Ros.*) Instead of the nominal supervision of the Horse Guards, by an official committee, should you see any objection to the College being subjected to an annual inspection (as to discipline only) on the same system as a regiment, and a confidential report being made thereupon to the Commander-in-Chief?—I do see an objection to it as long as you have a general officer of high rank at the College.

5267. Otherwise would you see any objection to it?—None whatever.

5268. You consider that the regimental inspection is the very life and soul of our army discipline, do you not?—I certainly think that it is a very good thing.

5269. Without reference to the expense, would you not desire to see all the cadets lodged in separate rooms, each with his bureau and drawers, and with the facility for reading and writing without disturbance, as he has in the upper part of a public school?—Certainly.

5270. What are your objections to adopting a more suitable style of punishment, such as would improve instead of merely vexing a cadet; for instance, if you confined him in some place where he could have no assistance from others, till a well written letter, or translation should be done, would it not be advantageous?—I see no objection to the imposition of tasks such as you mention.

5271. Provided that they cannot get them written for them by others?—Yes; at the same time I think that our punishments are not altgether unsuitable; in fact, we have no punishment but arrest on honour, or isolated close arrest.

5272. Do you see any objection to cadets making out all states and returns of the College as would be the duty of a company officer; would it not be good practice for them?—I think that it would be of very little use, because all the returns are on printed forms and have just to be filled up with a few names and figures; they are not, I think, of a description the knowledge of which would improve the cadets at all.

5273. Does not the rustication system in fact amount to giving an idle, or careless, or ill-conducted cadet a long holiday, which he is not likely to turn to any but the worst account; is it not a greater punishment on the parents than on the cadet?—It is, I think, more a punishment on the parents than on the cadet himself; at the same time I do not see how that is to be avoided.

5274. If you punished for contagious illness, would it not lead to a tendency to conceal those illnesses, and to harm?—No doubt.

5275. Would it not be advisable to have a more direct communication between the Governor and professors, and cadets, and not to have so many ceremonial links between the Governor and the cadet?—No, I think that I would adhere to the custom of the service.

5276. Does the Governor ever go round the messes and rooms, and studies, without previous notice?—Yes.

Adjourned to to-morrow at 12 o'clock.

Friday, 12th March 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	MAJOR-GENERAL HAYTHORNE.
GENERAL LORD DE ROS.	C. S. PARKER, Esq., M.P.
LORD NORTHBROOK.	REV. DR. BUTLER.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.	LIEUT.-COL. CHESNEY.
MAJOR-GENERAL EARDLEY WILMOT.	

Lieut.-Gen. Sir D. A. Cameron, K.C.B.

LIEUT.-GENERAL SIR DUNCAN A. CAMERON, K.C.B. (a Member of the Commission), further examined.

12 March 1869.

Royal Military College, Sandhurst.

Combination of instructional and disciplinary duties.

5277. (*Lt.-Col. Chesney.*) In continuation of your examination, will you be so good as to tell the Commission any advantages which you are aware of resulting from the system of military tutors, as opposed to merely teaching the cadets entirely by civilian masters?—I should think that a military officer, provided that he is a man of high moral character, would from his knowledge of military life, and of the temptations to which a young man entering the service would be exposed, and from his knowledge of the qualities which form a good officer, would be a much better tutor for the youth intended for the military profession than a civilian could possibly be, whether a clergyman or of any other profession. Of course it is a *sine quâ non* that the officer should be a man of very high moral character, and I think that there could be no difficulty in finding plenty of such men in the service; therefore I do not think it at all necessary to go to the Church or to any civil profession to obtain tutors for the cadets at the military colleges.

5278. Is there any real practical difficulty in revising the internal arrangements of the college, so that the cadets should be in smaller companies, and be more associated with, and more brought under the superintending eye of, the officers of the cadets?—No difficulty whatever. Instead of large companies you might, I suppose, have subdivisions of 20 or 30 cadets with an officer in charge and responsible for their conduct. Of course you would have to alter the interior arrangements of the college to correspond with an organization of that kind; you would have to do away with all the long passages and the rooms which contain four cadets; and in fact you would have to alter the interior arrangements of the building altogether; but I should think that there would be no difficulty in it.

5279. Can you tell us from your own knowledge whether there are not among the present staff of the

college some who, without any direct official authority over the cadets, have a considerable moral influence over the cadets personally?—You allude I suppose to the professors?

5280. I do.—Yes, I think that there are, and that they might be employed in charge of those subdivisions which I have mentioned; they would be very proper persons to have charge of a subdivision (or whatever name you give it) of cadets.

, &c. 5281. If the residence was somewhat slightly extended, so as to approach to the amount of residence at Woolwich, would it not be comparatively easy to establish a system of internal government carried on partly by means of under-officers?—If the term of residence were lengthened, it would be much easier to get corporals and under-officers who would perform the duty satisfactorily.

5282. One great difficulty at present is the very short residence at Sandhurst?—Yes, it tells against both the discipline and the instruction. In my opinion it is one of the great defects of the college; another term of half a year would make all the difference in the world. We have now every half year to make a fresh batch of under-officers and corporals, to supply all the companies with under-officers and corporals who have had no previous experience of the duties whatever, and at the end of their term they are all exchanged again, and so on; that is a great disadvantage.

5283. (*Maj.-Gen. Wilmot.*) Do you remember how many sleeping rooms there are altogether?—There are 50 associated dormitories containing four cadets each, and 100 bunks.

5284. Is a cadet under the name of a corporal, or under some other denomination, in charge of each of these rooms?—I think that there is an under-officer or corporal in charge of each. I think that if the establishment were complete it would not be possible to place a non-commissioned officer or corporal in charge of each room, but that you would have to select the senior cadet; but I think that at present every room has an under-officer or corporal. As regards disturbance in a dormitory it very seldom occurs, but there has always been an under-officer or corporal responsible for the behaviour in the dormitory.

5285. (*Rev. Dr. Butler.*) You attach the highest value to the functions of the under-officers; you think that they are essential to the maintenance of discipline at the college?—You could not do without them, and although their authority is not altogether what could be wished, they are still very useful in preserving order in the dormitories and recreation rooms, and as a rule they perform that duty uncommonly well.

5286. You think that there must be some authority exercised by the young men themselves?—I should think it absolutely necessary.

5287. Do you think that the necessity would be equally binding if the college were composed of young men specially selected for ability?—Not quite so necessary, but I think that it would still be necessary under any circumstances. It is found to be necessary at Woolwich, and they are a select class.

5288. (*Chairman.*) You heard the evidence which was given by the young cadets?—Yes.

5289. Is it your impression that that evidence conveyed to the Commission an accurate impression of the present state of discipline at Sandhurst?—I think not quite so. It applied to a period more or less distant, and I think that there has been an improvement since they were there. I am almost sure that there has; in fact, I think that the system has been improving gradually for some years, and that that improvement is still going on. For instance, I think that the amount of drunkenness was exaggerated, at least as regards the present state of things. I think that it is now very uncommon at the college.

5290. Do you imagine that the establishment at Sandhurst is regarded as a great boon by a considerable proportion of persons with small means?—I should think so by officers of small means, because one half of the cadets is composed of the sons or orphans of the officers of the lower ranks of the army.

5291. Then independently of the functions which Sandhurst discharges towards the army, there are other functions which it may be said to discharge towards a certain class of persons whom it might be desirable to benefit?—Yes; the officers of the lower ranks of the army benefit very much by the college at Sandhurst.

5292. (*Lord de Ros.*) With reference to that class of officers' sons, it was stated that they were habitually idle. Do you see any difficulty in putting them under some regulation upon that subject, so that they should be periodically examined, and that if they were habitually idle, they should be rejected; would that be any hardship?—None whatever. I think that you might compel them to undergo an examination at the end of every half year, and that if they could not pass that examination they should be removed; in fact we do that now, but I think that the examination is not strict enough. As long as the candidates get one-fourth of the marks they are allowed to remain; but a boy may be very idle, and yet get his marks. I think that that is the only way of curing idleness. As to punishing idleness, I am opposed to it.

5293. Do you not think that it would be a very great benefit to those officers' sons, and that the parents would be themselves obliged to you, if there were compulsory study?—I am afraid that so few commissions are given without purchase that there would always be a great deal of idleness; there is no inducement to work.

5294. Except sending them away if they do not work?—Yes.

5295. The cadets whom we examined seem to agree in considering, that the lads when they first arrived at Sandhurst were less amenable to discipline than after they had been resident there for a certain time?—I think that the second term cadets are as ill behaved if not worse than the first term cadets. The second term cadets are always the most idle, and as a natural consequence the worst behaved. The third term cadets generally behave well; but looking at the returns of conduct in study, and of offences which are committed out of study, I have ascertained that the second term cadets are, as a rule, the worst behaved class.

5296. To what do you attribute that?—I think that at about the beginning of the second term they find out whether they can get commissions without purchase or not; and then those who find that they have no chance of getting commissions without purchase cease to work, and become idle; and I attribute whatever misbehaviour there is in the college in a great measure to the idleness.

5297. (*Maj.-Gen. Wilmot.*) You say that the same cadets in the third term recover themselves, and behave well?—Yes.

5298. (*Lord de Ros.*) I suppose that is because they get nearer the period for their final examination?—Yes.

5299. (*Chairman.*) But if so large a proportion of cadets become idle and surrender their hope of obtaining a free commission, the benefit to that class of poor officers to whom we have alluded of course is proportionably diminished?—Yes; the only benefit which they can in that case be considered to receive is that their sons are maintained at the college for a year and a half at a very moderate expense. If a parent sends his son up for a direct commission, he has him on his hands for at least a year after he passes his examination; it is better for him to send his son to the college and to have him kept there for a year and a half in perhaps better order than he could keep him, than to send his son into the army by a direct commission.

5300. Have you received many complaints from parents of cadets, after they have been at Sandhurst for a term of two, intimating that they consider that their sons are deriving less benefit from the institution than they had anticipated?—No, I have never

Lieut.-Gen. Sir D. A. Cameron, K.C.B.

12 March 1869.

had a complaint of any sort from a parent since I have been at the college.

5301. No parent complains that his son receives an initiation in vice?—I have never heard of a complaint of the sort being made; there certainly has not been one made since I have been there.

Royal Military College, Sandhurst.

5302. Do you think that it would be a benefit to the institution if the powers of the Governor were to be more absolute and independent?—I think that he has almost enough power now.

Queen's and Indian cadets.

5303. (*Lord Northbrook.*) As I understand the advantages to the sons of officers consist, in the first place, in the Queen's and Indian cadetships, by which they get their education gratuitously; and secondly, in the reduced scale at which officers' sons are taken at the college?—Exactly so.

5304. Assuming that it is right to give that advantage to officers' sons (which I do not at all dispute), might not it be carried out by giving some scholarships at other places of education?—I should think that that would be a very much better way. They derive so little advantage from their instruction at the college that I think it would be far better to give them scholarships elsewhere, as you mention.

5305. Assuming that the present scale of payments is right, and that this free education for a certain class is also right, the scholarship should consist, in the first place, of the whole cost of the education of the Queen's cadets at whatever place they were, and of sufficient to pay the proportional cost of the education, upon the same scale as now exists, of the sons of officers who are not Queen's cadets—Exactly so.

5306. A Queen's cadet now receives a commission without purchase upon passing a qualifying examination?—Yes.

5307. I presume that there would be no objection to such an examination at other places of education; a separate examination might be had for Queen's cadets before getting their commission?—I think that they ought to pass the same examination as those who go into the army by means of direct commissions.

5308. Then if they passed the same examination you would be satisfied?—Yes.

Advantage of the College to the service.

5309. With respect to the advantages of the Military College at Sandhurst to the service generally, one alleged advantage is the military tone which is said to be given by a place of education carried on under officers, and on principles of military discipline. Do you attach much or any importance to the advantage to the service of the military tone?—I do not attach much importance to the military tone, but I think that the military education which one-third of the cadets receive is an advantage to the army. I do not attach any importance to the military tone, because they acquire that very quickly when they join their regiments.

5310. Taking first the branch of military education, do you attach much importance to the knowledge acquired by a cadet at Sandhurst of the details of drill, and to the physical instruction which he receives, such as riding and so on?—I attach very little importance to the drill. I do attach importance to the gymnastics and riding, but the drill is taught them so imperfectly that I think it is of very little use to them when they join their regiments.

5311. The knowledge which a cadet acquires of fortification, and of military history, and of languages, and the especial direction which he receives in those studies, may be of advantage to him in his service to the country. Do you attach great importance to having a certain proportion of officers in the army whose minds have been directed to those studies before joining the army?—Certainly.

Military instruction at civil schools.

5312. Do you consider that that very important object is better carried out at a military college, or that the same guarantee that the minds of young men entering the army have been directed to those subjects, and that they have acquired a considerable knowledge of them which is likely to be useful to them, might not be obtained by some other system, namely, by a system of examination in those special branches?—I do not think so. I think that it is almost absolutely necessary to have a military college to give the education which will be of advantage to the army; I mean the higher kind of professional instruction. I think that you could give a great deal of very useful professional instruction to an officer after he has joined the army, if you had special schools for the purpose; but for a superior kind of military education I think that you must have a military college. I do not think that it could be taught at a public school.

5313. To what portion of the education does that remark more especially apply?—To no one in particular; to fortification, practical artillery, military history, and surveying, and sketching.

5314. Taking military history, would it not be perfectly competent to the director of any place of education, to have professors of military history who would teach the theory of war perfectly well?—He might certainly do so. As regards military history perhaps it would be the easiest subject in which to instruct a youth at a public college, or a place of instruction other than a military college.

5315. I have no practical knowledge of the subject, but with respect to the points in which a special education is necessary, would they be, for example, the teaching of a young man how to throw up earthworks in order to fortify a post at any particular place?—Yes; and those points would be taught much better at a military college than at a public school.

5316. These points would be taught by sappers?—Yes, with the assistance of sappers.

5317. Do you attach great importance to that?—Yes, and to practical artillery.

5318. Is practical artillery taught at Sandhurst now?—Yes.

5319. To what extent?—All the movements of a field battery.

5320. (*Lord de Ros.*)—In the case of the capture of a gun in action, a young officer trained at Sandhurst would know how to spike it and to get it away, would he not?—Yes.

5321. (*Lord Northbrook.*) Languages of course could be gained at any place?—Yes.

Instruction of officers in service.

5322. Do you think that a system might be devised under which those practical portions of the duty of an officer might be taught him with advantage after he joined his regiment?—Yes, I should like very much to see officers' schools established. I think that it requires a great deal of consideration to decide upon the best way of giving that instruction, whether by having regimental instructors, or by establishing schools at the large camps and garrisons. I think that it would be a very good thing if the commissioners recommended that a military committee should be appointed for the purpose of deciding that question, and deciding what the course of instruction should be.

5323. Would that question also involve a matter to which some people attach great importance, namely, instructing the men?—No, I should make that a distinct question altogether. I am now alluding only to the officers. I am very much in favour of the system which is pursued in Prussia, where they insist upon every officer after he has joined his regiment acquiring a certain amount of professional knowledge, and not allowing him to get his commission until he has passed a satisfactory examination.

5324. Would you recommend in that case that a young man appointed to a commission should be employed on probation for a certain time until he passed a certain examination?—Either that, or that he should not be promoted to a company until he had passed his examination.

5325. Then it would be necessary, in order to carry out such a system as that, to introduce some alteration with respect to the examination for the promotion of officers?—Yes, decidedly.

5326. And that would be the key to the whole system?—Yes; I think that at present the examinations are not sufficient.

5327. (*Chairman.*) Then you do not agree with

Colonel Smith that it would deprive the army of a useful class of officers?—Not at all.

5328. (*Lord E. Cecil.*) Do you think that the selection of the professors at Sandhurst is generally good?—I think that all the military professors are excellent, but some of the civilian professors are certainly not well qualified for their posts.

5329. Would you vest that selection in the Council of Military Education, or would you vest it rather in the authorities, whoever they might be, at the college?—I think that it might remain as it is now with the Council of Military Education. The professors ought to be appointed on probation, and then if they were unfavourably reported upon by the college authorities they ought to be removed at once.

5330. How do you account for the fact that in some instances the selections have been bad?—I am unable to answer that question.

5331. Upon what principle do the Council of Military Education appoint professors to the military colleges?—I cannot answer the question.

5332. (*Lord de Ros.*) Do you not think that it not only requires talent and knowledge of a particular science to teach what a man has to teach in a military college, but that it requires a considerable knowledge of human nature also; that a man of abstract ideas would not suit at all; it must be some one who would carry with him the feeling of these young men who are intended to be military officers?—Yes, and that is what these professors do not possess; they are perfectly incapable of managing the cadets.

5333. (*Lord E. Cecil.*) With reference to a question which was put to you by Lord Northbrook on the subject of Prussia, are you acquainted with the system in Prussia?—Yes, to some extent.

5334. Is it not true that no one in Prussia has any military instruction previously to joining the army, but that they have the ordinary liberal education of gentlemen?—They have nothing more than a general liberal education before entering the army, with the exception of what is called the cadets of the Select Class of the Upper Cadet House at Berlin.

5335. Then that would go to prove that the Prussian authorities are rather in favour of military instruction after entering the army than before?—Yes.

5336. They prefer military instruction after entrance?—They prefer a young man completing his general education, and then building a professional instruction upon it.

5337. (*Maj.-Gen. E. Wilmot.*) But the circumstances of the Prussian army are very different from those of ours at home?—Yes.

5338. (*Chairman.*) You do not seem to think that education in such purely military studies as field fortification, and permanent fortification, and surveying, &c., could be so well given at a public school as at a military college?—No.

5339. The interest which lads would take in instruction in such branches would in some measure depend upon the fact of a considerable number of them being engaged in it and being occupied with the same pursuits, which perhaps would not be likely to be the case at a public school, where probably a relatively small proportion of the boys would be allowed to turn their attention to such pursuits?—I think so; I think that the classes at the public schools would probably be very small, and I do not see how they could afford to pay a proper salary to a military professor.

Lt.-Gen. Sir D. A. Cameron, K.C.B.

12 March 1869.

Royal Military College, Sandhurst.

5340. (*Lord de Ros.*) If they could do so, would they have all the necessary material, would they have the required ground to work upon?—No, they would not have either the ground or the appliances; it might be done imperfectly, but not so satisfactorily as it is done at a military college.

5341. (*Lt.-Col. Chesney.*) The estimates show that certain civilian professors have been appointed to Sandhurst not long since at 150*l.* a year and a house. Is it possible to expect that men of sufficient character can be got upon those terms?—No; I think that they ought to have higher salaries.

5342. And if they were better paid, do you not think that the same work as is done at present might be done with fewer men?—No; I do not think that you could do with a smaller number of professors; their classes are quite large enough now.

5343. Regarding the military nations of Europe, is it not the case that a large number of French officers are educated at a cadet college?—Yes; about one-third of the line are educated at St. Cyr.

5344. (*Chairman.*) Is not the fact of the proximity of Sandhurst to Aldershot an advantage, as enabling the cadets to be marched to Aldershot, and to take part on a field day?—I consider the proximity of Aldershot a great disadvantage to the college, because we have more irregularities committed by the cadets going to Aldershot than from any other cause. They have not time to be marched frequently to Aldershot; they go there once in the summer. It is of no advantage to them whatever; our proximity to Aldershot is one of our greatest drawbacks.

5345. (*Lord E. Cecil.*) Do you know in whom lies the nomination of Indian cadets to the Royal Military College, and under what circumstances and conditions those appointments are given?—They are in the gift of the Secretary of State for India. Under what circumstances or on what conditions they are given I do not know, but I can hardly suppose that they are given on the same principle as Queen's cadetships.

5346. Have you ever had reason to believe that the parents of the Indian cadets have better means, as a whole, than the parents of the Queen's cadets?—I have reason to believe so, inasmuch as I have known some of the Indian cadets go into the cavalry service.

The witness withdrew.

FIELD-MARSHAL HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE, K.G., examined.

5347. (*Chairman.*) Does the Royal Military College at Sandhurst, as at present constituted, fulfil those functions which your Royal Highness would wish to see discharged by such an establishment?—I think that it does to a great extent, though I should like to see it more extended even than it is at present.

5348. Any improvements which your Royal Highness might suggest would be in the direction of its further development and enlargement?—I think so. I have given evidence on former occasions before a Commission, in which I stated distinctly that I thought that it would be a great advantage, as far as possible, to get all the officers of the army passed through that college, and I am still of that opinion, though I am very well aware that there would be great difficulties in carrying that out; but if it could be carried out, I think that as far as the army is concerned it would be a great advantage.

5349. Your Royal Highness contemplates a very large institution; with how many cadets?—A sufficient number to supply the whole of the officers of the army.

H.R.H. the Duke of Cambridge, K.G.

12 March 1869.

Discipline and course of instruction.

5350. As far as your Royal Highness knows, do you think that the present discipline and the method in which the studies at Sandhurst are conducted are on the whole satisfactory?—I have no reason to suppose that they are unsatisfactory. I have heard a great many complaints, particularly as to the tone of the young men. If that tone is as represented, I should consider that there would be great improvements required, but I do not myself feel satisfied that the tone is so bad as I have heard it represented to be, though I admit that there have been times when it has not been satisfastory; I however think that of late there has been a very great improvement compared with what used to be the case.

5351. Your Royal Higness thinks that the military

H.R.H. the Duke of Cambridge, K.G.

12 March 1869.

Royal Military College, Sandhurst. Discipline and course of instruction.

instruction which is acquired by the cadets is of very great importance to them in their after career as soldiers and officers?—I think that the military instruction which they ought to get at Sandhurst, and which I believe they do get there to a great extent (and which might be extended), is of the greatest possible advantage; and I think that it is a very desirable thing that any instruction which an officer gets should, as far as possible, be gained before he actually joins his regiment, so that when he joins his regiment he may be fit at once to command troops. Now if you have not a college of this sort I do not see how you are ever to impart that education. I know that it has been stated, and stated frequently, that you ought to be able to give all the necessary instruction after a man joins his regiment. Now I dissent from that; I think that when once a man is an officer in the army, you have the greatest difficulty in forcing him to study. There are many men who will study of their own accord, and of course every opportunity should be given to them to do so, but as to forcing a man to study when he once becomes an officer, I contend that it is practically impossible. Therefore I want all that information to be gained before he joins the army.

Age of admission.

5352. Two commanding officers whom we have examined have agreed in considering that the cadets who joined their regiments from Sandhurst were rather older than they thought desirable; does your Royal Highness agree in that opinion?—I think that the age has been a great deal too old of late, and I should be glad to see it changed. In fact we intended to have made a change limiting the age considerably, but as this Royal Commission was sitting it was not thought advisable to carry it out until the Commission had considered the whole question; and, therefore, that intention on our part, which would have been carried out by this time but for this Royal Commission sitting, is now in abeyance.

Instruction of officers in the service.

5353. Allusion has been made to officers' schools at Aldershot and similar stations; is your Royal Highness disposed to encourage institutions of that description?—I think that they are next to impracticable. I think that you ought to give every facility to officers of the army who wish to gain further instruction, such as the Staff College or any other school which you may like to start in that direction; but I am quite satisfied that you cannot force any man to study unless he chooses, because there is no inducement excepting to go on the staff, and so long as an officer does his duty you cannot force that officer to study unless it becomes natural to him or he chooses to do so.

5354. Your Royal Highness would not be disposed to advocate any description of examination to which an officer might be subjected previously to promotion?—Not a regimental or company officer; I do not think that he should be examined in anything excepting matters immediately connected with his duties. There is an examination upon those now, and I think it very valuable, but beyond that I do not think that you can have any examination for merely promoting a regimental officer from one rank to another.

5355. Not even in such subsidiary subjects as field fortification?—I do not think it necessary that every officer in the army should know it, although it is very desirable; and therefore I think that it is very desirable that he should get that information at some college before he becomes an officer.

Cramming schools

5356. I suppose that your Royal Highness is very much opposed to the system of "cramming"?—I think that one of our great difficulties is that unfortunate system which is now called "cramming," which I think is a most serious detriment. What I should like to see is, that the young men from the public schools (the information obtained at which is the best information) should go to Sandhurst to learn such military sciences as are deemed to be essential before joining their regiments; and it is only with that view that I think that all the candidates for the army should pass through that college; but I cannot bear the system of cramming, and if any system could be devised for a young man to join the army direct, from whatever school he comes, it would be preferable to all those establishments which are now called cramming establishments, and which I believe give that bad tone and produce that want of discipline of which we have had to complain, and of which I am afraid to some extent we have now to complain, and which we wish to see entirely eradicated both from Sandhurst and from Woolwich.

5357. Do you think that the preliminary examination at Sandhurst is too high at present?—I think that it is too high for the schools of the country. I do not think that it is at all too high if the general schools of the country worked up to it. I do not want to see it put lower because it ought to be put lower, but I think that it should be put lower so long as you cannot get young men from a public school to such an institution as Sandhurst. The case is different with regard to Woolwich, because the acquirement there is a scientific acquirement.

Inst
offic
serv

5358. (*Lord E. Cecil.*) Your Royal Highness, I think, is aware of the system which is pursued in Prussia, where no officers except a very small proportion receive a military education before entrance into the army; do you think that such a system would be possible with our officers?—I do not think that it would; I do not think that it is in the spirit of the country in which we live. I think that there is a different feeling here from what there is abroad. Officers abroad have no other pursuits or occupations or feeling but military feeling. Now here the general mode of life is so distinct from that of an officer abroad, that I do not think that in that respect you can compare the two. You may try to bring up your officers to a certain extent to that spirit, but it will only be confined to a few, and the general run of officers will not be found easily to fall into such a habit as is carried out abroad. At the same time I think that the young men do not enter the army in Prussia without going through colleges, because I think that you will find that there are a great many cadet institutions in various parts of Prussia, and that the very large bulk of officers entering the Prussian service do enter after having been cadets at a college.

5359. Having received military instruction?—Yes. I of course speak under correction, but I think you will find that that is so.

5360. Would your Royal Highness be in favour of what some officers of distinction, Sir William Mansfield and others, seem to have been in favour of, namely, having officers appointed to commissions on probation as cadets?—That is so new a subject, and so large a one, that I should not like to give absolutely any opinion upon it. It no doubt answers very well abroad and might answer here; but there again I doubt whether the spirit of the country in which we live is quite compatible with such a system as that, because as far as I know the continental system (and I think that I know it tolerably well) the young men who enter as cadets during the time that they are cadets do the duties of common soldiers or non-commisioned officers; and I very much doubt whether the general run of officers who enter our army would like to do that. In time they might get accustomed to it, but I very much doubt whether our social institutions would lead us to comply with it.

5361. I think that your Royal Highness said that you were not altogether in favour of officers' schools; would you be in favour of the appointment of any such officer as a captain instructor, who might instruct young officers in military science, as well as in musketry instruction, or anything else of the sort?—Militarily there could be no objection whatever to such an arrangement, but practically I very much question whether it would be accepted with any degree of favour by the general body of officers. I would add a word to what I have said. I think that the principle in this country is that a man learns as much as he can before he enters his profession. Of those who

enter their profession there are a certain number who are extremely desirous to get on and to gain information, and I think that we ought to give every facility to them to do so; but I do not see that you can or ought to force it upon those who do not wish to do so of their own accord, and provided that they do their duty efficiently as regimental or company officers, I do not think that you can force the officers of the British army to go into classes, or to be instructed, by order from the authorities.

5362. Your Royal Highness has expressed yourself in favour of one military college. What sort of discipline would you have for the students, military or civilian?—I should like to have an admixture of both. To a certain extent no doubt the civil element is very valuable, and the principles upon which an University, or rather a large college, is managed are sound and good. At the same time I think that it is extremely desirable that these young men should early get military ideas, and military habits, and therefore I think that if you could combine the military element, as far as practicable, with civil views and the civil mode of conducting an institution of that description, it would be the best way of conducting an institution such as that which I contemplate.

5363. Would you have a military man or a civilian placed at the head of the college?—A military man decidedly. In fact I would have military men with as much of a civil mode of conducting the institution as it is possible to introduce, but still keeping it military.

5364. How long do you think that students ought to be at such a college, and at what age would you have them enter?—I should like to seem them enter at 16, and I should like to see every man appointed at 18.

5365. Do you think that there would be any way of improving the present system of cramming schools by Government inspection or otherwise?—I know that it has been contemplated, but I do not see how it is possible to do it, because I do not see what sort of control you are to have over those establishments. They are of course established with the view of making them profitable to those who conduct them, and I do not see how any Government not aiding them in any respect as regards an allowance, or in any other way assisting such an institution, could control them unless the Government had some lien upon them, and I do not see how the Government is to have any lien upon them unless it pays a portion of the expenses. Canon Moseley I think suggested something of that sort, but I never could see how it was to be carried out, and I believe that when it was considered by the Council of Education, it was found to be so difficult that it was given up.

5366. Do you think that any system of registration would be possible by which no candidates should be allowed to pass for the army unless they came from a registered Government school?—You then make a monopoly of it, and those establishments which were not registered would be crying out very lustily. A non-registered school might be better than a registered one, and you thereby trench upon the privileges of private schools, which I do not see how you are to get over.

5367. Is your Royal Highness in favour of keeping the present board of commissioners at Sandhurst?—I do not see that there is any great advantage in keeping them, and I do not see that there is any disadvantage in having them; if it was thought that it would be better to get rid of them there is no reason why they should be kept up, but they really interfere very little. The financial part of the estate is under their charge, and no great changes take place without their being consulted and without their approval being obtained. But the real object in having them originally has now been very much diminished because we have now a Council of Education, and as a Government department they look into all the system of education and everything connected with it, and consequently the functions of the board of commissioners have been very much reduced.

5368. In practice do you find that the commissioners at all clash with the Council of Military Education?—No, I do not think so.

5369. The principal portion of the duties of the Council of Military Education is with regard to the management of army schools is it not?—It is.

Council of Military Education.

5370. Do you think that that portion of their work might with advantage be transferred to the War Office or not?—I think that it works very well at present, the duties are pretty onerous; they not only have the colleges under them and the Staff College, but they have the soldiers' schools, and therefore they have to do a great deal of business, and as far as I can judge they have done it very fairly and well; and I think that the system has been working well, and therefore I do not think that there would be any advantage in changing it.

5371. You would not confine the duties of the Council of Military Education to a board of examination for the various colleges and for the army?—I think not; I think that the duties of examination are better performed by independent examiners than in any other way.

Instruction of officers in the service.

5372. (*Lt.-Col. Chesney.*) The objection of your Royal Highness to the teaching of officers would not apply, if I understand rightly, to voluntary classes of officers?—Not at all. I think that every facility should be given to voluntary classes, but I do not think that you can make it compulsory.

5373. I believe that nothing of the sort exists at present, excepting at Aldershot?—Not at present, because there is considerable difficulty in finding officers who would undertake the instruction.

Royal Military College, Sandhurst.

5374. (*Rev. Dr. Butler.*) I understand your Royal Highness to think it desirable that, if possible, every officer should, before joining his regiment, pass through a military college?—I think it would be a great advantage.

5375. Has your Royal Highness considered what would probably be the number in each year of young officers who would thus be trained at a military college?—It was made out at the time, and as far as my memory carries me it was 600 or 700 young men who were supposed to be at the college at the same time, but I may be wrong about that; I could easily find out what it was.

5376. Your Royal Highness would probably feel that a large proportion out of that number would be young men not of very high intellectual calibre, or of very studious habits. Might it not be feared that the discipline of the place would be rendered peculiarly difficult by this large admixture of non-studious young men?—No doubt it would be a difficult thing to administer the discipline, and that difficulty would be increased by the increase of numbers, but I do not think it impossible; and I think that if there were a judicious mode of giving rewards to these young men, besides commissions without purchase, you might introduce a much higher discipline than at present. For instance, I do not see any reason why commissions by purchase might not be given on a scale. We have the A. list and the B. list; why should not those on the B. list receive their commissions at a graduated scale of purchase, in accordance with their qualifications? In that way you would keep up a very large number of rewards, and a much better discipline than you do now by merely having a certain number of those who get their commissions without purchase.

5377. It has been represented in evidence to the Commission that among the students at Sandhurst a very large number do very little, and are in fact extremely idle; that they take the measure of themselves after their first term, and that despairing of obtaining a commission without purchase they abandon themselves to idleness; does your Royal Highness think that that evil would not be likely to be increased by a large increase of numbers?—I think that the evil would have to be met, but I think that there would

H.R.H. the Duke of Cambridge, K.G.

12 March 1869.

Royal Military College, Sandhurst.

be modes of meeting it which would mitigate that evil quite as much as we are doing now, and probably more.

5378. If it could be assumed for the sake of argument that it was impossible for all officers to pass through a military college beforehand, would your Royal Highness contemplate an institution where young men were only admitted after passing a severe examination, so that they were intellectually to some extent an honour to the country?—I think that if you did that you must entirely change the present constitution of the college. The college was instituted for two purposes, one was to educate a certain number of officers, with certain military acquirements before entering the army, and the other was to give facilities for the sons of officers who were known not to have much means to get a good education much cheaper and better than they could anywhere else. If, therefore, you raised in every respect the scientific qualifications of such an institution, you must altogether eliminate the idea upon which the institution was founded, of giving advantages to the sons of officers merely because they happened to have smaller means than their neighbours.

5379. Abandoning for the moment the great boon to officers, does your Royal Highness think that an establishment so conducted would confer benefits upon the army?—I do not myself see the advantage of it. I think that the ordinary run of officers ought to have a fair knowledge of military matters; but I do not see that it is essential to have so much knowledge. I think that you ought to give every facility to a man to obtain it who may choose to acquire it, but I think that it should be forced upon no class of men, and therefore I do not think that there would be any great advantage in it; though of course I should be very glad to see any young men passing through such a college not only have the means placed at their disposal for gaining any amount of science which they wished, but also that it should be put before them in such a shape as that we should rather expect to see them availing themselves of it than otherwise.

5380. Referring to the boon given by Sandhurst to the sons of poor officers, could it be given in an altered and equally acceptable form, if an equivalent in value were given to poor officers to enable them to place their sons at any school in the country, whether they were destined for the army or otherwise?—Perhaps you might make some arrangement of that sort with colleges such as Wellington or Marlborough, but unless you did so, I do not see how you could do it now if you gave up the boon to them of Sandhurst. Under present circumstances I do not think that any arrangement which I could suggest would meet the case which you propose.

5381. What are the special subjects which your Royal Highness thinks of great importance for young officers to learn before entering the army?—I think that military history is a very valuable thing, and one which is not much thought of elsewhere. I think that a certain amount of mathematics is advantageous, not the higher mathematics, though I think that you ought to give them the power of obtaining the higher mathematics if they wish it; I also think that field fortification is essential, and I think that a certain amount of permanent fortification is very advantageous; but field fortification and military history I look upon as the two essentials. Then no doubt languages are of the greatest possible importance; and then I think that it is a great advantage that all the lads, as far as physical acquirements go, should have opportunities of gymnasium and riding, and various things of that sort, which they could not properly get at any other school. There is one more subject which I should like to mention, namely, surveying; I think it most valuable and essential, and we have constantly, even in times of peace, found the advantage of having a large body of officers in our regiments who could survey. I will put military history, field fortification, and surveying in the first category; and in the second category I will put mathematics, of course to a limited extent, for those who are not qualified by their intellectual powers for great exertion, and permanent fortification for all to a limited extent, and again to a more extended degree for those who desire it; I will also include languages.

5382. Recognising the vast importance of modern languages to a young officer, and the practical disadvantages of his learning them in England, has it ever been considered whether facilities might be given for allowing young officers to learn them abroad?—We have never done so, and I suppose that there would be very great difficulty, because you could not send them abroad excepting under some sort of control, and I think that it would be extremely difficult to arrange that matter. Of course if it could be done it would be better, because you never learn a language so well as in the country where the language is spoken, and I have no doubt that six months in Germany or France would be much better than in a scholastic institution in this country; but I do not exactly see how it is to be carried out, I mean if the students were to go abroad.

5383. Passing to the discipline of the college, may I ask your Royal Highness whether any cases have come before you recently in which it has been necessary to indict the punishment of expulsion?—Not expulsion, but rustication. I do not recollect any instance of having expelled any cadets for a very long period; there has been rustication.

5384. (*Sir D. A. Cameron.*) With respect to the voluntary schools for officers, would it not be desirable to hold out some inducement to young officers to attend those schools?—It would be a very great advantage, but what inducement could we hold out to them? Look at the number of men who pass through the Staff College, and I am compelled to say to them "You must go to your regiment and do the best you "can, and when an opportunity occurs we shall be "most happy to employ you, but so seldom can we "do so that you must not be dissatisfied with the "authorities if they cannot do so for some consider-"able period." If that is the case with a limited number of officers, how much more difficult would it be if you extended it.

Instr officer servic

5385. But without some inducement is it not hopeless to expect that the officers will attend those voluntary classes?—No doubt of it; it could not be done without inducement.

5386. Would the remarks of your Royal Highness, as to the impracticability of forcing officers to acquire a certain amount of professional knowledge after joining their regiments, apply to a simple course of practical field fortification and artillery and field sketching? Would it be possible to lay down some very simple course of instruction which might be added to the present examinations for promotion?—The principle upon which the examinations for promotion have been established by us at present is that a man ought to know that which will be required of him in his higher duties. Anything which would be required of him in his higher duties I think that you have a right to enforce upon him; but when it becomes a question of knowing more than the actual necessities of his position require, it becomes a very difficult matter to say how you can enforce such a system upon an officer.

5387. But the capability of placing a house in a state of defence, or of strengthening an outpost, might be considered almost as part of the duty of an officer?—I think that you might most assuredly do that; if it was intended that it should not go beyond that, I should agree with it; but if it became more scientific than that, I do not think that it would be possible.

5388. In the opinion of your Royal Highness, would it be desirable to appoint a committee of practical officers to consider that subject; for instance, such officers as Sir James Scarlett and Lord Strathnairn?—There would not be the slightest objection to it, I should be delighted to see such a committee established.

5389. There seems to be something wanted yet, a little above the present examination for promotion?—Exactly so; there is not the smallest objection to it.

5390. (*Mr. Parker.*) Your Royal Highness suggested a most important inducement for the cadets to study, if it were possible to offer them commissions at a lower rate of purchase?—Just so.

5391. Does your Royal Highness think it practicable in the same way to offer an inducement to young officers to study, by giving them promotion at a lower rate of purchase?—It would be very much more difficult—for this reason, that every step of promotion entails a large expenditure of funds. Therefore, though it might be possible in some way or other and from some public fund, to add to an officer's purchase money the difference between what he would himself be called upon to pay and the price of his commission, which is at present paid by himself, it would be more difficult to carry it out when you came to higher grades, because it would require of course much larger financial assistance than on the first entrance into the service.

5392. Might it be considered that the value of a regimental officer being acquainted with these important subjects, surveying and so forth, would be an equivalent to the public for paying some portion of the expense?—I think that no doubt it would be a great advantage, but my impression is that if you have a college every officer ought to be called upon to gain this information before entering the service; and if he has acquired it, I do not see any great advantage in extending it by giving from a public fund an additional sum of money towards a step in his rank. If the rudiments of science are properly imparted to a young man before entering the service, I think that if he were worth anything he would wish to increase his knowledge, and would render himself a sufficiently valuable officer, even without any additional money advantages which he might get by a lower rate of purchasing his commission.

5393. There is one other form of inducement, which I think has been suggested to the Commission, for young officers to study, namely, if there could be some record of their having passed a voluntary examination on such subjects?—I think that that would be very desirable; there is no reason in the world why that should not be done, and it is very simple to do it.

5394. And having on record that certain officers possessed peculiar qualifications beyond other officers, it might be a means of recommending them?—Yes, and such is the case. On many occasions when surveys have been asked for we have sent to a regiment for the names of those officers who could survey; and in former years in fact I recollect that some of those officers were put forward merely in that way, and having proved themselves efficient, they have been employed and brought forward much to to their own advantage, and much to the advantage of the public service. So that to a great extent this arrangement actually exists now, but not in the shape in which you have put it, which I think would be advantageous.

5395. Does your Royal Highness think that perhaps even more reliance could be placed upon records of attainments acquired when no immediate promotion was in question, than upon recommendations made when opportunities of promotion occur?—I think it very desirable to have such a record, and that it would be an advantage in every respect.

5396. In the organization of our public schools almost everything at present rests upon the responsibility and the corresponding powers of the head master; does your Royal Highness think it desirable that at a military college any one person should have such large responsibility and such large powers?—I think that the Governor ought to have large powers.

5397. The powers of a head master at a public school include the appointment or removal of the whole of his under masters?—Yes.

5398. Does your Royal Highness think the Governor ought to have that power?—There would be a difficulty in it because the head master is himself occupied in teaching. Now the Governor is not occupied in teaching, and therefore perhaps he would not be the best person to make those selections. The Council of Education now make the selection from candidates who send in their work, and the best candidate without favour or affection is selected for the professorship which is vacant at the moment. I apprehend that that is a perfectly fair system. I do not myself see that there is any objection to continuing that practice, although I know that it is not the practice in a public school.

5399. With regard to the removal of any instructor who was not doing his work well, should that also be done by the Council of Military Education?—I think that that is one of the points in which we do not now interfere at Sandhurst. I think that the professors and masters should be placed under the general control of the Governor, and that the Governor should have the power of reporting to the Commander-in-Chief as President of the Council of Education that such and such a professor or master was disqualified from one cause or another, and that the time for his removal had arrived. If that was carried out every now and then I think that it would be greatly to the advantage of the institution, but it has not been the practice hitherto. Upon that point I think that an amendment would be desirable.

5400. Besides that it has not been the practice, would it also be considered beyond the powers of the Governor to make such a recommendation?—I do not think that it would be at all beyond the powers of the Governor. I think that no Governor has exercised that power, and therefore possibly the Governor may presume that it is beyond his power, but I am aware of nothing in the orders and regulations to prevent his doing so; and if I were the Governor and had such a feeling I should not hesitate to express the opinion which I have suggested.

5401. (*Lord de Ros.*) Does not your Royal Highness think that the instruction at the Military College, as to drill, should be exactly assimilated to the instruction which an officer gets from a regimental adjutant and serjeant-major, so that a cadet joining a regiment in the field should be much sooner available for duty?—I have no hesitation upon that point, but I would only remark that I am surprised that there should be any doubt about its being so. If it is not so I cannot account for it.

5402. Does not your Royal Highness think, ame without any luxury, every cadet should have the s conveniences as a boy at a public school; that is to say, a separate room or compartment, washing apparatus, bookcase, desk, drawers, and that sort of accommodation both for reading and for comfort?—Certainly; I think that it would be advantageous that each cadet should have those conveniences, but it is a matter of expenditure.

5403. Does not your Royal Highness think that many officers, who cannot be forced to study, may form excellent troop or company officers by influence over their men, good judgment as to awarding punishment, and general management of the soldier?—Certainly.

5404. Would it not be advisable that the commissioners should exercise more inspectional functions, and look more into the discipline at Sandhurst?—If you have confidence in the Governor of Sandhurst (and all parties have perfect confidence in him) I cannot see what is the advantage of the commissioners controlling the Governor more than at present, who at present reports to the commissioners. I am quite sure that the Governor will always find the commissioners ready to back him up.

5405. Would not your Royal Highness's idea of graduated purchase obtain much advantage from the influence of the parents and guardians over cadets?—The greatest possible advantage. I am quite sure that if anything of that sort could be established

H.R.H. the Duke of Cambridge, K.G.

2 March 1869.

Royal Military College, Sandhurst.

nothing would so much tend to improve the general condition, not only the scientific condition, but the general moral condition and discipline of the college. I should wish to add that I should like to see good-conduct marks tell when a cadet gets his commission, although that is a difficult thing to manage. At present marks are only regulated by scientific acquirements. I have known the very worst cadet get the highest marks from being a clever fellow, and he actually committed some very serious offence within a very few days of his being examined. Again, sometimes a responsible under-officer has not been gifted by nature, and he does not get his commission without purchase. Now if we could give to those young men opportunities of getting their commissions without purchase for good conduct, just as those do who get their commissions by scientific acquirements, we should raise the condition of the college; but we have never yet been able to accomplish that because the examination is a purely scientific examination. Our marks are given entirely for scientific acquirements, and the question of good conduct has not been brought sufficiently into play, and I believe that in this consists our chief defect.

5406. With reference to that opinion of your Royal Highness, is there not the very strongest feeling both among officers and soldiers of the army as to the junior officers having the tone and manners of gentlemen in carrying on all their duties and commands?—Certainly, and therefore I say that what I wish to see is a young man coming from Harrow, or from Eton, or from Rugby, or from Westminster, or from any of the public schools, direct into the college—gaining his military acquirements as I have suggested at that college, and then passing at once into the army as a gentleman and an efficient officer.

5407. Your Royal Highness commenced your military life as a cavalry officer. It has been observed as to a daily riding lesson that there is a lack of time for it at Sandhurst; does not your Royal Highness think riding so important a qualification that geology and physics might be well omitted in order to further it and to give additional time for it?—Most assuredly. I think riding a very important element, and we very often find some of the best officers perfectly useless, because they cannot ride from a sort of nervous excitement when they get on a horse in the field, so that they are lost to the service. With reference to riding, the evil at Sandhurst is an evil which you find with everything which is taught there, namely, that we try to teach everything to a certain extent, and that we never teach anything sufficiently, as there is not time enough.

5408. Does not your Royal Highness think that the want of time complained of is from attempting to do too much?—Yes.

ualifications equired in aff officers.

5409. Your Royal Highness recollects, when the army was first at Varna, the advantage of a knowledge of riding in the surveys made by the officers of the Q. M. G. Department, and I dare say that your Royal Highness remembers General Martimpré observing how much more quickly the English officers did the country and road surveying than the French officers?—Yes.

5410. Would not mere educational attainments be insufficient (since so many other qualifications are needed) to form a good staff officer, even independent of experience?—Certainly.

5411. With reference to the observations which have been made as to a certificate of attainments, that certificate of attainments would not be a sufficient test of what an officer ought to be; what is required is not merely mental attainments?—Just so; and I have known some men of very great scientific attainments who were not good officers, not from want of zeal, but because their aptitude was more towards scientific acquirements than military acquirements, and it does not follow that the one results out of the other.

5412. (*Mr. Parker.*) Perhaps scientific attainments should be regarded as one qualification amongst several?—Most assuredly, and I should like to see them extended as much as possible, but I think that a happy combination of both is what we should strive at.

5413. (*Lord de Ros.*) As to the difference between the qualifications which are necessary to form a good Staff officer, and those which are necessary to form a good Engineer officer, the one requires a great deal more scientific knowledge and a great deal more mathematical knowledge than the other?—Most assuredly.

5414. For instance, a Staff officer in examining a position, must say how many troops it would hold and so on, but an Engineer officer would have to work out the best way of fortifying that position and all the details of a scientific department?—Certainly.

5415. (*Lord Northbrook.*) Does your Royal Highness think that the inducement to officers to acquire scientific attainments would be secured by an increase of pay?—I have no doubt that that would very greatly induce a man to give his attention to these subjects, because there are many officers in the army who have very small means, and to whom an increase of pay would be very valuable.

5416. (*Sir D. A. Cameron.*) If the advantage of giving good-conduct marks were presented to your Royal Highness by the authorities of the college, would it be in your power to make the necessary change, with the concurrence of the Secretary of State for War?—Not at present, but it would be a most valuable thing; I have been trying over and over again to do it, but I have never been able to succeed; if it could be done, I think that nothing would so much tend to improve the whole tone and condition of the college as something of that sort.

Royal M College, Sandhurs

5417. Is it that the War Office authorities are opposed to it?—No; but it has been extremely difficult to depart from what has been given out, namely, that scientific attainments are necessary in order to gain marks. We ought to combine science and good conduct, but until that is accomplished we must adhere to our present regulations, because we could not do otherwise without injustice to the whole system.

5418. But it would be desirable to alter the whole system?—Yes; nobody felt it more strongly than the late Lord Herbert, and still we never could exactly find how we could combine the two things.

5419. (*Lord Northbrook.*) Is your Royal Highness aware of the practice on board the "Britannia" in passing out the naval cadets?—No.

5420. I understand that at present three months sea time is given for good conduct, six months for study, and three months for seamanship?—That would be very good.

5421. (*Lord de Ros.*) Would it not be carrying out the principle of improving the conduct of the cadets as well as their acquirements?—I think it would.

5422. It would improve the habits and condition of the cadets?—Yes; I am sure that nothing would be of so much value.

5423. (*Rev. Dr. Butler.*) We have gathered from some young ensigns who have recently been students at Sandhurst, that cases of intoxication were during their time not unfrequent, and we have also gathered from the hospital returns that cases of disease due to immorality have been very numerous; has the attention of your Royal Highness been at all called to that serious point?—I have observed it with the greatest possible regret, and I cannot account for it in any way excepting from the fact that the college is very open to the facilities both in the one respect and in the other which have been suggested. We have tried as much as possible to prevent espionage in the shape of serjeants, and that sort of thing, and we have left it as far as possible to the good feeling of the young men, but we have found that the result has not always been so satisfactory as could be wished. No doubt the cause is that they have not been watched out of doors and out of bounds; and that would lead me to refer to one point, as it has been objected to, namely, their having billiard

rooms and refreshment rooms in the college. Now I was a party to their establishment, and the reason why they were established was to try to prevent these young men from going to the low pothouses which I am sorry to say abound in the neighbourhood, the licensing of which of course entirely depends upon the magistrates of the county and in no respect upon the military authorities. We thought that, as we could not prevent the young men going there, it would be better to have them within our own bounds, and to give them the advantages which we could not prevent their seeking elsewhere, and not to keep them under restraint, but to treat them in a gentlemanlike way. As far as our experience goes I think that that has been a great success. It certainly seems rather peculiar that such a necessity should have arisen, but when you consider how isolated Sandhurst is, I think that that will be found to be the only mode of discouraging an evil which we have felt to be very great, and which we wish to check to the fullest extent.

H.R.H. the Duke of Cambridge, K.G.

12 March 1869.

Royal Military College, Sandhurst.

5424. It appears that no communication is made to the parents when any cases of illness of the latter sort to which I have referred occur. Considering the youth of the students, many of them not being above the age of 16, and the evil results—physical as well as moral—would it not be very beneficial that the parents should be informed of it?—Yes, but I think that the youths most frequently bring the disease with them; and therefore though the cases may appear to have arisen altogether at the college, I believe that many of the youths come in that condition when they join, or from leave, and then it appears as if they had got the disease at the college, which is not the case. But I have no doubt that it would be very desirable that their parents or guardians should be informed of the fact.

His Royal Highness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 6th April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	MAJOR-GENERAL HAYTHORNE.
GENERAL LORD DE ROS.	C. S. PARKER, Esq., M.P.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.	REV. DR. BUTLER.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.	REV. W. C. LAKE.
MAJOR-GENERAL EARDLEY WILMOT.	LIEUT.-COL. CHESNEY.

The REV. DR. BARRY (Principal of King's College) examined.

Rev. Dr. Barry.

6 April 1869.

System of instruction at Cheltenham College.

5425. (*Chairman.*) You are Principal of King's College?—I am.

5426. You were till lately Principal of Cheltenham College?—Yes, up to September last.

5427. How long were you Principal of Cheltenham?—Six and a quarter years.

5428. There is one especial fact which has been brought to the notice of the Commission by previous witnesses connected with the great public schools of England, namely, that almost invariably before a candidate dares to present himself for examination, whether at Sandhurst or for a direct commission, he is compelled in self-defence to resort to the assistance of what is popularly called a "crammer"?—I believe this to be generally the case.

5429. Almost all the witnesses who have noted this fact, including some young officers of the army who were also examined, concur in deprecating the intervention of this method of instruction, and I presume that you would be disposed to concur in that opinion?—Entirely. That is of course with regard to the normal state of things, allowing for exceptional instances.

5430. But to this general rule there has certainly been one remarkable exception, namely, in the case of those who have come from Cheltenham College; and it would be advantageous if you would kindly communicate to the Commission the method of instruction which has been adopted at Cheltenham, with such very satisfactory results, more especially in reference to the particular point to which I have alluded, namely, the obviating of the necessity of a lad going to a crammer?—I would say at once that on points of minute detail you will gain fuller information from Mr. Southwood, who I understand is to follow me to-day, than I can give you. But with regard to the general scheme of instruction I was, as Principal, naturally responsible for it, and I am tolerably well acquainted with it. Cheltenham College, I think, stands alone in this respect—that it has what we call popularly a modern department, or, to use its technical name, a "military and civil department," which is co-ordinate with the classical school. I believe that many schools have modern departments, but that they are generally purely subordinate. Now the system at Cheltenham is this. There is, first of all, a "lower school" for junior boys, comprehending perhaps 100 boys. Above this there are two departments, including usually about 300 boys each. One of these is the Classical, and the other the Modern department. In the classical department the staple of instruction is language, in one form or another, although with a very much larger admixture of other subjects than was common, perhaps than is still common, at most of our public schools. On the other side the staple is mathematics, while the languages occupy an important but a secondary position. The general system of this part of the school, therefore, is based upon mathematical science as the principal study. The boys begin with the ordinary elements of English work, with Latin, French, and mathematics, but with no Greek. Greek, in fact, is not introduced at all into the regular system. As they work up, and arrive at the three or four head classes of the school, they mostly drop Latin, unless they have shown any special aptitude for it, and take up German or Hindustani. They also enter upon physical science (chemistry, geology, electricity, heat, and magnetism), retaining and increasing the proportionate amount of mathematics, and they study English scientifically; that is to say, they use some scientific grammar, and they read a good deal of English literature, and also English history. This reading is general, though so contrived as to prepare for the public examinations. But our principle was never to train boys specially for any examination, until a comparatively short period before they went up. They went through the general system of the school, which we arranged as well as we could on the "modern system" with a view to giving a real education; and then, according as the circumstances required, they had a few months of special preparation. Indeed, with regard to Woolwich, the special preparation was simply the passing into the senior form, for the Woolwich examination was to that senior form

Rev. Dr. Barry.

6 April 1869.

System of instruction at Cheltenham College.

pretty nearly what university examinations are to the sixth form at an ordinary public school. Some indeed went to civil engineering, and some entered other branches of the Civil Service, but still Woolwich determined the character of their reading. With regard to Sandhurst we generally made no special preparation at all for it, unless a boy was exceptionally backward. For Sandhurst, and for the Direct Commission examinations we had what we called the "Sandhurst and Direct" classes. Into those classes boys might pass from other classes of the school, and, for perhaps six months before they went up, have some special preparation; but, unless a boy was exceptionally backward, he went up straight from the other classes of the school. Therefore as the scheme of the department had reference to the military examinations, it naturally followed that we had no necessity to resort to crammers at all; and instances were not infrequent in which boys, withdrawn from the school and sent to a crammer, passed, if they passed at all, considerably lower than those who had remained and had gone through the regular system. This is a general outline of the scheme.

5431. What were the studies which occupied the attention of the sixth form?—I have brought with me a list of the subjects of the chief examination of last year, which I think will best answer the question. This chief examination is mainly, but not exclusively, mathematical. The subjects of examination in what we there call the first class, which answers to the sixth form, were the ordinary subjects of pure and mixed mathematics, up to the differential calculus, with a small amount of the integral calculus; in fact, what the Woolwich papers mainly require. Woolwich mathematics differ from Cambridge mathematics in this respect, that they have less of theory and more of practice. In the classical department in our mathematical work we ordinarily followed Cambridge mathematics. In the other department we followed the Woolwich system, which requires far greater facility in working examples. Then besides this, the subjects for examinations in physical science included (I do not mean to say that any boy did all), first, geology and mineralogy; secondly, chemistry and heat; and thirdly, galvanism, electricity, and magnetism. These are the chief subjects, viz., those of mathematical and physical science. Then with regard to the English subjects, speaking generally, they would include geography, English history, some English grammar, and some portion of English literature. I see that in this examination some plays of Shakespeare were chosen for the special subject of examination. That would comprehend pretty well all the regular work of the highest class, except the modern languages, in which the boys were examined at a different time.

5432. Then, as I understand it, from that department of the college all classical literature would be excluded in the examinations?—Not entirely. When boys passed into this department from the classical department, they had usually gained a good knowledge of classics, and we made special arrangements by which they could keep up their classical work. Indeed, the boys who passed most successfully into Woolwich were those who had been for some time in the classical department or were otherwise good classical scholars, and who had been in the military department for perhaps a year and a half. Whether they kept their place at Woolwich of course depended upon their mathematical ability, because the classics were dropped in the academy itself; but in passing in they almost invariably took the highest place, and I may add that in my opinion they were the best educated boys whom the department turned out. Special arrangements were made for them throughout the first three classes. The Vice-master of this department is a good classical and English scholar; the boys came to him as *quasi* private pupils at certain times, and they read a good deal by themselves, often in high classical subjects. (For instance, on this occasion the books were Thucydides, Sophocles, Horace, Euripides, and Livy.) To give time for this work, they dropped some one of the regular subjects (any one except mathematics). I should add that the number of these boys would vary very materially from time to time. Sometimes they might have been as many as one third of the whole of the class, often less, but seldom more.

5433. Cases I suppose have occurred even at Cheltenham where the lads will have gone to a crammer notwithstanding?—Yes. If a pupil came to us and, from idleness or any other cause, fell behind in the work, we warned his father of it, and he might then take the alternative. We said, "we will do our best "for him, but he has lost a great deal of time "through his own fault, and we cannot ensure his "passing in ordinary probability." Sometimes the father would remove the boy; more often he would say, "I will not take him away, but I should like "him to have extra instruction;" and then he might often pass. On the whole boys who went away did not pass more satisfactorily, unless a boy had some one defect in his knowledge to which particular attention had to be given. There are many private tutors who do not deserve the title of "crammers," and, if such a boy was placed in the hands of a really able man, he had, under these circumstances, a great advantage.

5434. I suppose that all the masters, and those who superintended the examinations, were able, without any misgivings, to pronounce whether or not a lad was likely to pass?—I think that Mr. Southwood could always tell. We generally passed about five out of six whom we sent up, and he could mostly predict, not only whether they would pass, but where they would pass.

5435. And the parents themselves had that confidence in the system, and in the opinion of Mr. Southwood, that they were not led from any nervous apprehension to resort to extra scholastic training?—Yes, except in rare instances.

5436. I should conclude, from the observations which you have made, that you would be of opinion that until a lad was actually old enough to enter a special professional institution, such as Sandhurst or Woolwich, it would be advisable to render his education as universal as possible?—I think so. Naturally there must be some limitations. We found that in our modern department it was generally impossible to work to a high degree of classical attainment, considering the other subjects which we took up for study. We therefore worked Latin in all the lower classes, chiefly as subsidiary to modern languages. The boys in that department, if not going into the army, were probably going into commercial life, or into civil or mechanical engineering, or into some branches of chemical manufacture, and the like, and they would generally be aware that Latin would not directly tend to their future advancement. Hence Latin there was very apt to assume the position which French assumes at an ordinary classical school, where boys are mainly proceeding to the university. We gave up any attempt to do more than give a good grammatical knowledge of Latin, unless in the exceptional cases to which I have already referred. We found it impossible to do so otherwise.

5437. You are probably acquainted with Mr. Mill's inaugural address to the University of St. Andrew's?—Yes.

5438. He there specially advances the opinion that even a university ought to be a place for the administration of general education, rather than a place of professional preparation?—Yes.

5439. Probably that principle would apply with still greater force, at all events in Mr. Mill's opinion, to schools, that is to say, to lads of a younger age?—I can most thoroughly endorse the opinion, as far as I understand it. The point to which I think Mr. Mill drew attention was this,—he said that we practically overweighted the language scale; that, where we taught Latin and Greek, we should not teach French and German, but that, where we taught French and German carefully, we might dispense more or less with Latin and Greek; and that is exactly my own theory. If I could have had my will, I would have

taught no French or German in the classical school, and I would have taught comparatively little Latin in the modern school. It seems to me that the heads of education are something like these — language, mathematical reasoning, inductive science, and some artistic training. These four subjects I should have have liked to represent in both schools. In the classical school, from the necessity of teaching French and German as well as Latin and Greek, we were obliged to drop out physical science altogether. On the other side, I venture to think that we had the elements of a general education, because we taught French and German as carefully as we could, with Latin as the basis of language; we taught mathematics and inductive science; and there was also a drawing school; so that I hope we attended to general education without neglecting the professional subjects.

5440. Then probably you would be disinclined to think that it would be possible, or, even if it were possible that it would be desirable, to engraft upon such a college as Cheltenham the technical and purely professional education which is now administered at Sandhurst and at Woolwich?—I have always thought that a certain amount of it might be easily introduced at Cheltenham; for instance, that there would be no difficulty whatever in insisting upon knowledge of drill, and much which a cadet has to go through at Woolwich. The boys who never would join our cadet corps were those who were going to Woolwich, because they said "we shall have quite "enough of it when we get there;" but we could easily have saved the Woolwich authorities some trouble in that respect. We used to do a little in surveying, and a good deal of plan drawing, and fortification: and I think that it would not have been at all difficult for us to increase those subjects, and so do something in a technical way without interfering with our work.

5441. There has been a good deal of evidence given on the part of commanding officers to the effect that a young lad joining from a public school becomes in a short time as efficient an officer as a lad joining the army direct from Sandhurst, and it has been further suggested that it might after all be possible to communicate at public schools that special system of education which is administered at Sandhurst. Do you think that that would be possible?—I am not thoroughly acquainted with the Sandhurst system, but from what I know of it, I should be prepared to believe the former statement, and I should say that much might be done to meet the latter suggestion.

5442. You think that certain subjects, such as surveying, might be taught at public schools?—Surveying, certainly.

5443. And permanent fortification and field fortification?—Yes.

5444. And instruction in artillery drill?—Perhaps so.

5445. And in drill generally?—Yes. They all involve out-door work; this would be no burden upon the boys. In fact the surveying lesson with Mr. Southwood was the most popular lesson of the whole week. If the Woolwich authorities had thought fit to require drill, the only effect upon us would have been that our cadet corps would have been twice as large as it was. We should have had no difficulty in managing that part of the matter, and with regard to fortification, so far as I understand it, it seems to me a thing which, when the pupils have been accustomed to elaborate plan drawing, they can very easily take up. We had at one time a sand modelling room, and the subject was only dropped because the military authorities did not require it in their entrance examination. I have no doubt that a considerable amount might have been done in that direction, and I am one of the many who think that a certain amount of manual work helps head work.

5446. Surveying might be considered as a subject of general, more than special, instruction?—Quite so; and we always acted accordingly. Every boy in certain classes went in for surveying, unless he was engaged in some other subject which interfered with it. If it had been an absolute necessity, we should have taken care that there was no clashing.

Rev. Dr. Barry.

6 April 1869.

Military instruction at civil schools.

5447. Supposing, for instance, that you introduced into your curriculum field fortification, and a little permanent fortification, would not that imply the abandonment of some other study of a less special, and of a more general, character?—I am afraid that I am so ignorant as to the amount of time which fortification requires, that I can hardly answer that question.

5448. Who taught it?—We never had practical fortification in the field, as far as I know. We had only the sand modelling room. Mr. Southwood will give you better evidence than I can upon that subject, because all this refers to a time before I went to the college, and I know it only by tradition.

5449. We have to remember that after a lad comes up to Sandhurst, when his career becomes dependent at once upon his proficiency in certain special and professional subjects, he would be likely to be deprived of his general liberal education?—Yes.

5450. And the question would arise whether it would not be desirable, while he was still young, and before he joined these special and professional establishments, to communicate to him as large and as liberal an education as possible?—I should entirely take that view, and that is why I hesitate to answer respecting fortification, about which I know nothing certainly. With regard to the other subjects which have been named, I feel quite certain that they could have been worked at Cheltenham without any interference with a liberal education in the true sense of the term.

5451. (*Lord Eustace Cecil.*) Were the ages of the boys at Cheltenham very much the same as the ages of the boys at other schools, or were they older or younger?—Do you refer to the whole school, or only to the military department?

5452. I refer to the military department more especially?—In the military department the range of age would be from 14 to 18½.

5453. So that in point of fact 4½ years were devoted to the acquisition of mathematics, and something like technical professional education?—Yes, so far as I have explained; not precisely so, because I have endeavoured to point out that mathematics, although the principal subject, was by no means the sole subject. We sent a time table to the first Public Schools Commission, which gave the details of the actual time spent in each class upon each subject, and I am not aware that it has been materially altered. You will see by this that there were other general subjects, and the relative amount of mathematics to the other studies increased as the pupils got higher and higher in the school.

5454. If I understand your evidence rightly, you think that such subjects as military drawing, modern languages, field fortification, and surveying, might be taught in those 4½ years, certainly as far as the elementary portions of those subjects are concerned?—That is most certainly my opinion.

5455. Do you think there is sufficient capability of teaching those subjects from the nature of the ground around Cheltenham?—I fancy that there would be no difficulty at all in that respect; there is plenty of broken ground; there are both plain and hill country, and a good deal of open land. The domain of Cheltenham College would not be sufficient for it; we wanted all the ground that we had for playground: but I imagine that there would have been very little difficulty in the country around. Cheltenham lies at the edge of a great plain, and just under the Cotswolds.

5456. Do you think that there would be any difficulty in throwing up field works with the aid of a superintending party of sappers, or under the eye of a military instructor?—I cannot see any serious difficulty in doing so; but I am only giving my opinion as a pure civilian. You can get into unenclosed ground within a mile and a half from the college.

5457. And you see no difficulty in sending out the

Rev. Dr. Barry.

6 April 1869.

Military instruction at civil schools.

boys under an instructor to survey portions of the country around?—Certainly not; they do that now. I should add, that we only sent out the senior boys in that way.

5458. With regard to inducements to work it has been repeatedly said in evidence, more especially as regards Sandhurst, that the inducements at the military colleges are hardly sufficient to make the boys work; do you think that if any advantages were held out by the Government, boys would be induced to prepare themselves better at Cheltenham, or at other public schools, for the military profession?—Certainly. The fact is, that for the only examination which is of any importance, namely, the Woolwich examination, there is no difficulty whatever in getting the boys to work, to work very hard, and sometimes too hard; we had to keep them back, rather than to urge them on. But with regard to the Sandhurst and Direct examinations, the requirement for them is so elementary that the boys think very little of it. If they had more difficulty, and higher prizes held out, I have no doubt that more work could be secured.

5459. Supposing that a number of commissions without purchase were to be competed for at Cheltenham, do you think that it would raise the standard of military attainments in the modern school?—Of course I understand that you would have a pretty stiff examination for the purpose; I mean a harder one than the boys ordinarily pass for Sandhurst.

5460. Just so?—Then I think that it would undoubtedly raise the military attainments. We had a number of boys, who were just below Woolwich and who passed in high for Sandhurst, and who would have been very glad to have obtained their commissions without purchase by passing an examination, without the necessity of going to Sandhurst.

5461. Would you be in favour of any such inducements being held out on the part of the Government?—Yes.

Cheltenham College.

5462. What is the ordinary expense of a boy's education at Cheltenham, including everything?—The expense—not including pocket money, or clothes, or purely personal expenses of any sort, —is at the most 90*l.* a year. I can, if you please, give the details. Our school fee was 20*l.*; besides that there was a certain nomination fee of 6*l.* for those boys who were not nominated by proprietors, raising the fee to 26*l.*; extras were at the outside about 4*l.*, that makes 30*l.*; then there were 50 guineas as the whole charge for boarding, making in all 82*l.* 10*s.* Allowing for books and instruments, I should say that for a boy who was not extravagant in that respect, 90*l.* would cover the expense, exclusive of course of his pocket money, his journeys, and his clothes. We took very great pains to keep down the expenditure, because our boys almost invariably came from the professional classes.

5463. What sort of accommodation had the boys in the masters' houses?—They lived in the masters' houses and they had excellent accommodation. We recently built or adapted at a very large expense eight new boarding houses, giving all the elder boys studies, taking care that the little boys who had not studies had good pupil rooms, and adopting the compartment system in the dormitories; and I think that our boarding houses were as good as any in the kingdom.

5464. And I suppose that the provisions were as good as at any other public school?—I fancy so. Of course I cannot tell exactly what may be the case at public schools where very much higher sums are charged; but if you take Rugby, Marlborough, and Cheltenham, I should suppose that they would be very much the same.

5465. Did you teach gymnastics, or swimming?—Swimming was only taught in this way,—that every boy belonging to the boat club was required to swim in the presence of a master over a certain space, and I think that three fourths of our boys knew how to swim from their own choice. We had a very excellent gymnasium—I think the best school gymnasium in England—and every boy in the junior part of the school was obliged to go to that gymnasium twice a week, and besides might go there on half holidays if he pleased. Many senior boys attended by choice.

5466. What was taught in the gymnasium; were fencing and broadsword exercise taught?—Some of the senior boys learned these, but comparatively few: more might easily have learnt.

5467. Of course you had no means of teaching the boys riding?—No; but there were some very good riding schools in Cheltenham, and we could easily have made arrangements with them, if it had been thought desirable. I have always had an idea that in the competitive examinations such exercises should form part of the qualification for a man joining the army; in other words, that the physical examination should not merely extend to the question of his soundness in limb, but that a certain amount of gymnastic knowledge, and a certain skill in riding and the like, might be with very great advantage required; and if these had been required, I am quite certain that we could have supplied them.

5468. Supposing that commissions without purchase were given to be competed for by boys at public schools, do you see any difficulty in giving instruction in riding under competent military masters?—None at Cheltenham. Other schools might not be so fortunately circumstanced.

5469. (*Sir C. Russell.*) About what number of boys at one time were there on the modern side at Cheltenham?—300.

5470. What proportion would that be relatively to the whole number in the school?—The whole number in the school was 700; the lower school numbered 100, and the classical and military departments 300 each. (*See answer* 5430.)

5471. Did you find any difficulty in keeping up the numbers on the modern side?—None; on the contrary, there is now a certain fashion for modern subjects, and the pressure was rather upon the modern than upon the classical side.

5472. Were the average ages of the boys on the modern side about the same as on the classical side?—The boys on the classical side began rather younger. I think that on the modern side the age was from 14 to 18, and that on the classical side it was from 12½ or 13 to 18; many boys used to enter the classical department first and then pass into the modern department.

5473. In the list of professions for which the modern side appeared to you to be peculiarly suited you did not mention the Indian Civil Service?—No. As a rule we prepared for the Indian Civil Service on the classical side. The subjects which tell most in this examination are three,—namely, English, classics, and mathematics, and these three, taken together, we could teach infinitely better on the classical than on the modern side. Whenever there was a contest in English knowledge, although the boys on the military side received a special English training, the boys on the classical side, who had not received that special English training, beat them generally with ease, simply because of their greater knowledge of language. The same was the case with French and German. As a rule, if a language prize was open to the whole school, a classical boy was likely to carry it off.

Subject examin for the service

5474. From the experience which you must have had in preparing boys for the Indian Civil Service, did you think that there was anything peculiar in the examination for the Indian Civil Service? I have heard it alleged that the examination for the Indian Civil Service was made so general that it was not so fair a test as some of the other examinations, for instance, for Woolwich, and even the examination for a direct commission?—I presume that by the word "general" you mean "spreading over a very large variety of "subjects."

5475. Yes?—I think that there is a fault in that examination as at present constituted, but I am not quite certain that it lies here. A boy can pass

extremely well if he takes up English, Latin, Greek, and mathematics, and those are very much the same subjects which he might take up for Woolwich. The fault in the examination is that (I do not know why) from something in its method it has not succeeded in guarding against "cram" in the true sense of the word, so well as other examinations have done. I imagine that there is no reason why it should not do so; but at present it has not done so, and I know that the attention both of the examiners and of the masters is at present very much fixed upon that very point. I must again remark that by "cram" I do not mean private tuition,—private tuition may be the very best teaching,—but I mean substituting mere preparation for examinations for the attempt to convey real knowledge in the best way.

5476. (*Lt.-Col. Chesney.*) May not a part of the fault in those examinations arise from the fact that for English composition, the history of England, and English literature, there is as much allowance made as for the whole of the Greek and Latin languages and the literature and history of Greece and of Rome together?—I think so; unless care is taken to guard against the mere study of manuals in that subject. If composition is very severely marked, it is an evidence of thought which is perhaps more valuable than knowledge. Examination in history, unless such care be taken, is more liable to the danger which you suggest; and the same is the case with regard to literature. Too much stress may be laid upon subjects which can be got up from books such as Craik's and Angus', and the like, and then the importance given to the subject is very disproportionate. But, if a real substantive knowledge of English history or literature is acquired, I should not say so.

5477. Is it not practically very easy to have a young man prepared in English literature in such a way as that he shall pass an examination and shall be equal, or even better, in counting than a young man who passes an examination in the whole of mathematics, pure and mixed? In the same examination the three subjects which I have mentioned, namely, English composition, English history, and English literature are counted higher than mathematics; they stand at 1,500, whereas mathematics stand altogether at 1,250. Is it not almost impossible to expect that a young man should be as thoroughly prepared in those subjects as a young man, who could go thoroughly into mathematics and take up some of the papers in mathematics, would be prepared in mathematics?—In the estimate no minimum is subtracted for mathematics, so that every mark which a boy gets in that subject counts, whereas in the other subjects which you have mentioned, if he has only a smattering, it is useless, because a minimum of 125 is taken off before he can count. Thus, if a boy got 130 marks in English, he would only score 5, but, if he got 130 marks in mathematics, he would score 130. This advantage is given to mathematics, and of course makes no slight difference. Possibly English may be a little too heavily marked, but I must repeat that very much depends upon how it is tested. In English composition, (which is generally an essay upon some tolerably difficult subject,) it often happens that a very large number do not score a single mark, although I suppose that everybody sends up an essay. Therefore, if the English essay be very severely marked, I think that you can hardly give too much weight to it when it passes the ordeal, because after all it is an evidence of thought rather than of mere knowledge in the candidate. A boy whom we sent up, who was our best boy, and who came in (I think) first in English and especially in composition, was a very remarkable boy for thought; his work was that of a man. So that I should not much object to a high marking in that respect, if it be carried on reasonably.

5478. In fact very much depends upon the practice of the examiners?—I should say that everything depends upon it. I think that there is a very unfair arrangement in that examination, which involves the subtracting the same minimum from every subject, without reference to the amount of marks given to it. I may remind you that by this you would have 375 marks taken off for English, because 125 marks are taken off each branch, so that that would bring it down to 1,125, that is, a little below mathematics. But I do not think that the greatest injury is done to English or to classics. The subjects which suffer are modern languages, which I think are very hardly treated in that examination.

Rev. Dr. Barry.

6 April 1869.

Subjects of examinations for the public service.

5479. Referring to the general question of teaching military subjects at a public school, supposing that it was necessary, in order to give a training in those subjects, to devote daily about four hours of in-door work to purely military subjects, and about two hours to riding and drilling, would not that interfere immensely with the ordinary school work?—No doubt; but my former answer did not contemplate anything like four hours a day; it was especially provided that the instruction should be quite elementary.

Military instruction at civil schools.

5480. (*Sir D. A. Cameron.*) If in addition to the general subjects of his education you taught a boy these military subjects, namely, military history, fortification, and military surveying, would it not be giving him a great many subjects to learn at one time, and is not the consequence likely to be that he would get a very superficial knowledge of them all, and that in fact it would be a "cram?"—I think that I have not given any answer with regard to military history; if so, I had not intended to do so.

5481. (*Lord E. Cecil.*) I meant to include military history.—This term is vague, and might involve much or little. I would rather refer to the subjects of military surveying, and fortification and modelling, and drill. These might be taught, although we could not have carried them to the degree of perfection, which one would naturally expect at a military college.

5482. Then would it be desirable to teach them at all?—I think so; it would save the Military College a certain amount of rudimentary work, and the boys who were sent up would be all the better for it.

Cheltenham College.

5483. (*Mr. Parker.*) Can you state the cost of the gymnasium at Cheltenham?—I should estimate it at about 2,500*l.* This is only an estimate, inasmuch as the racket-ground and other buildings were included in the actual total amount.

5484. And for that you had a building thoroughly well suited to the purpose, with good architectural appearance?—Yes; it was a brick building, with the dressings picked out in different coloured bricks, and it had a very fair elevation.

5485. You mentioned private instruction for those boys who were preparing for examinations. Supposing a parent willing to bear considerable expense in the matter, could you arrange to allow a boy to have a large amount of private instruction at the College?—The word "large" of course must be comparative. A boy can only work for a certain number of hours, and you must take care not to interfere with his regular work; but he could easily have a considerable amount of private instruction. Our chief subjects for such instruction were mathematics (where a boy happened to be extremely deficient), physical science and French.

5486. Do you think that a boy who was backward might be as well prepared by private instruction at the College as by going to a private tutor elsewhere?—Generally so.

5487. At Cheltenham were the two departments absolutely separate, meeting together for no lessons?—The First Class in each department used to meet in a lesson with me once a week, and occasionally the highest forms would meet in French and German; but speaking generally the departments were quite separate in school. In the playground and boarding houses they mixed freely.

5488. What was the lesson with yourself upon which they met?—A religious lesson.

5489. You consider that the modern department might be regarded as giving a modern liberal education

Rev. Dr. Barry.

6 April 1869.

Cheltenham College.

rather than a professional education? — Undoubtedly so.

5490. Upon the whole do you think that it trained the mind generally as well, or nearly as well, as the classical department?—Nearly as well, but in my opinion not quite as well. When I had occasion to bring the departments together in any subject, which was not either purely classical on the one side or purely mathematical on the other, but which was one of general interest, (it might be for instance in divinity, or it might be in history, or it might be for an essay,) I almost invariably found more mind on the classical side. I ventured to say this in my evidence to a former Commission, and time has only confirmed my view.

5491. Do you think that that was due to an essential difference between the two sets of subjects, or due to the modern subjects having been less well organised, or taught less ably?—With regard to the modern languages it is very difficult to get them scientifically represented by modern language teachers. In the other branches of knowledge I think that such is not the case.

5492. In the nature of things you see no reason why modern languages should not be made the basis of a liberal education in language, as well, or nearly as well, as ancient languages?—None whatever.

5493. Speaking of the language, and not of the literature, should you say that what we commonly call teaching Latin and Greek at a public school is really teaching English, almost as much as the direct study of English?—Quite as much.

5494. It has the practical effect of making a boy master of his own language? — Certainly, so far as writing his own language is concerned, putting literature out of the question.

5495. Did you notice any great difference of tone between the modern department and the other department—of moral tone for instance?—Not in the two departments as a whole. The classes which gave us the greatest amount of trouble were those in which we had boys who were being specially prepared for Sandhurst, or for direct commissions—simply for this reason, that they were boys of considerable age, their physique was developed, their intellect far less so—and if there was trouble, it was very frequently in that division of the school. But if I had taken the range of the departments, supposing that those exceptional cases had been removed, I should have found no material difference. Perhaps I ought to say (so far as this may have any importance) that the Principal had more to do with the classical department, and therefore whatever moral influence he exercised was more directly exercised upon that department; and, however good a subordinate may be, the influence of a head is in this respect greater.

5496. Do you think that in itself the question of moral discipline for the class of boys who would be most likely to enter the army is a more difficult question than with boys generally?—I do not myself think this is the case in respect to what we may call the "raw material" of boys. The reason why boys such as I have described were likely to give trouble was merely this, that the intellectual requirements of their position were very simple, so that you had a number of boys, who were rather dull, possibly strong, and perhaps leaders in the play-ground, whose animal nature was more developed than their intellectual. If you take the raw material of boys who are going into the army, there is no reason whatever for making such a statement.

5497. You have told us, that at Cheltenham there would be facilities, such as we had hardly expected, for the preparation of officers for the army. Do you think that the case of other schools, so far as you know, is very different from that of Cheltenham?—I should think not, but I can hardly answer that question; Marlborough for instance might do at least equally well, and probably the same may be said of Wellington College.

5498. (*Dr. Butler.*) I gather that you would advocate the existence of a modern department at every great public school?—Yes.

5499. As affording a general liberal education?—Yes.

5500. For what class of minds, apart for a moment from military purposes, would you regard such a department as suited?—For the class of minds whose tendency was either to mathematics, or to inductive science, and not mainly to language.

5501. For those whose bent was towards literature in some form would you advocate the classical or the modern department?—The classical.

5502. Mathematics in the modern department at Cheltenham has a very decided preference, has it not, over teaching in English literature?—Yes; it is the principal subject. For instance, if a boy is to be classified on the one side, he is classified by his knowledge of Latin and Greek; if he is to be classified on the other side he is classified mainly by his knowledge of mathematics; other subjects, so to speak, have to take their chance, and inequality in them must be corrected as best it may; mathematics therefore is the staple subject. With regard to the efficiency attained, I should say that the best boys on the classical side were as good mathematicians as the best boys on the other side, in a different style; but that the rank and file on the military side were very far superior in mathematical knowledge to the rank and file on the classical side.

5503. In stating just now that the general intellectual calibre on the classical side was rather superior to that on the modern side, did you refer chiefly to the *élite* of either department, or to what you have just called the rank and file of both?—It is rather difficult to answer that question, because it was only the *élite* of the departments who were brought into competition. It would seldom happen that a lower class on the one side would in any way come into competition with a lower class on the other. But when I say the *élite*, I mean the head forms on both sides, but not boys selected from those head forms; if you therefore can regard the head boys as the natural product of the system, the two systems may be compared.

5504. Did you see any symptoms of the modern department degenerating into what may be called a refuge for the destitute, and being composed in its lower divisions of the intellectually duller boys?—Not at all. I am aware that that opinion has been stated, but my experience would not justify it.

5505. In connection with that subject, you did not not notice that there was more gross idleness on the modern side than on the classical side?—Certainly not; if anything, as far as attention in school was concerned, there might have been less idleness in the lower forms, from the greater variety of subjects which kept the boys up to a certain tension; there certainly was not more idleness.

5506. Supposing that many hours had been given in the course of each week to subjects of a special military character, would you have apprehended danger to the general culture on the modern side?—Yes, I should. My answer which was given in the first instance was only on the supposition that these subjects formed nearly extra subjects, and that the work required in them was mainly out-of-door work.

5507. Did you contemplate their being practised by all boys intended for the army, or only by the special class intended for Woolwich?—I imagine that all boys who are going in for the army would, for a certain period before going up for examination, require to devote attention to these subjects, probably in different degrees, according to the different requirements.

5508. Has the question of the teachers in these subjects come under your notice? Are you able to say whether they are taught at Cheltenham exclusively by civilians,—I mean the military subjects, so far as regards surveying and fortification?—I believe so. With regard to fortification I can only speak from

tradition ; surveying was taught by Mr. Southwood only.

5509. Does it strike you that a difficulty would be experienced in obtaining civilian teachers at the great public schools to give lessons in military subjects ?—No; but if such should be the case, I should not have thought it difficult to have had military teachers, or those who had been in the army. One of the most valued members of our body was a retired officer, and I do not see why there should be any difficulty in the matter.

5510. What would you say was the influence of the Woolwich examination upon the general educational interests of Cheltenham ; was it healthy, or otherwise ?—It was healthy.

5511. Had you ever reason to think that it made too great a demand upon the brain of boys ?—Not unless they had done what boys sometimes will do, that is, had neglected their earlier work, and so had to make up by a rush at the end. If a boy was not a dunce, but had good average ability, and power of steady work, we could ensure his passing without any fear whatever, and without any inordinate pressure at the end.

5512. You had no reason to think that the mathematical requirements were too high ?—Certainly not. I think that they might have been varied in their character ; I am not certain, for instance, whether the small amount of integral calculus which was required was a wise selection. But with regard to the test which was applied to a boy's mind and the strain upon it, I did not see that it was at all inordinate.

5513. You were, I think, almost the highest mathematician of your year at Cambridge ?—I was Fourth Wrangler and Second Smith's Prizeman.

5514. If I understand you rightly you would not recommend any lowering of the mathematical standard for Woolwich ?—I should not. I might advise variation in details. It struck me, as far as I could judge, that the amount of integral calculus which would answer was so small, that it had better be dropped altogether ; and if it had been dropped altogether, perhaps other subjects might have been taken up. For example, the subject of geometrical conics is hardly touched in the military examination, and that is a subject which I think to be of very great educational value.

5515. Do you think that French is best taught at public schools by Englishmen or by foreigners ?—That is a very difficult question. What I should like best would be to have both English and foreign masters on the staff. For French composition I should certainly wish to have a Frenchman, but for the general grammatical teaching, and the power of laying hold of boys' minds and keeping order, an Englishman has great advantage. We had four French masters at Cheltenham, and I should like to see them equally divided.

5516. I wish to put a very few questions to you as to the discipline at Cheltenham. May I ask you whether, during the number of years that you held your post there, cases of drunkenness were at all frequent ?—They were not frequent ; they occurred, but I imagine with no greater frequency than at any public school. Undoubtedly Cheltenham College is in a position of some difficulty from the neighbourhood of a rather fascinating town, but, in spite of this, I do not think that the average of drunkenness is greater than I have been led to suppose exists at other public schools.

5517. Was that an offence which came at all frequently under your notice ?—Not frequently. I had to send away one boy for it while I was there, whose case was a flagrant one, and others had to be admonished for it. Perhaps I ought to say, without any disposition to comment needlessly upon the older system of government at Cheltenham, that I had some circumstances of peculiar difficulty. When I went there, I found a system of very minute and vexatious restraint, which destroyed a boy's moral tone, and which yet could not possibly be effectively enforced, and I had to sweep that system right away. In my first year I had the natural result, namely, a good deal of trouble ; but progressively the trouble was less and less, and at the end of my time I was very well satisfied with the result.

5518. Did any considerable number of cases of disease, arising from immorality, come under your notice ?—A small number.

5519. Do you think that if they had been more frequent they would have come to your notice ?—Yes. Cheltenham is a place of a large amount of idle gossip, and a place somewhat distinguished, I think, for the power of scandalmongering ; and stories were frequently rife, which, when tested, proved to be utterly without foundation.

5520. Do you believe that in any college consisting of 200 or 300 young men between the ages of 16 and 19 there ought to be any difficulty in so maintaining discipline that cases of drunkenness and cases of disease arising from immorality should be extremely few ?—Certainly not, if due reliance was placed upon moral influence as well as external discipline.

5521. We have had conflicting evidence from distinguished officers as to the wisdom of placing the headship of a military college in the hands of a military man or of a civilian. Have you any opinion upon that point ?—I have not thought much on the point ; but if in choosing the head of your college you had regard not to services elsewhere but to qualifications for the office, I cannot help thinking that a military head might have great advantage, provided always that there was no jealousy under his administration of civilian influence in its proper sphere—the influence, for example, of the chaplain (who, I presume, would always be one officer of such an establishment), and the influence of the professors.

5522. (*Lord de Ros.*) As regards the application of more ability on the modern side or on the classical side of the school, do you not think that a good deal depends on what the profession is which a boy is intended for, and that if boys are intended for the learned professions, you would find more perhaps of a studious turn on the classical side, in consequence of the profession for which the boy was intended, than on the other ?—I rather doubt that. With regard to the boys whom I compared on the two sides, I should have said that the Woolwich boys worked at least as hard as the sixth form on the other side.

5523. As regards the surveying, are you aware that there is a very great difference between surveying in a civil manner, and surveying in a military manner ? For instance, in surveying in a military manner great rapidity is required, and it would be hardly possible to be taught by anybody but an officer ?—That I can imagine. I rather guarded my answer in consequence.

5524. As regards the riding schools, are you aware that you may have very good instruction in riding for teaching a young lady to ride, but that that would not do for an officer ?—Certainly. I should undoubtedly contemplate a competent military officer. I have no jealousy whatever of the military element. I think that it would be a very useful adjunct in the school.

5525. Would there not be this difficulty, that in adopting the military element you would most likely get hold of some old officer, or some old non-commissioned officer, who would become obsolete in his instruction ?—I am afraid that there is a danger of obsoleteness in all teaching, both civil and military, but there are means of guarding against it.

5526. By change ?—By change or by getting a man to keep himself *au courant* with what is going on ; but every head-master will tell you that this is one of the difficulties in all places, because those who have done good service are often unable to retire when they can do good service no longer.

5527. (*Rev. W. C. Lake.*) Did you find it easy to test the English work in a way which, as a scholar, you would think satisfactory ?—I found no difficulty.

Rev. Dr. Barry.

6 April 1869.

Cheltenham College.

5528. For instance, in lecturing on a play of Shakespeare you found that it was as hard work for the boys, or something like as hard work, as anything else?—Yes.

5529. Who lectured in that case?—The main part of the work was done by the vice-master of the modern department, Mr. Bayly, an Oxford man. Occasionally I used to do it myself.

5530. Then you seem to have thought that English was as good, or nearly as good, an instrument for bringing out a boy's abilities as Greek or Latin would be?—There is this difference, that you use it far less in the abstract as a language. I think that I classed together English and modern languages. If you would allow me English with German, or with French and German, I think that we might then bring out a boy's ability thoroughly.

5531. My question was especially with regard to English, as to whether the teaching of English was not liable to the charge of its being necessarily taught superficially?—I think that the teaching of English is apt to be less linguistic, unless very great pains are taken, partly from the nature of the language, and partly from the boys' familiarity with it; but in a literary point of view it has very striking advantages.

5532. Practically then you think that the boys who had worked in this way in Shakespeare, and in English literature especially, were ahead of other boys in a knowledge of English literature?—On the average they were. The best scholars on the classical side were ahead of them in that respect, as well as in others; but, if you take the first 40 or 50 boys in each department, I believe that the teaching of English literature did give those in the modern school a great taste for it.

5533. Will you shortly enumerate the subjects which were taught in the modern department?—First mathematics, next modern languages, French and German.

5534. Both?—Both; but not necessarily contemporaneously.

5535. Both were obligatory?—Yes; unless a boy took Hindustani, which he might take instead of German; and in former days a great many boys took it, but latterly the subject has almost dropped out. Then there was Latin, in the lower classes only. In the upper classes there was physical science in different branches, chiefly chemistry, heat and electricity, and geology; and lastly there was drawing throughout the school. (*See answer* 5430.)

5536. You did not think those subjects so numerous as to give rather a superficial education to the boys?—We endeavoured as much as possible that they should not be contemporaneous. A boy, for instance, entering the lowest class in the school would probably be learning English, Latin, French, and mathematics, and nothing more. Then as he got on he would add German, and he would then probably drop some of his geography and history, which, of course, were of a childish order. When he got further on, and introduced physical science, the Latin dropped out. The object, therefore, was that the boys should not have too many subjects at a time.

5537. I presume that you did not drop out the Latin with boys who had an aptitude for it?—No; but speaking generally it dropped out in that department because most boys who had a special aptitude went into the other department.

5538. Then in the modern department, if the boys continued their Latin, it was because they had a peculiar aptitude for it?—Yes; probably the state of the case was this—that about the first hundred boys in the school, unless they showed special aptitude and knowledge, would drop their Latin, and the other two hundred would always be learning it.

5539. And that was the case *à fortiori* I presume with Greek?—Greek was not regularly taught in that department at all. Where a boy had passed into the modern school entering it high up, having a sufficient knowledge of mathematics, he might go on with Greek, but he would have gained his original knowledge of Greek elsewhere, either in our other department, or in some other school.

5540. You do not think that apparently the large list of subjects which was taught led to cramming even at Cheltenham?—I think not; at least I do not think that it ought to have done so.

5541. If you had had your choice without reference to the necessities of the Woolwich or the army examinations, which include a considerable variety of subjects, particularly of scientific subjects, would you have had so many subjects, or would you have thought it better for the general education of the boys to have had fewer?—I would have had all the four elements which I have spoken of represented; I mean language, mathematics, physical science, and drawing.

5542. For example, would you have had so many branches of physical science?—Possibly not, but I think that the main elements of the system were right.

5543. Did you yourself exercise any control over the boys as to whether they should be allowed to go into the modern department, or not?—I exercised a certain amount of control. If a parent strongly urged it, I should not refuse, but I might deprecate it, and I very frequently did so; or I might say "such and such a boy is getting very idle on the "classical side, and I think that he would do better on "the other side," or *vice versâ*, but we laid down no obligation upon it.

5544. You spoke of its being possible to teach at Cheltenham a number of practical subjects such as sketching and surveying, and perhaps even field fortification. Would not that very much encumber a boy's time in relation to his position with others?—I am afraid that I should have trenched a little upon his out-door playtime.

5545. Would it not have isolated him from other boys, association with whom is generally an advantage at public schools?—I think not.

5546. You think that there would have been plenty of time for cricket, racquets, and so on, and yet for surveying and those subjects?—I think so, and no boy would have objected to it. Towards the end of his time we should have dissuaded a boy who was going up for an open scholarship, or for Woolwich, from being in the eleven—not from playing cricket, but being in the eleven.

5547. (*Chairman.*) I imagine that when you look with satisfaction upon the introduction of such subjects as field fortification, &c., it would be merely as a portion of general education, in the same way as you would introduce the study of optics into a mathematical course?—In answering the question, I thought that the point which was put to me was this, not whether I should desire to introduce these things in the abstract, but whether I could introduce them, if required. For instance, supposing that the course at Sandhurst did not exist, or taking the idea which was suggested, namely, that there might be a considerable number of open commissions given to schools, the question was whether we could do anything in the merely technical work, and I said that I thought we could.

5548. Supposing that the Commission had two alternatives under consideration, namely, whether they should recommend the introduction of technical subjects into the preliminary entrance examination at Sandhurst, or whether they should, on the contrary, exclude from that examination technical subjects, and rather adopt such subjects as form the principal studies at the public schools, which of those two courses would you recommend?—Am I to understand that the alternatives would not imply any difference in the age of the candidates?

5549. Yes?—Then I think that it would be desirable not to introduce the technical subjects; but if it was a question of lowering the age of admission, so as to keep a boy longer at a military college, or of requiring a certain amount of technical education

before he entered it, then I would embrace the second alternative with all my heart. What I mean is this—it might be supposed that it was necessary to keep a boy longer at Sandhurst than he is now kept; the average stay there is a year and a half, and I thought that I had heard it suggested that this course might be extended. Now if the question was between that, and acquiring a little more of the military subjects before the boys arrived there, I would rather take any moderate amount of military subjects beforehand, than increase the time at a military college.

5550. (*Sir D. A. Cameron.*) Would you hold to that opinion if the increase was one term, namely, six months?—Of course a small increase would be a comparatively small consideration. I may be wrong, but I should strongly deprecate any increase of the time at a purely military college.

5551. (*Maj.-Gen. Wilmot.*) Would the additional half year be at the end or at the beginning?—I should not so much mind if the boys did not go to the military college sooner. One must speak with a certain amount of delicacy on such a subject; but I have frequently had boys who have passed through military colleges and their experience has not been a fortunate one, and I have also had to do with parents who have had boys seeking the military profession, and who have preferred to give up the chance of a commission without purchase rather than send them to a purely military college. Therefore, as far as my knowledge goes I must say that, while the system of the colleges is exactly what it is now, I should deprecate, as far as I could, boys' remaining long under it.

5552. (*Lord E. Cecil.*) Would you be in favour of a large substitution of the civilian element in a military college, or not, compared with what now exists?—I believe that the civilian element is at present large, but that it now exercises little or no authority. There are a very large number of civilian professors at both of our great military colleges, but I apprehend that they exercise little discipline, and in fact no discipline directly over the cadets. If a cadet misbehaved himself in lecture, the professor would have no direct power of exercising discipline except by reporting him. What is wanted is not so much the admixture of a greater civilian element, but the giving it fair play in respect of authority and of moral and personal influence.

5553. With regard to Sir Duncan Cameron's question, whether if military subjects as well as others were taught at Cheltenham it would tend to "cram," did you take into account that the course at Cheltenham is 4½ years, whereas at Sandhurst, where there is a preponderance of military subjects, the course is only 18 months, and that the balance of three years in favour of Cheltenham might be set off against the variety of subjects taught?—I should suppose that it might; but in the subjects which I contemplated as additional, I should rather trench upon a boy's play time than (in any great degree) upon his school time, so that I did not intend to interfere materially with the subjects which are now taught.

5554. Supposing that military subjects of education were continued after entrance into the army, do you not think that a sufficiently good elementary military education could be given at Cheltenham, and at other public schools constituted like Cheltenham, to enable a young officer to build upon such instruction afterwards?—Certainly.

Rev. Dr. Barry.

6 April 1869.

5555. (*Dr. Butler.*) I gather from some answers which you gave just now, that you would deprecate a young man's remaining for any length of time at a military college, as at present constituted?—I should.

Defects of military colleges.

5556. You do not think that the moral life is very healthy?—I must say that in my opinion it is not.

5557. Have you been led to consider what would be a healthy constitution of a purely military college like Sandhurst?—I am afraid that the question is rather too wide to answer. The point which has most struck me, from what I have heard, directly and indirectly, is, as I have said, the need of a larger infusion of civilian authority and influence, especially in a moral direction. It has always appeared to me, from the accounts which I have received from those who have been under instruction, that that peculiar moral influence which the head master of any well-ordered school exercises upon his pupils, is wanting at a military college, at the very time and under the very circumstances in which it is most needed. How it is to be acquired, and through whom it is to come, it is not for me to say.

Cheltenham College.

5558. (*Lt.-Col. Chesney.*) Am I right in saying that the charge for boys is, on the whole, exceptionally low at Cheltenham as compared with other great public schools?—At Marlborough it is about the same; at Wellington College I imagine it is rather higher; at Eton and Harrow it is considerably higher. I do not know about Winchester. At Rugby I have always understood that it is about 120*l.*, that is the cheapest of the old public schools, and it is about 25 per cent. above Cheltenham.

5559. Is not the payment to the junior masters at Cheltenham also exceptionally low?—It is decidedly far lower than it should be, but the reason of that is not so much that the salaries given on entrance are too low, but that there are not sufficient means of rising in salary. At Cheltenham, after I had been there a few years, no man entered under 200*l.* a year; that was their first salary, and the highest salaries which were given, excepting to the head master, were only up to 500*l.* a year. Unless therefore a man had a boarding house, either a large one or a small one, his salary was too low. But I ought to add that we found very little difficulty in getting good men to take the posts on this condition, that, if they did not rise high, they left, so that we had what I consider by no means an evil, namely, a not infrequent change in the lower masterships.

5560. (*Lord E. Cecil.*) How are the masters chosen at Cheltenham?—Entirely by the Principal. I should add that the military department at Cheltenham is now in a somewhat exceptional condition. At present the head master of that department recommends assistant masters, and the Principal usually appoints on his recommendation. But this depends on the fact that Mr. Southwood (our present head master) has practically created the department. I do not imagine that the arrangement will continue permanently, nor do I think it desirable that it should do so. In all departments the Principal will probably appoint absolutely.

The witness withdrew.

The Reverend T. A. Southwood, M.A., (Head Master of the Modern Department, Cheltenham College,) examined.

Rev. T. A. Southwood.

5561. (*Chairman.*) You are the Head Master of the modern department at Cheltenham College?—I am.

Modern Department at Cheltenham College.

5562. For how many years have you been at Cheltenham college?—Since February 1843, 26 years.

5563. And you may be regarded as the founder of the modern department?—I suppose that I may be so regarded, because I went there at the solicitation of Colonel Colby, who was then at the head of the survey of Ireland, and others, who thought it very desirable that there should be a school in this country which could be properly called a military school, and I went to Cheltenham for the purpose of starting what was to be considered a military school, not a modern school as it is sometimes called, but a purely military school.

5564. In what respect do you regard it as a military school?—Because the subjects taught are subjects proper for a military education, consisting of mathematics, drawing of all kinds, physical science, two

Rev. T. A. Southwood.

6 April 1869.

Modern Department at Cheltenham College.

modern languages—French and German—English, fortification and surveying. Those are the principal subjects: with a certain amount of English they form the staple.

5565. Amongst those subjects there are not included purely technical military subjects?—Nothing more than fortification, surveying, and scientific drawing of all kinds.

5566. Is fortification still included?—Yes; it has been so from the very first.

5567. Permanent fortification as well as field fortification?—Yes.

5568. Do the lads attain considerable proficiency in those special subjects?—At the time that Addiscombe was in existence we took them through the whole Addiscombe course before they entered Addiscombe, and that included artillery, fortification, and surveying, both military and content surveying. The competitive examinations have interfered a little with this.

5569. But that is not the case now?—Yes, it is; only that other subjects have been introduced of late years into the department which I think have rather crippled its efficiency; it has not been in accordance with my wish, but merely from the force of circumstances, and also because I think that the Principals of the public schools have not sympathised so much with the ordinary military education as I could have desired.

5570. So that if you were completely unfettered you would contemplate almost a pure military education, technical as well as otherwise?—Yes; everything which is proposed to be done at Woolwich, and also a good deal of what is now done at Chatham. Those who get their engineer commissions from Woolwich go to Chatham.

5571. At what age would this technical education commence?—About 15, but I think that would be regulated by the age for admission into Woolwich. I take Woolwich because it is the highest school of military education.

5572. But you would not commence to administer this technical education to a lad before he was 15?—I think that he ought to have the foundation of a more general education first, and that the superstructure should be a special education.

5573. So that you would consider it desirable to delay, at all events to a certain period, his consignment to a technical education, in order to give him an opportunity of acquiring during the earlier part of his life what may be called a liberal education as distinguished from a professional and technical one?—Yes; I think that the foundation should be Latin and Greek, such as we now get in our public schools, and that at a certain age that should cease, and the special training should commence.

5574. And you think that that age ought to be 15?—Taking the age for admission to Woolwich at between 16 and 19, I think that 15 would do very well. If the age for admission to Woolwich be earlier, we must commence a little earlier, unless the course be shortened.

5575. Considering the point rather with regard to admission to Sandhurst than to Woolwich, supposing that the entrance examination at Sandhurst were to be upon purely general subjects, and to exclude all technical and purely military subjects, do you think that the exclusion of technical subjects from the preliminary examination for entrance into a military college would be a disadvantage?—I do not think that it would be a disadvantage.

5576. Do not you think that the extra year which would be devoted under those circumstances by the youth to the acquisition of a more general and liberal education would be an advantage to him?—I think that it would for Sandhurst.

5577. (*Rev. W. C. Lake.*) Will you enumerate the subjects which you would teach in the course of this special education?—Mathematics I think is the principal subject, then freehand drawing, scientific drawing of all kinds, physical science, and English composition.

5578. Will you enumerate the subjects in the order in which you would teach them, so that we may know which you would teach first, and how you would get into those which come later?—Freehand drawing I think should come first of all, then practical geometry, or the construction of all kinds of plane geometrical figures; then descriptive geometry, plans, sections, and elevations of solid figures. Mathematics would be studied at the same time, so also would French and German; and physical science would be introduced into the course a little later, but at a time to give the pupil an opportunity of making very good progress in them before leaving school.

5579. How would you work with these boys with the idea which you would give them of field fortification for example?—They would study the ordinary text books and then model in sand; also trace the plans and erect profiles in the field.

5580. Do you preside over the whole teaching of the modern department?—I do.

5581. Are you assisted by any other masters?—Yes; there are about 300 pupils in the department, and there are about from 20 to 25 masters, including extra masters for modern languages, and certain branches of drawing and physical science.

5582. Are the boys in that department in any way kept distinct from the other boys in the school; is there a tendency in boys who are coming into the modern department to congregate in particular boarding houses?—I think so. I think that they prefer being in the boarding houses of the masters who are in the department; they derive some advantage from it in the preparation of their work.

5583. Do boys come to Cheltenham with the intention, not of going into the classical department, but of going into the modern department?—Yes; we have boys from Eton, Rugby, and other such schools.

5584. Is it a very rare case for boys to go from Cheltenham to what are called "cramming" schools?—It is very rare.

5585. Do you think that that occurs only in the case of thoroughly idle boys?—It only occurs with boys of whom I have no very great opinion, and of whom I do not expect success at the examinations. They are perhaps a little impatient, and will try the effect of private schools; they do not generally succeed.

5586. Is it generally felt in the school that a boy in the modern department working fairly is pretty sure of obtaining either his entrance into Sandhurst or his direct commission?—I think so, and perhaps you will infer that, when I say that the whole of my class went up for examination on the last occasion, and they all passed.

5587. (*Lord de Ros.*) About what amount of classical proficiency could the boys arrive at by the age of 15; what sort of books would they be competent to take up in classics at that age?—That I think would vary very much indeed.

5588. I mean taking the average?—If a boy coming out of the classical department of the school had not reached the first class or the upper division of the second, I do not think that it would be of much use his taking classics into that examination.

5589. You would hardly expect a boy of 15 to take up a Greek play, would you?—I think so.

5590. Thucydides?—I think so.

5591. At the age of 15?—I think so. A few boys from us take up classics, and those are the boys who are able to do the books which you mention.

5592. As regards surveying, do you think that it would be possible, without an experienced officer, to arrive at anything like military surveying, bearing in mind that rapidity is one of the elements of military surveying?—Yes; I think those educated for a civil engineer would find no difficulty whatever in qualifying themselves to teach military surveying, nor would others who applied themselves to the study of the subject; there is much to interest one fond of applied mathematics.

5593. (*Dr. Butler.*) I gather from you that you

value the modern department as mainly preparatory for the army?—Yes; it was originally a military department, and some English classes have been added to the department, and I suppose for shortness sake they call it the modern department—but you will observe that the name of it is "military and civil."

5594. Do you think that the governing idea of the department among the boys themselves, say among the more thoughtful boys, is of a military college or a civil?—Of a military college.

5595. Most of your abler boys look forward to the army?—The five upper classes consist entirely of military boys.

5596. About what proportion go to Woolwich?—I suppose about from 12 to 15 a year. At present we have very nearly 40 boys at Woolwich out of about 120.

5597. Is the standard of examination at Woolwich very much what you would yourself advocate?—If I were called upon to offer any suggestion with regard to the course of studies at Woolwich, I should suggest that the boys who reach a standard represented by from 1,800 to 2,000 marks in mathematics, at the entrance examination, should discontinue the study of mathematics upon entering, and give more time to professional subjects.

5598. That is after entering Woolwich?—Yes.

5599. With regard to the entrance examination, do you think that it is in any degree too exacting, considering the age of the candidates?—It is rather severe, I think, for those who wish to take a high position.

5600. Are there any subjects which are now included which you would distinctly recommend to be omitted?—I think that classics are reckoned a great deal too high. I think that, considering that they are not to be taught after the candidates are admitted to Woolwich, it would be very much better to have the standard for classics lowered; but I do not recommend the omission of any one of the other subjects.

5601. Do you think that the standard in mathematics is at all too high considering the age of the candidates?—I scarcely know whether I do or do not. I find that we can get the boys up to the standard—of course dull boys cannot be brought up to the standard—but I take it that one object of the examination is to get boys into the academy who have brains, and I think the examination tests that.

5602. It has been urged by some persons that the standard is so exacting as to lead to overwork?—I have not found that.

5603. You have mentioned that fortification is learned by every boy at Cheltenham?—It is a part of the course of study. Of course these things are taken up progressively.

5604. How many instructors have you in that subject?—I am responsible for it, and I have an assistant.

5605. So that there are altogether two instructors in it?—Yes.

5606. Your assistant is a civilian?—Yes.

5607. Do you recommend that French should be taught by an Englishman, or by a foreigner?—I think that there is a considerable advantage in a classical Englishman teaching French—our principal French teacher is an Englishman, and a university man. I think that there is a great prejudice against it by the French teachers of the country, and I am not sure whether boys who go to the examination may not suffer from it. If the examiners for these competitive examinations were university men I think that the system would be complete.

5608. (*Maj.-Gen. Haythorne.*) Do you think that it would be possible for a civilian effectively to teach military surveying and fortification out of doors unless he had the advantages which you enjoy?—I think that civilians may qualify themselves to teach those subjects.

5609. In a manner suited to active service?—I think so. I do not think that they are difficult subjects for any man who has a taste for them, to get up.

Rev. T. A. Southwood.

6 April 1869.

Modern Department at Cheltenham College.

5610. (*Sir D. A. Cameron.*) Do you think that you now teach fortification and military surveying as well at Cheltenham as they are taught at Woolwich?—I think so; we have not time to do quite so much as at Woolwich.

5611. As a knowledge of those subjects is not required for admission to Woolwich, and as those subjects must afterwards be learnt at Woolwich, is it not rather a waste of time to teach them at Cheltenham?—I think not. It is a great advantage to have studied them before admission.

5612. Would it not be better to teach a boy something else which he would not learn at Woolwich?—I think it is a very great advantage that before the boys enter the academy they should study those subjects which they will have to do afterwards. I believe it will be found that scientific drawing is very imperfectly learned after they enter the academy, because it is not sufficiently regarded in the entrance examination.

5613. (*Lt.-Col. Chesney.*) Dr. Barry in his evidence has spoken of the military teaching at Cheltenham as regarded by him, if made a regular college course, as being imparted in the nature of "extra subjects, mainly by out-of-door work." He has said again that it would be done "by trenching a little on his out-of-door playtime," and in a third part of his evidence he has stated that Cheltenham might very well "introduce the Sandhurst subjects into its school course." Are not those expressions indicative of his feeling that the education would be of a very different sort from the military education thus obtained of a Woolwich cadet? I am merely asking you as to a matter of opinion?—All the subjects I have enumerated as included in the course of study in the military department of Cheltenham college are studied during the regular school hours; we do not trench on the boys plays hours at all, it is not necessary to do so. Fortification modelling in sand, as formerly done at Addiscombe, has temporarily been discontinued, because we wanted the sand modelling room for a class room, in consequence of the great increase of boys in the military department of the college. For the present we content ourselves with tracing works and constructing profiles out of doors.

5614. Are you acquainted with the general course of the teaching at Woolwich?—Yes.

5615. Is it your impression that the military knowledge of a Woolwich cadet when he leaves is on a par with that of a well-taught youth leaving the modern side of Cheltenham College?—It ought to be better, because if he spends two years at Woolwich, after being at Cheltenham, it must be added to the Cheltenham education.

5616. Supposing that a certain number of your pupils at Cheltenham were to be devoted entirely to a military course, or at least to make a military course their chief occupations, so that they should be well taught in the military subjects which are now taught at the military colleges, would it be consistent with their carrying on a general school education at the same time?—That special military course would succeed the general education, just as it now does in the military department of Cheltenham College.

5617. (*Sir C. Russell.*) Then we may understand that, in your opinion, if the addition was made to your course on the modern side of the practical part of throwing up field works, and artillery drill if it was necessary, you could turn out an officer as fitted for the artillery as is now produced at Woolwich?—Most certainly.

5618. (*Lord E. Cecil.*) With regard to Sir Duncan Cameron's question as to the number of your pupils who are prepared for Woolwich, is it not true that by far the majority go into the army and not to Woolwich?—There are about twice as many go into the army through Sandhurst and the line direct as go into it through Woolwich.

Rev. T. A. Southwood.

6 April 1869.

Modern Department at Cheltenham College.

5619. Do you consider that a lad entering the army at 18 from Cheltenham has every requisite to enable him to become a good staff officer if he chooses to pursue his military education afterwards?—I do.

5620. (*Chairman.*) Do you think that he would pass the out-going examination at Woolwich without difficulty?—I think if it were understood that he might do so we should send him up properly prepared for it. Captain Wilson, Royal Engineers, now in Palestine, is an instance. He obtained his commission in the Royal Engineers immediately on passing the first competitive examination; he went up to that examination from the military department of Cheltenham College, and was second in order of merit.

5621. But then you would have to augment your present instruction?—A little, but I think not much.

5622. (*Dr. Butler.*) You think that if a young man spent his final two years at Cheltenham instead of at Woolwich, in common with officers preparing for the artillery, he could pass his final examination nearly as well?—I think so.

5623. (*Sir D. A. Cameron.*) Do you give instruction in fortification and military drawing to those lads who are intended to go into the army by a direct commission?—Yes.

5624. They all learn them?—Yes; whether they go to Woolwich or to Sandhurst or to the line direct, they are all taught them.

The witness withdrew.

The Rev. Dr. Benson (Head Master of Wellington College) examined.

Rev. Dr. Benson.

System of instruction at Wellington College.

5625. (*Chairman.*) You are Head Master of Wellington College?—Yes.

5626. How long have you been in that position?—Since the College was opened in January 1859; 10 years.

5627. What is the general character of the course of instruction?—It is double; partly a university course, and partly a preparation for Woolwich and Sandhurst. There are two lines of education.

5628. What are the peculiarities of the department for Woolwich and Sandhurst?—Much more mathematics is taught there than in the rest of the school; and French and German are taught to all boys. A good deal of time is given to both subjects, and experimental science is arranged for, as well as history and geography in larger quantities than elsewhere. All boys do not do all, but pursue the subjects which the boys seem likely to succeed in when they take them up for Woolwich.

5629. Is any technical military instruction included in the course, such as fortification?—No; we once began to do fortification, but we gave it up as not considering it worth while to continue it. The amount required for our purpose was soon learnt, and we thought it better not to teach it in the school itself.

5630. Why did you think so?—We thought that the time was more usefully given to mathematics, and that it was better not to divide attention so much.

5631. You thought that the education of the mind, which I suppose you consider your principal object, was better arrived at by a mathematical than by a technical education?—Yes.

5632. Which course would you advise the Commision to adopt, supposing that you had to consider the point whether to have for the entrance examination at Sandhurst an examination in the general subjects of education or a large infusion of technical subjects?—The first certainly. I would keep the education at school as general as possible.

5633. (*Lord E. Cecil.*) What is the number of your pupils at Wellington College?—Rather over 300; 312 at present.

5634. What is the range of age?—They may not come before 11. A few come between 11 and 12; the largest number are, I think, between 12 and 13, and they remain until between 18 and 19 if they are going to the university.

Modern Department.

5635. What is the number in your military class?—There are at this moment 96 in that division.

5636. What proportion of those go into the army, and what proportion to Woolwich?—Out of the 96 we estimate that now there are about 40 preparing for the engineers, or artillery, with a fair prospect of getting in, and for the line about 20, and the rest are at present not settled; these are the younger ones of course.

5637. Can you give us any results of the examination in previous years, and the places which the pupils took in the examination for Woolwich, for Sandhurst, or for direct commissions?—The history of the last 10 years of course is no real estimate of the present state of the school, because it has risen during that time from nothing.

5638. I will take the last five years?—Again it is only within five years that boys have begun to go in; the number is just now increasing very much.

5639. Can you give us the numbers actually studying for a military education?—At Christmas 1864 there were 27 per cent. preparing for Woolwich; at Christmas 1865 there were 36 per cent.; at Christmas 1866 there were 33 per cent.; at Christmas 1867 there were 36 per cent.; and at Christmas 1868 there were 46 per cent.

5640. How many of those passed yearly?—Those were boys in course of preparation all the way down the school divided into their several classes.

5641. How many of your pupils passed yearly in that period?—In four and a half years there have been 17 that we can fairly count, namely, about four a year, that is for Woolwich.

5642. How many passed for direct commissions?—Very few; six or seven; they generally aim at Woolwich or Sandhurst.

5643. Supposing that the number was kept up to 96, what became of the majority of your pupils studying military subjects of education?—At this Easter it has only just reached 96. The modern school has increased since Easter 1864 from 20 to 96. At present of those 96 there are 40 preparing for the engineers, but of various ages, and for the line about 20. In the course of that same period, since Easter 1864, 19 have entered Woolwich direct and 33 have entered Sandhurst.

5644. How many for direct commissions?—Six or seven. Out of the 96 we have reckoned 60 who have gone into the army; the others are younger, and may probably do the same, but we cannot say for certain. We might say that 40 go to Woolwich, and 20 to Sandhurst, and of the remaining 36, 30 at any rate would go some to Woolwich and some to Sandhurst.

5645. What proportion do the boys educated in military subjects bear to the rest of the school?—One third.

5646. Do you consider that a young man leaving your school at 17 or 18 would be well grounded in all elementary subjects of military education?—Yes, I think so.

5647. What subjects do you teach in the military department?—French, German, and mathematics to all; and geometrical and mechanical drawing to all but half a dozen; and Greek and Latin to those who are likely to do well in classics, also experimental sciences.

5648. Do you teach fortification?—No.

5649. Do you think that you could teach fortification without difficulty?—We might; but we gave it up because we thought it better to give the time to mathematics.

5650. Of course as regards ground there are capabilities for it?—Yes.

5651. And also for surveying and military sketching?—Yes.

5652. Have you any military men as professors?—None.

5653. Do you think that you could teach those

studies which I have mentioned without having military men?—I think so.

5654. Do you consider that civilian teachers are as good for the purpose, if properly trained, as military men?—Yes.

5655. How do you choose your professors; are they chosen by the head master?—Yes.

5656. Is it upon any system or is it merely by selection?—When a vacancy occurs, knowing what kind of master we want, I make inquiries in all directions from persons connected with education in the universities and schools, and select.

5657. A great deal has been said with regard to the inducements to work at Sandhurst and at other places, and complaints have been made of the idleness at those colleges. Do you find that in your military department you are troubled with idleness?—No; the only boys who trouble us with idleness, I think, are Queen's cadets; they leave off working very often at an early age.

5658. Do you think that you would arrive at a higher standard of military education supposing that a few exhibitions, or commissions without purchase, or other pecuniary rewards, were given to be competed for by pupils at the school?—I think so; we have founded one ourselves which acts extremely well, we call it the Woolwich Exhibition; there is an annual examination for it; it is worth 30*l.* a year for two years, and the honour of getting it produces an additional emulation among the head boys.

5659. Would you be in favour of commissions without purchase being competed for generally at public schools as well as at your own?—So far as regards military education itself, I certainly think so.

5660. I mean as regards their tendency of improving military education generally?—Yes; I think so. But it would be better that there should be a general competition fixed at a public school standard than that commissions should be attached to particular schools.

5661. You think that it would have a beneficial effect?—Yes; I think that the Queen's cadetships, though they are given so young, would have a good effect if they were partly competitive. Four annually of our own foundationerships are competitive within limits, and the rest are chosen on grounds of meritorious service, and the circumstances of the family. The four candidates elected by competition generally do well afterwards in the school.

5662. From your observation and from your knowledge of public schools generally, do you think that there would be any great difficulty in giving a high standard of military education, supposing that a sufficient inducement was held out?—I think that a good deal depends upon how high it is, and how far it is professional and technical. We have spoken hitherto of the grounding.

5663. I mean a really good professional education so that it might be continued after entrance into the army?—May I ask up to what standard? the standard for Woolwich for example? and at what point the youth would be supposed to begin? how old would he be when he entered the army?

5664. Suppose that a candidate entered at 18 or 19?—And would he be supposed to be trained up to the point to which we now train boys for Woolwich?

5665. I am speaking of fortification, surveying, and other subjects. Do you think that if those military subjects were taught you could give a sufficiently good elementary education to enable an officer to pursue his studies with advantage after entrance into the service?—Yes, I think so. It would lower the education, if technical instruction were given too early, or too largely. But the elements *could* be taught if boys remained long enough.

5666. There is no difficulty in giving that education at public schools?—No, I see none if we have sufficient time given us. That is if the boys in question spend at school the years from 16 to 18 or 19, which they now spend elsewhere.

Rev. Dr. Benson.

6 April 1869.

Wellington College.

5667. I will ask you one or two questions as to the expense of a pupil's education at Wellington College. What is the ordinary expense to the parents, including everything, of a pupil's education?—Sons of officers pay 80*l.* a year, and the additional payments amount to between 20*l.* and 30*l.*, and the sons of parents not in the army pay 110*l.*, with just about the same additional payments.

5668. What is your accommodation; how do you lodge and feed the boys; are they lodged and fed in the college?—Yes; they take their meals in the hall, and each boy has a separate study of his own large enough for study and bedroom.

5669. Have you ever any complaints made as to the provisions, or the accommodation generally?—No; we never have now, and we have not had any for several years past.

Modern Department at the College.

5670. (*Sir C. Russell.*) Do you attribute the increase from 20 to 96 in the number of boys studying for the army to the success which has attended those who have been educated at Wellington College in their competitions, or do you attribute it to the growing desire for what is called a good modern education?—I think that both those causes have acted, but I think the first principally, and the reason why I think so is that the length of time for which boys going to Woolwich stay with us is rapidly increasing. Four or five years ago those boys generally only remained for two and a half years in the modern school, and now their average stay in that department is four years, and there are other indications which show an increasing tendency to make the college a direct preparation for Woolwich without the intervention of tutors at all; this I think is due to the success of the boys.

5671. Of course living so close to Sandhurst as you do, you are pretty well conversant with the course of education there?—I think so, fairly.

5672. Do you think that there would be any considerable difficulty in carrying out at Wellington College such a course as is conducted at Sandhurst with a view to preparing men for direct entry into the army?—We certainly could not give so much drill as is given at Sandhurst, and I am quite sure that we should not think that it would be conducive to the good general education of the boys to give so much technical education as is now given there.

5673. I want to arrive at the point whether the difficulty appears to you to be considerable. I am not asking you whether you approve of the system as pursued at Sandhurst, but I wish to ascertain whether there is any considerable difficulty in your opinion in training, at such a college as Wellington College, boys to exactly the same standard as now exists at Sandhurst; I will put the drill out of the question, because you have answered as to that already?—Do you mean by actually transferring the course at Sandhurst to the course at Wellington College?

5674. Yes; take for instance your 96 boys on the modern side?—There would be considerable difficulty in adopting all that system of education.

5675. (*Lord E. Cecil.*) Will you state what the difficulty is?—It would require a complete readjustment of the proportions of time which we have given to each study, and which we think best for the training of the boys' minds. I think that the amount of attention bestowed upon almost every single subject would have to be entirely different from what it is now with us. We do not teach military history at all, that would take a considerable time, and with boys it would involve a process very much like "cramming;" it is not desirable to give it to boys so soon. The amount of time bestowed upon drawing of various kinds at Sandhurst is very great, and if you took away that time from the time which we now give to such subjects as German and French and mathematics, which I apprehend to be necessary, to say nothing of classics or English, they would all suffer, in fact it would necessarily involve beginning

Rev. Dr. Benson.

6 April 1869.

Modern Department at Wellington College.

a technical education too soon. Special subjects introduced among general subjects tend to extrude the latter. And with respect to our 96, full 80 of them are much too young, and the rest are doing work, which is better for their cultivation.

5676. (*Lt.-Col. Chesney.*) Is the Woolwich Exhibition to which you have referred a new thing at Wellington College?—It has existed for seven or eight years.

5677. Is the number which you have given as having entered Woolwich the number who have done so without going to "crammers"?—It includes 11 boys who have been on the average one year with tutors, but I think that they would have entered Woolwich as well from Wellington College, but they went away chiefly when the college was young. Boys now are not leaving us to go to tutors, but they remain with us until they go to Woolwich.

5678. Do you think that it would be possible at any school, as a school distinct from the idea of a college, to give such a course of technical education as is now given at Woolwich?—I think not; I think that the Woolwich course could not be given there.

5679. (*Sir D. A. Cameron.*) Did you say that fortification was at one time taught at Wellington College?—Yes.

5680. Was not it something very trifling,—drawing the outline of a front upon Vauban's first system?—I am not sure how far it went.

5681. I believe it was "crammed" up in a few days?—Some weeks, I think; but we soon gave it up, as I said, thinking it not a desirable school subject.

5682. It was merely drawing fine lines in a certain relative position to each other. You have stated that you think that fortification could be taught successfully at Wellington College?—Perhaps I am not quite aware how much fortification is necessary, or how far it ought to be pursued for the purpose now inquired about.

5683. (*Dr. Butler.*) Do you regard the modern department at Wellington College as mainly military?—In practice mainly, not entirely.

5684. Do nearly all the able boys who are members of it go into the army?—I think so; a very few, two or three who are mathematicians, are preparing for Cambridge, and two or three for the civil service.

5685. Do you value it chiefly as giving a military education, or as giving a liberal education to those for whom classics are not desired?—It also answers that purpose to a considerable extent, but still, most of the boys whom we have go into the army.

5686. Do you think that it is upon that ground that parents are mainly attracted to it?—I can only judge from the fact that most of the boys are going there.

5687. In the evidence which you gave before the Schools Inquiry Commission, I find the following passage, "Parents constantly come and inquire about "the modern school, and take considerable interest "in it, but are very generally not willing to put their "own boys into it; they think it excellent that it should "be provided." That evidence was given four years ago; have you seen reason during the last four years to modify that opinion?—Yes; decidedly. Many boys now come intended for the modern school at once, and are placed there; confidence in the modern side has grown very much.

5688. Can you compare the general mental calibre of those boys who are members of the modern side and of those who are members of the classical side? Do you, for example, notice any marked superiority in the members of either of those two departments?—I think so myself.

5689. On which side is the advantage?—On the classical side. Boys have sometimes entered the two sides whose performance has been very much the same at the time of their entrance, and they have differed widely after two or three years, although they both have been diligent. I think that the classical is the harder work, and more disciplinary.

5690. I think that you stated in evidence before the Schools Inquiry Commission, that you had reason to fear that Woolwich required too great a strain from those boys competing for it?—Yes.

5691. Is that still so?—I think that it is still so to some extent; but I think that it is chiefly through the demand for five subjects. I do not think that the length of time for which boys are obliged to work is too great, but that the division of their attention is not good for them mentally.

5692. You think that their attention is too much sub-divided?—I do.

5693. Have you any reason to think that the standard in mathematics is too exacting considering their age?—I scarcely think so now; boys in the school are reading all the subjects which are proposed for Woolwich, except spherical trigonometry.

5694. Would you say that the effects of study at Wellington College work as well in the modern department as upon the classical side?—I think so; the boys are very industrious, and are stimulated to work very well for Woolwich; they work very well while at Woolwich, and they come back to the school with a satisfactory tone, and altogether I think that it works very well on the boys. We make no difference at Wellington College between the boys who are preparing for the one and those who are preparing for the other, and they enjoy all the same privileges. A good deal depends upon this.

5695. Have you any opinion as to whether it is desirable to teach French through a Frenchman or through an Englishman?—Yes. So far as my experience goes it is not possible to teach French well and satisfactorily through a Frenchman all through. I have been moved by circumstances to adopt the following plans:—Boys begin French with a Frenchman, and German with a German; they get some idea of the language and of the pronunciation; they are interested in the beginnings of it, and after that we take them away from the foreign masters, and they work with their own form masters at grammar and exercises, and from them they get harder work and better discipline than from foreign masters. Then when they have reached a certain point they go back again to foreign masters, and finish with them.

5696. Does English literature form an important element in the instruction given in the modern department?—It is given at times, but I do not think that it is a good subject; that is to say, so far as it has been prepared for Woolwich. We have adopted it in the classical department, by careful preparation of plays of Shakespeare and other English authors. But preparation for Woolwich in this subject requires the knowledge of a good many authors, a scrappy kind of knowledge favourable to cramming, and, therefore, we discourage that sort of English literature, while at the same time we have adopted for the classical boys another kind of training in the same literature.

5697. If much training were given at Wellington College in special military subjects, as for example, military history, field fortification, sketching, and surveying, do you think that there would be any serious inroad upon the more general culture, or would it last for a comparatively short time?—I do not quite know how far "fortification" would extend. Perhaps Sir Duncan Cameron would say.

5698. (*Sir D. A. Cameron.*) A thorough knowledge of field fortification?—I am afraid that description is beyond me, and therefore I am not able to say how much time would be taken up by it. Any large demand upon the number of hours in a week would of course diminish the most valuable training for boys, namely, in languages and mathematics.

5699. (*Dr. Butler.*) Are you decidedly of opinion that a modern department at a public school is an advantage?—We certainly have found it so.

5700. Would you say so even irrespectively of a military destination?—I think so. Our experience of "modern" education with a different aim is limited. As I said, most of the boys who have gone into the modern department are intended for the army.

Others commonly remain in the more general or classical side.

5701. A considerable number of your boys go to Sandhurst as well as to Woolwich?—Yes.

5702. Have you opportunities for becoming familiarly acquainted with the moral tone of Sandhurst?—I see nothing of it. I hear accounts which I have reason to believe; they are the accounts given by persons familiar with the place.

5703. Have you reason to think that their moral tone at Sandhurst is on the whole satisfactory or the reverse?—I should say that it is improving. I must say that it was very unsatisfactory.

5704. But it has improved of late?—Yes, I believe that it has improved.

5705. Have you been led to notice any special defect in the system which seems to you capable of being remedied as regards the moral tone?—It is not attempted to bring the same moral influence to bear upon boys there as acts so strongly at public schools; their intercourse with the masters is very much more limited, and from the short residence, the elder boys have little power; and then again of course a good many boys go there whom one would be sorry to have to associate with other boys, some who have been intended for other professions, and who have in one way or other closed the door to themselves, and their influence is not at all good.

5706. Has it ever occurred to you whether the civilian and the military elements among the teachers blend happily together?—So far as I can judge I think that there is not the same kind of intercourse and unanimity of feeling as there is among the masters of a public school. The civilian professors have not so much influence or opportunity of influence as they ought to have.

5707. Are cases of drunkenness at all frequent at Wellington College?—No.

5708. They are very rare?—Yes, altogether rare.

5709. Are cases of disease owing to immorality frequent?—No; I have scarcely I think heard of a single case; there have been two cases in ten years, and both contracted in the holidays.

5710. Do you believe that a large number of boys of the ages between 16 and 19 might be so governed and influenced as to make those offences very rare?—Yes.

5711. (*Rev. W. C. Lake.*) Am I to collect your general opinion to be that you would not think it at all injurious to a public school to have a general modern department, but that you would think it beneficial to have one which taught general military subjects?—Yes; the very limited amount of fortification which we taught, which I suppose bears a very small proportion to all that is to be done, we gave up simply because we thought that the time would be much better spent in a general training in mathematics.

5712. I understand that you are of opinion that the attempt to teach special military subjects would withdraw the attention of boys from subjects such as mathematics which are necessary to their general culture?—Yes.

5713. And you think it highly undesirable to teach such military subjects which could not be taught without prejudice to others?—Yes.

5714. You spoke of the five subjects of examination for entrance to Woolwich being too many for boys to master?—Yes.

5715. Do you think that they are bad as making boys too superficial, or that it is too great an effort?—I think that it acts in two ways. Some boys have to attempt to master them all, whose heads are not quite strong enough. Then with regard to the boys who are really very promising in mathematics or in classics, their attention is drawn away from them to taking up, to a small extent, one of these other five subjects; and besides the actual loss to their more important subjects, the gain in that one subject is very small, and they are fretted with the distraction.

5716. Do you think that the same remark applies to the Sandhurst examination, namely, that the subjects for entrance there are too numerous?—A boy need not take in more subjects than he likes. At Woolwich it is not advisable for a boy to go up, unless he is a very exceptional boy indeed, without having five subjects. *Rev. Dr. Benson.* 6 April 1869. Entrance examinations for Woolwich and Sandhurst.

5717. You spoke of the prospect of the Woolwich examination as exercising a good influence upon the school?—Yes.

5718. Do you think that the same remark applies to the Sandhurst examination?—I do not think so; boys very soon arrive at the knowledge that they have done enough to pass, and there is no great emulation.

5719. Have you any military men as masters at Wellington College?—No. Wellington College.

5720. Do you think it undesirable on general grounds in a civilian school to have military men as masters?—Yes; I think so.

5721. (*Chairman.*) Upon what principle is the good conduct medal at Wellington College given?—It is rather difficult to define the principle; there is no accumulation of marks for it, but the manner in which it is given is this—the masters meet and fix upon two, three, or four boys, and then these names are given to the prefects, and the prefects vote.

5722. Are the prefects lads?—Yes.

5723. Monitors?—Yes.

5724. (*Lt.-Col. Chesney.*) What number are there?—About 25 to 30.

5725. (*Chairman.*) The medal is given for good conduct independently of intellectual capacity?—Yes.

5726. Is it a great stimulus?—It is very much valued, but I do not know that it actually operates directly in making boys desire to be more virtuous; it is considered a very great honour.

5727. How lately has it been established?—From the first. The idea of the Prince Consort was that it should reward, not the clever boys particularly, but those boys, whether clever or not, who had influenced the school for good; that the boys should have an effective voice in determining to whom it should go.

5728. Do you give two votes according to classical precedent to each prefect, one for himself and one for another boy?—It was thought of, but is not necessary.

5729. (*Rev. W. C. Lake.*) Do you think that if that medal were generally given for ability it would have a greater tendency to make boys what you call more virtuous than if given for general good conduct?—The difficulties which it was thought might arise in giving a good-conduct medal have not arisen. It is properly bestowed.

5730. Do you think that a medal given for ability in lessons at school would generally have a better influence in raising the tone of the boys than one given for good conduct?—No, I do not think so; we give prizes and exhibitions to boys of ability, and it would only be one additional prize.

5731. (*Lord E. Cecil.*) Did you yourself teach fortification at the time when it was taught at the college?—No; one of the mathematical masters taught it. Possibility of giving military instruction.

5732. Do you yourself now teach the essentially military subjects which are required?—No. My own form is the sixth form of the classical school.

5733. Then I may presume that you have hardly studied fortification sufficiently to be able to say whether it could be taught with advantage, simply from not knowing how much would be required?—That is what I said. The possibility (apart from the advisability) of teaching it, appears from the success with which it is taught at some schools and by tutors. But I spoke only of the elements, and meant to exclude the amount of fortification which is taught either at Sandhurst or Woolwich.

5734. From one of the answers which you gave to me, I understood that you thought that the study of fortification could be pursued, but that you did not know whether it could be pursued with advantage,

Rev. Dr. Benson.

6 April 1869.

from not knowing how much was required for a direct commission, or for an officer's improvement in the army?—Yes. I understood that the question only referred to the elements of fortification and surveying.

I should object to give more than two hours a week to it as part of a boy's education.

5735. Do you think that you can give an opinion from your knowledge of the study?—I think not.

The witness withdrew.

Rev. Dr. Temple.

The Rev. Dr. TEMPLE (Head Master of Rugby School) examined.

Character of examinations for admission to the service.

5736. (*Chairman.*) You are head master of Rugby?—Yes.

5737. If the Commission consulted you as to what they should constitute the entrance examination at a military college at which the lads were to enter at about the age of 16, would you advise us to introduce into that examination a certain number of purely technical subjects relating to the military profession, or would you recommend us to render that examination as general as possible?—It would depend, I think, upon what you would require of them afterwards. I should fancy that the answer would be different if you wished them to enter the more scientific parts of the army.

5738. It would be upon the supposition that immediately upon their entering into Sandhurst, they would be initiated in a purely technical education which would endure for perhaps two years, and which we have reason to believe would be found amply sufficient to invest them with those qualifications which we desire; not of so high a character as those which are required for officers who pass through Woolwich, but considerably superior to those which are looked for in officers who obtain commissions by purchase?—I should have thought, if that were the case, that with the exception of securing quite the elements of mathematics, there was no necessity for asking for any technical instruction prior to their coming to Sandhurst.

5739. Then you would be of opinion that it would be desirable to render the preliminary education which they are to receive at the public schools (because, of course, our test examination must in some measure influence their public school course) as liberal and as general as possible?—I should have thought that it would be best that they should receive precisely the same kind of education as that which would be given to any other boys.

5740. Another subject which has been brought very forcibly to our attention has been the almost invariable practice which is adopted by parents, of sending their sons, if they are proposed to be subjected to any examination whatever, to "crammers," as though they had not sufficient confidence in the education which their sons received at the public schools; it has been very strongly put before us that the intervention of these "crammers" is upon the whole prejudicial both intellectually and morally, and, of course, in any scheme which we might devise, we should be anxious to contrive that that defect should be obviated. Have you any suggestions to offer to us in that respect?—I should have thought that the utmost which you could do, and the best which you could do, would be to provide that the examinations should be as nearly as possible directed to the subjects at which the boys have been working in the schools, and I doubt whether you can do anything else.

Military instruction at public schools.

5741. If it were proposed to you to endow Rugby with a certain number of free commissions, on condition that you introduced into your school system a technical and professional education, in field fortification, permanent fortification, and such subjects, would you, as responsible for the education at Rugby, be disposed to accept or to reject the offer?—It would entirely depend upon the degree in which these technical and professional subjects would interfere with the ordinary course of the school.

5742. You would be the best judge of that?—But I could not judge of it until I knew what subjects they were. I mean that you might ask me to introduce very little, or you might ask me to introduce very much, and in the one case I should give a different answer from what I should give in the other.

5743. It would be upon the supposition that the boys should be competent to pass as severe an examination as that which would be required for a free commission at Sandhurst, at the expiration of a two years' purely technical and professional course of instruction?—I should not like to answer such a question quite off-hand, but my own opinion on the whole would be to decline such free commissions.

5744. (*Rev. W. C. Lake.*) You mean that your opinion would be against giving a strictly technical education?—Yes; I think that it would be exceedingly difficult to do it well without really breaking in upon the general system of instruction.

5745. For example, supposing that you had the offer made on condition that you should teach the elements of field fortification, the elements of surveying, the elements of military drawing, and something of military history, what would be your answer?—I should fear that the gain would not be equal to the loss; that these boys would get very little good by staying at Rugby, not being in the ordinary course of instruction at the school, and that they would be rather in our way than otherwise.

Modern departm

5746. Taking something far short of that, supposing that the offer was made to you on the condition that a modern department should be introduced into the school at Rugby, in which boys after a certain time would be allowed their choice of an education consisting mainly of mathematics, physical science, and modern languages, in preference to your now general, if not universal, curriculum of Latin and Greek, would you be prepared to think that such a department was desirable?—I should not be prepared to say that under no circumstances would I have such a department, because I think that it might possibly become a necessity, but I do not think that it is at all the best way of giving that kind of education; I should be sorry to be driven to it.

5747. What kind of education do you allude to?—An education in which the classics should no longer form the staple.

5748. You think it very desirable for a public school that all boys should pass through the present universal curriculum of the classics?—I do not say that at all; what I mean is rather this, that I think that it would be very desirable that there should be public schools in which classics were not the staple of the instruction, and that it would be better that these public schools should stand alone than that they should be departments of the present public schools.

5749. In fact you mean that some public schools should have a modern department, but that you think that it is not desirable for Rugby?—No, I do not mean that. I think that some public schools should be a modern department entirely.

5750. Then you object to the admixture?—I object to the attempt to unite the two systems. I think that the classical instruction suffers in some degree, and that the modern instruction is not nearly so good as it might be made.

5751. That brings us to a very important subject, because it touches the question of the great public schools. Will you therefore tell us why you think that a great public school, such as Rugby and the other great public schools, would be injured by having a modern department?—I think that it is rather an injury to have two systems going on side by side; but I was not so much thinking of the injury to the public schools as that this modern work would be done better by having schools specially devoted to it.

5752. But it is from the great public schools that we generally desire to draw young men for the army, and therefore it is a direct injury to the army that the great public schools are unable, or think it undesirable, to give a modern department?—I agree with that, but what I should infinitely prefer would be to see new public schools created for this purpose.

5753. But pending that, do you see any reason why the great public schools should not adopt such a modern department as I speak of?—I think that it would a good deal dislocate their system, and I doubt whether it is worth their while to do so.

5754. Will you state why you think that it would be injurious to a public school if, at the age of 15 or 16, boys who had, or whose parents had, no inclination to a strictly classical course should be allowed to deviate into what is called a modern course?—I think that it is always bad to be giving them what you do not give them in the best possible form, and I think that it is not given in the best possible form when it is given in a secondary department. This modern department is exceedingly liable to get filled with a considerable number of stupid boys, because those stupid boys do not get on well in their Latin and Greek, and then there is a strong temptation both to masters and to parents to put them over into what seems to be, and what is to a certain extent a more easy system, and the consequence is that the whole of that kind of instruction is lowered in its standard. Besides that, it is quite impossible that this modern department can really be influenced to the same degree as the classical department by the head master. Everyone knows that the influence of the head master upon the school to a very large extent determines the character of the school, and that in fact the ambition of the boys is to rise up into a part of the school where they will be directly under him. Now when there is a modern department all the boys going into that department have to give that up. The consequence is that they are studying subjects which in the first place are the refuge of the stupid boys, and in the second place have not the sort of *prestige* about them which attends the leading subjects of the school. I think that they in consequence suffer, and that they damage the rest. Besides that, it introduces of necessity a very considerable amount of complication into the system, and, as far as I have seen it, makes it a good deal harder to work, but I do not consider that last objection the most serious one.

5755. Dealing with the most serious objection, you say that the modern department has a tendency to become a refuge for the more stupid boys; is not that rather speculative? All the evidence which we have had from the masters of Cheltenham and Wellington Colleges, and others, has been the other way?—I do not think that it is the case at Wellington College. There was from the first a very strong impulse given to that college in that direction, and I do not think that it is the case there. I should have said that there the modern department was likely to become a thorough success, although I still think that Wellington College would be a very much more useful school if it abandoned the other department altogether and stuck to the modern department alone. But certainly at the other schools all that I have heard has been very much what I say; it may have changed since.

5756. (*Lord E. Cecil.*) Do you include Cheltenham?—Yes; I meant to speak of them all. I do not think that at Cheltenham the modern department has the same vigour in it as the classical department has.

5757. (*Rev. W. C. Lake.*) Then your opinion comes to this, that a modern department is likely to be so injurious to the general development of a great public school that you would rather that the great public schools did not attempt it, and did not attempt to give an education which would at all tend directly to boys entering the army?—Upon the whole I should prefer that the public schools should not undertake that work. At the same time I wish very decidedly to guard myself against its being supposed that I would not have boys who are intended to go to the army educated in our schools, because I would have them so educated. I think that rather than give up public school education for them I would have them in departments in the present public schools.

Rev. Dr. Temple.

6 April 1869.

Modern departments.

5758. In fact if you thought it probable that boys would leave the great public schools, in consequence of there not being an adequate preparation for the army in them, you would be prepared to adopt a modern department?—If I saw that they were leaving the present great public schools, and that there was no hope of other great public schools arising more suited to their need, I think that I might feel myself compelled to have a modern department.

5759. How long would you wait to ascertain whether there was such a prospect or not?—I really cannot answer that question.

5760. Are you aware that at present the boys from Cheltenham almost universally pass the entrance examination without the intervention of a "crammer"?—Yes.

5761. Can you explain how it is that in some of the other public schools that is not found possible?—I should have thought that it was because the system at Cheltenham has been carefully adapted to the examinations. I think it upon the whole better for a boy to go to Cheltenham to be prepared than to go to any "crammer;" still I do not think that the modern department at Cheltenham is nearly as good as such a school would be if it had a head master of its own, a man of such ability as the head master of a school like Cheltenham ought to be, and had also a staff entirely of its own.

5762. Do you mean then that you would wish in no case to mix the two kinds of education, but that you would have either a strictly classical system of education or a strictly modern system of education?—I do not quite know what you mean by the word "strictly," but I should prefer having schools of the two different kinds separate from one another.

5763. By a "strictly classical system" I intend a school in which boys from the beginning to the end of their career continue their Latin and Greek?—In that sense I quite concur with what you say.

5764. (*Dr. Butler.*) Assuming that the great schools had a modern department, would you consider that it ought to look to general culture, or rather to special military objects?—I should prefer certainly that it should look to general culture.

5765. Do you consider that in such a department special military subjects, such as military history, surveying, and fortification could be introduced without being either superficial in themselves or damaging to the more general subjects?—I should have thought that they could be introduced.

Military instruction at public schools.

5766. And thoroughly taught?—Yes; that I think depends upon the length of time which you assign. The mischief of the "crammers" really is in the attempt to teach very quickly what ought to be taught slowly. The amount of mathematics which a boy has to learn, for instance, ought to be spread over some considerable time, instead of which, it is attempted to be forced into a boy's mind in the course of six months or a year.

5767. Are you familiar with the standard required at Woolwich?—No, I cannot say that I am.

5768. You have no reason to think that the mathematical standard is too high?—I should not have thought so, but I would not venture to give an opinion without looking into the matter more carefully.

5769. Have you had any opportunities of judging of the tone at Sandhurst?—None that I can rely on.

5770. (*Lt.-Col. Chesney.*) Supposing that it was considered that about four hours a day indoors and one hour a day out of doors for two years was required to give a moderately good technical education for the army, could such a system be introduced into

Rev. Dr. Temple.

6 April 1869.

a great school without very much interfering with instruction in general and more liberal knowledge?—I think that it would very greatly interfere with general knowledge. It is a larger demand than I should expect to be made, especially as I should have supposed that if there were a department for the purpose in a great school, the subject would be taken earlier, and that therefore being spread over a greater number of years it would not be necessary to occupy so large a time per day with it.

Rugby School.

5771. Will you favour us with a general idea of the expense to the parent of a boy at Rugby?—The average is about 140*l.* a year, covering everything, journeys and all.

5772. Are the boys at Rugby mostly from a special class, and of good parentage?—I do not think that they are from any special class.

5773. I mean distinguishing between men of property and professional men?—I should have thought that we had rather a larger proportion than, for instance, Harrow has of the sons of professional men. I have always felt that in some respects we had a considerable advantage in the fact that a very large number of our boys come from homes where the fathers were hard at work, and not from homes where the fathers were idle.

Modern departments.

5774. (*Lord E. Cecil.*) You have spoken of the stupid boys as going generally into the modern departments at public schools. Do you think that Latin and Greek are fitted for all intellects?—Not at all.

5775. Then do you think that these boys who go into the modern department are necessarily stupid?—Not at all.

5776. How then do you account for it?—From the fact that over and above those who go there because they are not naturally fitted to be educated in Latin and Greek, there are a good many who go there simply because they have failed in learning Latin and Greek, and that failure is not always due to want of adaptation, but it is very often due to want of intellect.

5777. May not a boy have a natural predilection for other studies than Latin and Greek?—No doubt, but over and above those boys there would be a considerable number of boys who fail in Latin and Greek simply because they are stupid; and the temptation to put them into the modern department is very strong. I constantly have applications made to me at Rugby by parents that their boys may do less Latin and Greek and may do something else instead; and in nine cases out of ten they do not do that something else a bit better.

5778. Then you think that the stupid boys largely predominate over those who have a predilection for modern languages?—Certainly.

5779. And that all those boys go into the modern department?—No, I do not say that. I say that there is a tendency to put them there.

Schools for military education.

5780. I think you said that you would prefer to have new military public schools created; would you rather have them as schools or as colleges, that is to say, as institutions for young boys or for old?—I did not say "new military public schools," I said "new public schools," but I did not at all mean that they should be military, because I think that there are a great number of boys who would be better for that sort of education who would not be fit for going into the army; and I should think it a great evil if such schools were simply military schools; and I meant schools distinctly, and not colleges.

5781. I thought that you intended to convey the idea that you wished to have new public schools where military education should be given?—Quite so, but not confined to the army at all. I meant that there should be new schools in which the classics should not be the staple of instruction. I did not mean military schools.

5782. Have you at all thought out what sort of school you would be in favour of; whether there should be a preponderance of the military or of the civilian element in it, and whether it should be for military purposes or for modern purposes?—I should have thought that it was better that there should be a preponderance of the civilian element.

5783. Supposing that the college at Sandhurst were reconstructed, what would be your idea of an efficient college for the purposes of military education?—I should have thought that what would be most useful would be to take boys at the age of about 17 or 18, and to give them an instruction directly bearing on their profession.

5784. With regard to the union of civilian and military teachers, would you have instructors who should have in their hands the power of discipline as well as of instruction, or would you have the disciplinary power apart?—I should think that the instructors must have the power of discipline. I do not think that it is possible to teach boys properly without it.

Age for commencing professional instruction.

5785. Is it not the case that general education in civilian professions is usually pursued up to the age of 18, or even farther, until a young man takes his degree at the university?—Those who go to the university pursue their general education up to the age of 21 or 22, and the others, those who do not go to the university, if they have attended constantly, continue their education till they are about 19 or very nearly 19.

5786. Is not that the case as respects professions, such as the church, the law, and medicine; and do you see any reason why any special exception should be made with regard to the army?—I can see no reason why any exception should be made for the army. I should have thought that it would have been far better that boys should begin their special preparation for the army at a later age than they now do.

5787. Looking at it in a civilian point of view, would not you be rather in favour of the young men completing their education in technical subjects after their entrance into the army than before, supposing the age of entrance to be about 18 or 19?—I have not thought of that question, and I do not quite know how it would affect their education. It would mean simply this, that they would be already in the army when they were in the Military College. I see no reason for a difference with regard to military men.

5788. That technical or professional education could be completed quite as well, if not better, after the age of 18 than before it?—I should have thought so.

5789. (*Chairman.*) You are of opinion that the longer the general education of a young man's mind can be continued the better?—Yes, I think so, on the whole.

5790. And that it would only be with reference to other special considerations that it would be desirable to curtail it?—Certainly.

5791. An intelligent lad of 16, if he possessed, more than ordinary intelligence (because we are now rather referring to lads who will present themselves for a severe examination), if he was well taught, would have acquired a very fair knowledge of many important subjects, such as Latin and Greek and English, would he not?—It depends very much upon the standard which you set up, because for certain purposes he might acquire by the age of 16 as much knowledge as is wanted for his life, but of course you could not make him anything like a first rate scholar at the age of 16.

5792. By the age of 16 he would have acquired a good classical education, such as would be considered sufficient for a gentleman entering a liberal profession?—He would have acquired what would generally speaking be considered enough, if he is above the average of intelligence, to matriculate at any college in one of the universities.

Modern department.

5793. (*Rev. W. C. Lake.*) We have been told in evidence that the presence of a modern department in a school has a beneficial influence upon the whole teaching of the school; your opinion is strongly against that view?—I should not have thought that

it had at all a beneficial influence as a general rule. As far as I can judge from my knowledge of Wellington College, I think that at Wellington College it has.

5794. For what reason do you think so?—Because there I think that so much of the ability of the staff at Wellington College is thrown into the modern department.

5795. With reference not only to the after army education, but to the general education of a young man, do you think it really desirable that all boys who go into a public school should be obliged to go on with Latin and Greek as long as they are there?—I have been saying repeatedly that I do not think it at all desirable. I want to have new public schools.

5796. I am speaking of the existing public schools.—In the existing public schools I think that it is a choice between difficulties, but I do not want to have those boys there at all. I want to send them to schools of their own.

5797. You think then that all the boys who come into a public school are capable of profiting more by Latin and Greek than by any deviation from that course?—No, I do not think so at all, I think just the contrary.

5798. Then for what reason would you keep them there?—I want them to go to the other public schools. Those boys who are not fitted for the public schools as now organized should go to other public schools differently organized.

5799. In fact you are opposed to any alteration in the classical organization of the present public schools?—I am.

5800. Upon what grounds?—I do not think that the attaching of modern departments to the present public schools will do the work which is desired to be done nearly so well as having public schools for the purpose, and I think that not doing it so well, it will damage the work which is already being done in the present public schools.

5801. Then you think that the general education of the country at the present public schools should be confined to classical education, and that in future other schools of a more modern character should be raised up?—I do.

Rev. Dr. Temple.

6 April 1869.

Comparison of public schools with military colleges.

5802. (*Dr. Butler.*) What do you think might fairly be expected as to the standard of morality at a school of 200 or 300 young men, between the ages of 16 and 19, in two important particulars? Would you say that the offence of drunkenness is one to which public schools are at present much exposed?—No; not much certainly.

5803. The cases of that kind which come before you at Rugby are very rare?—Yes; and they are always treated and punished as very rare.

5804. And the same, I apprehend, would apply to cases of disease connected with indulgence?—Such cases would require instant expulsion.

5805. Then you probably believe that it would be possible to govern a college of 200 or 300 young men with very rare instances of either of those offences. Certainly. I have not a doubt about it.

5806. Do you attribute the immunity from such serious offences at Rugby in a great measure to the friendly relations existing between the masters and the boys?—In a very great degree to that cause, and also in a very great degree to the fact that all those who have charge of the boys make it a business of their lives, and really know what to do with boys.

5807. Would you hold that it would be possible to administer a military college except by introducing similar friendly relations?—I should not have thought so.

5808. Have you an opinion as to placing either a civilian or a soldier at the head of such a college?—I think that if such a college is to be well conducted, there should be at the head of it somebody who really has studied education; whether he is to be a civilian or a soldier is I think quite a minor question; but education should have been his study, and he should know as much about it as any other schoolmaster is required to know, or else he would certainly fail.

5809. The same principle would probably apply to all the instructors acting under him, namely, that whether soldiers or civilians they should be specially appointed for their educational qualities?—Certainly.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 8th April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR GENERAL EARDLEY WILMOT.
C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.
REV. W. C. LAKE.
LIEUT.-COLONEL CHESNEY.

MAJOR GENERAL THE RT. HON. SIR H. K. STORKS, G.C.B., examined.

Maj.-Gen. Right Hon. Sir H. K. Storks, G.C.B.

8 April 1869.

Instruction of officers in the service.

5810. (*Chairman.*) You are at present Controller-in-Chief and Under Secretary of State for War?—Yes.

5811. The Commission are anxious to ascertain what is your opinion with regard to the practicability of giving facilities to officers, after they enter the army, for the acquisition of instruction in those technical subjects connected with their profession which at present are not taught; I would therefore ask you, in the first place, whether you think that it would be possible to introduce such facilities; and in the next place, whether you think that it would be sufficient merely to grant facilities and to give encouragement to the officers voluntarily to avail themselves of such advantages, or whether anything like a compulsory principle could be introduced by adding an examination in those subjects to the examination which they are now compelled to undergo on promotion from one grade to another?—I think so; there should be a captain instructor in every regiment.

5812. What would be the subjects of instruction?—I think that all young officers, when they join, should be obliged to attend to professional instruction, which professional instruction should be given by a captain instructor, who should be a supernumerary of his rank, and with his duties and powers properly defined; and the instruction to be given to them should be in the following subjects: military law, that is to say, the Mutiny Act and the articles of war; the theory and practice of courts-martial; the elementary principles of the law and nature of evidence; military history; field fortification, and

Maj.-Gen. Right Hon. Sir H. K. Storks, G.C.B.

8 April 1869.

Instruction of officers in the service.

surveying enough to enable an officer to put a post into a state of defence and to give cover to his men, and to write an intelligible report of the country, its features, roads, and supplies, through which he may be marching. I would also include instruction in reading plans, and in accounts, and military administration, and in everything relating to the accounting and interior economy of a regiment; and likewise drill and general military duties, and if possible a knowledge of modern languages, say, French or German. I think that the attendance should be obligatory. I do not think that anything should be voluntary in the Army. Periodical examinations should take place in connexion with the course of instruction, and promotion from one grade to another to the rank of captain should depend upon passing such an examination; I do not mean a competitive examination, but that if an officer had not passed the examination he should not be eligible for promotion.

5813. A captain instructor attached to every regiment would be the instrument by which you would regulate the necessary discipline?—Yes; I think that to this officer should also be confided the general superintendence of the regimental schools, and of all the regimental institutions, such as the canteen and its funds, recreation rooms, lectures, library, &c.

Age of admission to the army.

5814. You do not apprehend that the institution of such obligatory studies would prove unpopular among the officers of the army?—I think that the age at which officers go into the army should be considerably reduced, and that is partly dependent upon my proposal. I am of opinion that the age at which officers are eligible for commissions should be lowered; I am speaking now of the cavalry and infantry of the line, and I think that first appointments should be made, as formerly, at 16 instead of 18, and that no commission should be given after 20 years. My reasons for advocating a return to the former practice are formed after a long practical experience of both systems; and I consider that the discipline of the army has been shaken by the admission of officers to first appointments at a mature time of life, when habits are made and opinions are formed. I think that habits and ideas of discipline are much more easily acquired in youth than at a maturer age, and are retained in after life, and that they should be impressed when the wax, so to say, is soft. I think that the intermediate period between leaving school and entering the army, and the time spent with a "crammer" to pass the examination, are generally productive of bad consequences. I have remarked that. It follows therefore that if the standard of age be reduced some instruction of a professional character beyond mere parade and barrack duties and drill should be given to young officers.

5815. What grades would you make dependent upon those examinations?—Up to the rank of captain, that is to say the two subaltern ranks. No officer should be eligible for promotion from one rank to another until he had passed what is considered the qualifying examination.

5816. You think that the professional advantages arising from an early admission of lads into the army more than counterbalance those disadvantages which might ensue from the curtailment of what we may describe as their liberal education, in contradistinction to their professional education?—Yes; what we want in the army is discipline, and habits of obedience.

Preliminary military education.

5817. (*Lord Eustace Cecil.*) I understand that you would not be in favour of military colleges?—No; I am now merely talking of the cavalry and infantry of the line; I am not speaking of the scientific corps. I would rather have a military school, but then it should be a school to which boys were admitted, and no boy should be retained there after 16. If you have a military academy I would make it a school, and not a college.

5818. Have you formed any idea how your military school should be organized?—No, I have not given my attention to that point.

Instruction of officers in the service.

5819. I gather from your evidence that you rather incline to having a species of army school in every regiment?—Army professional instruction.

5820. But, if compulsory, it would amount to a school, would it not?—Certainly, the young officers would go to it every day at the hour which the commanding officer fixed.

5821. How would you appoint your captain instructor?—I should think that those appointments would be very suitable for officers who had passed the Staff College.

5822. Would you largely increase the pay?—No; but I would give the captain instructor more pay than the ordinary pay of a captain.

5823. Would you limit your boards of examination entirely to regimental officers of other regiments, or would you allow staff officers of the district to examine?—I would form the best board which I could upon the spot. You might easily form a board in a large garrison like Aldershot or Malta. You might have the captain instructors of other regiments.

5824. Then you do not propose to have a central board of examination in London, or elswhere, as at present constituted?—That is a thing which I have never thought of, but for the local examinations in regiments I should assemble the best board which I could; the captain instructors of other regiments might probably form a board.

5825. Would you have your board nominated by the general of the district, or by the War Office, or by the Horse Guards, supposing that it was appointed in England?—At home I would have it nominated by the adjutant general; application should be made to the Commander in Chief for a board, and it would be nominated by the adjutant general. Abroad it might be nominated by the general officer commanding on the station.

5826. Do not you think that unless the pay of an officer was very much raised this obligatory course of instruction would rather tend to diminish the number of candidates for the army?—I do not think that it would.

5827. You think that the pay at present is quite sufficient to induce candidates to enter?—If the instruction was properly conducted, I think that it would be rather a popular thing than an unpopular one.

Age of admission to the army.

5828. You say in your evidence that you are in favour of young men entering at 16?—Yes.

5829. Did you ever hear that in the Crimea there were a great number of very young boys who were sent out to regiments, who were totally useless in the trenches simply from their youth and inability to stand physical hardship?—No, I cannot say that I did. I never heard that complaint.

5830. It very often happens that lads of 16 are more boys than men, and under those circumstances I should think that they would hardly be looked upon in the light of serviceable officers?—You may take the cases of my contemporaries and of myself. I joined my regiment before I was 17, but I do not think that we were looked upon in that light; we did our duty very well.

Instruction of officers in the service.

5831. Would you propose that your captain instructor should teach modern languages?—It would be very desirable if he could do so, but I think that would be rather a difficult matter in the army; modern languages are difficult to teach.

5832. You have mentioned among the subjects named by you military law and courts-martial?—Yes.

5833. We have had somewhat conflicting evidence upon the power of lads of 16 to master so difficult a subject as military law; it is your opinion that there would be no difficulty?—No young officer is put as a member of a court-martial until he has acted for some time as a supernumerary. I wish to give instruction in the theory and practice of courts-martial, and particularly in the elementary principles of the law of evidence; because, in my experience, I have found

that subject not understood by officers of the army generally.

5834. Are you not speaking of the present young officers of the army, who range from 18 to 22 or 23, as the case may be, and not of boys of 16?—I am talking of both systems, so to say. I am speaking of what my experience was when I myself was a subaltern.

5835. (*Sir C. Russell.*) Amongst the many duties which you would attach to the captain instructor there is one which you have omitted, and that is the superintendence of all returns relating to the musketry instruction. Do you consider that if an officer selected either from the Staff College or from his general acquirements was appointed to such a place, he could not undertake the chief superintendence of the musketry instruction?—I think that he might do so. I did not allude to that, because I considered that there would be an instructor of musketry besides this officer.

5836. The reason why I ask the question is that naturally in an arrangement of this sort a man of consideration would have some influence?—Certainly.

5837. And if a captain is to be made a supernumerary, as you proposed, I anticipate that putting upon him as much as his shoulders could reasonably bear would lessen the expense?—I think that there would be difficulty during the shooting season in the instructor of musketry paying attention to other duties.

5838. One difficulty which has been suggested in teaching the practical part, for instance, of field fortification, is that under the present system working pay would be asked for for the soldiers. Do you not think that such duties ought to be reasonably expected from the soldiers without working pay?—Certainly; because I think that it is a matter of instruction to them as well as to the officers.

5839. (*Lt.-Col. Chesney.*) If I understand your idea rightly you would have the whole army more or less a school, as regards the officers?—That is to say, all young officers should receive instruction till they could pass their examination.

5840. Taking this examination in a considerable number of subjects, would not the fact that it was known that they were coming into the army to attend regularly at a school (for it would be in plain words a school) somewhat tend to alter the present character of the class of men who supply the position of officers of the army? Would the same men be anxious to go into the service who are now anxious to do so?—I think so. I do not think that it would have that effect; it would be professional instruction. I do not see how any officer could reasonably object to being professionally instructed in his duty. There is no subject to which I have referred which I do not consider thoroughly professional.

5841. I am not here speaking of any theory of what would be right as to the army, but as to the present class who supply the position of officers of the army. Is it not likely that the institution of such a system as you speak of, if strictly carried out with bonâ fide examinations, would very much tend to alter the character of applicants for commissions?—I do not think that it would. I should like to see the present examination for commissions either lowered or done away with altogether. I would rather get a young man into the army with a good gentleman's education, as acquired at a public school, and then professionally educate him, than that he should go to a "crammer" before he gets his commission and pass the preliminary examination. The best recruits we get are from the public schools.

5842. But for those who did not come from public schools, what guarantee of their fitness would you have before your examination?—I think that almost all the general schools of the country are now pretty good.

5843. (*Mr. Parker.*) You attach importance to the liberal education of officers, so far as it is practicable?—Certainly.

5844. Do you not think that the age which you propose for their joining the army, and commencing preliminary professional studies, is rather early with reference to a liberal education?—No, I do not think that it is.

5845. Are you aware that in the Prussian army the earliest age for entering the army even in the ranks with a view to becoming an officer is 17½?—I do not think that there is any analogy between our army and foreign armies; our service is so different in every way. Age of admission to the army.

5846. Would you be prepared to make any exception for the express purpose of obtaining a limited number of officers of higher education at a later age, on their showing special attainments in the way of liberal education?—No, I think not. I would rather have youth.

5847. Do you think that if the instruction were given by an instructor attached to each regiment it would be advisable to have any further instruction given at garrisons or large stations of a more complete kind than you could get from a single instructor in his regiment?—I think not. I am always talking of the cavalry and infantry of the line. Instruction of officers in the service.

5848. You would not think it desirable to send most young officers through a course beyond that which could be obtained in their own regiment?—No.

5849. (*Maj.-Gen. Wilmot.*) Do not you think that in garrisons the system could be much more effectively carried out than in a regiment; take the case of field works thrown up?—Probably; but I think that an ordinary officer of a regiment of the line should only be required to have sufficient knowledge to defend his post and to protect his men.

5850. How would you meet the case of a regiment abroad, where a young officer was on detachment, and away from his instruction?—Those are certainly exceptional cases which do occur; but regiments are now much more together than they used to be. Abroad there are very few detachments. At our large garrisons,—take Gibraltar, Malta, and even Canada,—the regiments are all together there.

5851. You think that a regimental instructor would be better than a fixed instructor, to whom the regiment should come?—I think so.

5852. (*Sir D. A. Cameron.*) Under your system of regimental instructors, would it not be difficult to ensure uniformity of instruction in the different regiments of the service?—I do not think that it would be difficult in the subjects which I have laid down as what I consider should be the course. I think that if the officers acquire the knowledge, it does not matter as to whether it is taught quite in the same way or not; I think that a course would be laid down as to how far military history should go, and as to how far it would be necessary for the officers to be instructed in field fortification, and in such an amount of surveying that a man could write an intelligible report of the country through which he was marching. Probably a course and standard would be laid down by the Council of Military Education.

5853. Would those matters be under the superintendence of the Council of Military Education, or of any other board?—I suppose that the reports would be sent to the Council of Military Education, always supposing that a Council of Military Education existed. Of course great care should be taken in the selection of the captain instructor; and much of the success would depend upon the way in which the instruction was given.

5854. (*Dr. Butler.*) One commanding officer who has given evidence to the Commission has expressed a fear that commanding officers of regiments would not cordially support such a system as you have advocated of teaching in the regiments if it were compulsory; do you share that opinion?—No; I think that commanding officers of regiments would receive positive orders, and that they ought to be held responsible if they disobeyed those orders; I do not think that anything ought to be voluntary in the army.

Maj.-Gen. Right Hon. Sir H. K. Storks, G.C.B.

8 April 1869.

Instruction of officers in the service.

5855. (*Lord De Ros.*) Do you think that the rank of captain would give sufficient authority in the regiment for the purposes of instruction?—Yes; because the only officers who would be under obligatory instruction would be subalterns.

5856. Do you see no fear of the lieutenant colonels of the regiments regarding these captains as rather an encumbrance to the regimental system generally?—I think not, for they would be very useful. We are now very much embarrassed with reference to canteens, and many new things which have sprung up in the army which may be called regimental institutions of different sorts; and I think that a captain instructor would be very usefully employed in managing the canteen, and the various other regimental institutions.

5857. Would you introduce the captain instructor as a supernumerary officer into the army rather than take one of the captains and appropriate him to that office?—I would put him amongst the captains in the same way as the adjutant is among the subalterns; he should be supernumerary of his rank, and rise progressively in his grade.

5858. Should you like to intrust the captain instructor with the power of impeding the promotion of an officer, bearing in mind that these captains might see the same accomplishments in an officer so very differently that one might think that a young officer did very well, and another might think that he was not equal to what was required of him?—I apprehend he would not have quite that power. I suppose that the final examination would be a good deal conducted by papers, as it is now; every officer now goes through an examination before he is eligible for promotion to the rank of lieutenant, or of captain.

5859. On service, how would you employ the captain instructor? Would you make him revert to the command of a company? As an extra person, would there not be very great inconvenience?—No; I think on the contrary that there would be a very great advantage; you would be sure to have some casualties, and I would put him to a company if there was no instruction going on.

5860. Do you not think that something of an examining board,—say an artillery officer, an engineer, and two field officers of the line,—would be a better, and safer, and more agreeable system to the army than a regimental instructor?—I do not, because I do not think that such instruction would be either regular or continuous; there would be breaks, and the board could not assemble, and there would be a great deal of difficulty in that way; whereas the commanding officer of a regiment, if it had a regimental instructor, would give orders that on certain days in the week so many officers should assemble for instruction. Instruction in the navy goes on up to the rank of sub-lieutenant.

5861. In the navy it is thought a very great advantage to have the instruction of the young officers after receiving commissions carried on, and would not the same thing apply in a certain degree to the army? As regards the army, would not the parents be sufficiently well pleased to think that the young men were being carried on in instruction, instead of falling into idleness?—Very much so. I think that another advantage of the system is that young officers would acquire habits of industry and application, which it is to be hoped they would take with them into the higher grades of the service.

5862. With regard to the question which you were asked as respects the supposed inutility of young officers joining on account of their youth, have you not observed that on service they are generally favourites with the men, and are obeyed with alacrity, and assisted by the old non-commissioned officers with a sort of pleasure and zeal?—Yes, I have always seen the young officers excessively popular in regiments, and very zealous, and with a great desire to learn.

5863. And very soon after that they take charge?—I think so.

Age of admission to the army.

5864. (*Rev. W. C. Lake.*) Supposing that you took your young officers at so early an age as 16, would you not be afraid of losing a good many of the best youths in the public schools?—I think not. I take the range from 16 to 20, the minimum now is 18, and the maximum goes up to 25, for graduates in the University.

5865. Then that I suppose would usually end in young officers entering the army at about 17 or 18?—About 17; I joined my regiment from school, when I was about 16½.

5866. You seem to object to the idea of a military college, and if Sandhurst is retained, you would rather look upon it as a school?—Certainly.

5867. With regard to the point of assigning a certain educational board to a station, I think that you have hardly contemplated the case which might be put, of having a district college at some of our different stations — in fact, a supply of different colleges at which young officers would be massed, and would be put for six months under instructors in those branches of a military education which are taught in a military college?—I would rather that they were taught regimentally, because those officers would be doing their duty in their regiments at the same time, and would be still under the eye of the colonels of their regiments, and would be acquiring that discipline which is the main-spring of the army.

5868. In the case of a regiment you would not have more than two or three young men going through this work at the same time. Do not you think that they would have no spirit of study such as is gained by the contact of several minds in a larger class?—I think that you would have a larger number than that under instruction at the same time, because you would have two examinations for promotion—there would be promotion from ensign or cornet to lieutenant, and from lieutenant to captain.

5869. Do you not consider that two examinations would be rather rigorous?—There are two now.

5870. But they are nominal rather than real, are they not?—The papers are certainly not good papers. My duty has been to look over a great many of these papers, and I must say that they are not good. A board is put in orders for the purpose of examining young officers for promotion, and that board gives certain questions to the officers, and the officers are put in a room, under observation, and have to give answers to these questions.

5871. (*Lord de Ros.*) It is a regimental board, is it not?—It is a garrison board; but I must say that in going over these papers it has not at all impressed me with either the ability or the information which those papers exhibit.

5872. (*Rev. W. C. Lake.*) Then would your plan imply for each fresh appointment a course of military education which extended over five or six months?—It would depend very much upon the capacity of the officers. For instance, I think that the young officers of the army write very badly, and their reports are often slovenly and very badly written, and are badly spelt. In such a case I would send an officer to the captain instructor and make him go through a course of writing; it is a most essential thing for a man to write a good hand.

5873. (*Lord E. Cecil.*) If all the subalterns of a regiment were employed in studying the several subjects which you have named,—that is to say, military law, courts-martial, military history, fortification, accounts, drill, and modern languages,—how would you get the effective work of a regiment done, making allowance for casualties and for the sick list?—After morning parade they would go for instruction for probably one hour.

5874. Do you think that they would have sufficient time to do both?—I think so; or they might go in the afternoon. I think that that would be a matter of regimental arrangement. The commanding officer would regulate the hours in the day when they would attend for instruction.

5875. Do you not think that the fact of so many subaltern officers being *in statu pupillari* would be rather unpopular with some officers?—I think not,

when the advantages to be derived from it were seen.

5876. (*Sir C. Russell.*) If I understand you aright you would not compel either an ensign or a lieutenant to keep on going through this course provided that he could pass at any time when he appealed to a board to be examined?—Certainly not. I think that when he passed the examination required he ought to be released from instruction.

5877. (*Lt.-Col. Chesney.*) Have you considered whether it would be necessary to have any special arrangement for officers detached; how would you provide for those cases?—Probably the captain instructor would send certain questions to officers detached, or would endeavour to keep up their instruction in some such way as that. But young officers do not go on detachment until they are dismissed drill, and are considered fit for their duty. Every officer would thus be kept at the head quarters of his regiment for some time.

5878. (*Lord E. Cecil.*) Would not the per-centage of serviceable officers in a regiment be very much smaller if the junior officers were under education?—I should consider an officer although under education perfectly efficient for the ordinary duties of his regiment.

5879. But not on detachment?—He would not be sent on detachment until he was dismissed drill.

5880. But the dismissal from drill would take longer than it does now, and therefore I conclude that there would be a large per-centage of unserviceable officers?—Dismissal from drill takes place when officers have acquired what I should call the mechanical part of their profession. When I put down drill and general military duties, I apprehend that the captain instructor, as part of the instruction, should give officers instruction in the drill book, and that he would explain to them the theory, principle, and object of the movements. We call "dismissing from drill" when an officer can fall in with his company, or in the cavalry when he is dismissed from the riding school.

5881. Do you not suppose that that course of instruction would take very much longer?—Yes; but the officer would do all the ordinary duties of his regiment.

5882. (*Lord de Ros.*) In fact you allow him now to take guards on many occasions before he is dismissed drill, do you not?—Hardly guards.

Maj.-Gen. Right Hon. Sir H. K. Storks, G.C.B.

8 April 1869.

Instruction of officers in the service.

5883. (*Lord E. Cecil.*) Would you allow him to go on detachment?—No, not until he is dismissed drill; but I think that his instruction should be kept up by the captain instructor on detachment in the way I have before adverted to.

5884. (*Mr. Parker.*) Would you not only make the examination compulsory, but also make attendance at lectures compulsory, until the examination was passed?—I think that the compulsion would amount to this, that officers would receive orders to attend for instruction until dismissed, whether that instruction was given by lectures or otherwise. As to lectures, generally, I should think that officers who had passed their examination might attend or not, as they liked. Probably the soldiers would attend lectures in large numbers if the lecturer were a clever man. I have seen lectures very popular in barracks.

Age of admission to the army.

5885. Supposing a young man to join at 18 or 19, having remained at a public school, and having reached the highest form, would you make him junior in his regiment to a boy of 16, who had entered the day before?—It would depend upon the date of his commission, that is the fortune of war, whoever is gazetted first would of course be the senior. It would depend upon the military secretary's list more than upon anything else.

5886. In Prussia they attach so much importance to providing for a young man of that class in the army, that they put him in at a higher grade altogether than a boy who has come in from a lower form at a public school?—They have no purchase in the Prussian army. Our commissions are generally purchased.

5887. The practical working of your proposal is to put a premium on entering the army as young as possible?—I think so.

5888. And to discourage remaining at school until the age of 18 or 19?—As far as my own opinion and experience go what we want in the army is youth, and a good liberal education up to a certain age.

5889. But although your system should discourage remaining at a public school until the age at which a boy could be in the sixth form, you would think it no sufficient objection?—I should think not.

The witness withdrew.

LIEUTENANT-GENERAL LORD WILLIAM PAULET, K.C.B., Adjutant General to the Forces, examined.

Lt.-Gen. Lord W. Paulet, K.C.B.

Instruction of officers in the service.

5890. (*Chairman.*) You are Adjutant General to the Forces?—I am.

5891. From the answers which you have been good enough to give to our questions,* it appears that you are of opinion that the facilities for the education of officers after they have joined the army might be increased; and you give a list of subjects in which instruction might be given. Of course the benefit of such instruction would in a great measure depend upon the bonâ fide nature of the examinations by which its efficiency was tested?—Certainly.

5892. You are of opinion that a certain portion of these studies should be obligatory?—I think that the military portion should be so. I have specified that.

5893. What system of examination would you suggest?—I think that the examination ought to be carried on, not by the officers, but by professional people employed for the purpose.

5894. Under the superintendence of a special board of examination?—Yes.

5895. I see that you propose the combination of two alternatives, which other witnesses have suggested to us as a means for conveying this instruction to young officers. One set of witnesses are rather in favour of military instructors being attached to large stations where bodies of troops are collected in various parts of the empire, and others again are in favour of a military instructor being attached to every regiment. As I understand your answer, you would combine these systems?—Yes. Except at Aldershot, and two or three other places, a regiment would have no opportunity of keeping up that instruction if they had not regimental instructors.

5896. To what grade would your regimental instructor belong?—I think that he might be a subaltern. I think that there might be a good many subalterns who with a little extra pay would not object to undertake the duty. But I am rather against making education too compulsory, because I do not think that it would succeed in the army. I think that the military parts of the education, as put in my answers to your questions, might be undertaken by a well instructed subaltern; that is to say, a picked subaltern, who had passed a good examination, and had obtained a certain number of marks.

5897. Inasmuch as these subjects which you have indicated are so intimately connected with the professional proficiency of an officer, you do not apprehend that their becoming obligatory would be unpopular in the army?—I think not, because those subjects which I have named are part and parcel of an officer's education. In the first place, I think that he ought to know them in a great measure before he comes into the army.

5898. I am inclined to gather from a remark which you have made that you would be in favour of

* See Appendix VII. A., page lxxx.

Lt.-Gen. Lord W. Paulet, K.C.B.

8 April 1869.

Instruction of officers in the service.

passing every officer into the army through a military school?—Yes, I think so. I think that he ought to have a certain military education. I do not think that it signifies much where that education has been obtained. I do not see that those young men who come from the military schools are a bit better than the others. I know that when I commanded a regiment I would rather have taken an Eton boy from choice, than a Sandhurst boy, to make an officer.

5899. (*Lord de Ros.*) You have suggested that a subaltern should be made an instructor; do you think that it would be possible for a subaltern in the same rank as those whom he was instructing to keep proper authority over them in order to ensure their attention?—They are under the orders of the commanding officer, and of the superior officers, and I do not see why he should not keep proper authority over them. It must be to a certain degree voluntary; you cannot force a man to learn.

5900. Do you not think that the fact of the instructor being a subaltern of the same age as most of those whom he was instructing would rather deteriorate the authority which such a person ought to have?—Of course if you could have a higher class of instructor it would be better.

5901. You would prefer a captain?—I should; but I think that he would require higher pay.

5902. Supposing that you had a subaltern instructor what would you do with him when on service?—I would let him merge into the regiment and do the same duty as the others.

5903. Do you not think that it would be better to have a sort of board at military stations, and that the army would receive it with more confidence than they would a regimental instructor?—I think so, but in many places it is difficult to have a board; in fact our examination now is not a regimental affair, but it is a board—I mean for steps in promotion.

5904. In your situation as adjutant general have you found difficulty in assembling those boards?—Not at all.

5905. They have I suppose been sometimes deferred for a short time?—Generally speaking it has happened when regiments are quartered in a camp or garrison town, for instance Portsmouth, or Aldershot, or some other garrison towns.

5906. Do not the regiments go sufficiently often to garrison towns to make it quite practicable to examine the officers in garrison?—I certainly think that they do; officers are examined before it comes to their turn for promotion.

5907. Three months before?—Yes; in fact an officer may pass his examination as soon as he enters one rank from another rank.

5908. (*Dr. Butler.*) Would you think it important that a young officer should have passed through a liberal education before joining his regiment?—I think so.

5909. And do you think that he should have carried that liberal education to any considerable pitch?—I think that for regimental work you do not want a high pitch of education, because almost the best regimental officers are those without a very high pitch of education. I think that a very high pitch of education puts a man rather above what I call the onerous duties of a regimental officer, such as looking after barrack rooms, and pipe clay, and blacking and all those sort of things. Very highly educated officers, in my opinion, are not nearly so good as regimental officers as others; but I think that for staff work or for the superior branches of the service, such as the Staff, the Artillery, and the Engineers, you should have a high class.

5910. What is the age at which you would recommend that young officers should join?—I would recommend the age of 16, as it was before; I think that they come in too late now.

5911. (*Sir D. A. Cameron.*) If you gave instruction at the garrisons, and large military stations, you would of course require several instructors at each?—Yes.

5912. You would require an instructor for each subject, and perhaps more than one if there were many officers under instruction?—Yes; of course it would depend upon circumstances.

5913. Would you put them under charge of a field officer who would take charge of the whole body?—You must of course have a superior officer at the head.

5914. Would you have an officer specially appointed in charge of the school?—Yes, I think that I would; it would of course be better; you must have a head.

5915. (*Maj.-Gen. Wilmot.*) What is the limit of age which you would allow for youths to enter?—If you shut the door with the present reduced state of the army, you shut out many young men who are anxious to get into the service who cannot get their commissions; that is the only fear. Even now a great many are shut out at the present age; but in the long run I would rather have a young officer join at 16, and let him work up, than I would have him join at 20.

Age of admiss the ar

5916. (*Mr. Parker.*) If the young men joined at that early age would you prefer that up to that time their education should have been like a public school education or like the Sandhurst education?—I should be quite content with a public school education, because I think that the regimental and military duties could be very well learnt in the regiment, except the superior parts, which are better learnt away from the regiment, because they have better opportunities.

5917. Then if officers could join young, you would see no need for military colleges on a large scale to train the officers?—Of course they would be better; but the worst of it is, that when young men go to military colleges they are apt to think that they know a great deal more about military matters than they do; they have an idea that they should not go to drill, but I have never seen them come in that state that they did not want further education in military matters.

Milita colleg

5918. The drill which they bring with them from Sandhurst is not worth much?—I think that of late they have been very much improved, I have seen the young officers drilled quite well enough for anything. It depends a great deal upon the man himself.

5919. (*Lt.-Col. Chesney.*) If I understand you rightly, the objection which you have to young men from Sandhurst is rather owing to an imperfection in the college, than to any objection to the system of a military college in itself?—I think that the college has very much improved lately, more pains are taken in it, and it is more looked into, and the education is higher than it used to be.

5920. Supposing that a military college is such that it gives an efficient military education to each young man passing through it, do you consider it desirable that there should be a proportion of such young men in the army?—Yes, I should like it very much; but I think that the class of officers coming from the college are not equal to those coming from other public schools. A great deal, of course, depends upon the individual. Of course many young fellows are very apt at learning, and others are very slow; but I think that the great point for a regimental officer is what you call a gentleman's education. I think that he will then mould into anything which he is capable of doing.

5921. (*Lord E. Cecil.*)—You have spoken of a qualified officer in each regiment. Would you take him from the Staff College, or in what way would you select him?—If I could not get him out of the regiment I should certainly like to get him out of the Staff College; he must of course be a more highly educated man.

Staff and S appoi

5922. Then you would be in favour of retaining the Staff College for that purpose, as well as for supplying the staff appointments in the army?—I am not myself a great advocate for the Staff College. I

think that an officer ought to manage to educate himself quite enough if he chooses. Many officers go to the Staff College, I think, rather to get away from knocking about in their regiments.

5923. Have you formed any plan by which officers in regiments might qualify themselves for staff appointments?—It entirely depends upon the officer. Some officers like learning and others do not. I think that if an officer chooses he may do it during his leave of absence.

5924. Would you allow him to be examined by a central board of examination, or by a district board of examination?—Yes, by a district or central board.

5925. But you would allow him to be so examined, without enforcing his attendance at any military college or school?—I would.

5926. And the surplus of officers who could not be appointed to staff appointments you would appoint as qualified officers to be instructors in regiments?—I would.

Lt.-Gen. Lord W. Paulet, K.C.B.

8 April 1869.

Staff College, and Staff appointments.

His lordship withdrew.

LIEUT.-GENERAL THE HONOURABLE SIR JAMES YORKE SCARLETT, G.C.B., examined.

Lieut.-Gen. Hon. Sir J. Y. Scarlett, G.C.B.

Instruction of officers in the service.

5927. *Chairman.* You have been good enough to favour the Commission with replies to the questions which have been addressed to you,* and I gather from them that you are of opinion that facilities for the acquisition of instruction in military subjects to young officers, after they have joined the army, can be increased?—Yes.

5928. But that you are disposed only to render obligatory such portions of that instruction as is comprised under the heads of military surveying and field fortification?—Yes.

5929. I gather that the machinery by which you would communicate that instruction would be some system established at various head quarters, as well as by attaching a military instructor to each regiment?—Yes.

5930. I suppose that you would be inclined to incorporate into the examinations which are now held when an officer passes from one subordinate grade to another, the two subjects of military drawing and field fortification?—Yes.

5931. Of what rank would your military instructor be?—I should certainly give him the rank of captain.

5932. And additional pay?—I should make him supernumerary. I do not think that a captain commanding a company would have sufficient time to devote to that matter. I would make him a supernumerary captain.

5933. Would you give him superior pay?—No; I would give him a captain's pay. He would have no other duty to perform, except that of a captain instructor.

5934. And his being relieved from other duties would be the result of the efficiency which had recommended him for that post?—Exactly so.

5935. Do you consider that the present examinations answer the intended purpose, and sufficiently test the proficiency of the officers in the subjects in which they are examined?—I do. I think that the present examinations are sufficient for the purposes for which they are at present intended.

5936. And you would enlarge the range of the subjects which they include?—Yes; but in enlarging that range I would place on the board of examination some one more competent to examine into those subjects than the members of present boards are.

5937. I see that you suggest that the captain instructor should also take charge of the instruction of children with the aid of sub-instructors?—Yes, I think that he might become the instructor of the regiment generally, and that the regimental schools, both for adults and for children, might be under his peculiar care. He must have some subordinates; he must have a regimental schoolmaster, and some subordinates under him to enable him to do the whole; he could not do it himself without any assistance; but I think that with a small amount of assistance he might undertake the whole.

5938. As to your military instructors at the large military stations, what description of officers do you contemplate?—I should contemplate an officer of a higher rank, and one who is competent to lecture upon military subjects generally, such as military history and the general art of war.

5939. (*Sir C. Russell.*) It has been suggested to us that there would be some difficulty, in consequence of the number of subjects which might be selected for instruction, if the regimental system of instruction were adopted. Is not there generally in every regiment what is called a sucking adjutant, who looks to filling the position of adjutant when it becomes vacant?—There is very often a great difficulty in finding a qualified person to succeed the adjutant, but there is probably somebody who is generally qualified to fill the office.

5940. I am talking entirely of line regiments?—Yes.

5941. Do you not think that if an officer was appointed, as you suggest, there would be always in the regiment some one or two officers who would look to succeeding him, and who would be willing to assist him as unpaid assistants in conducting his duties?—I think so.

5942. (*Lt.-Col. Chesney.*) You would object to any high standard being made compulsory on officers of a line regiment, that is to say, anything above a very moderate standard?—Yes; I think that you would not succeed; you would make the service very unpopular if you made that compulsory.

5943. And if any such system were absolutely introduced, in your opinion would it not be likely to lead to a sort of *pro formâ* examination, not to really carrying out any high class of examination?—I think that very few officers would like to undertake it. I think that it would make the service unpopular by requiring something beyond what their own line of the service particularly demanded.

5944. (*Sir D. A. Cameron.*) Would not the duties of a captain instructor be much more onerous than those of the other captains of regiments, and would it not be advisable to give him some additional pay?—He would have no other duty to perform. Of course I should be very glad to see him with increased pay, but as economy is the order of the day, I should be glad to see him even without it.

5945. (*Lord de Ros.*) Do you not think that the fact of an extra officer being attached to a regiment always produces great inconvenience on service as regards quarters, &c.?—I do not know that I should take him upon service. I should take him more as a depôt officer. I do not think that he would be required on service, or would have any opportunity of taking a part there.

5946. You would have about 140 captains employed as instructors in the army; would there not be a danger of their entertaining very different views as to what officers should know?—I think that that should be laid down by a higher power.

5946*a*. At present the examining boards are a sort of garrison board; there are three officers?—Yes.

5947. Do you not think that those three officers, keeping them as they are, with a little more selection, might be intrusted with the same duty as is proposed for the captain instructors?—I think that they are competent to examine in those things which they know, such as drill, and the interior economy of a regiment, and military law; but I do not think the task and trouble of instructing could be imposed on them; besides which they do not belong to the same regiment as the officers examined.

* See Appendix VII. A., p. lxxx.

Lieut.-Gen. Hon. Sir J. Y. Scarlett, G.C.B.

8 April 1869.

Instruction of officers in the service.

5948. Do you think that a captain instructor would have sufficient influence and authority in the regiment? Looking back to your own regiment, do you recollect any officer whom you could have named in the 5th Dragoon Guards, which you commanded so long, to be an instructor to other captains?—I recollect one who was second wrangler at Cambridge who would have been a very good instructor, but I do not know that I could name another.

5949. When the regiment goes on service, you propose rather to leave him behind than to take him on service?—Yes.

5950. (*Rev. W. C. Lake.*) Do you prefer the plan of having a competent instructor for each regiment, or do you think that the plan of having a small board of instructors at the stations is a better one?—We have only a few stations—at Aldershot, and perhaps Colchester and Shorncliffe.

5951. And Malta?—Yes, Malta and Gibraltar.

5952. And Dublin?—Yes; but I think that an instructor for each regiment would be very much better.

5953. In your opinion, would the work be very unpopular?—If you went into higher subjects than what an officer would on service be called on to do, namely, field drawing and fortification, which are a part of his duties, I think that it would be unpopular.

5954. Looking back upon it when an officer had gone through it, do you think that it would be unpopular?—No; very few men are at all averse to the possession of knowledge when they have got it; the objection is to acquiring it.

5955. Supposing that officers on looking back upon it thought it a good thing, might not that be proposed?—I am obliged to look at the army as I know it at present.

5956. (*Chairman.*) Inasmuch as we cannot undertake to make every officer a field marshal, you think that it would not be fair to call upon him to qualify for that post?—No; I think that the amount of knowledge which is set forth as proper for an officer to possess is sufficient to carry him up to a certain point in the service. If he is ambitious to take a higher position he ought to qualify himself for a higher post, and I think that all such officers will do that without any particular pressure.

Staff College.

5957. I will ask you a few questions with respect to the Staff College. I suppose that you have naturally given your attention to the general effect and influence of a staff college upon the army?—Yes, to some degree. I was in the senior department myself for a short time.

5958. Do you think that its effect has been beneficial?—I think that upon the whole it is beneficial. I think that the knowledge acquired there is very useful to those who have acquired it, and that they make it turn to account afterwards.

5959. I will not ask you any questions as to the internal organization of the Staff College, which is rather a matter of detail, but I will ask the following question. Previous witnesses have rather hinted that the Staff College is apt to become a resort for officers who desire to absent themselves from regimental duties, either after having married, or with a view to leading an easier life than that which they pass in their regiments. Do you think that that is so?—I believe that some men have other designs than that of simply devoting themselves to the service. I think that the pressure of the moment sometimes induces them to go to the Staff College to escape going abroad, but I should be very sorry to accuse any one by name of that.

5960. Could you suggest any test, or any means of rendering an officer's application for admission to the Staff College *bonâ fide*?—No, I really could not do so, unless you refused altogether to take a married man, and unless you selected those who were likely from their activity and habits to make good staff officers afterwards.

5961. You think that the exercise of a certain power of selection from amongst the applicants, by authorities competent to form a general opinion as to an officer's capacity and zeal and devotion to the service, would afford some kind of safeguard?—It would; but it would be a very invidious task to reject an officer who set forth that his object was to improve his mind, and to make himself useful. You cannot say, "Sir, you are married, and I do not want "you to go there if you merely want to go there "because you are married." It is a very difficult thing to do that.

5962. At present officers are selected for admission to the college by means of a competitive examination?—Yes.

5963. Are you aware whether any other considerations than those which are founded upon that examination are allowed to influence the selection?—No; I believe that it is entirely by the number of marks which each man gains, and the proficiency which he shows, that he is selected.

5964. And you think that it would be very difficult and very invidious if the general character of an officer were allowed in any degree to modify the results arrived at under those conditions?—I think that it would.

5965. I see that in one of the answers to our questions you have stated, that with regard to officers who might choose to avail themselves of the facilities which you suggest might be afforded at these military stations for instruction in the higher branches of military education, it might be desirable to render such officers who proved their efficiency, eligible for staff promotion, so that these local examinations would be a second method by which an officer could enter the staff independently of that which is now necessary, namely his passage through the Staff College?—I think so.

5966. It would be something like the granting of a degree at Trinity College Dublin to a non-resident student?—Yes.

5967. And probably it would be considered a great advantage to officers of the army, many of whom might find it inconvenient to go through the Staff College?—Yes. I think that it also might possibly have an effect, *cæteris paribus*, upon promotion. In the case of a man who had distinguished himself, and had got a certificate from one of these local boards, if there was any doubt in the mind of the Commander in Chief as to the officer to whom he should give promotion it might turn the scale, but I wish it to be understood that I would not give him any right to staff promotion.

5968. From your acquaintance with those officers who have passed the Staff College, and who have in consequence obtained appointments, do you think that the fact of an officer having passed through a Staff College is in itself a trustworthy test of his efficiency for the duties of a staff officer?—If he has physical aptitude for it I certainly think so, but if a staff officer is physically unfitted for active work, and is a bad rider, and wants nerve, and is constitutionally unfit, his being at the Staff College will aid him a little, but will not make him a good staff officer.

5969. In fact there is great difficulty in finding any real test which at the same time shall give the measure of an officer's intellectual capacity, and of his having those other military qualities which are equally essential and perhaps even more necessary, but which are not exactly intellectual, such as his energy, his power of commanding troops and influencing men, maintaining discipline, and the possession of a military eye, &c.?—There is a great difficulty in ascertaining all that. You may form an opinion, but it would be very difficult to act upon it.

5970. All the tests which have hitherto been suggested merely apply to one set of qualities, and of course leave the others undetermined?—They leave the others very much undetermined.

5971. There seems to be a general feeling of dissatisfaction amongst many officers who have undergone the trouble of passing through the discipline of the Staff College that notwithstanding their exertions,

and the satisfactory examination which they have passed, they derive no immediate benefit?—They can only derive benefit as vacancies occur. If the numbers admitted exceed the number of staff situations vacant, they must remain in abeyance.

5972. Do you think that as that fact has become generally apparent in the army it has discouraged applications for admission into the Staff College?—I do not know that they have fallen off.

5973. There are more applications than there are vacancies?—I think so.

5974. I believe, that before admission to the Staff College the applicant must produce a certificate from his commanding officer, to the effect that he has not only been examined in the various subjects connected with his duty as a regimental officer, but that from his general knowledge of the service and his character, habits, and physical qualities he is fitted for employment on the staff, and that he is a good rider, and is not short sighted. Can that certificate be relied upon as implying the presence of the qualities to which I have alluded?—I should rather doubt it. He may be the best of those who apply for the position—there may be only one officer in a regiment who does apply—but I do not put a very great deal of faith in that certificate. As to the riding, as regards infantry, I think that there is very little opportunity of ascertaining it, unless he is a hunter.

5975. Have you observed whether officers who have passed through the discipline and the instruction of the Staff College seem to have acquired a taste for military studies which they afterwards prosecute on joining their regiments?—I have had no great opportunities of observing that; I have only had opportunities of observing those who have come under my own command. I have been satisfied with those who have come under my own command.

5976. Do you think that the infiltration of the army with these officers gives a more intellectual tone to the regiments?—I think that it would do so. I think that those officers who were inclined to study, or who were inclined to improve themselves, would have a mode of obtaining knowledge and of applying information which they have not at present.

5977. And subjects connected with military science would be likely to occupy more generally the attention of the officers at large?—I think so.

5978. (*Sir Charles Russell.*) Do you think that if a regimental system of instruction coupled with a garrison system of higher instruction were carried out in the army there would in course of time be found amongst the mass of the officers so educated a sufficient number of properly educated gentlemen to supply the staff officers of the army without recourse to the special college which now exists?—I should prefer to have a special college, and I should prefer to have the men for the staff passed through the special college, because the knowledge acquired in a variety of places from variety of people would perhaps not be of so definite a kind.

Lieut.-Gen. Hon. Sir J. Y. Scarlett, G.C.B.

8 April 1869.

Staff College.

5979. (*Lt.-Col. Chesney.*) With regard to riding at the Staff College, would it not be very easy to establish a much stricter test than the mere riding school inspection which now takes place, and from which officers are occasionally absent altogether?—It does not occur to me at this moment exactly what you could do. You can ascertain that a man does not fall off his horse, and has a fair seat. We do not always reckon cavalry officers as the best men over a country for rough work.

5980. (*Lord de Ros.*) Should not you consider it a great advantage on service to be able to take an officer from a regiment, and to try him on the staff, and if you found him good to make him a permanent staff officer, and if you found him not quite equal to his work, to return him to his regiment without any heart-burning or soreness, and to get another?—Yes; but that is done at present on service.

5981. Should you put much faith in commanding officers' certificates as to the fitness of a staff officer? Besides their very often recommending a man with a view to get rid of him, are they not sometimes reluctant to part with a good officer when they are on a distant station?—I am afraid that both those motives may act occasionally.

5982. Have you found that the army generally accept an officer from the Staff College as superior in his qualification to others?—A Staff College officer is generally better instructed in certain scientific parts of the service. He may not be a man of a greater courage or nerve, or of greater aptitude.

5983. Do you think that any system of marks or proofs of scientific knowledge can secure the real qualities which are necessary for a staff officer on service?—I do not; it only ensures certain portions.

5984. You are of course aware of the sort of qualifications which are necessary for a good staff officer?—Yes.

5985. Perhaps you may recollect Captain Calthorpe on Lord Raglan's staff being considered particularly clever in the office of carrying a flag of truce?—I do not.

5986. Do you see any hardship after an officer has been at the Staff College in his not being placed on the staff; do you not think that whatever he has acquired at the college is always an advantage, but that it ought not to give any real claim to be on the staff?—I believe that it is understood that those officers have no positive claim, but that they qualify themselves for it, and naturally expect when there is a vacancy that they will be preferred to one who has never put himself forward.

5987. If nothing but science were necessary for a staff officer, would it not be the simplest way to take him from the Engineers?—Yes.

5988. But you would not approve of that?—No.

5989. Have you not found a great many scientific officers very unfit for the rough work of the service?—A great many completely so.

The witness withdrew.

LIEUTENANT GENERAL SIR J. HOPE GRANT, G.C.B., Quartermaster General to the Forces, examined.

Lieut.-Gen. Sir J. Hope Grant, G.C.B.

8 April 1869.

Instruction of officers in the service.

5990. (*Chairman.*) From the answers which you have been kind enough to send in to the questions which we ventured to address to you,* I see that you are of opinion that it would be desirable to expand Sandhurst into a much larger establishment than at present exists, and to pass through that establishment all officers who enter the army if it were feasible?—Yes.

5991. I gather from your replies that you would be rather opposed to rendering military instruction in the technical branches of a soldier's education in any way compulsory to officers after they join?—If it were done regimentally I think it should be made compulsory with regard to *solely military instruction.*

5992. Would you attach a military instructor to every regiment?—Upon further consideration I am induced to modify the opinion expressed in my first "answer to questions," and to say I should be inclined to do so except for the great expense which it would entail upon Government.

5993. You are decidedly of opinion that facilities ought to be given at various garrisons, and large stations, for enabling officers who might wish to do so, to obtain technical scientific education?—I think it very desirable.

5994. Do you think that it would be largely availed of?—It would be availed of by officers who would desire to make their profession of use. I think that a great number would not attend to it.

5995. From your knowledge of the service what

Lieut.-Gen. Sir J. Hope Grant, G.C.B.

8 April 1869.

Instruction of officers in the service.

per-centage of officers in a line regiment do you think might be disposed to come under the category which you have just given?—I should say not more than five per cent.

5996. (*Sir D. A. Cameron.*) About one or two to each regiment?—Not more than two or three to each regiment.

5997. (*Chairman.*) In what may be considered as purely military subjects, such as the elements of field sketching and of field fortification, you would render it obligatory?—I think that it ought to be rendered obligatory, and I would particularly attract the attention of officers to taking them out in the field, and to drawing a sketch quickly, and at once taking up any ground which was thought desirable. In the way in which it is done at Sandhurst, it appears to me that those drawings are very minute, and very beautifully done, but that too much time is taken up in them; some of the officers have told me that they have taken three or four months to make one drawing; that appears to me to be time and trouble thrown away. I should like an officer to be taken out to ride, and to draw a sketch of the country from his eye rather than from measurement.

5998. (*Lt.-Col. Chesney.*) Supposing that a considerable standard was expected in military studies from every regimental officer, would it not be practically impossible to enforce it consistently under the present regimental system, and to make it compulsory upon every officer to come up to the required standard of proficiency in military subjects?—I think that it would make the service very unpopular.

5999. Or otherwise if such a thing was laid down would it not become formal?—I do not think that it would become formal if you had an instructed officer to examine them.

6000. But you think that it would make the service very unpopular?—Yes, I am convinced of it.

6001. (*Mr. Parker.*) If you had voluntary instruction would you also have voluntary examinations? I understand that you recommend that there should be opportunities for instruction of which officers at their own choice might avail themselves. Supposing that they did so, would you think it desirable also to have examinations to which, if they pleased, they might submit themselves?—I think that you could hardly divide it, and that if you made it voluntary you must make it voluntary in both instances.

6002. If officers passed these voluntary examinations you would have it recorded in their papers?—Decidedly.

6003. And you think that such a record, among other elements, might count in their favour, as regards employment upon the staff?—Decidedly. I think that the examination of officers for promotion ought to be compulsory, and I think that I have stated in my paper that my idea is that the military instructor should be the president. I am perhaps wrong in having stated that, because in all probability he would be a very junior officer, and therefore the senior officer should be president; but I would always have him one of the members of the committee.

6004. (*Dr. Butler.*) Supposing that voluntary instruction was given to the officers either in their regiments, or in garrison, would you recommend that excellence on their part in these subjects should receive any direct reward, pecuniary or otherwise?—I should think not.

6005. That has been recommended to the Commissioners by one commanding officer?—I should be very much inclined to think that any money reward would not be wise.

6006. (*Lord De Ros.*) Do you not consider that a certificate of a certain knowledge in military matters would be better than any pecuniary reward, and that it would rather act as a recommendation to a general officer on service, and that he would rather be inclined to take an officer who had such a certificate than one who had not?—Certainly.

6007. As regards the rapidity of surveying to which you have alluded, would you not prefer that that should be done chiefly by the use of the common compass, rather than by any instruments which would not be available on service?—I think that it should be done by the simplest instrument which would be available.

Staff ... ments.

6008. Do you think it possible to arrive at any real knowledge of an officer's capability by the mere marks which he obtains at the college?—I can hardly go into the variety of marks. I think that you must judge of an officer more by his capabilities in the field. If he had a good eye, and physical capabilities in every way, I should think more of that than of marks. An officer to be a useful officer in the field must be a man of good health and energy, and able to see at once a point, or anything which is going on in the country.

6009. To obtain that sort of officer do you not think that the best plan is to call for staff officers on trial from the different regiments and brigades on service, and to try them, and to see whether they do their work well, and if they do not do it well, to return them to their regiments, and if they do their work well to keep them?—Yes; but I would take every officer out in the field before I should think that he would be fit for a staff officer.

6010. I am speaking of on service; would not the trial which you would be able to get out of him be more efficient than by any certificates which he could produce, or in any other way?—Certainly.

Sandhu

6011. As regards Sandhurst College, would you not make it rather a real preparation for forming a good regimental subaltern than any abstract teaching? I mean that instead of teaching him the mere mechanical duty, for instance, in a battalion, do not you think that the time would be more usefully employed in his learning the commanding duties of an officer, such as calling the men out, and letting him command a company or a squad, and that that would be better for him than being made part and parcel of a battalion for show? You attach a great deal of importance to those officers being good out of door horsemen?—Decidedly.

Prelim... militar... educat...

6012. (*Rev. W. C. Lake.*) Will you state a little more in detail what are your reasons for wishing to have every young man who enters the army go through a military college?—I think that one great reason is, that they go to what are called "cramming" schools, and get a quantity of outside learning without knowing the foundation, or the base of the learning; it is merely superficial.

6013. Do you mean with respect to what may be called military learning, or general education?—I mean the ordinary learning which is required for an officer to pass his examination to get into the army.

6014. We have had very strong evidence in favour of receiving young officers direct from public schools, would not your plan very much militate against that?—I would stop that. I think that every officer ought to pass at Sandhurst. I think that passing at public schools is not a proper instruction for an officer.

Instru... officer... servic...

6015. I understood you to say that you would attach an instructor to each regiment?—Yes.

6016. In your first answer you say "it would not "be advisable in my opinion." I ask you the question, because I thought that from what you had said to-day you had modified that opinion, and were of opinion that, where possible, an instructor should be attached to every regiment?—I think that it would be advisable if the expense were not taken into consideration, but it strikes me that the expense would be too great.

6017. And you would make it compulsory for all young officers to receive that instruction?—Yes, the solely military instruction.

6018. Along with that system of instruction, would you also wish for a higher system of instruction by means of colleges, or something of the sort, attached to garrisons?—Yes; but I think that it should not be compulsory, and more especially I should make the

modern languages, namely French and German, to be taught as part of the instruction of a military officer.

6019. Do you mean as part of the higher instruction?—No, I think that they should be taught as part of the military instruction.

6020. Would you have them taught by a regimental instructor?—Yes, if a regimental instructor was appointed, because I think it very necessary upon service.

6021. Then may we understand that you think the best state of things would be that you should have these two systems going on,—one of instruction in strictly military matters in each regiment, and the other of a higher kind of instruction to be furnished through garrison schools?—I think that if there were a regimental instructor it would not be necessary to have garrison schools. I would only have one or the other. I do not wish to have the two systems.

6022. Then would you not practically give up any attempt to have what you may call a higher kind of military education, because in the regiments I understand you only to wish for education in strictly military subjects?—No, I think not. I think that even an instructor in a regiment should teach the higher branches of education also, but I would not make it compulsory.

6023. Then you think that the instructors in regiments should teach military subjects upon compulsion, but should teach the higher military art to those who wished to learn it?—Exactly so.

6024. (*Lord de Ros.*) Upon general principle, do you not think that the non-compulsory system would be more likely to lead officers to study than the compulsory system?—Yes, I think that it would lead officers who were calculated to be good officers to do so.

6025. (*Chairman.*) On the whole does the operation of the Staff College satisfy you?—The Staff College, as far as I understand, is very good.

6026. From your observation do you think that those officers who pass through the college prove efficient staff officers?—Many of them do.

6027. Is it a perfectly trustworthy test?—I should not say that every officer who passes that examination will do well on the staff, but I should say so generally.

6028. In one of your replies to Lord de Ros you laid great stress upon the necessity of a certain amount of physical energy, the power of command, and a military eye, as being essential qualifications for employment on the staff, and for any important position in the army. Can you suggest any impartial and satisfactory test by which the presence of those qualities could be determined?—I could hardly state any particular, except that the commanding officers who had the charge or management of these officers would be able to tell from their previous history that they were in good health, and whether they had a good eye; they could tell so at once in the field.

Lieut.-Gen. Sir J. Hope Grant, G.C.B.

8 April 1869.

Staff College.

6029. At present, as I understand, before a candidate is admitted into the Staff College, he is compelled to present a certificate from his commanding officer that he does possess some such qualities as those. When you mention testing an officer in the field previously to considering him qualified for employment on the staff, do you mean to imply that that preliminary ought to be observed before such certificates are granted?—I do not think that that is quite necessary, but I think that a good staff officer must always be an officer who has all those qualities.

6030. Have you ever heard it alleged that the Staff College is occasionally resorted to by officers who on becoming married find it a pleasanter place of abode than marching about with their regiments?—I have heard that mentioned, but I am not at all competent to state it.

6031. You are decidedly of opinion that it would not be advisable to offer to officers who have acquired superior qualifications any encouragement in the shape of an increase of pay, or anything of that sort?—I decidedly think not. I do not think that it would be advantageous.

6032. Would you give, for instance, to the officers who might be selected as military instructors a higher pay than the pay of their rank?—I think that I would; I think that they should decidedly have a higher pay than the pay of their rank.

6033. In the same way as a higher pay is given to officers who are qualified for adjutants and musketry instructors?—Yes.

6034. (*Sir D. A. Cameron.*) Are you aware that the commandant at the Staff College is required to report as to the physical qualifications of every officer who passes out of the college, in order to enable the Commander in Chief to judge of the fitness of an officer for the staff, or for a particular office?—I was not aware of that.

6035. (*Chairman.*) Are there any observations which you would like to make *proprio motu*?—No; there is, I think, nothing else which I wish to state.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 13th April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR GENERAL EARDLEY WILMOT.
MAJOR GENERAL HAYTHORNE.
REV. DR. BUTLER.
LIEUT.-COL. CHESNEY.

GENERAL SIR W. J. CODRINGTON, G.C.B., examined.

Gen. Sir W. J. Codrington, G.C.B.

13 April 1869.

Instruction of officers in the service.

6036. (*Chairman.*) I believe that you have received some questions which the Commission have ventured to send to you?—Yes.

6037. As you have had no opportunity of favouring us with answers to those questions, perhaps you will be kind enough to explain to the Commission what are your views with regard to the possibility of increasing the facilities for communicating military instruction to officers after they have joined their regiments?—That is, to answer the first question which has been sent to me. With regard to affording practical military instruction for the officers after entering the service, limiting it to a practical preparation for war, I should reply in the affirmative; but, as respects practical instruction as in war, I should answer in the negative. I consider that the art of war is only effectually learnt by actual practice before the enemy, because war is the most practical of all arts, depending not merely upon a fixed machinery, or upon the quiet of a library, but from the private soldier to the highest in command it has to deal with every variety of human nature in its practical working; it has to deal with difficulty,

Gen. Sir W. J. Codrington, G.C.B.

13 April 1869.

Instruction of officers in the service.

distress, self-denial, and exposure of life in battle, or by climate; and its necessities must be enforced even by violence. Therefore I consider it the most practical of all professions. Then there is the enemy, his numbers, and his defensive or offensive purpose; all this influences war, and makes it a practical art; and therefore I say that war itself is the only real instruction. But there is a practical preparation for war, beginning even with the elementary drill of the soldier, and extending to the command of bodies of troops, their discipline, their camps, their manœuvres over an extent of ground. I consider that the practical military instruction which can be given in England is a theory, inculcated by the traditions or the remembrance and knowledge of former real practice in war, but valuable in a high degree, and necessary as a preparation for war. That preparation can be given especially in camps, where marching, manœuvring, and moving as if for attack or for defence are valuable practice. I consider that the system under which it can best be carried out is that which obtains most in our army, namely, the regimental system—that is to say, one in which the officers look forward to their regiment as their home, and in which the junior ensign looks forward to the command of the battalion which he has entered. In reference to the 2nd question—the nature and subjects of the instruction should, I think, be carried out either by commanding officers of battalions, if detached, or by brigade, or other general officers, if in camp. I would not make the instruction obligatory, if it is to be a course of instruction in a room by reading, or by lectures; but I would do so if it is to be practical in, say, throwing up field-works, defending a house, and in short, giving a positive practical knowledge which would be applicable in time of war. I would not have examinations, nor would I make promotion dependent upon them, nor would I have an officer instructor either in the regiment or in garrison, except for field works, batteries, &c., where an officer of the Engineers could be specially associated with the commanding officer, or with a field officer of the regiment. I have really no actual facts to speak of further than my general opinion of the army in which I have been employed.

6038. Then your impression would be, that from time to time it should be competent for the Commander-in-Chief, or for the military authorities, to assign to each regiment, or to certain stations, an officer of Engineers who should be employed in communicating this special practical instruction in field fortification?—Yes; I think that there could be no objection to that in any way; it is the natural employment of an Engineer officer so to instruct in time of peace, and it is his *specialité* in time of war. The camps of instruction are places where there is ground for the purpose, and therefore I consider that that is the best way of doing it.

6039. Would you confine the communication of that instruction to the great central stations where large bodies of troops are congregated, or would you assign an Engineer officer to each regiment?—I would not assign an Engineer officer to each regiment for this reason, that in the English army the detachments of the battalions (take Ireland and also England) are so considerable, that I think that it would be almost impracticable to attach an officer to each regiment. When you come to stations, there certainly could be no difficulty whatever in detaching an Engineer officer, or several Engineer officers, if there were several battalions, say for Aldershot, or for the Curragh, taking out a battalion with its commanding officer, and its officers, to occupy a post and to throw up field works. The special duty of an Engineer would be to teach them the way in which works, flanking defences, or rifle pits could be made; and I think that that would be the most practical way of doing it.

6040. I suppose that even in teaching in the most practical manner the elements of field fortification, a certain amount of literary study would be necessary?—It would of course be an advantage. I do not the least in the world decry the advantage of any officer making himself acquainted with the principles of the matter, such as the calculation of quantities to be dug out for a parapet in forming a ditch; but when you come to the real practical work, you want a man to do the work at once, and then the actual physical knowledge rather than the more abstruse knowledge comes into play. For instance, take a ditch of a particular width in order to make a parapet of a particular width, that, I apprehend, would be stated by the Engineer officer. The positive instruction in that matter for a subaltern and a non-commissioned officer, and for the soldier, is in the practical business of digging. An officer of course can find out what time it takes, and if he is really anxious to improve in his profession he will see that with 10 men he digs out so much, and that with his own detachment he can put such and such a place in a state of defence; but I would not insist that he should study that in theory, for I do not think that it would be necessary for the whole army to do so.

6041. In that description of instruction you would probably include military sketching, and surveying?—We now come to another branch, namely, one taken from what I consider to be the Quartermaster-General's department of the army; that is to say, the power of an officer to sketch the country, and make observations. Nothing can be more useful; and officers can be taken out under either an Engineer officer or their own field officers, to ride or walk upon a particular line of road, and to make their observations upon that road right and left. Of course it would be of the utmost advantage if you could get that done with the correctness of a survey; but generally speaking I think that is rather impracticable. Even in the Quartermaster-General's department my impression is that personal observation, the use of the compass, and finding distances by the pace of a horse, are the main elements of survey useful for war purposes.

6042. Provided that the instruction was not carried beyond those lengths, you would make that branch of instruction as obligatory as the elements of field fortification?—I do not know that I would make it as obligatory as that which I should rather consider a regimental duty for all ranks; supposing that you are to insist upon a regiment being sent to occupy ground as an outpost, to remain there for a certain time, and that the officer is to make it as defensible as possible, that is a very different thing from what is necessary to an individual officer in surveying the country. It is a more practical business for all composing the company or battalion, and more easily carried out for the instruction of officers and non-commissioned officers of the army.

6043. But, subject to the limitations which you have enumerated, you would enlarge the present system of examination which officers are obliged to undergo, before passing from one grade to another?—Yes.

6044. And would you incorporate the subjects referred to with that examination?—No, I think not. I think that the examinations at present are sufficient for their purpose. You want to know that an ensign is qualified for the duties of lieutenant, and that a lieutenant is qualified for the duties of a captain. I do not know that I should rigidly exact, of necessity, much more than is necessary for a regimental purpose. Of course you gain by the instruction which every officer has in addition to what is absolutely required, nobody can deny that; at the same time I do not know that it is necessary to make it obligatory.

6045. You would be indisposed to put the officers of the army under an obligation which might be distasteful to them?—I do not know that I could say distasteful; if it was in one particular line, say as an engineer, or in the Quartermaster-General's department, I do not think that it would be in the least distasteful to them; but I think that it would be in most cases rather an unnecessary work, and that it would be rather too hard upon them to make it obligatory.

6046. I will ask you a few questions with regard to the Staff College. I believe that you resided for some time in the neighbourhood of the Staff College?—I resided for some time in the neighbourhood of the Staff College, but it was merely residing, and I can give you no actual facts with regard to the Staff College. I merely resided in the neighbourhood, and saw some of the officers, who were connected with it, who were friends of mine.

6047. From your general experience as an officer of the army, are you inclined to look with favour upon that institution?—I myself scarcely think that with our army a staff college is necessary, that is to say, a separate education, and a separate establishment of officers for the staff. In the first place, if my impression is right, there are the officers of 60,000 men in India, who are not available for the Staff College. In the next place, I think that you get in regiments officers who qualify themselves for the staff very fairly well; and, as far as my experience went, both in the command of a brigade and of a division, and subsequently of the army, I think that you got very good staff officers from regimental corps. I also feel that, going to the root of the business, it is such a practical art, that with the exception of the Quartermaster-General's department, which rather requires surveying knowledge, such as the being able to tell the height of a hill without perhaps being able to go there, there is no necessity for extreme scientific knowledge for the practical profession of the army. That is my opinion, but it is, of course, only an opinion. I go even so far as this (as I have known and have seen), that even in the Artillery, when you come to a captain of six guns, and you tell him to fire on a particular body of troops, the very first thing which he does is to try the range as it is called, and he does his duty and fires away; he has got the range and he manages very well, but I do not know, as to the extreme point either of mathematical knowledge or of any other knowledge connected with the abstract duty of his profession, that it is of particular use in the field.

6048. From your practical experience you have never found any difficulty in furnishing yourself with staff officers, from various branches of the army, who were perfectly competent to the discharge of those duties which you exacted from them?—Certainly not. Of course, there may be some who are cleverer than others; there may be some who have peculiarities of surveying a country by the eye, and there may be others who have the tact of knowing how many troops can be placed in a particular locality, and some may ride better than others; there are thousands of little peculiarities of that sort which must all be considered, but I have not found any difficulty from the first beginning of my service with the army of the East, until a subsequent period when I was in a higher position. The staff have done their duty very well. I could mention the names of many officers who were both in the divisions and at head-quarters, and I am quite sure that no persons could do their duty better, but at the same time I may say that several of those officers had given themselves special instruction for the purpose.

6049. Would you be inclined to look with disfavour upon the rule which I believe is established, that, whenever the circumstances of the case permit it, preference in the selection for a staff appointment shall be given to an officer who has passed through the Staff College?—I think that if you have a Staff College, that is but due to those officers upon whom you enforce great attention and a certain sacrifice. Some officers may make it a convenience, and some may think it a sacrifice; but when you have once established a Staff College, for the purpose of forming officers of the staff, I think that you are bound to provide places for them.

of 6050. (*Lord E. Cecil.*) Would you have all the he officers in a regiment instructed in practical work, such as throwing up field works, or only the subalterns?—I would have the whole so instructed. For instance, at a place like Aldershot, sending out a battalion, either the Brigade General being present with his brigade or not, or sending out a battalion with its commanding officer, and with all necessary implements, such as picks, shovels, &c., telling him, "You "are to go to that particular wood, and you must "place your sentries, and you are to throw up a "defensive line along that hill;" I should include the whole.

Instruction of officers in the service.

6051. Then you would treat the practical instruction of the officer as a matter of drill?—Certainly.

6052. How would you ensure the officers learning at these drills, because we know that there are always a certain number of idle and inattentive officers in a regiment?—I do not think that any system will enforce industry upon any set of men. If people will be idle, they will be idle, but I think that by their employment in that military capacity they must be able to do a certain quantity of that duty, because it is a duty imposed upon them, and so far it must give them a certain quantity of practical knowledge.

6053. Would you make an officer's promotion in any way dependent upon the certificate which the commanding officer gave of his knowledge in these subjects?—No. I look upon it that the regimental system is one to which in England we ought rather to adhere, and for that reason I would not make promotion dependent upon what might be accidental, such as sickness or absence on detachment duty. There are thousands of things by which one officer may be a great deal better than another as respects his knowledge, and I do not think that it would be a good principle to introduce that extreme jealousy and heartburning, which would take place if you were to put one officer over another on account of his accidental knowledge.

6054. Then you would give the idle officer an equal chance with the industrious officer?—Yes, as far as his regimental conduct went towards promotion in his regiment.

6055. I understand you to say that you do not think that foreign languages, or military history, or subjects of that kind, are absolutely necessary for regimental officers, and that you would rather leave it to their wish in the matter whether they pursued those studies or not?—I of course think that there should be an examination, that is to say, that no officer should enter the army, or should get promotion, without passing an examination so as to show himself to be capable of the duty which he was called upon to perform. The extra things which you speak of, such as languages, I would rather leave to the officer himself. If he wished to get forward for that very staff business whilst he was with his regiment, I think that he would do it; but if he did not wish to do so, I do not think that all the teaching in the world would make him valuable.

6056. If an officer wished to learn these subjects, namely, languages, military history, and surveying, would you give him an opportunity, both at home and abroad, of doing so, by appointing Engineer officers, or others qualified to teach him those matters?—Yes, there can be no possible objection to that; on the contrary, it would be of the greatest possible avantage. I consider languages to be as practically important as any of those subjects which I have mentioned.

Staff appointments.

6057. Supposing no Staff College to exist, have you any plan by which officers could qualify for staff appointments?—I think that they will qualify by their own exertions, if they feel that the staff is open to regimental officers. I think that in regiments you will always find some officers who are very ready to take staff situations. I think that we found it so.

6058. Would you qualify them by examination, or not?—Certainly, as regards the Quartermaster-General's department, namely, being able to survey. I do not know that as regards the Adjutant-General's department there is anything so particular as to require an examination.

6059. Then you would select officers for the Adjutant-General's department, and would only insist

Gen. Sir W. J. Codrington, G.C.B.

13 April 1869.

Staff appointments.

upon some test of examination for the Quartermaster-General's department?—The test of examination is a formal test, which I do not see the necessity of carrying out in the field. In five minutes the Quartermaster-General is sure to find out whether an officer is valuable to him, and knows his business, or not; therefore, I do not see that in the field there is any necessity for a test.

6060. How would this system work in peace time?—Then I do not think that it signifies very much. In the Quartermaster-General's department, in peace time, I would certainly have a test; the officer should be able to sketch, and so on. In war his qualification would be found out directly; but it is not only this sort of qualification which I should insist upon, because, supposing that a man had that qualification in war, with a very bad temper, I would rather put him on one side. Those are things about which you cannot have a test.

6061. In peace time you are of opinion then that every officer who was not preparing for the Quartermaster-General's department, should be selected in the ordinary way, either by the commanding officer, or by the General of the district, or by the Horse Guards?—He certainly must be so selected.

6062. (*Lord de Ros.*) Not by the commanding officer of the regiment?—Only as a recommendation. Of course he cannot select; he may select the adjutant.

6063. (*Lord E. Cecil.*) How would you prevent the cry which is very often raised of favouritism?—I should not care about that cry, for I think that if a man does his duty he must stand that sort of shot.

6064. What subjects would you require as a test examination in peace time for appointments in the Quartermaster-General's department?—I would limit them to the necessities which you have in war, which are principally surveying, being able to ride along a road, or bye-roads, and to take a survey of the country as rapidly, and as correctly, as possible. I do not know that there is any other subject for which you need have a test examination for the Quartermaster-General's department.

6065. You would not insist upon military history or foreign languages?—Foreign languages, I think, would be very desirable, and in the staff I think it a very great advantage to insist upon a knowledge of language; but I think that the regimental officers would qualify themselves if they were selected, and you need not select them unless they were so qualified.

6066. Of course you would exact the test of being able to ride?—Certainly.

6067. And that, I presume, you would do in the case of all staff officers?—Certainly, from an adjutant of a battalion upwards.

6068. How would you propose to examine the candidates for the Quartermaster-General's department; would you do so by a central board?—I cannot say that I have paid any attention to that point, as to how that is to be done. You are speaking of England, and in peace time?

6069. Yes?—I suppose that it would be done by a central board, or by some officer deputed by the Commander-in-Chief, in peace time. I am not sure that one officer is not a better tribunal than a board, because he has an aptitude for going more into detail, and for finding out whether a man can ride or sketch, or can do this, that, or the other. I think that a board are rather apt to have a certain number of questions asked, and sketching done, and that it is somewhat uncertain whether the officer would be quite as fit as he would appear to be by his written work.

6070. With regard to officers in peace time abroad, would you send written papers to them to fill up?—I do not know that I can give you any opinion upon that point. My impression is that papers only are not a very good test of the fitness of an officer for the Quartermaster-General's department.

6071. (*Lt.-Col. Chesney.*) With reference to what you have stated with regard to the instruction in what we may call the small practical details of fortification, I presume that you would have no objection to making use of the Engineer School at Chatham, where there is a good deal of spare room; would that be one of the places which you would recommend?—Certainly; but you would have to move a regiment to Chatham. I think that all that is wanted, perhaps, would be that if there were Engineer officers to spare for the purpose, it would be better to send one officer, say to a place like Aldershot, either once or twice a week, rather than taking a regiment to a place like Chatham. I think that it would be better to bring the instruction to where the regiment is, and where it may march out three or four miles, and have its picks and spades, and begin the work on the spot, than to send a regiment to Chatham; but, of course, there would be no objection to Chatham.

6072. (*Sir D. A. Cameron.*) Do you think that before the establishment of the Staff College there was sufficient inducement for regimental officers to qualify themselves for the staff?—Yes, as a general rule to select from. If you take the whole of the officers of a regiment, perhaps not; but I think that you would have found, and do find in every regiment several officers who are, I would say, fairly qualified for the staff, and some who are remarkably well qualified for the staff, independently of any staff instruction. Several regimental officers have gone through, for instance, surveying, which you may take as one of the apparent necessities of the Quartermaster-General's department. I believe that in most regiments you would find two or three officers who could survey a country. As I have said, for the Adjutant-General's department I do not know that you want even so much as that, you want a certain amount of education, and attention, and labour, and knowledge of regimental affairs; but I believe that you could, without any actual staff instruction, find officers enough for your staff from the regimental corps.

6073. Was not it the case that, unless an officer had very great interest, he had very little prospect of staff employment, however well qualified for it he might be?—Certainly, because if you take the number of officers which you have, and the comparatively few situations on the staff, of course it becomes a chance, and a very great chance; but then the question is whether you do not, by extracting the whole of the staff, still more diminish the wish for education in the body of the officers than you did before.

6074. Do you not think that there are more men now studying for the staff than there were formerly in consequence of the Staff College?—I think so, as respects the general run of education, but I should rather doubt it as regards the Staff College. I, however, speak quite under correction, for I really do not know the facts sufficiently to be able to give an opinion.

6075. (*Maj.-Gen. Haythorne.*) Do you think that all the regmental officers who are best qualified for the staff go to the Staff College?—I cannot say; I have no grounds for stating one way or the other.

6076. Are there not many officers in regiments who would not learn languages, or surveying, or military history, and such like, but who are invaluable in their regiments as regimental officers?—Certainly.

6077. And are there not many personal qualifications, independent of those which I have mentioned, which are invaluable to regimental officers in the field?—Certainly, and not only that, but it is the same with the staff. I look upon it that, taking a staff officer who may be a remarkably good surveyor of the country, and which may be one of his most valuable qualities, if he has a bad temper, and is at daggers-drawn with all the rest of the staff, you would rather be without him than with him. Therefore it is not only the quality of surveying a country which is a valuable quality in a staff officer. It is

of the utmost importance that the officers both of the Quartermaster-General's department, and of the Adjutant-General's department, should have an intimate, and a modern knowledge of regimental duty. I think that it is of the greatest advantage, particularly in the Adjutant-General's department, that you should be able to refer to the Assistant Adjutant-General a particular question as regards courts-martial, and that he should know the particular practice going on at the moment. That is rather one disadvantage which I should feel with regard to a separate staff corps, namely, that the regimental knowledge to a certain extent ceases, compared with that regimental knowledge which you have in a man fresh from his regiment.

6078. (*Lord de Ros.*) To revert to regimental matters, and to the proposal which has been made of an instructing captain in every regiment, do you see no difficulty which would arise in the first place from the near equality of age of many of the subalterns, and the familiarity of habits and the similarity of duties, the habitual and familiar intercourse at mess, and other matters of regimental life which would rather prevent the captain-instructor being much looked up to by his comrades in the regiment? Supposing that there was a regimental captain selected as an instructor, in every corps, how far do you think that would answer with regard to his social position?—I should think that it would be open to many objections, such as you mention. In the first place any captain who would be selected, possibly for his attainments, his history, and his theoretical knowledge of various things connected with war, might yet, not having seen war service, be looked upon, although unjustly, as inferior in point of practice to a captain who was perhaps junior to him, or to a lieutenant who was probably junior to him who had seen service; and that of course always creates a difficult feeling with regard to the authority of such a man. We will take the case of a captain who has to go out as instructor into the field; another man who has seen the thing done in war has infinitely more advantage in the consideration of the men, the *morale* of the business, and in the management of the men who are to do that work, than a man who has not seen the work. It is right to mention that in this sort of instruction there may be some difficulty as to the wear and tear of men's clothes.

6079. Do you think that the difficulty to which I referred might be to a certain extent got over by adopting boards at military stations formed in the same sort of way as the old boards of "Respective Officers" were formed? Do you think that that would effect a system of instruction at the different stations?—No, I do not like a board for any such purpose; I think that everything to be done in a regiment should if possible be done upon the responsibility of some separate officer. I think that a board is apt to become a mere form. There are certain things in the examination now which go through a board,—the qualification of an officer for promotion goes through a board,—but I think that it is a form, though sufficient for its purpose. A man must have a certain quantity of knowledge in order to answer those questions, but I think that even that examination descends rather to a form, except for its limited purpose.

6080. You are in favour of practical military work being carried out in the regiments as an appendage to the drill. Would it not have the advantage of bringing out the capabilities of valuable officers and men? For instance, it has been often quoted that the bricklayers of the Foot Guards who occupied Hougoumont were one of the causes of saving it from capture, by the quickness and facility with which they made the loopholes?—I think that that part of the practical work, if you can carry it out, is of the greatest possible advantage, because you would be able to find out who were the good men at the spade, and who were the good men in making a hole in a wall, and who were the good men in originating some flanking defence, and therefore you should keep those artizans for their special purpose in a regiment.

Gen. Sir W. J. Codrington, G.C.B.

13 April 1869.

Instruction of officers in the service.

6081. As regards a point we have heard so much of in this room, the habitual idleness of officers, would not many of those officers who are averse to study, be perhaps found extremely ready and able to work out of doors?—Yes; I think that, according to idiosyncracies of various sorts, an officer might naturally take much greater interest in the practical effect of throwing up works in the field, than in learning or studying in his room; but I think that we must rather understand what an English officer is. There is no question that he may be idle, but when the occasion comes he is active, and he certainly does his regimental duty wonderfully well upon service, and he submits himself to a life of great privation: he is taken away from his home, and so on, and without very much pay from the Government. I do not know that you are entitled to exact, or rather that it is good policy to exact, so very much from an officer as to disgust him.

6082. On the occasion of a landing, as our armies generally do land and go immediately into action, the selection of the officers for the first outlying pickets, of course, is a matter of very great importance. On such an occasion you would never think of inquiring whether an officer was reckoned idle or not?—No.

6083. You might know that an officer was in the habit of pursuing field sports and might be particularly sharp in seeing the direction and nature of a road?—Yes, but I do not think that you can select in this manner on service. You bivouac, and you send out No. 1 company, the first on the roster, to form outposts beyond the battalion, and you send them out to do their duty.

6084. It would not lessen your confidence in the officers thus employed if you chanced to know that they were not studious?—Certainly not, for I think that it is a matter of tact and common sense.

Staff appointments.

6085. As regards the Staff College, do you not think it a very great advantage on service to be able to make the experiment of an officer's fitness by taking him for a time (as you know was formerly done), trying him, and if he does not answer the purpose, returning him civilly to his regiment, whereas if he does answer the purpose you can keep him and make him a staff officer?—Certainly. If you can start perfect with all your staff, of course so much the better, but, balancing the whole system and considering the regimental system as one from which we can fairly well get our staff, there is no doubt that it is a very great advantage. You can take a man from the regiment, and you can hear of him from his commanding officer; the General of brigade may know him personally, and even how he has managed his outposts, and may report of him to the commanding officer with confidence, but if he was found not to succeed, it would be quietly said "It is better to find some-" body else who knows more upon particular sub-" jects;" and there are a hundred ways of relegating a man to his battalion, without more offence than is necessary for the public good.

6086. At the end of the Crimean war were there not a large number of officers on the staff who had obtained that position, without any interest, but simply from being found to be the best men for the situations which they filled?—I have no doubt of it. I can mention the names of officers who were put forward solely from their regimental knowledge, and who were placed in positions where they were found to be so valuable that they were at once taken to head-quarters.

6087. After the war had gone on for some time, and the number of officers had been very much thinned by casualty and disease, did the supply from the regiments for the staff ever appear to fail?—No. As far as my impression goes of the time before I was in command, I do not think that they failed at all, and there were not, I think, many appointments afterwards, because there were very few casualties after I took the command; but there was never any

Gen. Sir W. J. Codrington, G.C.B.

13 April 1869.

Staff appointments.

deficiency of officers from the army fitted for the purpose.

6088. It has been rather represented that the officers who have gone to study at the Staff College have made a sacrifice. Do you think that it can be called a sacrifice to have the opportunity of improvement there without expense, and at the expense of the public?—No. I do not know much of the details of the Staff College, but I cannot conceive it to be at all a sacrifice, on the contrary I should consider it a very great boon.

6089. As to languages, do you not think that it would be practicable to make French an actual requisite for coming into the army, and that such a rule would induce parents to send boys to places where they would acquire French very much better than they could ever be taught it at a military college. Do you not think that it might be required of an officer on joining the army that he should speak French well enough to enable him to make his way through a foreign country; I do not mean grammatically?—You mean one language, either French or German?

6090. I mean either French or German?—There might be some qualities in a man which would make it desirable not to press that point. In the present day I think that the education of a gentleman in the class from whom almost all the officers of the army come entails a knowledge, or a partial knowledge, of French, or some other foreign language.

6091. Do you think that there is more favouritism in the selection of the staff officers in the French army than there is in ours?—I cannot speak with regard to the favouritism in the French army; but my impression is that all the officers of the personal staff of the Generals are obliged to be taken from the *corps d'état major*. I however know that when the General officer finds that this will not suit him, the first thing which he does is to obtain his own confidential officer as an "*officier d'ordonnance*." Any officer must feel that he must have confidence in a man who is to be his intimate private secretary, and who, although a subaltern, must almost always know, either verbally or by correspondence, all the discussions which go on with the higher officers of the army. He must be a man in whom he can have confidence, and therefore each General feels that he cannot have a man of whom he is entirely ignorant.

6092. Do you not consider that an officer might very well fill up written papers sent to him in a foreign country, and yet on service turn out to be a very useless and inefficient officer on the staff?—Certainly. There is no doubt that that could be so. I do not mean to say that because a man has education, therefore the chances of it are greater; but the answering of questions does not ensure an officer being a valuable staff officer; of that there can be no doubt. And the converse of that proposition is true, namely, that you may have a most valuable officer who is comparatively ignorant, and yet who has the tact of observation in various ways. There was a most notable instance of that on the Duke of Wellington's staff, namely, in the case of Colonel Waters; you may say that that was a most celebrated instance. When we were young subalterns in the Coldstream Guards, Colonel Waters was a Captain in the Guards, and mounting guard at St. James's, and I am ashamed to say that we young gentlemen used to think that the spelling of his report was not very correct, and certainly that was so; we used to turn it into a kind of redicule, and make remarks on it. When you come to know the facts with regard to this man, what are they? Waters was a clerk in Portugal, in, I think, one of the wine establishments. When the Duke of Wellington went to drive Soult across the Douro, Waters either came into his camp, or gave him some information, but so quick and intelligent was this young fellow, that the Duke at once took him with him, and got him into the army, and he was the eye of the Duke as far as a knowledge of the movements of the French troops went; and there is the known instance that when Waters was taken prisoner, the Duke said, "We shall very soon "have him back, from his knowledge of the country, "and from his readiness at escape," and sure enough he did come back. I mention that to show that a man may be ignorant of spelling, and yet may be a most valuable man, even to the Duke of Wellington.

6093. You have spoken of ill-temper being a great disadvantage to a staff officer, would you not consider the want of secrecy and conceit quite as great a disadvantage?—Yes; there are many qualities of that kind which one would consider quite as disadvantageous and more disadvantageous in a staff officer.

The witness withdrew.

Col. F. C. A. Stephenson, C.B.

Instruction of officers in the service.

BREVET-COLONEL F. C. A. STEPHENSON, C.B., Scots Fusilier Guards, examined.

6094. (*Chairman.*) You served through the Crimean campaign. You were brigade major to the Guards, and you were military secretary to the Commander-in-Chief. You were also Assistant Adjutant-General and Deputy Adjutant-General in China, during both the last expeditions?—Yes.

6095. The Commission are anxious to hear your opinion as to the degree in which you think it might be practicable to enable officers, after they join the army, to acquire a certain amount of instruction in the elements of some technical subjects connected with their profession, such as field fortification, field sketching, and such other subjects as might render them, generally speaking, more efficient?—I think that certainly, as regards field fortification, that is one of the most important things in which an officer should be instructed. In fact, taking those things which you have just mentioned, I think that a certain degree of knowledge of permanent fortification, field engineering, and field fortification, would be an advantage; and I would suggest that such places as Chatham, for instance, or Aldershot, or the Curragh, might be set apart as a school for instruction, where officers should go after they had joined, say after a year, and had obtained a certain knowledge of their regimental duties, and where they should remain, say for three or four months, and that during that time they should acquire as much knowledge as could be obtained in that period.

6096. Then your notion would be to constitute independent schools for such instruction?—I do not think that the system of regimental instruction will answer upon that point. I do not think that it is applicable to our service.

6097. It has been suggested to us by some of the previous witnesses that there should be attached to each regiment an officer of the grade of captain, who should be called a captain instructor. What is your opinion upon that point?—I do not think that he would have the means of practically carrying out such instruction as you require in field fortification. I look upon that practical part as most essential.

6098. Another suggestion has been put forward by other witnesses, that at the larger stations there should be appointed an officer whose especial duty it should be to give instruction and to organize classes, and I apprehend that is more in accordance with what you would be inclined to recommend?—I think that there should be something of that kind. About 20 years ago a very good system was carried out at Chatham, and companies were detached there periodically, with the officers belonging to them; a very good system of instruction was carried on there in a very practical form, and I believe that if it had been perpetuated it would have been an advantage. It came to an abrupt termination, I forget for what reason, probably the Crimean War; but if that system had been carried out, it would have answered all the purposes which I have in view in making the suggestions which I now do.

6099. I suppose that the system which you recommend would be of practical application in India, where there is a large body of troops?—Quite so.

6100. Would you render a course of instruction of that description, always upon the understanding that it is to be essentially elementary in its character, obligatory upon all officers in the army?—I would make it obligatory upon all officers of the infantry most decidedly.

6101. In fact you would incorporate a test examination in those subjects into the present examinations which all officers of the line are now compelled to pass before obtaining their promotion?—Certainly.

6102. You do not think that the introduction of that additional amount of examination would be unpopular?—No; on the contrary, I think that you would find that officers would resort to it very readily, and that it would be very popular. I think that these subjects would give officers a greater interest in their profession; at present their knowledge is very limited in fortification.

6103. They would have ample time at their disposal for the prosecution of these studies?—I should not exact too high a test. A certain number of questions are already put to officers in their ordinary examinations, and I think that those should be extended and made more complete.

6104. Of course the mere practical utility derived from such a system as you have suggested would in a great measure depend upon the examinations which are to test it being *bonâ fide*, and really winnowing the candidates?—Yes. I think that branch of the examination should be undertaken by a separate board, and not by the ordinary board of regimental officers which now assembles.

6105. Will you kindly explain to the Commission what machinery you would construct for the purpose?—I think that there might be a series of written questions submitted by the board, to be answered by the candidates; but I would not suggest that the questions themselves should emanate from the regimental board.

6106. Do you think that with your system of station schools all officers of the army would have the necessary facilities for preparing themselves for these examinations?—I do most decidedly.

6107. Would there not be occasions when officers on detachment would be rather at a disadvantage in comparison with officers at the main stations?—I do not see that there would be any difficulty in that respect, at least not as far as England is concerned, because I should suggest that this instruction should take place within a year or so after an officer had joined, when he would still be at his depôt battalion.

6108. How many examinations would you require him to pass?—Only one.

6109. At what period of his career?—It now takes place when an officer is within three or four of the top of the list of ensigns.

6110. That is in passing for lieutenant?—Yes.

6111. But has he not to pass for captain?—I would not suggest any further examination after that. I think that an officer's schooling should cease after that, as far as obligation is concerned.

6112. In the navy, lieutenants, who rank with captains in the army, have to undergo a very severe examination, and I do not imagine that any objection, such as you have suggested, has ever been started on account of their age or their rank?—The requirements in the navy are so much higher than in the corresponding ranks in the army, that it makes the thing really more necessary.

6113. With reference to the Staff College, on the whole are you inclined to approve of the Staff College instruction?—As far as I have seen of the officers on the staff, whose acquaintance I have made, very few of them have gone through the present Staff College qualifications. I have not had many opportunities in that respect; in fact, I only know one or two instances of it myself.

6114. (*Lord de Ros.*) Do you consider that many officers who are apparently idle, young officers especially, might be made to acquire a good deal of knowlege out of doors in field fortification, and rough surveying of roads and country?—A great deal, I think.

Col. F. C. A. Stephenson, C.B.

13 April 1869.

Instruction of officers in the service.

6115. Almost as easily as the studious ones?—I am not prepared to say that.

6116. You suggest that officers should be for three months at Chatham, where that system is said to have answered well; you would have monthly reports made as to how those officers were going on, and showing that they did not idle at Chatham, would you not?—When they left I would have a report sent to their commanding officer as to how they had conducted themselves.

6117. As regards the proposition of having captain instructors, do you not think that in our service there is too little formal distinction between a captain and a subaltern to enable that system to work very well Is it not very different from the French system, where the captains do not usually mess with the subalterns; but with us they are very nearly of an age and are more similar in position? Do you not think that that would be detrimental to the success of the plan?—I do not think that it would work well.

6118. It might be the blind leading the blind?—I do not think that it would work well. I think that it would be too much like school. What I have suggested at Chatham would be of a totally different sort.

6119. Would there not also be some danger of its becoming a matter of quizzing, and selling bargains to the instructor?—I do not think that it would work well.

Staff College, and Staff appointments.

6120. With regard to the Staff College, do you see any reason for the officers from the colonies coming home to study at the Staff College, and leaving their regiments and their duties for that special purpose?—I think that a much better system would be a test instead of competition.

6121. Have you ever considered whether the exclusiveness of the Staff College system may not lead to discourage officers in *self-education*, and in preparing themselves for the chance and hope of opportunities of getting on the staff?—I do not think that it would discourage them, but I think that it would exclude many valuable men.

6122. Is not that somewhat of a discouragement, namely, that an officer does not attempt it because he thinks that he can never get the appointment?—I think that there are other qualifications which are very necessary beyond the qualification of very high educational attainments.

6123. From what you have generally observed in our service, do you think that the staff officers have generally obtained their situations by interest and favouritism; have you not seen a great many who have owed them entirely to their merits?—I think that some few may have derived the situation from favouritism.

6124. Do you not think that many ordinary military subjects may be studied by an intelligent person with very little extraneous aid, by the help of books?—Certainly.

6125. Have not officers on detachment good opportunities occasionally of improving themselves?—Certainly.

6126. Do you not think that, if officers had that elementary training which you propose, it would lay a foundation for future improvement, which they might cultivate themselves?—Certainly.

6127. (*Lt.-Col. Chesney.*) Am I to understand you that in order to ensure the staff qualification you would recommend a good system of test examination instead of a competitive one?—Yes.

6128. You would have that a strict test examination?—Certainly; I would have it very severe.

6129. Does not it occur to you that in all probability the same men who were excluded by natural disqualifications from seeking to enter the Staff College, would also be to some extent excluded by the same reasons from going up for a strict test examination?

Col. F. C. A. Stephenson, C.B.

13 April 1869.

—Yes, they would to a certain extent; but at the same time I should make the ground of my qualification a more thorough knowledge of regimental duties, and I would graft the other matter upon it.

Staff College, and Staff appointments.

6130. You are aware that a strict regimental certificate is required for an officer going into the Staff College?—Yes, but the question is whether that certificate is strictly carried out.

Age of admission to the army.

6131. (*Sir C. Russell.*) Do you approve of an early age for entering the army?—I do, most decidedly.

6132. If you were given your choice between a man being permitted to enter the army as at present, and being educated in professional subjects after entering, and not being compelled to enter the service until the age of 20 or 23, which would you prefer?—I should prefer his entering young and learning his work afterwards.

6133. You were an adjutant?—Yes.

6134. You never found any want of respect between seniors and juniors from their associating, did you?—Not the least in the world.

Instruction of officers in the service.

6135. Do you see any objection to teaching a whole battalion the simple rudiments of throwing up field works?—No; on the contrary, I think that it is very necessary, but I do not think that they would require that instruction to be obtained at Chatham. I think that it might be done on many other occasions. I think that what the men have to learn is very simple in form, and that, provided the officers were more instructed in it, there would be no difficulty in the men learning it. I do not think that it is necessary that the expense and trouble should be undergone of sending a company say down to Chatham. It is very necessary for the officers, but I do not think that what you require of the men necessitates it.

6136. You would wish a battalion, as opportunity offered, to be instructed in the practical construction of field works?—Most decidedly; that is a great omission in our present system.

6137. A question has been raised with respect to the wear and tear of the clothes of the soldiers; how would you meet that?—I think that I should meet it by a plain working dress for the men. I would much sooner do that than give them pay for it; that ought to be looked upon as a part of their duty. I think that it is objectionable that whenever a company is ordered out to do a little extra work additional pay should be given.

6138. (*Lord E. Cecil.*) How long would you keep officers at such a War School as you have described?—I think four months; but of course one could not lay down the exact time.

6139. Of course you would limit the number of absentees from a regiment; you would not allow too many to be away at a time?—There would not be too many at a time, because by doing it in that way, by sending a man directly he has completed a year or fifteen months' service, you would never, I think, have more than one or two at a time from the same regiment.

6140. And in the event of a regiment being ordered on service the officers would rejoin?—Necessarily.

6141. (*Lt.-Col. Chesney.*) Can you inform the Commission at about what age sub-lieutenants in the navy generally pass their examination for a lieutenancy?—I should think at about 23 or 24.

6142. They cannot pass before they are 19. Are you aware that the greater part of the sub-lieutenants in the navy pass their examination for a lieutenancy very soon after the completion of their 19th year?—I am not aware of that.

The witness withdrew.

Col. V. Baker.

Brevet-Colonel Valentine Baker, 10th Hussars, examined.

Preparatory education for the army.

6143. (*Chairman.*) You are in command of the 10th Hussars?—I am.

6144. When you state, in answer to the questions sent to you by the Commission,* that you can suggest no alteration in the age for entering the army, does that imply that you would allow officers to enter the army as late as they are now permitted to do, if they shall have taken a degree at Oxford?—Exactly so.

6145. You think that a good deal of the instruction which is communicated to cadets at Sandhurst is unnecessary, though in other respects the education which they receive is very useful?—Yes. I think that the more distinctly military part of the education at Sandhurst, the drill and military details, would be better left until they joined their regiments.

6146. And you are of opinion that all officers should be educated in certain military subjects before they join the army?—Certainly.

6147. Would you be in favour of passing all the officers of the army through such an establishment as Sandhurst?—Yes, Sandhurst, or the Universities, but not for so long a time as they now remain at Sandhurst. I think that a shorter time would be sufficient.

Instruction of officers in the service.

6148. Two alternatives have been suggested to us by several witnesses, who are in favour of giving facilities to officers after they join the army, to perfect their education in subjects connected with military education. One of these alternatives is the addition to regiments of an officer of the grade of captain, as a military instructor; and the other is that of the establishment at the larger stations of military instructors, who should be empowered to form classes. Of those two alternatives you would prefer the military instructor being a permanent officer attached to the regiment?—Certainly. I do not think that the other system would answer at all.

6149. Why?—In the first place regiments are constantly detached, and they would then lose the advantage of the centralized military instructors. Again, officers do not like leaving their regiments for any purpose of that kind. If it were brought home to them I think that they would take advantage of it. I do not think that it can ever be carried out, except compulsorily, in our large military stations, and if made compulsory it would be objectionable in many ways, whereas in the regiment I think that officers would take advantage of it.

6150. According to a rough estimate what do you suppose would be the expense of the addition of these military instructors?—I think that an addition of about 100*l.* a year to the pay would be sufficient to induce men to qualify.

6151. The expense would of course be measured by the number of regiments?—Yes. I think that 100*l.* a year for each instructor would be sufficient.

6152. And you would appoint an instructor to each regiment?—I would. It is now found, when there are surveying classes at Aldershot, that the officers do not attend them in any numbers. They do not like leaving their regiments for many reasons. In the first place if they do so it throws the duties upon other officers.

6153. But you are in favour of the Staff College?—Certainly.

6154. A passage through the Staff College implies the very objection to which you have referred, namely, requiring an officer to leave his regimental duty?—Yes, but then he leaves with the special understanding that he is going to be employed upon the staff afterwards. The number of officers allowed to go on the staff is now limited to two in each regiment.

6155. Would you make this military education which would be communicated by these instructors obligatory or optional?—I would make it voluntary.

6156. Entirely voluntary?—Entirely voluntary, but I would have returns sent in every quarter of the number of lectures and the number of classes which

* See Appendix VII. B., p. lxxxv.

each officer had attended; therefore if officers failed to attend as they should, it would immediately come to the notice of the Brigadier-General commanding, and a few words said by the commanding officer of the regiment to the officers of his regiment would induce better attendance in future.

6157. Then in place of this you would not be at all disposed to enlarge the scope of the present examinations which an officer is required to pass?—No; I do not think that it would have the desired effect. I think that you want to give him a constant means and opportunity of improving himself.

6158. Would it not be an advantage that the Government should have a guarantee that the officers whom it employs should have acquired a certain amount of information and instruction in such very elementary and essential subjects as field fortification and field sketching, &c.?—Yes; I would have certain classes under the instructor, and the officers who attended those classes should be specified, and their acquirements should be specified in the return which I should propose every quarter.

6159. Under that system the only inducement which a young officer would have would be the chance of receiving some special appointment?—Not only that, but if he paid attention he would be known to have acquired a certain amount of military knowledge; it would become known to his superiors, and his advancement would consequently depend upon it.

6160. How could his advancement be made dependent upon it?—Because the good officers in the army are now very well known from the bad ones by the commanding officers, and by generals commanding a brigade, and consequently when an officer had to be employed for any special purpose, of course a good one would be selected instead of a bad one.

6161. Do you refer to a regimental appointment, or to a staff appointment?—I refer to a superior appointment.

6162. His appointment on the staff would be secured not by having attended these classes, but by having passed through the Staff College?—Yes, but still on service there are many appointments which could be filled up by men who had not passed the Staff College; and naturally men would be selected who were supposed to be well qualified, and who had distinguished themselves by their knowledge, and who were known to be good officers, and who had been instructed.

6163. Then am I to understand that you have a positive objection to the introduction into the present examinations of any subsidiary examination in such subjects as field fortification?—Certainly not; I think that the examinations for promotion would help, as an additional test, to prove whether the officers had taken advantage or not of the opportunities of instruction afforded to them by these military instructors. I think that you might then raise the standard of your military examinations for promotion.

6164. At present do these subjects form a part of these examinations?—Yes.

6165. Field fortification?—Yes.

6166. Is it not very trifling?—Yes.

6167. But you would not object to increasing that element?—Certainly not; when you give officers the means of instruction, I think that you might demand a higher class of knowledge from them upon examination.

6168. In the paper with which you have favoured us, you have laid a great stress, and a very proper stress, upon the absolute necessity of a staff officer in addition to his scientific acquirements being a man of active habits, and a good rider, and even possessed of an intuitive military genius. Can you suggest any method by which the presence of these qualifications could be ascertained?—At present, as you are aware, a certificate is given by the commanding officer, but I would make it as strict as possible, and I would also let officers qualify to a certain extent as staff officers even before they entered the Staff College, and certainly afterwards. There could be no difficulty after they entered it in their being employed at Aldershot as aides-de-camp, or in different capacities on the staff, and then their riding and their intuitive qualifications would be tested. I think that a certain number of marks might be given for their physical qualifications as staff officers. Many clever men make very bad staff officers, that is the great difficulty.

6169. It strikes me that it would be almost impossible to gauge by marks the possession of those particular qualities to which you have alluded, such as the intuitive military genius of an officer, and even his active habits and his skill as a rider?—If those officers were employed at Aldershot I think that the system might be carried out. For instance, supposing that 1,500 marks were allotted, then the general officers under whom they were employed might fix a standard, at which a certain number of marks might count in their final examination at the Staff College. It is a question of very great difficulty.

6170. You are strongly of opinion that the preliminary certificate which shall enable an officer to claim admission to the Staff College should be of a *bonâ fide* character?—Yes, it should be as stringent as possible.

6171. That is not the case now?—No. Very often men who make the best staff officers, and who are the most active in their habits, do not care to pass an examination; they do not like the drudgery of the Staff College.

Advantages of a University education for officers.

6172. (*Lord E. Cecil.*) I see, from the answers which you have sent in to the Commission, that you are very much in favour of University candidates for the army?—Certainly.

6173. At what age would you have officers enter the army?—I think that the earlier that they can enter the army the better, after the age of 18. I think that 18 would be about as good a standard as any, but the difficulty of a University examination is that it brings officers into the army comparatively late in life, which I consider a disadvantage. If the Universities would give a military degree to men wishing to enter the army, after a residence of a year and a half, or two years, at a college, they would then come into the army at 19, which would be a very great advantage; they would not be too old, and they would have had the University education.

6174. Are you in favour of giving commissions without purchase, like exhibitions, to be competed for at the Universities and public schools?—I think that might be carried out, but there would be difficulties. I would simply go into the preliminary education which an officer ought to have, and not a military education.

6175. Do you not think that such a system of exhibitions might encourage men to go to the Universities, supposing that they had an opportunity of obtaining commissions without purchase?—Yes; it would be simply a question of expense.

6176. The same thing would also apply to the other public schools of the country?—No doubt.

Instruction of officers in the service.

6177. You are in favour of entirely voluntary instruction for officers?—I am.

6178. And of a captain instructor?—Yes; a captain instructor to each regiment.

6179. Rather than of adopting the Prussian system of War Schools?—Certainly.

6180. How would you have that instruction conducted; would you have it under the superintendence of the commanding officer?—It should be conducted by means of lectures and classes.

6181. With one of the field officers of the regiment present?—I do not think that would be necessary.

6182. Would you permit officers who had taken pains with themselves to try for staff appointments direct without going through a Staff College?—I think that is a question. I think that they should pass some examination.

6183. I am supposing they would pass a test examination?—I would open the door to them; I would not exclude them entirely from staff appointments.

Col. V. Baker.

13 April 1869.

Staff College and Staff appointments.

6184. Is it your opinion that the system of the Staff College, as at present constituted, is open to objection?—I think so in this way, that many officers go there who are not at all qualified for staff appointments.

6185. They go for various reasons?—They go for various reasons. I do not mean to imply that the majority do so, but many do so.

6186. Would you increase the numbers of the Staff College, or would you diminish them?—I should feel inclined to diminish them. I think that you might open a door to men entering the Staff College if their qualifications for the staff could be distinctly proved in any way. I think that these military instructors would raise the whole tone of military education throughout the army, and then you might select men who were known to be thoroughly qualified for staff officers, and pass them through a minor examination, but not so extended a one as is, I believe, demanded at the Staff College. I think that many of the officers would do that who will not go through the present drudgery.

6187. Would you not be rather in favour of setting apart a certain number of staff appointments under these circumstances to be competed for by officers from regiments, leaving the remainder to the Staff College?—That would be an excellent system.

6188. I presume that as far as possible your desire would be to encourage a system of self-improvement among the officers of the army?—Certainly.

6189. You have said something with respect to marks being given for physical qualifications?—Yes.

6190. I presume that you mean marks for riding and gymnastics?—Not entirely. If an officer were attached to the staff at Aldershot and were attached to the different Generals of brigades, they would be able to judge after a certain time of his general qualifications as a staff officer; and supposing that 1,500 marks were allotted as the extreme to be obtained, they would be able to send in a return giving him 600 or 800, or 1,000 or 1,200 marks.

6191. According to his proficiency?—Yes.

6192. Do you mean that his proficiency should be purely physical?—No, not purely physical; but physical acquirements are desirable in a staff officer; for instance, it is a great qualification for a man to ride well, and to be able to make his way quickly over broken ground, and to carry his messages quickly and correctly.

6193. Have you any particular system by which you would test these physical acquirements?—The general opinion of the general officer.

Instruction of officers in the service.

6194. With regard to young officers before they were pronounced fit to undertake regimental duty, would you insist upon a certain amount of fortification or surveying, looking upon all those matters of instruction as a question of drill?—I think that young officers might attend the classes before they were dismissed, and that it might be so far compulsory. I think that young officers on joining should pass a certain number of classes and lectures before they were dismissed.

6195. (*Sir C. Russell.*) Am I to understand you that you would make the rudimentary principles of field fortification and sketching compulsory on the young officers upon entering the army, and would then leave the option to them, giving them at the same time the opportunity, of following up a higher branch of military study if they desired to do so?—Exactly so.

6196. And having considered this subject, as I know that you have very much, you think that that would be more easily done by means of a regimental instructor than by schools concentrated at any one of our military stations?—Yes; I hold a very strong opinion upon that point. I do not see that it could be carried out by central schools, and I think that it must be carried out by a regimental officer.

6197. You refer to education after joining the army?—I do. I think that it could only be done after joining the army.

6198. (*Lt.-Col. Chesney.*) Referring to what you have said as to giving marks for practical subjects, and to the objection which is often made against the Staff College that men have left it who have not been able to ride well, is there any real difficulty in having such a strict test, either before entering the Staff College or afterwards, as that it should be ascertained that a man was able to ride well?—I do not merely allude to men riding well,—men vary very much in their qualifications,—especially to make an aide-de-camp; one man who has a sort of natural talent, and who has never been instructed may make a very good aide-de-camp; and another man who has been highly instructed may make a very bad one.

Staff C

6199. Will you state to the Commission whether there is not a possibility of having such a strong practical test as regards riding that that objection should cease to exist?—I do not think that that alone would do it, although I think it very necessary. What is wanted is that those officers should be good staff officers, and with the natural talent which is so necessary in a staff officer. Of course, a man may be taught to be a military rider, and to ride fairly, but that is a very different thing from crossing a broken country well, and understanding how to get quickly across it; the one can be taught, but the other it is difficult or impossible to teach.

6200. Then would you recommend that before an officer takes up a staff appointment he should be actually and practically tested in his power of crossing a country?—I think so. I think that as regards those qualifications he should act as aide-de-camp for a certain time.

6201. There would be no great difficulty in doing that at Aldershot?—None whatever at Aldershot.

6202. (*Maj.-Gen. E. Wilmot.*) You say that some officers go into the Staff College who are not sufficiently qualified ever to become staff officers?—Yes.

6203. Do you think that there is anything in the certificate, which is required of a commanding officer, of such a character that it is impossible for a commanding officer to give it truly?—I think that the certificate is more or less slurred over; people read it as they like. I think that it should be more stringent.

Age o admiss the ar

6204. (*Lord de Ros.*) As to the age, particularly with regard to your own arm, namely, the cavalry, is it not difficult to form a cavalry officer after a certain age? I do not mean only as to his drill, but as to his acquaintance with stable and troop duty, the management of horses, the duties of billeting, and other very important duties of a cavalry officer on the march?—I should certainly prefer a young officer of about 18 or 19.

Instru officers service

6205. As regards regimental instructors, do you not think that there would be a very great difficulty in finding a captain who should take charge of a troop, and who should act as a troop officer, and in placing him over the others, as it were, in education?—I think not.

6206. Would you give him a troop?—That would be a question. In cavalry that would not be a difficulty now, as we have a squadron system, and I would allow a junior captain, and even a lieutenant, to qualify as an instructor.

6207. Supposing that in the field he proved a clumsy and bad squadron officer, must not that rather affect his position as an instructor in study; would it not be rather thrown in his teeth?—I think that it would be far better that he should not be a troop officer, but a special officer attached.

6208 Do you not think that, on service particularly, there would be a difficulty in providing for him, and his horses and servant, and all that sort of detail?—I think that his services might be made useful.

6209. Would you give him a troop on service?—No; I would make him assistant to the general staff. Such an officer would be often very useful.

6210. Would you take him away from the regiment?—No; not necessarily. If a general officer

required such an officer to draw plans, and so on, he would be very useful, or in the regiment he would be very useful if required.

6211. As regards lecturing, would you have a special room for the instructor?—I would have a special room.

6212. Would there not be great difficulty in always providing a special room?—I think not.

6213. Supposing that a board of field officers were selected at each garrison for purposes of instruction, do you not think that they would be more respected and looked up to than the regimental officer?—I think that they would not be always available.

6214. In the case of an officer rising from the ranks, would you put him under the instructor?—Yes; but you could not expect the same qualifications from him as from an ordinary officer.

6215. As regards the present promotion examinations, I understood you to say that in your opinion they cannot be carried out properly. Are you not aware that in some regiments they are very strictly carried out?—I think that that is the objection, namely, that in some regiments they are strictly carried out, but not in others.

6216. As regards your idea of a military examination at our universities, do you propose that what is now called the "Little go" should stand as a degree?—I think that the authorities of the Universities did agree to it, that is, at the end of six terms they would give a military degree.

6217. Do you not think that commanding officers on foreign stations sometimes give certificates to officers desiring to enter the Staff College rather with a view to get rid of a useless or troublesome officer than for merit; and are they not reluctant to part with their best officers for those purposes?—Certainly.

6218. As regards the riding, would it not be practicable to have it carried out at the Staff College in a more satisfactory manner, by having a riding inspection made every three or four months by a field officer from Aldershot, so as to make quite certain that the drill was carried on in conformity with the orders of the cavalry, and that a student might then be made a good military horseman?—I think so, as regards military riding.

6219. Do you not think that for the general purposes of staff surveying cross country riding is hardly required?—No; on the contrary, I think that a good bold horseman is very useful.

6220. Have you ever seen that practically proved on service?—I think so, often.

6221. Are you aware that the Duke of Wellington used to say that he had never in his life been out of a canter in the field?—That is very likely, but I do not think that he would have liked all his staff officers to say the same. At Solferino, although the French Emperor was within two or three miles of the Sardinians, he was upwards of two hours without any information whatever; it was a difficult country to cross, and numbers of staff officers were sent off with messages, but none of them arrived.

Age of admission to the army.

6222. (*Rev. Dr. Butler.*) I observe that you say in your printed answers that a university education is preferable as compared with the education given at Sandhurst, but that it has at present the disadvantage of bringing officers into the army at rather a late age. Will you state very briefly what you consider the disadvantages to be?—I think that if an officer enters the army at a late age his ideas are more formed, and that he is less amenable to discipline, and that he does not pick up his drill as quickly as young officers do.

Instruction of officers in the service.

6223. Passing to another point, you desire that officers should have the means of voluntary study after they join their regiment?—Yes.

6224. Have you considered whether it would be desirable to encourage that by any material advantages, as for example pecuniary advantages of any sort?—It would, I think, be very difficult to carry out such a system. I strongly believe that the officers would avail themselves of the means of instruction, from the very fact of its being known that they had attended a certain number of classes, and had attended lectures, and from the fact that their superior officers, and the Generals over them would know that they had neglected to attend if they had so neglected. I think that would be quite sufficient to induce them to avail themselves of the opportunity of instruction.

The witness withdrew.

Captain H. M. Hozier, 3rd Dragoon Guards, examined.

6225. (*Chairman.*)—At what age would you think it advisable that an officer should enter the army?—I think that at about 18 under the present system, if he is to learn his drill.

6226. Does any alternative suggest itself to you under the present system, in connexion with any alteration in the present arrangement?—I think that everybody ought to learn his drill before entering the army; I think that everybody ought to be taught the techincal elements of his profession at a military school.

6227. So that you would prefer the establishment of one large military school through which all officers of the line should pass?—Yes, I should prefer such a school, certainly.

6228. At what age would you think it desirable that the cadets should enter that school?—I think at about 16, so as to have two years there.

6229. Would you be inclined to encourage the introduction of instruction in technical subjects in the education of young men at school, previously to entering such an establishment?—I think that it would be a very good thing if the schools would teach technical subjects, but I do not think that they do.

6230. You would not be afraid of the general liberal education which is now given at a school being curtailed or interfered with?—No, I do not think so.

6231. After the young cadets had acquired the rudiments of a military technical education, and had entered the army, would you be disposed to continue that education still further?—I certainly think that they ought to have the chance of being allowed to continue it, but I think that it is very doubtful whether very many would avail themselves of it. When a boy enters the army he has got sick of teaching, and he wants to have his fling.

Instruction of officers in the service.

6232. But that period of effervesence lasts only for a short time, and eventually, I suppose, he feels an interest in his profession, and desires to have a knowledge of it?—I think not in the English army, because we do not desire to make our officers more than serjeant majors.

6233. Might not the introduction of some such facilities for instruction abate that evil?—I think that if prizes were given for it, and were open to men who distinguished themselves in that way, it would be a great improvement.

6234. What would you designate as prizes?—I think that if men were selected for promotion, and commands, and appointments, on account of knowing the higher part of their profession, it would do a great deal of good.

6235. Is not that in some degree secured by the Staff College?—Yes; but many of the best staff appointments are given to men who never pass through the Staff College at all. All the personal appointments, and the appointments of military secretaries or assistant military secretaries, which are the best appointments of any, are given to men who have never passed through the Staff College.

6236. What do you think would be the best method of giving these inducements?—I think that that is very difficult. I do not think that it is easy to find regimental or garrison instructors in sufficient num-

Capt. H. M. Hozier.

13 April 1869.

Instruction of officers in the service.

bers. Instructors might be found in garrisons to teach certain subjects, but it would be a very difficult thing to find men competent to teach all the parts of a military education.

6237. But if such appointments were going, and were constituted prizes, it might act as the very inducement which you desire?—It might, but as a general rule I do not think that men who care much for the higher parts of their profession would consent to become instructors; they would be much more inclined to learn themselves.

6238. Supposing that the professional instruction was in a certain sense elementary, and merely comprised such simple subjects as the rudiments of field fortification, and an elementary amount of permanent fortification, field sketching, &c., it would not require a very first-class man, would it, to administer instruction in such subjects as those?—No; but if it is only the rudiments I do not think that you will get the students, because it is the rudiments of any subject which are the hard and disagreeable part of the work, and I do not think that officers would be inclined to do it.

6239. For instance, I allude to instruction in such an operation as the defence of the head of a bridge, or the defence of a house; or instruction in such military operations as many an officer has felt the need of, when he has found himself in a difficult position, separated from the main body of the army, as was the case during the Indian Mutiny?—I think that all those things ought to be compulsory, and that they are as much a part of an officer's duty as his company drill is.

6240. You think that, using the word "elementary" in that sense, that instruction ought to be incorporated into the regular military course?—I think so.

6241. And that it ought to be rendered compulsory by every officer being required to pass an examination in it?—Yes; but to pass a real examination, and not the sort of examinations which officers pass at present.

6242. You think that the present examinations are not very effectual for their purpose?—I do not think that they are quite effectual.

6243. To what do you attribute that?—I think that our system is against it. Commanding officers do not superintend it; commanding officers only care to have their officers to know their regimental drill, and do not care to have them more highly educated.

6244. Could you suggest any machinery by which those examinations might become more real and effectual than they are at present?—I think that they would be so if there were some central examining board, but there the expense comes in.

6245. The expense to the country?—Yes; and when your army is quartered in all parts of the world, it is very difficult to bring your officers home to be examined by any central department.

6246. Various alternatives have been suggested to us. One is that an officer of the rank of captain, receiving additional pay, should be attached to every regiment; would you approve of that?—I think that it would be a very good thing, because it would allow those who knew something beforehand to keep up their knowledge.

6247. The moment that you render a knowledge of these subjects compulsory by an examination, of course you are bound to afford facilities for the acquisition of that knowledge?—Yes; you must provide machinery to teach it.

6248. Another suggestion which has been made to us is the constitution of schools of instruction at the various great stations. Which of the two systems would you prefer, or do you think that both might be employed?—I think that both might be employed, because there are many things, such as fortification, which could not be taught by a regimental instructor, but could be taught at a large school of instruction.

Military education in Prussia.

6249. You have, I believe, a very intimate acquaintance with the Prussian military system. Can you suggest any practices which prevail in Prussia with regard to the particular point which we are now considering which it might be advisable to introduce into the English system?—I do not know much about the Prussian military system in time of peace; it is only in war that I know anything about it.

6250. Has it struck you, from your observation of the character and conduct of the Prussian officers in time of war, that they are men who are better educated, and have a greater professional knowledge, even in the subordinate grades, than the officers of our own army in corresponding grades?—Yes; I certainly think so.

6251. In what respect are they superior? is it in the knowledge of drill?—No, I think not so much in the knowledge of drill, but they know their work practically. You could trust a captain of any company in the Prussian service to hold a position, and he would know what to do, and how to strengthen his position, and how to take advantage of natural obstacles. For instance, if he were occupying a farm-house, he would know how long to hold it, and when to retreat if it was absolutely necessary, in case he was likely to be cut off.

6252. A part of that knowledge, I suppose, belongs to the special branch of fortification, and the other part is the less definite branch of tactical skill?—Yes.

6253. Do you think that the Prussian officers are superior in tactical skill to our own officers?—Yes, very much so.

6254. Is that from the instruction which they have received in tactics?—I think that it is from the practical operation of the manœuvres in which they are taught the practical art of war.

6255. That has been so from the time of Frederick the Great?—Yes. A Prussian officer knows perfectly well the whole of the art of war, whereas an English officer may be for years and years in our service, and only see one regiment or one battalion.

6256. Have the Prussians any system like our Staff College?—Yes.

6257. Are all the Prussian staff officers passed through it?—Nearly all staff officers.

6258. Are aides-de-camp passed through it?—It is not absolutely necessary that they should be, though such is usually the case.

6259. Have you had any opportunity of knowing whether the Prussian officers of high rank look with favour upon that system?—Certainly.

6260. A Prussian general officer would not complain if his choice of an aide-de-camp was limited by that requirement?—A Prussian general officer would almost never take an aide-de-camp who had not passed through that college, because his aide-de-camp has to do real practical work.

6261. By that do you mean different work from that which is required by an English general of his aide-de-camp?—Yes; because an aide-de-camp in the Prussian service has more of the work of a Brigade Major to do.

6262. At what age do the officers enter the Prussian army?—About 18 or 19 upon the average.

6263. Before entering the army, is their education military?—About one-third of them pass through the cadet schools, the others serve as cadets in the ranks before receiving commissions.

6264. Is the military education given in a military college?—About one-third of them are previously educated at a military school, I believe, but those who do not pass through a military college have to pass through the ranks, and to pass through the War Schools examinations.

6265. Do you think that that has had a tendency to render them less men of the world, and nothing but soldiers?—I think that that may have something to do with it, but the reason why the Prussian officers are so purely men of one clique is, that the whole aristocracy of the country are soldiers. To be an officer, and to belong to the aristocracy, are only different terms for the same thing. No man who

is of noble birth in Prussia will ever embrace any other profession than the army.

6266. But persons who are not considered, in Prussia, as being technically of noble birth, do enter the army and obtain high rank in it?—Yes; but they are always either granted the privilege of being called "*Von*," or else they assume it.

6267. Do you think that Prussian officers, independently of their knowledge of purely military subjects, are better or worse instructed than English officers in what are called the subjects of liberal education?—I think that they are rather better instructed than the English officers; many of them have been at the Universities before coming into the army.

6268. Would you say that they possess a higher intellectual tone?—I think that their intellectual tone is narrowed, from almost universal association with one profession.

6269. You think that a young Prussian cadet, as compared with a young officer who has just left a public school in England, would be better instructed in the technical subjects of his profession; but in other respects might be less ready to adapt himself to any exigencies which might occur?—Yes; an English schoolboy would probably write a much better copy of Latin verses than a Prussian cadet, but Latin verses are not very much required in war.

6270. No; but when we talk of the qualifications of an English boy, I do not think that that is the one which principally occurs to one's mind?—From my own knowledge of a public school, I do not think that they even teach arithmetic properly.

6271. Almost all the commanding officers whom we have examined were agreed, in saying, that upon the whole they have found that a boy from a public school in England made as good an officer as they could desire, and even a better officer, or, at all events, quite as good an officer as a boy from Sandhurst. In saying that, they did not refer to his power of writing Latin verses, but they referred to the general manliness of his character, his practical readiness, and those qualities which, after a little discipline, would render him a good soldier?—I think that an English public schoolboy is a much better cricketer and much better player at football, and much more manly than a Prussian cadet; but I think that the commanding officers like a public school boy better than a cadet, because they only want a man to learn drill; they do not want a man to understand the higher parts of his profession.

6272. Would there not be difficulty in compelling our subaltern officers to acquire anything but a very slight knowledge of those parts of their profession?—To make all of them do so, I think, would be difficult, and it is not necessary that they all should do so, but there ought to be some doing so.

6273. (*Lord de Ros.*) You stated in a previous answer that in our regiments we, generally, only prepare our officers for serjeant-majors. Do you think that our troop and company officers are at all inferior to any foreign officers?—Yes; I think so, in the higher parts of their profession.

6274. Have you had an opportunities of comparing their efficiency on service?—Yes, I have served in two campaigns in the English army, and I have been present in two campaigns in foreign armies.

6275. Can you give any reasons why such inferiority exists, and any instance where it has been shown?—I think that the inferiority exists because our officers have not an opportunity of studying the higher parts of their profession.

6276. Have you ever heard it asserted by competent persons that our staff have shown inability in the field, in consequence of the want of instruction?—Yes, I have certainly heard that asserted.

6277. Do you consider that the commanding officers in the British army are at all disposed to discourage their officers from studying their profession?—Yes, I think so in the higher parts. They wish them to have a thorough knowledge of regimental drill, but they do not care for their knowing anything more.

6278. What would you suggest to be the course of the instruction of the regimental instructor, supposing one to be attached to each regiment?—I think that it depends a great deal upon what the men are likely to know when they come into the hands of the instructors.

6279. Do you suppose that an English aide-de-camp has not plenty to do on service? Are you aware that he is allowed two horses, and sometimes three, and that very often his work is so hard that he is exhausted after it and that his duties are by no means light?—Yes, but in foreign armies, officers are detached to perform those duties which are done by English aides-de-camp on service.

6280. Are they allowed two horses?—Yes.

6281. (*Lt.-Col. Chesney.*) I have observed that in certain Prussian theoretical instructions it is stated that skilful cavalry officers should be very much employed in reconnoitring for the advances of armies. Can you state whether that is so?—They detach cavalry officers reconoitre, but they sometimes have a staff officer with them.

6282. A staff officer superintending?—Yes, on important occasions.

6283. You saw that?—Yes.

6284. (*Sir C. Russell.*) Am I to understand that you think that it would be at any rate very difficult to carry on the instruction of officers after they had joined their regiments?—Yes; I think that it would be very difficult.

6285. To what extent do you think it difficult? For instance, you have stated that a Prussian officer, if called upon to defend a farmhouse, would not only know how to defend it, but would know when it was untenable?—Yes.

6286. Do you not think that such an amount of instruction as that implies could be very easily given in a regiment?—I think that practically it could not be given in a regiment, because, according to our present system, if you made it compulsory, it could not be enforced; and if you made it voluntary, young officers would not take the trouble to learn it. A young officer in our service has a great deal to do in the way of amusement; he has plenty of hunting and shooting and things of that kind to attend to, which are more amusing at the moment than instruction in military subjects.

6287. You have stated that the examinations as at present passed are very insufficient, but I think that you will admit that the practical part as regards the drill is not a sham?—The drill is certainly not a sham.

6288. Why could not you carry out a system of examination which should test the power of an officer in the rudimentary portions of field fortification as well as in his drill?—I think for the same reason that the examinations in the way of military law, and so on, are of no avail; and so I think that those things would be of no avail.

6289. Do you attribute the failure in the test by the present examination to the want of some one habituated person to conduct those examinations?—I think that that is one reason, and another reason is that I think that the whole tone of our system is rather opposed to proficiency in those subjects.

6290. Then you appear to look upon it as a very hopeless affair. I want to arrive at your scheme, by which you would improve the practical military education of the officers in the army?—I think that it can only be done before they join the army, and by making their commission the great prize for proficiency to which they can look forward.

6291. Are you opposed to military instruction after entering the army because you consider that it should be given before?—I think that it should be given before, but I think that the opportunity of military instruction should be afforded afterwards for those who like to avail themselves of it; there will no doubt be some who will do so, but not very many.

6292. That system of education which you would

Capt. H. M. Hozier.

13 April 1869.

Preliminary military education.

propose would be intended for the higher branches?—Yes.

6293. (*Lord Northbrook.*) You think that a military education should be given mainly before a young man enters the army?—Yes.

6294. Do you think that the military education which has been given at Sandhurst is sufficient and satisfactory?—No, I do not think that it is satisfactory; I think that it is capable of great improvement.

6295. We have been told in evidence, generally speaking, that it is only those who get their commissions without purchase who have acquired any sound military instruction at Sandhurst; do you concur in that view?—I believe that that is the case; that it is almost only those who try to get their commissions without purchase who have acquired such an instruction.

6296. Supposing that you had some college for educating officers before they entered the army, how would you ensure that they should get a sufficient amount of military instruction?—I would not let any one get his commision, unless he had passed a *bonâ fide* and thorough examination.

6297. Under such a system, do you suppose that you would have a sufficient number of candidates for admission into the army?—Not to supply the whole of the officers, but a large portion.

6298. Do you think that, even with respect to commissions by purchase, you would find a sufficient number who would be prepared to go through such an examination?—I think that some of them would. I think that if every boy who went to Sandhurst knew that he must pass a strict military examination, and that unless he did so he would be sent away, the system would work. I think that a boy at Sandhurst would be much more afraid of being sent home to face his parents or friends who had paid for a certain amount of his military education, if he was not allowed to go into the army at all.

6299. You think that under that system you could keep up the present education at Sandhurst?—Yes.

6300. And that in that way you would get a certain number of officers in the army with a sufficient military education?—Yes; I do not see that you want every officer in the army with a high military education.

6301. Besides that, you would insist upon every officer received into the army having such a knowledge of certain military subjects, field fortification, and the like, as would enable him to protect his men in case of accident?—Yes, I think that every man ought to know that.

6302. And according to your view, that knowledge is not possessed?—No, I think that it is not.

6303. And at present you think that there would be great difficulty in requiring an officer to pass an examination in those subjects?—Yes.

6304. Do you think that questions might be sent round, having a central board to look over the answers. Could you rely upon such a system?—One might do so, but I should think that an examination, in such cases as the defence of houses and so on, ought to be more practical.

6305. You therefore think that *vivâ voce* work would be better than paper work?—Yes, to take out a man, and ask him what he could do.

6306. (*Lord E. Cecil.*) Have you not said that you would be in favour of a large military school for the whole of the line?—Yes.

6307. Do you think that there would be any chance of instituting such a school in the present state of public feeling in England?—Yes, if it was the only road to a commission.

6308. Then I suppose that you anticipate the abolition of the purchase system?—If no one was allowed to go into the army except through a military school, I think that at the present time they would go through.

6309. From your observation, is it, or not, a fact that popular feeling in Prussia is very much against large military schools before entrance into the army?—I am not competent to give an answer to that question. From what I know, I should think that it was rather in favour of large military schools, but I am not competent to answer that question at all, because I have only heard what people have mentioned in ordinary conversation.

6310. You think that military subjects generally could be acquired before the age of 18 better than after?—Certainly; there is one thing which ought to be taught, namely, riding. I think that every officer ought to be able to ride, and that he ought to be taught that at his military school.

6311. I am now talking of the practical portions of military science, and also of the knowledge of regimental duty which is required from every officer. You think that all those things could be acquired before 18 better than after?—I think so.

6312. You said that there were very great difficulties with respect to the education of officers after entrance into the army. Do you not think it possible that every officer could be sent to a War School for a few months in the first year of his service, and that before promotion to a lieutenancy he could be required to pass in certain practical subjects, such as fortification and drill?—That would only be the State maintaining this officer at school, whereas if he went there of his own accord, his relations would maintain him.

6313. I am not speaking of the maintenance, but of the possibility of instruction?—It might be so, but I do not think that you would get many men to go into the army if they were to go immediately into a War School. When a man joins the army, I think that he is rather glad to get away from school.

6314. In fact, you think that the entrance of a man into a War School before entering the army would be preferable to his doing so afterwards?—Yes.

6315. (*Lord de Ros.*) Are you aware that in many regiments of the line there are very few officers who can afford to keep hunters, or who have a large income, and that amusements and field sports can but rarely hinder them, because they cannot afford them?—Those who cannot afford field sports find other kinds of amusement.

6316. Do you think that if to-morrow you called on any captain in camp at Aldershot to describe and show how a farm could be held, against attack, and how soon it would be untenable, you would not find the majority perfectly capable of showing how it could be done?—Certainly not the majority; but some, of course, would be able to do so.

6317. (*Lord E. Cecil.*) With regard to the Staff College, are you in favour of all officers passing through a Staff College before they obtain a staff appointment?—Yes.

6318. You would not allow any regimental officer to qualify at a central board of examination without passing through the discipline of a college?—I think that if he could pass the final examination of the college he might be qualified for an appointment.

6319. Do you not think that the Staff College, to a certain extent, acts rather badly upon the army in general, by inducing officers for various private reasons of their own to prefer going to the Staff College to doing their regimental duty?—In some cases there may be officers who go to the Staff College in preference to going to a bad station, but the reason of that is that you do not get the very best men into the Staff College, because you do not give them the best of the prizes.

6320. You think that if those prizes were given you would be certain of insuring all the really best qualified officers for the staff?—Yes, we should get the very best men, if all officers knew that they could not get appointments on the staff through the loophole of private influence, but must pass through the Staff College.

6321. May it not so happen that there are numbers

of officers who are quite fitted for the staff, as far as their practical acquirements are concerned, but who are utterly unable to pass a really high examination in military subjects?—No, I do not think so at all.

6322. You think that practical acquirements and intellectual power generally go together?—Yes, generally; and I think that the instruction at the Staff College ought to be so adapted as to teach the necessary duties of a staff officer.

6323. Under those circumstances, do you not think it likely that a senior wrangler at Cambridge would be a better staff officer than anybody else?—I should think that if a senior wrangler at Cambridge had learned the other part of his work, he would, *cæteris paribus*, make a better staff officer than anyone less highly educated.

6324. (*Rev. Dr. Butler.*) Would your idea of a military college be for all officers, or for a limited number of officers?—I think that all ought to go to a military college, if you could get them to do so.

6325. If you could make the encouragements sufficiently great?—Yes.

6326. Would you not apprehend great difficulty in getting all to be of sufficiently studious habits?—No, not if you made the inducement sufficient for them.

6327. Then you do not think that the necessity of having to pass through a military college would disincline many officers from doing so?—No; a boy of between 16 and 18 must be at school; and with military tastes he would certainly rather be at a military school than a civil one.

6328. (*Chairman.*) In Prussia do you think that a commission is a greater prize than in England?—Yes.

6329. If the preliminary discipline necessary for obtaining a commission was made very severe, might there not be difficulty in obtaining the requisite number of officers in this country from the classes from which they are now provided?—There might be, but I do not think that it would be so. I think that if a boy, who has a military tendency, wants to go into the army, he would rather go to a military school than any where else. He is there from 16 to 18, and there is plenty of machinery there to make him work, if it is put in motion.

Capt. H. M. Hozier.

13 April 1869.

Preliminary military education.

6330. If you pass all the officers of your army through a military school, you must limit your test examination to a considerably lower standard than would be the case if you merely offered the prize of a free commission to such young lads as were capable of proving themselves to possess superior attainments, and from whom, therefore, you could exact a higher standard of qualification?—You might exact a higher standard from the top men, and make the others pass a test examination, and send them away if they did not properly pass that test examination.

6331. You would get over the difficulty by having a minimum qualification?—Yes.

6332. And you would incorporate with it a competitive examination for the free commissions?—Yes.

Prussian military system.

6333. (*Maj.-Gen. E. Wilmot.*) I think that you attributed one cause of difference between the Prussian and the English staff officers to the Prussian camps being so different, and therefore the means of instruction being so different?—Yes.

6334. What possible instruction could you substitute in the nature of that which is so admirably given in the Prussian camp from its constitution; how could we get the experience in England which a Prussian officer has in those large camps?—I think that we ought to have camps for instruction and manœuvres, as the Prussians have.

6335. (*Chairman*). What is the size of their camps?—Sometimes they collect 200,000 men, but generally there are divisions of 30,000 men.

6336. I suppose that the small numbers of our standing army would prevent similar facilities being given?—Yes; but if we had regular troops, and the militia, and volunteers, all brigaded in their own district, it would, I think, obviate that difficulty.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 15th April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, ESQ., M.P.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

VISCOUNT WALDEN examined.

Viscount Walden.

15 April 1869.

Instruction of officers in the service.

6337. (*Chairman.*) You have served in India, and you were also in the Crimean campaign?—Yes.

6338. Do you think that it would be desirable to afford to officers, after they have joined the army, facilities for acquiring the elements of technical instruction in subjects connected with their profession?—I certainly think so.

6339. Do you attach such importance to the acquisition of that instruction as to consider it to be desirable to render it in some degree compulsory?—I should render the knowledge of the subjects compulsory.

6340. That is to say, that you would be inclined to require every officer on rising from one grade to another to pass an examination in those subjects?—Yes; up to a certain rank.

6341. Up to what rank?—Up to the rank of captain.

6342. Would you have two examinations?—Yes, for the ranks of lieutenant and captain.

6343. To what subjects would you be inclined to confine that obligation?—I should confine it to all subjects which related to the particular profession to which the officer belonged; that is to say, an infantry officer would have to know different subjects from a cavalry officer. I think that an infantry officer should be better acquainted with field fortification than a cavalry officer, and on the other hand a cavalry officer should know more about horses and so on than an infantry officer. I should confine it to the profession to which the officer belonged.

6344. There are now, I believe, examinations, but they are connected with the drill and the interior economy?—I believe so.

6345. You would extend those examinations to such subjects as field fortification, field sketching, &c.?—I

Viscount Walden.

15 April 1869.

Instruction of officers in the service.

am not certain as to field sketching, that should be taught before the officer enters the army, but I think that they should include field fortification. In the first place, I think that field fortification in its widest sense should form one subject, that everything in the nature of out-post duties, and everything in fact connected with a campaign, another. A knowledge of permanent fortification sufficient to enable an officer to understand what is going on at a siege, in trenches, and so on ; and a certain acquaintance with siege ordnance and artillery, so as to enable him to work guns on occasions ; a knowledge of tactics should likewise be required.

6346. (*Lord de Ros.*) The working of guns is taught now, is it not?—I believe so, but I cannot say for certain what is taught at the present moment. I would include the elements of strategy, and military law, and of course the practice of courts-martial.

6347. (*Chairman.*) What machinery would you suggest for administering that instruction?—I think that the greater part of it might be obtained in the battalion to which the officer belonged.

6348. Would you appoint a military instructor to each battalion?—No ; that would hardly be necessary. An officer could acquire by study everything which is necessary connected with his purely military duties, and he could so acquire it in the battalion.

6349. But still I suppose that that would facilitate his acquisition of a knowledge of field fortification?—He would very likely find opportunities of learning that in garrison, where there are engineer officers quartered. I would have district instructors, but not battalion instructors.

6350. You would be inclined to organise your system of instruction at the great military stations rather than in a regiment?—Yes.

6351. Do you think that that would be unpopular in the army?—No, not if confined to an officer's military instruction ; but anything savouring of a schoolboy going back to school would be very unpopular. On the contrary, I think that what I have suggested would be popular.

6352. You have stated that you would not make attendance at lectures, for instance, or at the rooms of these instructors, compulsory?—I would make the knowledge compulsory, to be ascertained by examination.

6353. Your opinion would be considered by the Commission very valuable, not only as to the subjects taught, but more especially with reference to the application of such a system as you have indicated, to India. From your acquaintance with military life in India do you think that there would be any difficulty in extending to India the same system as you would be inclined to recommend for this country?—I think not. Generally speaking, the troops are more or less collected together in stations. It is many years since I left India, but I believe that since then the troops have been more concentrated, not so detached as they were in my time.

6354. And your notion would be that the station instructors should be taken from officers belonging to the scientific corps?—Yes, and from the staff and from regimental officers if holding certificates of qualification.

6355. In fact, wherever you could get them?—Yes ; and you could always get them at the stations.

Preliminary education at military colleges.

6356. At what age would you like to see officers coming into the army?—At 16. I think that it would be better if their military training was entirely commenced in the army ; they might be treated as cadets in the army for the first year, without the authority of officers, but as supernumeraries. I should like them to have the military training of a battalion as soon as possible.

6357. Then you would be very much opposed to the idea which has been advocated by some witnesses, namely, the establishment of a large military college through which all the officers of the army should be passed?—I should not object to that if you could maintain the proper discipline and authority which you have in military schools abroad.

6358. You have a large acquaintance with foreign countries where that system of military education principally prevails ; and from what you know, without presupposing a very intimate acquaintance with those institutions, are you inclined to think that they have a tendency to give a higher scientific tone to the officers of foreign armies than that which is possessed by our own officers?—I certainly think so, because they teach much we do not teach.

6359. At our last meeting we had the evidence of a witness who had had opportunities of observing the conduct and the character of Prussian officers, and he seemed very much impressed with that fact. He seemed to consider that a Prussian line officer knew more of his profession, or at all events of the more technical subjects of his profession, than an ordinary English officer ; would you be inclined to agree with that opinion?—Yes, I should say that he did.

6360. That of course is an advantage?—A great advantage. In Prussia it is a much more purely military life ; an officer is never out of his uniform ; he is always a soldier at every minute of the day.

6361. I suppose that as far as physical training is concerned, and what would be called practical military qualities as distinguished from technical instruction, our officers are perhaps superior to other officers?—Yes, I think so.

6362. In that respect a lad joining the army from a school would perhaps even physically be superior to a cadet from a foreign military college?—Yes ; but in the Prussian army they have more practice, every officer has practice in manœuvres and camps.

6363. To the facilities which are thus held out to an officer you would attach great importance?—A very great importance.

Ex for

6364. (*Lord Northbrook.*) Have you directed your attention to the way in which these examinations should be carried on, if they were instituted?—I should like to see the present system of regimental examinations altogether abolished, and district boards of examiners appointed, composed of the general of the district, and his staff, and anyone else it might be thought right to appoint, an engineer officer, and an artillery officer.

6365. How would you apply the system where regiments were detached?—Officers might go up to be examined to the head quarters of the district.

6366. Suppose a regiment to be ordered to the Mauritius, or to the Cape?—Even there a general officer, a staff officer, an engineer officer, or an artillery officer would be found.

6367. I presume that you would let an officer go up for examination at any time?—Yes ; say four times a year.

6368. He might qualify whenever he was fit?—Yes, and I should let the decision of the general be final, if in favour of the officer. But if against him, and if the officer complained, I would allow him an appeal to a higher tribunal if there was one, such as the Council of Military Education. I would send his papers to them, and would let them decide. In drill and the other practical parts of his profession the decision of the District Board should be final.

6369. That I presume would be a most essential part of the examination?—There might be questions in tactics and strategy, fortification, and artillery.

Ins offi scr

6370. (*Sir C. Russell.*) Always presuming that there is not to be a vast military college for the instruction of all the officers entering the army, I understood that you would be content to take the material which we now get, but that you would take it at an earlier age, and with military instruction immediately after joining?—Yes.

6371. I believe that at present most regiments are capable of instructing in musketry without the assistance of a detached military instructor?—I believe so.

6372. If the system which you propose were adopted in the army, do you not think that there

would very soon be sufficient officers in the army to teach young officers the practical part of their profession?—Yes; I have stated that in the answers which I have sent in to the questions which have been sent to me.

6373. I believe that you have had opportunities of seeing some of the staff officers who have passed a very high examination, and who were sent out to the Crimea as staff officers; did you see in any of those officers any incapacity to perform the staff duties?—I understand the question to refer to physical incapacity?

6374. Yes?—I certainly recollect one or two instances of it.

6375. For actual service in the field do you consider that they were efficient as staff officers?—Certainly not; I recollect one officer perfectly, because I remember that he could not take an order.

6376. In illustration of officers in the army not being taught even the rudiments of permanent fortification, do you remember any notable instance of a general officer who was sent very suddenly in the Crimea to command a division?—I do not recollect the case of a general officer; I recollect the case of a field officer who had great difficulty in finding his way about the trenches.

6377. And of course, being unable to find his own way, he had not the remotest idea where to put his men?—Just so. If I recollect rightly, an order was in consequence promulgated desiring officers to go for three days into the trenches, and to make themselves acquainted with their principles of construction.

6378. Which would have been unnecessary if they had been previously instructed?—Yes.

6379. Do you remember in the trenches a serious mistake in consequence of the officer not knowing anything of the ammunition supplied to guns?—Yes; I recollect a case of that sort. I recollect a working party commanded by an officer taking solid 68-pound shot to hollow-shot 8-inch guns, and I think that I could recollect other cases of the same sort.

6380. With regard to education, will you state to the Commission what you consider that a fair education should be for a young man entering the army?—I think that he ought to know one foreign language; French, I think, should be rendered absolutely necessary. I also think that he should know a certain amount of mathematics and a certain amount of Latin.

6381. (*Lt.-Col. Chesney.*) Referring to what you have said with regard to examinations, am I to understand that your opinion of the present system of regimental examinations is that they are unsatisfactory and are slurred over?—I think that there are several objections to them. I do not mean to say that there is any intention on the part of boards to slur over the examination in any way, but I think that the boards are not well constituted; one board may put very severe questions, and another board may put the reverse, so that there is not the same standard of examination.

6382. (*Maj.-Gen. Haythorne.*) Do you think that there would be any difficulty in carrying out in India a practical course of instruction in field works, military surveying, out-post duty, and such like, in consequence of the short period during the cold season which is available for drill, rifle practice, &c.?—It may be so at some of the hot stations, but as far as I know, most of the troops are being as much as possible taken out of the plains. Certainly in the north-west provinces they could do it. In the Madras Presidency there might be a difficulty.

6383. But in each presidency several stations exist where it might be carried out?—Yes, it can be carried out at Bangalore now; it is a much cooler spot.

6384. On the Bombay side could it be done?—I am not acquainted with the Bombay side, but as regards the great mass of troops in India in could be done; throughout the whole of the north-west provinces it could be done.

6385. (*Lord de Ros.*) As regards the difficulties which have been alluded to in India, do you not think them rather exceptional than otherwise, and that they would not interfere with any general principle?—Certainly.

6386. As regards languages, you speak of Latin as useful for the young officers; I suppose, because you consider that the study of the classics teaches you not only classical knowledge, but how to read and digest many other kinds of knowledge?—I think so. I should not require a very high proficiency, but certainly enough to read Cæsar.

6387. As regards the instruction of officers generally, do not you consider that the commanding officers of battalions are the proper instructors for everything, and do you see any reason why they should not be so?—I certainly consider that they ought to be.

6388. You are aware that the first person who introduced anything like field and outpost instruction in our service was Lord Frederick Fitzclarence, of the 7th Fusiliers. Do you see any reason why it should not be done now?—None whatever.

6389. Taking those commanding officers of regiments whom you personally know, would you not consider them to be as good officers as you could get?—Yes, under the present system.

6390. When you speak of instruction in strategy what is it exactly that you propose?—I should require every officer to have an acquaintance with strategical principles.

6391. Do you mean that he should also understand the service of the commissariat?—No. What I understand under the word "strategy" is different from what I understand by the word "tactics." I define tactics as what relates to the movement of troops in the presence of the enemy.

6392. As regards the discipline of the foreign schools, with which it appears that you are tolerably acquainted, is it not of a very harsh nature, such as would hardly be borne by young English gentlemen, and are there not several things connected with it, for instance duelling, and the absence of all religious instruction, which bear no analogy to our system?—Yes, there may be.

6393. If it is supposed that foreign officers have more theoretical knowledge, do you think that they have the same resource and the same power of endurance under hardship as a young English officer?—I certainly think so; I think that they undergo more hardship than our young officers.

6394. You do not allude to the hardships of service?—No; the hardships of service I presume would be the same in both cases. The French officers in the Crimea underwent the same hardships as our officers did. I do not mean to say that they did so voluntarily, but I think that they could not avoid it.

6395. You were a captain for about seven years?—Yes.

6396. Supposing that you had been in Ireland at the time of the Fenian disturbances, and that your commanding officer had desired you to take the command of 60 men and to occupy a bridge or a farmhouse in Ireland where an attack was expected, should you have felt incompetent to do so, or would you have undertaken it?—In my own case I should have undertaken it, but simply because I had been instructed in field fortification.

6397. Do you not think that there were other officers in the battalion besides yourself, who would have done so?—All those who had been instructed in the elementary principles of field fortification, but no others.

6398. (*Rev. W. C. Lake.*) You have not enumerated military history?—I do not think that I should require an officer to know more of military history than was necessary to illustrate strategical or tactical principles.

6399. But you would require a certain amount of military history from all officers?—Yes; before joining the army.

6400. Do you think that the advantage of boys joining the army young counterbalances any supposed or real disadvantages arising from their not being so

Viscount Walden.

15 April 1869.

well educated as at the age of 19?—I am presuming that the education of a young officer goes on after he has entered the service, but that it is purely military.

Instruction of officers in the service.

6401. How long would you continue the preliminary education immediately after entering the army?—Until he had passed out of his cadet state, and he should then be required to pass an examination for his lieutenancy or captaincy in purely military subjects.

6402. When you speak of his being in a cadet state, do you mean before he becomes an officer?—Yes.

6403. You have spoken of the standard of examination at present in the regiments as not being systematic; do you think that that leads to a general failure in the result?—Certainly.

6404. (*Lord de Ros.*) Supposing that you introduced the foreign system of cadets into the English army, would there not be a difficulty as to the men saluting and showing them proper respect, and so on, or would you have them from the first receive that respect?—I would. But I would not let such a cadet be an executive officer in any sense. In the Prussian army I think that they must notice him, because the privates salute the corporals even.

6405. Would you have him to belong to the officers' mess?—Yes, I would treat him in every way as an officer.

6406. (*Chairman.*) Even with regard to the cadet officers, supposing that they were to be attached to regiments, would you have it optional with them whether they were to take advantage of any instruction which might be provided or not?—No, I should not.

6407. You would make it compulsory?—I should make it very much the same as in the case of a midshipman.

6408. (*Lieut.-Col. Chesney.*) Is it your opinion that, in the present state of our infantry and cavalry, every commanding officer is qualified to teach field fortification, and such elementary technical subjects?—I do not think that they would be so well able to do so as they would be if there was a proper system.

Preliminary education at a military school.

6409. (*Chairman.*) You are of opinion that this military instruction ought to be given to officers after they join the army, but at the same time I think you have stated that you would be in favour of the establishment of a large military academy or college, through which all officers joining the army should be compelled to pass, provided that at such an establisment proper discipline could be maintained?—Yes.

6410. (*Lord E. Cecil.*) Then it would be a school, and not a college?—Yes, it would be a school.

6411. It would be for boys younger than 16?—Yes.

6412. (*Rev. W. C. Lake.*) Do you say that you would wish to see such a college established, or only that you would not object to it?—I should like to see it, but my fear is that it would not be established on good principles, from what we have seen.

6413. What do you think would be right principles on which to establish such a college?—In the first place I do not think that the military training of the boys would be sufficiently kept up.

6414. (*Lord E. Cecil.*) Would you have it a military school, with military organization and discipline, or a semi-civilian school?—I would have it a purely military school in every sense, with very severe discipline.

6415. (*Chairman.*) You would allow the cadets to pass out at 16.—Yes, they should then pass out into the army.

6416. At what age would you allow them to go into such an establishment?—At the same age as that at which a boy goes to Harrow, but I would not teach military details there. I do not think that it would be necessary.

6417. Might not such a plan have the effect of depriving a lad of what all would think desirable, namely, the elements of a liberal education; would it not render his instruction almost too military?—I fancy that at first starting the elements of both kinds of instruction are very similar, and that it is only the direction to which both are turned in after life which would make the difference in the one case and in the other.

6418. Would you have all the teachers officers?—Yes, or at all events connected with the army.

6419. You have said, in answer to a previous question, that European officers, as distinguished from English officers, are essentially military, and that they are actuated by a military spirit, and always live in their uniform, and that they are soldiers and nothing but soldiers. Do you think that an unmixed good?—I look to the ultimate object in view. I look to what would make the best fighting animal, and I think that every other consideration ought to be subordinate, so long as you have an army. I do not wish to bind myself to the details. I think that the primary object is to make as good a soldier as you can.

6420. (*Lord Northbrook.*) Supposing that cadets joined the army at 16, what would be the military instruction which you would expect to get from the school?—Elementary instruction in sketching and drawing, and other kindred subjects.

6421. And field fortification and so forth?—That is rather a matter of detail, but I would give elementary instruction in that subject also.

6422. What particular advantage do you expect to derive from this school as compared with boys coming into the army from Eton or Harrow?—You would obtain habits of strict discipline.

6423. That would be the main point?—Yes.

6424. (*Chairman.*) At all events, you would consider that Latin and foreign languages should be subjects of instruction?—Yes, and a certain amount of mathematics.

6425. (*Lord Northbrook.*) Do you think that at a military school the discipline would be sufficient to keep the boys from drunkenness or disorder?—Yes; it might be made so if the authorities were supported by the public.

6426. Drunkenness has existed at Sandhurst?—Yes, and for that reason I should object to such a public school. It prevails both at Woolwich and at Sandhurst.

His Lordship withdrew.

H.R.H. The Duke of Cambridge, K.G.

FIELD-MARSHAL HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE, K.G., further examined.

Instruction of officers in the service.

6427. (*Chairman.*) Since we had the honour of receiving your Royal Highness on the last occasion, the Commission has been examining how far instruction in technical military subjects could be communicated to officers after they joined their regiments; and I believe that the evidence which we have received has been communicated to your Royal Highness?—Yes.

6428. From that evidence it appears to be the opinion of a great many very distinguished officers of the army that it would be advisable to facilitate the communication of such instruction, and I think that your Royal Highness intimated that that also was your opinion?—I did.

6429. A further question has arisen as to whether it might be desirable to annex to the present examination which officers are compelled to undergo in passing from one grade to another, an examination in technical subjects. Is your Royal Highness disposed to think that it would be desirable to do so?—I think that it would be desirable. I think that there is an abundance of opportunity for doing so under the Regulation which exists, if you only carry it a little further than it is carried at present. I think that there is no difficulty whatever in the matter. I of course assume that it is unnecessary to add anything to the examination of cornets or ensigns, because the Regulation lays down that they are to be examined

within a year of their appointment. I think that within a year of their appointment you can ask for nothing more than is laid down. Then we come to lieutenants, and there you would begin. Besides these professional subjects, which are of course essential, and which could be carried out better than they are now, there are the following two paragraphs. The first of those paragraphs is: "They must be acquainted "with the light infantry drill, duties of outposts, "patrols, escorts, advanced and rear guards." That leaves a very wide margin, but there is still more. "And they will be required to show that they have "a sufficient knowledge of field fortification and re- "connaisance." If you amplify that to any extent, I think that you have sufficient, and I presume that that also would be the feeling of the Commissioners. I think that by amplifying paragraph (*g*) under section 161 (which is the last paragraph that I have read) you will obtain everything which you desire.

6430. Another very important point has been the machinery by which these examinations are to be conducted; from the evidence which we have received it appears that there is not sufficient uniformity in those examinations, and that if they were to be amplified in the sense in which your Royal Highness has suggested, it would perhaps be necessary to constitute some independent and controlling authority which should superintend them. Will your Royal Highness favour us with your opinion as to the system which you would be inclined to recommend with that view?—It appears to me that you could do a good deal in this way. I daresay that you have observed that quite recently a great wish has been expressed that the troops should be employed in trades, and that they should do their own work in barracks, and so on. To carry that out systematically you must have a superintending officer. I see no reason why you should not combine the two. I do not see why you should not have in every regiment an officer qualified to give instruction to officers and to superintend the performance of the work of the men in barracks such as is now contemplated. I put that forward with this view. Of course you must look at the expense of the arrangement; no officer could be required to perform this duty without having a sufficient amount of remuneration for it. If you only had an officer to instruct the officers, I think that his time would only be half filled up. A scientific officer would be the best qualified for such a duty, and I think that you might combine the two objects in view in one person who might have an assistant—the musketry instructor might possibly be the assistant—and by combining the two duties I think you might unite them and make a good arrangement, that is, as regards the regimental instruction. As regards the mode of examination it is desirable that there should be some change in it. One set of officers examine very lightly and another set of officers examine very severely, you cannot control it, and they carry out the examinations according to their reading of them. After they have been carried out you cannot recall them, and if the officers answer the questions put to them you cannot expect them to be re-examined because the questions put are very easy. Therefore in large garrisons, such as Portsmouth, Dublin, and Cork, and so on, if you did what has been already done at Aldershot, namely, to have an officer for the purpose of instruction, and to associate with him two field officers of the garrison, the station instructor always being a member of the board, I do not see why you should not carry out these examinations on a much better principle than you now do. That is what I should suggest, and I think that it would answer very well.

6431. Three systems have been suggested to us by different witnesses:—one system which corresponds very much with what your Royal Highness has suggested, namely, the presence in each regiment of an officer with scientific attainments who should act as a military instructor; another, as a substitute for the foregoing, namely, the establishment at large military stations of military classes, and it has been suggested that in order to enable that system to work, it should be arranged that all officers who might desire to do so should at stated periods be passed through these station establishments. The third plan suggested has been a combination of the two, namely, the presence of a regimental military instructor, supplemented and assisted by the station instructors, the guarantee for the practical results of both those systems, whether taken separately or combined, being not a very severe or a very high examination, but an examination of an entirely honest and *bonâ fide* character, carried out pretty much under the system suggested by your Royal Highness, namely, by an independent authority. I would therefore ask your Royal Highness whether you see any objection to supplementing the military instructors whom you have indicated by station classes?—Not at all. That was my meaning when I gave my view of having instructors attached to large stations who should always be members of boards of examination. The fact of an officer being merely a member of a board of examination would not give him sufficient occupation. I meant to convey that he should have the instruction of an advanced class, such as at Aldershot. I think that that class should be a voluntary class. I think that it would be very objectionable to have anything like a forced study. I think that we should give every officer who wishes to study an opportunity of so doing, but that it would be very objectionable to enforce it upon everybody. In the case of many of our best officers I am sure that they would not have given themselves to study. Forcing a man of that sort to study would be to force him out of the army. You ought to give a man any information which he could derive in the service, but I think that it should not be compulsory. The only portion which I think should be compulsory is in the examination from one rank to another, but of course that would be up to the rank of captain.

H.R.H. The Duke of Cambridge, K.G.

15 April 1869.

Instruction of officers in the service.

6432. You think that the only element of compulsion in such a system should be that which is secured by an examination?—Just so. The promotion examination which is required professionally, because I see that all that is contained under paragraph (*g*) in section 161 is purely professional. I have heard it said that it is a great object that officers should learn languages. I am perfectly aware of that. I have had great opportunities of knowing languages, and I know the value of a knowledge of them, but I do not see how you could make the station officer an instructor of languages. I do not think that any Englishman could give a good and real instruction in French or German, or any other foreign language. I think that it could only be given by a person of the nationality, and I do not see that you could put that instruction upon a station officer, although I would wish that it could be done.

6433. Has your Royal Highness at all considered what would be the additional expense of these regimental instructors?—No; but in order to meet the financial difficulty it occurred to me that if you could combine in one officer the superintendence of the barrack work, and things of that sort, and also the carrying out this object, you would save a great deal of money, and then I should think that the expense would not be anything very considerable; there would be one such officer in each regiment, and if you availed yourself of the musketry instructor he might be an assistant to the other officer, and there would be no additional pay necessary. As it is, the musketry instructor is exempt from all duties. Then there would be another advantage, which would be a very great one. The Commissioners will recollect that I said that there is a great difficulty with regard to the Staff College, because we have no opening for the employment of officers who pass through the Staff College. In my opinion they would be the most qualified for these appointments; there would be then an opening to induce men to go to the Staff College, and you would therefore increase the advantages to be derived and the desire to go to

H.R.H. The Duke of Cambridge, K.G.

15 April 1869.

Staff College.

the Staff College; and in that way you would diffuse through the army a great deal more information than it possesses now, because by holding out inducements to men to get better appointments you would get men to work for them, but without inducement you cannot get men to work for them.

6434. With regard to the Staff College, is your Royal Highness satisfied with the working of it?—I am satisfied with it as far as it goes, at the same time I am quite convinced that many officers who have not passed through the Staff College would make most excellent staff officers, but they are now virtually excluded, and that has always appeared to me to be a great disadvantage. There is a clause in the Regulations which says, that any officer who has shown a great capacity for staff employment in the field shall be considered. Colonel Greaves who is now on the Staff never passed through the Staff College, and he was very highly recommended by Sir Duncan Cameron and others, but there is always a difficulty in selecting an officer on such grounds. The officers who have passed the Staff College think that they have a grievance if you select an officer in this way instead of them, and insinuations are made that favour and affection have been shown, whereas that has not been the case. I think that if the Commission felt that this mode of selection was a correct one, and gave expression to that view, it would as a matter of opinion be a very valuable one.

6435. With reference to the Staff College, it has been brought to our notice in pretty strong terms that the preliminary certificate which an officer is compelled to present, which vouches for his possession of certain physical and military qualities, is a document which cannot always be depended upon. That would seem to be a very great defect in the operation of the system; would your Royal Highness suggest any means of obviating it?—I think that the present system is not a good one in that respect, it depends entirely upon the care and consideration given by the commanding officers. A commanding officer may say that an officer whom he wishes to get rid of, but against whom he has nothing to say, is qualified for the Staff College; but I do not know in what way we are to obviate that difficulty, because the commanding officer can only report from his personal knowledge. With all the confidential reports which we receive, I do not think that we can depend upon them alone, and we must rely upon the good faith of the commanding officer who makes the report. I do not wish to be personal, but I believe that there are instances of officers having gone to the Staff College who might as well not have gone, although they may have turned out fairly enough in their examination.

Instruction of officers in the service.

6436. (*Lord E. Cecil.*) There has been some idea in the evidence which we have taken that the examination in fortification and reconnaissance, as laid down in the Queen's Regulation, is not quite so strict as it should be in the army. Is it your Royal Highness's opinion that that might be improved?—I think so most decidedly. I think that it has not been sufficiently carried out, and one of the reasons is that the examination is conducted by three officers who are selected indiscriminately, and it may be that those officers are not very well versed in the subject themselves, and if so, of course the result of such an examination is very superficial.

6437. Could you give us any suggestion as to the officers of whom the examining board should consist?—If it is thought right that there should be officers at all the large stations, who are independent officers, and who are to be appointed for the express purpose of conducting the education of officers, I think that the best plan would be that those officers should always be made members of these boards, with two officers of the garrison to carry out those examinations. If you made the station instructors members of these boards, always working upon the same principle, there could be no deviation from that principle, and the same principle must be carried out whether at home or abroad, or whether in Ireland or even in India. If you had these station or garrison boards, I would have the officers at out-stations brought in for examination. At Aldershot there is always a facility for forming boards. The same thing should be done in districts, for instance, Winchester and Portland, and those stations, might come into the Portsmouth district. Again, if you took Plymouth and Bristol, they would come into the Plymouth district. In Ireland it would be just as easy. At Dublin or Cork, or the Curragh or Limerick, there would be central stations in the same way.

6438. How would your Royal Highness meet the difficulty of regiments being stationed at the Mauritius, or the West Indian Islands?—Of course there would there be considerable difficulty, and you must leave it very much to accident, and to those who happened to be there; but I think that if you established these principles in large stations there would be no difficulty in sending out to the smaller ones directions from the Horse Guards, of the style of question which should be put, and selecting a certain number of questions, so that there should always be a sufficiency of questions put, in order to show whether or not the officers under examination were qualified in the various subjects which might be put before them.

6439. There has been some doubt in the minds of the Commission as to the means and appliances which would be required by every regimental instructor for the purpose of perfecting an officer's education in the matter of reconnaissance and of field fortification; does your Royal Highness think that there is any method by which the use of those means and appliances could be secured in each regiment, so as to enable the instructor to have the benefit of such appliances for the purpose of educating young officers?—If you had workshops for the education of the men you would have implements which might be established at every station for that object; and the implements employed for work by the men might be made available for the officers. Therefore the only instruments which you would require would be the scientific instruments which do not come under the definition of working instruments for the men, and those of course would be a matter of expenditure. In my opinion, all those things should be made stationary, and should not be moved about with the regiments. They would become like barrack furniture, and they would remain there; and if there was no regiment there they would remain in store until another regiment came. I do not think that there would be any difficulty about it. The only real expense would be in the scientific instruments required for surveying purposes, which would not be required for the ordinary labour of the men of the regiment.

6440. You do not anticipate any very great expenditure on these heads, supposing regiments to be detached far away from any central station?—Those instruments must be bought in order to make them available, but beyond that there would be no expenditure.

6441. Your Royal Highness has said that it is rather a matter to be deplored that there are many officers of the army whom there is some difficulty in employing in consequence of their not having passed through the Staff College. Would you be in favour of an officer passing an examination in his regiment without going through the Staff College?—You might take the examinations originally laid down. Examinations have been laid down for military secretaries, aides-de-camp, &c., and of course by adapting those examinations to the appointment for which the officer was to be selected, you could have those examinations just the same, without passing through the Staff College medium; but the examination would be very different from that of an officer who had passed the Staff College, because the latter is very scientific, whereas the examination of other officers would not be scientific, at least not to the same extent.

6442. The machinery which you have suggested would, in your opinion, be sufficient for the examination of those officers, and you would not have a central

board in London or elsewhere?—I do not think that you could have a central board considering the number of officers to be examined, and I think that it would very largely add to the expense. You could not bring an officer up to London without paying his expenses. If the officers go to stations in their immediate neighbourhood, they could come in the morning and return again in the evening.

6443. I am supposing of course that written papers would be sent out by the central board of examination to the various commanding officers, and that with a regimental board it would be possible under those circumstances to examine officers regimentally?—Of course you could do it to a great extent. The Council of Education might do it, or it could be done from the Horse Guards, who would send those papers to the regiments, and then the regimental examinations might come back to us, as they come to us now after those examinations are completed. They are forwarded by the commanding officer of the regiment through the officer commanding the district, and they are all looked over at the Horse Guards, and remarks are made upon them if necessary. It is difficult to deal with these examinations too severely at head quarters, because the replies depend mainly upon the questions which have been put by the board; and if you sent back those examinations as not being sufficiently stringent, you would be throwing great difficulties in the way of the board, who put questions to the best of their ability.

6444. One of the principal subjects which in our instructions we are called upon to consider is the possibility of the amalgamation of the two colleges of Woolwich and Sandhurst. Has your Royal Highness any views upon that point?—I think that it would be very unfortunate. I think that it would be the worst thing which could be done, because the requirements of Woolwich and of the Ordnance Corps are so essentially scientific that an attempt to combine these things would be an unfortunate thing for the army.

6445. Is that simply because one college is scientific and the other is not so?—I think that the objects are so entirely distinct that what would be required for the one college would not be required by the other. I think that the separate objects in view would be entirely done away with if all the officers in the army were required to be examined upon subjects which are essential for the Artillery and the Engineers. I think that the Artillery and the Engineers require such special knowledge that it would be a waste of time to oblige every officer to be examined upon those points.

6446. You do not think that the one college at Addiscombe worked well in the East India Company's service?—I do not say that it did not work well, but I think that very few of the officers at Addiscombe were for the line, and that the great majority were for the Artillery and the Engineers. Addiscombe was before my time, and Addiscombe was so entirely Indian that we had nothing to do with it, and I only know incidentally how the duties were there carried on.

6447. I believe that your Royal Highness is in favour of a large military college for the whole of the cavalry and infantry of the line?—Yes.

6448. You think that the military education and discipline given at a college would be an advantage to the army?—Yes, an enormous advantage.

6449. You do not think that there would be any disadvantage as respects the absence of what is called a liberal education?—I should like a college to be formed which would take in the young men who now go from Eton, Harrow, and Rugby for other purposes to the university. I should like to see a military university. I would not deduct one day from the education of the young gentlemen who are instructed at those public schools, but after passing those public schools I should like to see them go through a university for the military profession, in the same way as young men go through the universities for the learned professions, such as the law or the church. I want a college to be formed in the shape of a military university, through which these officers would have to pass before entering the army, because I think that it is of the greatest value for young men early to get military ideas and views, and that they should have no interregnum between their school period and their period of entering the army. They cannot do so at other public establishments, which I think is a great drawback. I would wish to see the young men go direct from one of these public schools to a college, and then into the army; and in the college I contemplate they ought to be thoroughly instructed so as to be able to take their place in the army on coming into it. I know that that is not the idea of many commanding officers of regiments. I think that if the system which I have indicated were adopted, those officers would on joining their regiments give a very good tone to them, although I do not say that the tone at present in regiments is not most excellent.

H.R.H. The Duke of Cambridge, K.G.

15 April 1869.

General Military College for the line.

6450. Then you think that there should be a college for young gentlemen, say of the age of 17, numbering about 600 or 700?—Yes.

6451. Would you establish the same discipline as at the universities, or would you have that discipline more rigid?—I would have it more rigid than the discipline at the civilian universities. I think that a great deal of latitude is given in the civilian universities which is beyond what there ought to be in a military university, particularly as to being kept under more discipline within the establishment itself.

6452. We have had a great deal of evidence upon the organization of a military college. Has your Royal Highness any plan as to the organization of such a college, with regard to its professors and officers?—I have no further plan. I should amplify and improve the system as it now exists. I believe that if it was extended, and was put in certain respects on a sounder footing, as I have no doubt could be done, the organization as it now exists would be a very fair basis to work upon; and when you extended it you of course would require to have more officers of the establishment, because more would be necessary to do the work; but I do not know that any large quantity would be required, because there is a considerable number of professors, and I think their work could be increased without any particular strain upon them; and if so, I think that you might increase the College largely without any great increase of expenditure.

Sandhurst.

6453. (*Lord Northbrook.*) With respect to your Royal Highness's proposal of a college, through which all candidates for commissions should pass before entering the army, what suggestions would your Royal Highness make in order to secure that the discipline and the tone of the college should be sound, and that the knowledge which the cadets had when they passed out should be sufficient, bearing in mind that the evidence which we have received as to Sandhurst is unfavourable to the knowledge and the tone, excepting as regards those who pass out first? The difficulty which we have is how a guarantee could be found that such a college, if it was started, would differ essentially from Sandhurst in those respects?—I know what has been going on at Sandhurst, and although I admit that there were times when there was a good deal to find fault with, I believe that of late there has been very little to find fault with at Sandhurst. Every irregularity which the Sandhurst cadets commit is laid hold of and exaggerated. I have no doubt that if you were to go critically into the little failings of other colleges, you would find that they were quite as great, if not going beyond what goes on at Sandhurst; because it is supposed that a man in a red coat is public property and everybody marks what he does. Therefore I very much question whether on comparing Sandhurst with any other educational establishment, you would find that Sandhurst was so inferior in tone and in other respects to what the other colleges would be found to be. At the same time, supposing that it were so, I do not see any reason why a college of the sort I contemplate should not have the same high tone and high feeling as exists in any of the great universities,

H.R.H. The Duke of Cambridge, K.G.

15 April 1869.

Sandhurst.

or in any of the public schools of the country. It entirely depends upon the manner in which it is managed. If the governor and lieutenantgovernor were men of character and experience, and with a practical knowledge of the world, I imagine that there would be no more difficulty in managing an establishment of that kind by officers of the army than in the case of any other institutions of the country.

6454. It has been put before us that a great deal of idleness is created, which is prejudicial to the tone of the whole place, by a man who knows that he can get his commission by purchase ; and there is not much doubt that half the men who come out of Sandhurst know little more than they did when they went in ?—If you increased Sandhurst you would make every man go there. At Sandhurst at present you have a large number of young men of very small means who cannot get so good an education elsewhere, and who are looking forward to the prospect of commissions without purchase. Those are perhaps the most difficult element we have to deal with. If you were to increase the high tone of such a college by having young men from the great public schools, you would introduce a tone which you could not acquire without it. The present mode of obtaining direct commissions prevents men from going to Sandhurst, and hence the want of the public school element in the college, upon which I consider so much depends. If there is anything lower in the tone of Sandhurst than there ought to be, I believe that that is at the bottom of it ; and I believe that if you obliged all persons going into the army to pass through the college the tone would improve beyond what can be conceived.

6455. Do you believe that for all cadets passing out of Sandhurst the examination could be raised for the commissions by purchase ? From the evidence which we have received it appears that the standard of examination for commissions by purchase is so low that there is no inducement for men to work ?—You might raise the technical qualifications, but not the scientific ones. As regards the technical portion, if you made a great military university of it you could raise the technical portion to any extent, so as to give a man the necessary qualifications to pass such an examination.

6456. In order that such a plan should be carried out you would oblige all the officers who entered the army to pass through such an institution; you would not allow direct commissions to go on at the same time ?—Just so ; I would abolish direct commissions. Most young men who do not care about getting commissions without purchase naturally go to the direct commissions; they need not go to any special college, they pass out of any school which they happen to be at, and if they pass the qualifying examination they enter the army at once. Most of those in the higher walks of life go up for a direct commission, and therefore you have the children of many men of small means, and who have had very little opportunity of education, go to Sandhurst, which is the reason of the lower tone at Sandhurst. But if you made all officers pass through Sandhurst, I think that you would have no more trouble than you would have probably at Oxford or at Cambridge, or at any large university. At the same time I do not wish to raise the entrance examination into Sandhurst, because I want a youth to go from school to Sandhurst, and not to pass through any crammer or any private institution. There would be then no interregnum, and no opportunity of acquiring bad habits or bad ideas; a lad would be sent direct from one of the great public schools with all the feelings and impulses of a public school, and all its advantages, and would then acquire all the scientific acquirements which he ought to obtain at the College.

Instruction of officers in the service.

6457. With respect to the knowledge of field fortification and so on, I understand your Royal Highness to say that in your opinion attendance upon the lectures in those subjects should be entirely voluntary ?—Yes.

6458. Supposing that officers were attached to regiments as instructors, do you think that the attendance upon the classes of those instructors should also be voluntary ?—I think that it should be voluntary. I think that you should be very strict with regard to the examination for promotion, and that a strict rule should be laid down that if officers did not pass they should be passed over for promotion, and that a man should not be allowed to go up again for a year or so.

6459. Upon the question of field fortification and the defence of out-posts, and such like, in your Royal Highness's opinion, is instruction in those subjects essential ?—Yes.

6460. If so would there be anything wrong in principle in insisting that an officer shall obtain that knowledge ?—I think that he ought to have all that knowledge before he enters the army, and that it should not be necessary to teach him anything afterwards, except just to refresh his memory ; therefore I do not think that there is any object in making it obligatory, but at the same time I think that if an officer, on going up for his examination with a view to promotion,wanted his memory to be refreshed, there should be an opportunity given to him of joining the class for a very short time, together with the other officers of a regiment who were going through a voluntary course under an instructing officer. I think that it would be very beneficial for an officer to enter a class in order to pass the examination, but I think that it should be left optional to him to do so or not.

6461. At present many officers of the army are entirely ignorant in that respect ?—Yes ; a large proportion of those who go up for direct commissions do not know anything upon these subjects, and must acquire a knowledge of them, and I think that these would go to the officer instructor of the regiment rather than to anybody else, but I would leave it with the individual officer. I think that self-interest would induce them to do so.

6462. I wish to ascertain from your Royal Highness the precise objection to making this part of the education of an officer, which seems to be an essential part, obligatory upon him ?—You do make it obligatory in one sense ; unless he acquires this education he cannot pass for his promotion ; but I would let him acquire the knowledge as he thought fit, the chances are very much in favour of his going to the officer instructor, but I would not have any compulsion. I should leave it to his own good sense, he knowing very well that the consequences of his not being able to pass would be to stop his promotion.

6463. Does your Royal Highness say so upon the ground of its being unpopular ?—I think that it would be extremely distasteful. I think that you must lay down the acquirements which are demanded of an officer, and if he obtains those acquirements I think that you should leave him to obtain them as he thinks fit. My opinion is that if you make it obligatory it will be a subject which officers will not like, whereas, if it is left to them, they knowing that they must pass, I think that they will obtain the information with satisfaction to themselves and to the public interest.

6464. Supposing that the new system of examination for promotions was carried on, would your Royal Highness recommend that there should be any appeal, or that it should be final ?—I think that it should be final, but that the authorities should regulate the mode of conducting the examinations, and that if they considered that in any district these were not going on as they ought, they should find fault with them and check them, just as they would in the case of any other branch of the duties of an officer. For instance, take the musketry instructor, if he does not do his duty we remove him and appoint another, and we find out his defects by looking over his returns. If it was found that from Portsmouth the station returns were not so good as from Plymouth, the authorities would direct attention to the subject, and

would say that improvement must take place. If an officer once passes, I do not think that you can reverse the decision. An officer passes as respects the questions which are put to him, and if there is any fault it is the fault of the board, and not the fault of the individual.

6465. If an officer was rejected would you give him an appeal?—I would let any officer make any statement which he wished to make, as is the case now, and if he made out his case there is no doubt that the authorities ought to deal with it.

6466. (*Sir C. Russell.*) I understand your Royal Highness to prefer making the after instruction to the officers when they join the army regimental instead of detaching them either to a garrison or to any other place?—I should myself prefer station or garrison instruction, though in some respects it might act rather unfairly upon some regiments, scattered as our army is. If you had station instructors I have no doubt that they would be better men; and no doubt it would be less expensive, but as the army is situated it may be necessary to some extent to admit the regimental principle.

6467. From your Royal Highness's long experience do not you think that the officers would object to being detached for so long a time?—Yes, I think they might.

6468. And would not a commanding officer object very much to it?—Yes; and it adds to their expense, and to the public expense; they must pay more, and it naturally adds to the public expenditure. Therefore if you carry on what is required at an officer's head quarters it has certain advantages.

6469. There is one point which has been raised before us with respect to working clothes. Would there be any difficulty in carrying out the same principle with regard to clothes as your Royal Highness has suggested with respect to tools? Might there not be slop clothes for the working men?—There would be no difficulty in that, that is now the case at Shoeburyness.

6470. With regard to the staff, is it not the case that officers have suddenly been discovered upon practical trial to be first rate staff officers, of whom it was not suspected before?—Yes, constantly; and that is where I think that the present system works hardly to a certain extent; because situated as our army is, where the army is often put into difficult situations a man shows himself to be an able man, and yet we have considerable difficulty in giving him employment as a staff officer, because he has not passed the Staff College.

6471. (*Lt.-Col. Chesney.*) Referring to the board which your Royal Highness has suggested, I have before me a letter which states "In India most officers "join the service profoundly ignorant of their pro- "fession; and on active service out-posts and pickets "are surprised because officers do not know their duty." Could such a board be extended to India?—I apprehend that there would be no difficulty in that respect.

6472. A great deal has been said with regard to men going for their ease to the Staff College. Has your Royal Highness heard of any officers breaking down in their health under the hard work at the Staff College?—Yes, several officers have broken down under it. I did not mean to say that they did not do hard work, but still I am under the impression that it is not every officer who goes to the Staff College for the purpose of hard work.

6473. (*Mr. Parker.*) Both in the evidence which we have had and in the discussions of the Commission, there has been a certain conflict between a professional and a liberal education. I understand that your Royal Highness thinks it important to combine the two?—Most important.

6474. And for a liberal education your Royal Highness would rely very much upon the ordinary public schools of the country?—Most certainly; and for professional education, I would like to see that acquired at Sandhurst to the fullest extent that could be given at such a college.

6475. You would prefer to see the professional education given at one large college or university?—I should.

6476. The question turns very much upon the age at which a boy should come from Eton or Harrow to such a military university. If he came at the age of 16, as has been proposed, he would have to leave before he received the chief benefit of one of those public schools. If, on the contrary, he came at the age of 17½ or 18, he would have received a much fuller education there. Does your Royal Highness think that he might be received in such a university at the later age?—I do not see any objection to it. If you left the college as it is now, it would take in the lads at a younger age, who did not come from the public schools; but if it were looked upon as a general military university into which young men should pass direct from the great public schools, then I see no reason why a young lad should not join at 17, because he would still pass into the army at 19. If we are to continue as at present, I should prefer the age of 16, because the lads now going there do not generally come from public schools. I might add another reason to what I have just stated: The young men who remain longest at public schools are probably those who have been most assiduous in their studies. That very fact is an advantage to them when they go to Sandhurst. They will have obtained a great deal of scientific education at a public school which they will not require to get at Sandhurst, and therefore they will have to apply their minds to the mere practical part of an officer's duty, rather than to the scientific part, and I think that that would facilitate matters. Under those circumstances, I think that a youth could pass through the college much quicker than a youth who had not had the same advantages before. I would not oblige a youth to be there for two years. I would let a youth pass through the college as soon as he could if he came up to the attainments, and I think that those who worked hard, and showed a knowledge of scientific acquirements before they got there, could pass through much quicker than those who were not so well prepared.

6477. A sixth form boy at Eton would know that he could pass rapidly through such a college?—Yes; that is the meaning which I intend to convey.

6478. That perhaps would be as near an approach as we could get in England to the Prussian system?—Yes; and since I was here on the last occasion I have seen a very valuable book, and I think that what is stated in it fully bears out what I stated before, namely, that in Prussia there is not one of the young men who does not pass through a military college of some sort before he becomes an officer of the army. I said that I thought that they all had to pass through some military college in Prussia, and I think that what I then stated is borne out by what I have myself since seen in that book. So that with our English views and feelings we should obtain the same description of education for our young men, as far as we could, as is now required of the officers in the Prussian army.

6479. In that way we should have in our army a certain number of officers who had received the highest liberal education given at public schools?—Yes, which I think is a very valuable thing, and of which nobody has a higher opinion than I have.

Instruction of officers in the service.

6480. (*Sir D. Cameron.*) If the system of station instructors was adopted does your Royal Highness think that without serious inconvenience to the service it would be possible to detach officers for four, five, or six months to go through such a course of instruction?—I think that there is always an inconvenience in detaching officers. I am very much afraid that at those places there would be a great tendency to make officers study subjects which they otherwise would not contemplate.

6481. I refer to a course of instruction in professional subjects which would be necessary to pass an examination for an officer's promotion?—I think that officers commanding regiments would very much ob-

H.R.H. The Duke of Cambridge, K.G.

Instruction of officers in the service.

ject to officers being taken away from them for a long time. Our service is so dispersed that if any officers were to be absent from duty for a long time it would, I think, be a great inconvenience.

6482. (*Maj.-Gen. Haythorne.*) It is felt by some people that a regimental instructor would be unpalatable to commanding officers, do you think that that would be the case?—I think that it would require some little time to get the new system established, but I do not think that that would be the case when the system was established. I think that the good sense of the officers would enable them to accommodate themselves to the new state of things, so that I do not apprehend any difficulty of that sort. We have an instance of it as regards the musketry instructors.

6483. (*Lord de Ros.*) Does not your Royal Highness think that in many cases the commanding officer of a regiment and his field officers would say, "We "do not want these instructors, but we will do it "ourselves;" and do you not think that most of our commanding officers ought to be able to instruct officers in reconnaissance and other field duties?—A man must devote some time to it. There is no reason why a major should not do it, but I think that the commanding officer of a regiment would have his time too much occupied for it. If one of the majors was to be told off for that duty it would be a very good thing, but you would have a larger field for selection if you took the instructors from the captains.

6484. Your Royal Highness was in the cavalry when Sir Hussey Vivian was inspector of cavalry?—It was before my time, but I knew his system.

6485. And your Royal Highness no doubt recollects that he never by any chance inspected a regiment without calling upon several of the officers to give proof of being instructed in field duties as well as movements?—I have always understood so.

6486. Do you not think that that might be made an imperative matter at all inspections of regiments?—Yes, and so it is to a great extent at present.

6487. You think that a young English gentleman should remain at Eton from the age of 12 or 13 to 14 or 15?—I think that he should remain as long as it was considered good for him to do so, certainly up to 16; and then I would give a latitude, and would say that if a man did not care much about being at a public school, and wished to enter the service early, he could come to the college at 16; but that a man under other circumstances should be allowed to remain at school and to pass into this college at a later period, up to 18, arrangements being made to pass him through the college more rapidly.

6488. As regards the absence of officers from their regiments, when they are at great stations like Portsmouth and Aldershot, and those sort of places, there would be no necessity for their being absent from their regiments to obtain proper instruction in field duties?—Not at all.

6489. In the case of isolated regiments it has been suggested that it would be desirable to send an assessor to join the regimental board, and to assist them in the same way as the judge-advocate does at a court-martial. What is your Royal Highness's opinion upon that point?—The station instructors might go round periodically, and they might form a board. As far as possible we always prevent any officer of the regiment being on the board, because there is a certain amount of feeling on the subject; and I think that it is better not to have an officer of the regiment on the board when the young men are examined, and therefore I prefer their going before a station board.

Staff College.

6490. I think that there seldom elapse three months without its being stated as a grievance in some newspaper that the officers who have passed the Staff College have not been properly rewarded?—Yes.

6491. Does not it strike your Royal Highness that they have no claim whatever, but that they are rather under an obligation to the public, for what has been done for them?—No doubt of it. The officers thought at first that a staff appointment must be found for them, but I stated to them, as I always do, "You must go "back to your regiment and show that you do not "shrink from regimental duty, and you will have a "much better claim to staff employment than if you "had not done so." They seem to think that having passed through the Staff College they have a claim for immediate staff employment, which is unreasonable. I have no doubt, at the same time, that they go through a good deal of anxiety and fatigue in passing the high examination which is required.

6492. Your Royal Highness spoke of officers who had not passed through the Staff College being virtually excluded, but has not that rule been broken through? I believe that some of your Royal Highness's staff are officers who have not passed through the Staff College?—It has not been very largely broken through, because those who have passed through the Staff College have been in the subordinate ranks. When these officers get to the rank of field officer of course we shall have much more difficulty than we have now in selecting officers who have not passed through the Staff College.

Sandh

6493. (*Rev. W. C. Lake.*) A good deal of your Royal Highness's evidence has been to the effect that what drawbacks have existed at Sandhurst have arisen from the admixture of idle cadets with other cadets, would it not be almost impossible to hold out commissions without purchase to the whole of the 500 cadets?—Yes, and the whole system of the college must be altered if the system which I contemplate was carried out. Almost every man who goes there at present goes there in order to get a commission without purchase, and when he finds that he cannot get it he falls off; but the moment it became the rule that every person must attain professional acquirements, without which he would not be permitted to pass into the army, if you made those professional acquirements real, I do not think that you would run any risk of the idleness which now exists. You must, however, alter the system to some extent, because no doubt for those who pass through without obtaining the premium of a commission without purchase, the examination is very slight, and some pass through less well than one could wish.

6494. Supposing that you found, with your present prizes of commissions without purchase, that say 400 cadets did not look forward to that reward, would you not increase the number of those who would not look forward to that reward?—Not if you made the professional part of the examination at Sandhurst more stringent than it is now. I think that the professional part of the examination at Sandhurst is rather too low, but that the scientific part of the examination is quite sufficient. I think that everybody should attain the professional acquirements, but I do not think that everybody need attain the high scientific acquirements.

6495. Supposing that we had 500 commissions which we could give to 500 cadets at Sandhurst, do you think that it would work badly?—No doubt it would not work badly; but that is a financial subject, with which I cannot deal.

6496. (*Chairman.*) Would not the strict professional examination which your Royal Highness contemplates, coupled with what is necessary for a commission, have a tendency to diminish the number of applicants for commissions?—I think not; I do not see any reason for it, because you give all that instruction at the college, and I think that it could not be obtained anywhere better; and therefore, as I say, that is why I wish to have a college, because I think that the idea of having special classes at the public schools would fail, whereas if you had a military college I think that it would be very satisfactory; and I see no reason why anybody should not pass an examination showing that he possessed the qualifications necessary for an officer.

6497. Independently of the primary advantage which in your Royal Highness's opinion would result from these military instructors being attached to regiments, you would by that means increase the number

of secondary prizes in the army, and as of course you would insist upon very high qualifications in those officers who were competing for such situations, you would secure in every regiment the presence of a number of scientific and well educated officers?—Certainly; and if you diffuse the prizes no doubt you will make more men strive for them; and I apprehend that the qualification for such appointments will be very much what it is at the Staff College. I suppose that an officer passing out of the Staff College would be very capable of taking one of those appointments. Of course out of that number you can secure any number of staff officers that you choose.

6498. (*Lord de Ros.*) Would it not be advisable to prevent the payment at Sandhurst being too low, and to avoid the education at Sandhurst becoming cheap?—If you adopted the college which I contemplate, I think that you ought to make the payment such as would meet the means of the ordinary class of society in England; but I think that Sandhurst is such a great advantage to the poor class of officers, as at present constituted, that I should not like to see it interfered with in that respect.

6499. The poorer class might be on some such footing as the Queen's scholars at Westminster, or the collegers at Winchester?—Yes.

6500. (*Rev. W. C. Lake.*) From your knowledge of English society and the somewat different feeling as regards the army and army education in England compared with what it is abroad, does not your Royal Highness think that there would be an objection to raising so large a college for the army as one with 500 young men?—I know that the objection was made, but it was chiefly made by the universities, because they thought that a man from the university could not enter the service. There is no reason why some regulation should not be made to overcome that objection. There is another point, which is a point of very great importance, which I think might be considered in connexion with this college—and I am very glad that it suggests itself to me to mention it—namely, that the young men at Addiscombe were allowed to count their time as commissioned officers from the period when they entered at Addiscombe. I think that it would be a very great check upon these youths if that system were extended to Sandhurst. You could deprive a young man of this advantage, either entirely or in part, if he behaved badly; and I think that it would be a very valuable thing if a man's time as a commissioned officer counted from the time when he entered the college.

H.R.H. The Duke of Cambridge, K.G.

15 April 1869.

Sandhurst.

6501. (*Chairman.*) What would your Royal Highness do with Queen's cadets who are now entitled to a commission?—They would be like the foundationers.

6502. Do not they obtain their commissions without an examination?—No; they must pass a qualifying examination; but they are allowed to compete.

6503. Do you see any objection to their being educated elsewhere?—If you had merely one college they would be in that college the same as anybody else.

6504. But as it is merely in the form of a bounty there would be no objection to it?—Do you mean without their going into the army at all?

6505. Yes?—There would be no objection to that, but if they had to go into the army they must pass this college the same as the rest.

His Royal Highness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 20th April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
REV. DR. BUTLER.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

MAJOR-GENERAL J. L. A. SIMMONS, C.B., Royal Engineers, examined.

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869

Royal Military Academy Woolwich.

General results.

6506. (*Chairman.*) You were formerly Director of the Royal Engineer Establishment at Chatham?—Yes.

6507. And of course during your professional career you must have had ample opportunities of forming an opinion as to the general character of the Royal Military Academy at Woolwich?—Yes.

6508. Would you favour the Commission with whatever opinions you may have formed with regard to that establishment, with respect to its efficiency, its internal economy, and its general character?—In the year 1846 I was instructor in fortification at the Academy for a short period, about six months, but since that time I have had no opportunity whatever of judging of the interior economy and management of the establishment within itself. I have only been able to judge of it from the results which it has produced in the young officers of Engineers who have passed under my command. During the last nine years I have had under my command I should think about 150 or 160 young officers who had not long left the academy, and for the last three years a great number have come direct from the Academy to the Royal Engineer Establishment at Chatham under my command, and, judging from the results which have been produced in those young men, I think that the system is a thoroughly good one. The education which has been received by those young men has been calculated to fit them for officers of Engineers, and in other respects they are gentlemen, and all that I could desire. I say this with confidence, in consequence of the position I have filled for the last three years, during which I have had no complaints to make of the officers, with one unfortunate exception; but I think that the exception tends to prove the rule, that the results are decidedly good.

6509. During those three years of which you speak, how many officers passed under your inspection?—About 140, or perhaps more. At one time alone I had about 80 at the establishment who had just left the Academy and still held temporary rank under a state of tuition to fit them for the duties of the corps of Royal Engineers.

6510. Your favourable opinion extends not only to their intellectual and professional acquirements, but to their moral character and their general tone?—Quite so. With reference to that, I may say that I have been a very late convert to the system of open competition for admission to the Academy; my experience from having these young men under my control has been decidedly favourable to open competition, when guarded, as it is at the Academy, by the very high standard of education.

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Royal Military Academy, Woolwich.

6511. When you say "guarded by the very high "standard of education" do you mean when the test examination is placed at a very high level, or do you mean by the subsequent examination?—I mean when the test examination is placed at a very high level; this to a certain extent renders unnecessary what was formerly considered necessary, namely, the principle of nomination.

6512. What was your misgiving as to this principle of open competition?—I was afraid that we should not get into the corps of Engineers the high class of gentlemen whom we used to get formerly; but my objections have been entirely removed by the results I have seen of the system as at present worked, and I have attributed it to the high test which is required of a candidate upon admission into the Academy. It is also no doubt due, in some measure, to the great acquirements required of the cadets afterwards, which by keeping them hard at work prevent them from running riot in irregularities.

6513. The Academy therefore, in your opinion, turns out young men who are fitted in every way to enter the scientific branches of their profession?—Quite so.

6514. Is the working of the institution at present so satisfactory that it would not occur to you that it is capable of improvement?—It is palpable that some slight improvements might be made in the details of the education, but I have nothing to suggest of a serious or radical nature. Of course there may be some minor details requiring change.

6515. Does the high standard of the entrance examination necessitate a course of preparation at "crammers"?—I had occasion about 12 months ago to make inquiries for a friend who asked me in what way he should have his son prepared for the Academy; not having given the subject much thought previously I inquired from some of the young officers as to what they considered the best way of acquiring the necessary education to fit them for cadets, and the result of it was that I recommended my friend to keep his boy at a public school, warning the head-master of what the object in view was in his education; I did not know anything myself of that public school at the time, but my recommendation was merely from what I heard from the young men. The school to which I allude is Cheltenham College.

Royal Engineer Establishment, Chatham.

6516. You were for a considerable time Director of the Royal Engineer Establishment at Chatham?—For three years.
